VALLEY MEDICAL MANAGEMENT

SPECIALISTS IN MEDICAL PRACTICE MANAGEMENT

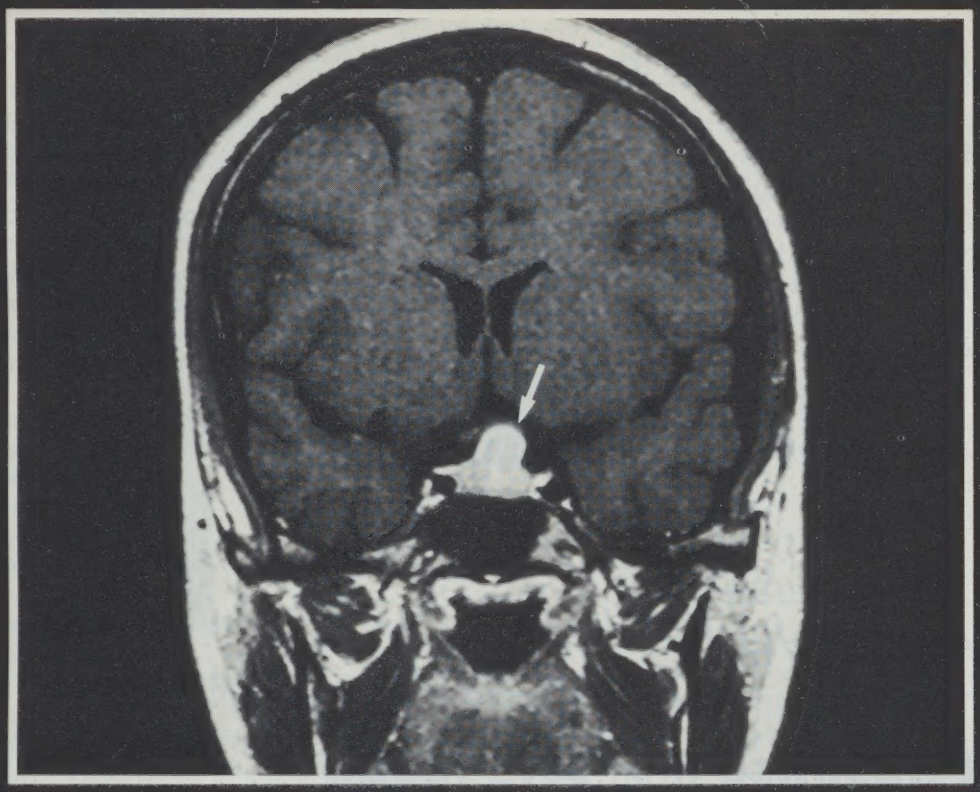
You deserve the best kind of support and technology we can put together for your practice. The Valley Medical Management concept revolves around a team of reimbursement specialists, managers, systems analysts and CPAs. This is the formula for our success. Due to our years of experience, we can locate the weaknesses, identify the potential cost savings and revenue improvement potential, and recommend solutions.

We are different from any other company out there, and we will prove it. Our approach is scientific, comprehensive, and informed. Services provided include:

MANAGEMENT

- Practice Reviews
- Administrative & Financial Management
- Changing Government Regulations
- Billing
- Marketing

We understand that quality office management software systems are essential for the medical practice of the 1990s. We offer:



HARDWARE
SOFTWARE

- Custom Fit To Your Practice
- Specialized Ongoing Support
- Adaptable To Most Popular Hardware
- One Year Money Back Guarantee

The services of Valley Medical Management have one objective: to make you a more successful professional. If you're not satisfied, you don't pay. Call us.

1-800-832-1566

166 Hanover St. Suite 103, Wilkes-Barre, PA 18702

Clearly the Quickest Path to an Accurate Diagnosis.

CLINICAL HISTORY: 19-year-old female who has had no menstrual period for over a year, galactorrhea and headaches. The clinical suspicion was a prolactinoma.

FINDINGS: 1.5 cm. pituitary adenoma extending superiorly through the sella with compression of the left optic chiasm.

MRI is the imaging procedure of choice for the evaluation of pituitary adenomas because of its ability to examine the parasellar anatomy in all planes as well as its ability to differentiate subtle tissue differences within the pituitary gland itself.

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

MEDIGRAM

SOCIETY OPPOSES 113 PERCENT OF MEDICARE WORKERS' COMPENSATION CAP: Though supportive of cost containment reform for the state's workers' compensation system, **the Society opposes measures within House Bill 2140, passed 121-80 in December. That bill would cap providers' fees at 113 percent of the Medicare allowance. The Society opposes any linkage of workers' compensation to Medicare. It has developed a payment system which also reforms the submission, processing, and adjudication of claims for workers' comp health care services.** The Society plan would provide a more realistic reduction in costs for employers and lessen administrative hassles and disputed claims over medical services. Senate action on the issue is likely soon after the legislature reconvenes in late January. PHYSICIANS ARE URGED TO CONTACT THEIR SENATORS IMMEDIATELY TO OPPOSE MEDICARE LINKAGE AND SUPPORT THE SOCIETY'S PROPOSALS FOR REFORM.

BLUE SHIELD BEGINS MONITORING MEDICARE PROVISION OF OBRA '89: Pennsylvania Blue Shield (PBS), as the state's Medicare carrier, is monitoring Medicare beneficiary claim submission deadlines as of January 1, 1992. OBRA '89 requires all physicians to submit claims for Medicare beneficiaries beginning with service dates on or after September 1, 1990. The policy includes a *10 percent reduction* in payment of the Medicare share in the allowance for assigned claims which are not received by PBS within *one year* of date of service. Providers will now begin to see the 10 percent reduction applied if the one-year rule is not met. Note: the beneficiary's liability is *not* affected by the 10 percent reduction, and physicians cannot recoup the reduction from the beneficiary. For additional information, contact the State Society's Council on Medical Economics.

SOCIETY OFFERING RBRVS-RELATED SEMINARS AND PUBLICATIONS: In addition to this month's RBRVS regional meetings for physicians, the Society is offering a special workshop and a series of publications to help members use the new Medicare payment system. The workshop, for physicians *and their office staff* on "How to Master the *New* CPT Codes," will be held:

January 28, Greentree Marriott, Pittsburgh
January 29, State Society Headquarters, Harrisburg
January 30, Holiday Inn, King of Prussia
February 4, Hilton, Allentown
February 5, Bel Aire Hotel, Erie
February 6, Holiday Inn—Penn State, State College

Workshops are from 9:00 a.m.-4:00 p.m. Tuition is $195 for members and their office staff and $225 for non-members; enrollment is limited to 75 attendees at each location. For registration information, call the Society's Department of Meeting Services at 1-800-228-7823.

Publications available about related issues include: *Visit Code Information Kit* (includes analysis of E/M coding system)—complimentary to members, not available to non-members; *Medicare Evaluation and Management Codes: A Pocket Reference for Physicians*—first copy complimentary to members/additional copies $2.00 each, $5.00 per copy for non-members; *Medicare Physician Payment: Before and After RBRVS* (currently under development)—first copy complimentary to members/additional copies $2.00 each, $5.00 per copy for non-members; and *Practice Management Consulting Network*—first copy complimentary to members/additional copies $2.00 each, $5.00 per copy for non-members. To order, send name, address, phone number, and check to the State Society's Department of Physician Services in Harrisburg (Pennsylvania residents add 6 percent sales tax).

HCFA 1500 CLAIM FORM DEADLINE: Physicians are reminded that mandatory use of the revised HCFA 1500 claim forms, submitted on behalf of Medicare patients, will become effective on May 1, 1992. Until then, Medicare will accept the current version of the HCFA 1500 form.

No Quick-Fix Solutions For Medicine

John W. Mills, MD
Medical Editor

Pennsylvania is on its way to having a new law regulating Medicaid reimbursement. House Bill 20, introduced by Representative Allen G. Kukovich (D-Westmoreland), is making its way through the legislative process.

Your State Society has worked diligently to try to bring some semblence of a solution to the large Medicaid problem in Pennsylvania. We've also addressed the even larger problem of uninsured folk in this state. The Society has spent thousands of dollars and many hours trying to delineate the problems and offer reasonable solutions. Our propositions are wide-ranging, as they attempt to address the myriad of aspects so that a workable solution can be hammered out during the next few years.

This is not a new problem; it is one that has been steadily worsening for four or five years. A "quick-fix solution" is not in order, but will only serve to heap more bureaucratic nonsense on the people.

The Democratic House seems to be buoyed up by Senator Harris Wofford's sweep in November. At this writing (early December 1991), Representative Kukovich has reasserted his "quick-fix solution" in House Bill 20. While efforts to add sanctions for non-participating physicians in Medicaid failed in the House, the threat remains.

Quick fixes are typical of the Pennsylvania legislature and serve only to boost the sponsors of the legislation to even higher political levels, while bureaucrats are left to do the implementation and enforcement. We have seen it with the "MOM" bill and with auto insurance. We may even see it with workers' compensation. Doesn't it strike you that something is wrong "on the hill?"

When we needed a quick-fix solution on the living will, we couldn't get one. December 1, 1990, was the implementation date of the Patient Self Determination Act (a federal law) throughout the country, and we at the State Society have been pushing for a living will law since 1983. Still, when the legislature adjourned for the 1991 holiday recess, no living will bill had yet been passed.

The fact is, the Pennsylvania legislature has its own agenda, which often serves mainly as a springboard for higher political aspirations. Unfortunately, that's one of the advantages or disadvantages of a Democratic process, depending on your viewpoint.

It strikes me, however, that the State Society has not been very well received by the legislature. While I don't expect "wins" very often, we should be able to negotiate on any subject that affects the practice of medicine. Part of the problem may be ours. We, as physicians, sometimes fail to understand the political process, and we rarely contact our legislators to express our concerns.

The most important focus of the Society's lobbying expertise should be within the field of medical practice, to temper the impact of proposed legislation in that arena, as well as on the "patient" public. Perhaps our credibility has been dimmed in the past. If so, we need to strengthen our Legislative Action Teams and encourage all members to contact their legislators on a *regular basis*.

Negotiation seems to be the by-word of the day. The idea of "winning or losing" in the legislative arena is passé. Let's look at it from a different perspective and try to make legislators realize that what they do—*and don't do*—affects every person in this state.

To return to House Bill 20, the State Society has accumulated more accurate information on the Medicaid and uninsured problem in this state than anyone else. Hopefully, we can get someone to listen to our well-founded statistics and well-thought-out proposals. Implementation would require legislation as well as other activity, but there is no reason why our proposal would not work in Pennsylvania and be a model for the rest of the country—as Oregon's Medicaid experiment is also an attempt to deal with the uninsured/underinsured/Medicaid morass.

We have the expertise, and we have the information. All we need is open-minded listening by the legislative leadership.

One to One is a series that invites physicians to ask questions about Pennsylvania Blue Shield.

We've designed *One to One* to be another open line of communication between physicians and Blue Shield. Our goal is to give you the opportunity to ask questions — and to give us the chance to provide more physicians with information about both our Private Business and Medicare operations.

Your questions will be addressed by Joseph A. Ricci, M.D., Blue Shield's Vice President of Medical Affairs. In the first several installments of *One to One*, Dr. Ricci answers some of the most commonly asked questions about Blue Shield.

If you have a question, please write Dr. Ricci at: Pennsylvania Blue Shield, P.O. Box 890089, Camp Hill, PA 17089.

One to One.

Can I use my office's personal computer to file claims with Pennsylvania Blue Shield?

Yes, with a personal computer, the proper software and a modem, you can file your claims by sending them to us through the telephone lines. We call this "electronic claims submission" or ECS.

Providers can send us both Private Business and Medicare claims. We have a line available for each.

Participating and non-participating providers can take advantage of this. And, the size of your practice does not matter. You can send as many or as few claims as you like.

What are the advantages of submitting claims electronically?

ECS eliminates paperwork — which saves your office staff time and money. It also reduces errors, thus allowing your claims to process more accurately and consistently.

ECS also helps get your claims payments back to you faster. Claims submitted electronically are entered directly into our system, by-passing a week or more of handling and administrative work.

In addition, you can submit claims to Blue Shield at any time — 24 hours a day, seven days a week.

Another ECS advantage is that it provides weekly reports on your assigned claims. Your staff can access "reconciliation" reports that provide claims detail on patients, services and payments. They also show the status of claims still in the processing system.

How long has ECS been available?

Providers have been submitting claims through telephone lines since 1985. Blue Shield first entered the paperless claims arena in 1983 when it began accepting claims on magnetic tapes.

Providers now use ECS to submit approximately 2.6 million claims each month — 400 thousand for Private Business and 2.2 million for Medicare. That accounts for 30 percent of our Private Business claims total and 40 percent of our Medicare claims total.

How can I start using ECS?

We have support staff to help you get started. And we have a free software package that most providers can use, called Paperless Claims Express. Or if you prefer, the support staff will send you a list of private vendors that can provide you with the proper hardware and software.

The ECS staff also works with your staff to make sure your system is working properly. They'll assign you a log number and have you submit a test batch of 25 claims.

You can contact the ECS staff at: (717) 975-7130, for Private Business; and (717) 763-6722, for Medicare.

Blue Shield
The right information. Right away.

Who Will Mold Health Care Reform?

Robert N. Moyers, MD

Washington, DC, is abuzz with up to 30 plans to revise the health care system of the United States, according to Senate Minority Leader Robert Dole (R-KS).

Senator Dole was one of the speakers at a recent Health Care Forum hosted by Congressman Curt Weldon (R-PA 7th), attended by about 150 representatives of health care provider organizations from Delaware County and surrounding areas. I also had the opportunity to attend, along with other Society leaders, members of the Council on Governmental Relations, and staff.

It is important for you to hear some of what was said. Regardless of our individual political persuasions, physicians must recognize that health care is on front stage, courtesy of Pennsylvania's newest senator, Harris Wofford. To ignore this growing debate, hoping that it may somehow resolve itself or go away, is no longer possible. If there is any doubt, ask Dick Thornburgh.

Here are some of the opinions expressed at the forum in November:

• Senator Dole predicted there will be radical changes in health care within the next five years, as the country attempts to reconcile the $365 billion spent on health care with the fact that 37 million Americans remain uninsured or underinsured.

• Gail Wilensky, administrator of the Health Care Financing Administration, said that she and others in government believe that some form of managed care results in the most effective cost control, whereas fee-for-service rewards a practitioner for doing more and is therefore undesirable. She said there are no easy answers, no right answers, and that any final system will involve tradeoffs and compromises. Her first priority, however, is restraining increasing costs. She closed her brief presentation by asking, "What are you—the public and providers—willing to do to control costs?"

• Senator Arlen Specter (R-PA) admitted that "it's an open secret that we do not have all the answers," and urged input by all segments of society, especially the provider community.

• Representative Jim McDermott, MD (D-WA), a psychiatrist and member of the House Ways and Means Committee, believes that access to care is a right, but that rationing is not to be feared. He favors a single-payer system for simplicity of administration and as the only way to control costs by imposing caps on appropriations.

• Representative Nancy Johnson (R-CT) stressed the difference between the U.S and Canadian health care systems. She said she did not believe that the U.S. patient would tolerate the decreased access to high-tech services that would eventually result from a Canadian-type system.

The speakers' plans can be summarized as: 1) employer-based play or pay; 2) single-payer; 3) patch up the present system; and 4) throw out everthing and start from scratch. There is general agreement that no plan is perfect, and there will be variations on any one of them.

Our future system of medical care is presently being drafted in the forum of public opinion. In our political process, those in government will write into law what they perceive their constituents want. Physicians are the vital profession in the health care system, and therefore have the unique opportunity and responsibility to aggressively take the initiative to educate legislators and build patient-voter coalitions. Now, as never before, every physician must become informed on the various plans that are coming before Congress. The State Society and the American Medical Association work to evaluate and keep members up-to-date on the many bills that come before Congress.

It is time we begin to deal with these issues from a position of strength—and strength comes from unity of effort and widespread participation. I urge doctors to take five minutes a week to talk to their legislators, in order to establish cordial, regular communication. I also encourage county medical societies to invite local legislators to their meetings.

Our legislators and congressional representatives cannot serve our needs or address our concerns if they do not know what they are. The responsibility is ours. Are we willing to meet it?

PINNOCHIO TRAVELS TO OZ

Editor's Note: The following letter was originally published in the October 1991 issue of the Berks County Medical Record. *It was written at the suggestion of William Alexander, MD, of Reading, who was accompanied to the AMA House of Delegates meeting by the author. The article was subsequently submitted to* PENNSYLVANIA MEDICINE *for publication consideration by the State Society's Department of Membership.*

Perhaps some would consider it sacrilegious to refer to the AMA in terms of a fairy tale. Yet, there are physicians who think of the AMA as a monolithic, self-serving leviathan in the Land of Oz (Chicago) that does not concern itself with the needs of the individual physician in private practice, but rather is only concerned with perpetuating its own existence on its own terms. In other words, these physicians believe that the AMA does not exist in the real world, but rather exists in "never, never land." Well, allow me (Pinnochio) to tell you about my recent trip to the Land of Oz to attend the AMA's Annual House of Delegates meeting.

As I begin this journey, I must tell you that I was a non-believer regarding the AMA. When our Pennsylvania House of Delegates approved unifying with the AMA two years ago, I was greatly concerned about the membership losses our county society would suffer. I knew that 75 percent of our membership were AMA members prior to unification, but was concerned that physicians might be losing their "freedom of choice" in the matter. Physicians are trained to be independent thinkers, and unification was no longer allowing the AMA membership choice! I believed that this whole concept of forced membership could spell disaster for the continual membership growth we had experienced in our county. But in Oz, Pinnochio saw otherwise.

This year's AMA House of Delegates was held at the Chicago Hilton and Towers, located on North Michigan Avenue in downtown Chicago. The Pennsylvania Delegation consisted of 24 delegates and 24 alternate delegates. The Pennsylvania delegation met to caucus prior to the official opening of the AMA House of Delegates and then at 7:00 a.m. each day of the convention. It was at these caucus meetings that the resolutions of each of the reference committees were reviewed by the delegation.

The resolutions had been submitted by state medical societies from across the nation. An individual physician could submit a resolution for consideration, but it had a much greater chance of passing if it was endorsed by the state society from which it originated. Reference committees reviewed 263 resolutions and recommended to the full session of the House whether a resolution should or should not be supported.

Two of the biggest issues considered at the meeting were HIV testing for physicians and the federal government's Medicare reimbursement system (RBRVS). These issues were as "hot" as had been anticipated prior to the meeting, and created much discussion and debate on the floor of the House. This "floor activity" was the most exciting part of my trip. All voices were heard and all views represented. I was comforted to hear the concerns of our county physicians addressed by these national leaders who have the power to influence and/or change the practice of medicine as we know it today.

An additional highlight of my trip was hearing Vice President Dan Quayle address the AMA House of Delegates. Security in the auditorium prior to the Vice President's speech was extremely tight, so I was absolutely stunned when a middle-aged woman with press credentials ran towards him from the back of the auditorium screaming, "People with AIDS need national health care, people with AIDS need national health care," as the Vice President had barely spoken five words of his opening speech! This woman was quickly removed from the auditorium, and the Vice President didn't miss a beat by stating to the audience's delight, "This is going to be more fun than I anticipated!" I must say I was quite impressed with Vice President Quayle!

In summing up my journey to Chicago, I would call it exhilarating, enlightening, and energizing. I believe our physicians can take comfort in the very fine leadership we have in our Pennsylvania Delegation. I can also assure our physicians that their concerns are being addressed and that the AMA *does* care about the problems facing physicians in private practice throughout our 67 counties. The system works! I am a witness, and I only hope the Berks County Medical Society Executive Council allows Pinnochio (that's me) to return to the Land of Oz (that's Chicago) to see the AMA House of Delegates in action at some future point in time. I know it will be well worth the wait.

Bruce R. Weidman
Executive Director
Berks County Medical Society

COST CONTAINMENT CLARIFICATION

In the September 1991 issue of PENNSYLVANIA MEDICINE, in the article entitled, "The Cost of Monitoring Medical Care in Pennsylvania," there is a reference to the cost of the Pennsylvania Health Care Cost Containment Council's operation for the year 1989. For the sake of any future reference to these figures, I would like to clarify that the total operating cost for PHC4 for fiscal year ending June 30, 1989, was $2.5 million, not $4.6 million as stated.

Thank you very much for your attention to this matter.

Ernest J. Sessa
Executive Director
Pennsylvania Health Care Cost Containment Council

Editor's Note: In order to clarify the source of the information, the preceeding letter was forwarded to the lead author of the article. His response follows.

I appreciate Mr. Sessa's careful reading of our paper. Our figure for the 1989 PHC4 budget of $4.6 million was properly referenced to a July 3, 1989, front-page story in the *Philadelphia Inquirer*. Apparently, Mr. Sessa, as executive director of the Health Care Cost Containment Council, has more accurate information, and we appreciate his willingness to clarify the data.

Legislative Grand Rounds: 1991

Division of Governmental Affairs

As a result of governmental intervention, physicians in Pennsylvania and across the country are no longer just practicing medicine. Legislative battles and burdensome regulatory land mines have become as routine as daily hospital rounds.

As we embarked on the new legislative session last January, your State Society leaders were acutely aware of the difficult medical issues that would be considered and debated by our Congress and state General Assembly. It is no secret, however, that medicine and government have become entwined in a political stranglehold that threatens the very survival of every physician's practice. While concern over sky-rocketing costs of health care continues to gain momentum, the recent campaign platform of Pennsylvania's U.S. Senator Harris Wofford is testament that the issue of health care will be in the forefront of many politicians' agendas in this election year.

In an effort to combat government's encroachment into the practice of medicine, the Pennsylvania Medical Society's Division of Governmental Affairs is dedicated to the task of helping shape medical policy for all Pennsylvanians. To meet this burgeoning challenge, the Division's registered lobbyists work continuously to monitor the multitude of legislative proposals that are put forth under the Capitol dome.

In retrospect, the past legislative year has been anything but mundane. The General Assembly addressed a number of critical issues facing the medical community. However, thrown into that mix were other important issues that significantly bogged down the political process. Soon after the new session began, discussions about the state's financial condition and how best to solve the crisis took center stage. After months of heated debate, the issue was finally laid to rest nearly five weeks after the June 30 deadline.

With the budget crisis temporarily behind them, lawmakers began working behind the scenes on the re-apportionment of Pennsylvania's congressional districts and the re-drawing of the state's Senate and House districts. This exercise, which occurs once every 10 years, predictably sends this body into an emotional tailspin, with members fighting to protect their own turf. Moreover, the legislature recently spent weeks strategizing and hours debating the emotionally charged issue of school choice for Pennsylvania's children.

Within the fold of this busy and controversial agenda, lawmakers addressed such medical issues as indigent care, workers' compensation, and living will legislation. Although these three measures remain in the political and medical "spotlight," other matters—such as expanding the practice of optometry to include therapeutic drugs, removing qualifications for the state's Secretary of Health, and imposing penalties for drug-related offenses for physicians—were successfully stopped or amended.

Indigent care

Throughout 1991 medicine came under fire from lawmakers at both the state and federal levels. Topping the political agenda at the state level has been the issue of health care for the medically indigent. In an effort to solve this problem, Representative Allen G. Kukovich (D-Westmoreland) introduced House Bill 20, a comprehensive proposal aimed at ensuring access to care for children, Medical Assistance (MA) recipients, and the uninsured. However, the tremendous cost of such a proposal was quickly recognized as a significant problem.

In its original form, House Bill 20 included several provisions which the Society found to be onerous. Many of the proposed sanctions and mandates for physicians were gradually removed as the bill moved through a maze of House committees. One provision aimed at assuring MA participation by reducing payments to hospitals which have non-Medicaid participating physicians on their staff, was finally deleted from the package at the last minute.

The Society, through two physician committees, initiated and reviewed several proposals to address aspects of the bill which had not yet been resolved. These included ensuring equal access for MA recipients and maximizing physician participation. While proponents of the bill and the Society had agreed, in concept, that referral networks in certain areas of

The staff members of the Society's Division of Governmental Affairs are: Jerry L. Rothenberger, vice president; Larry L. Light, director, and David J. Thompson, assistant director of legislative affairs; Donald N. McCoy, director, and Frani Battista, assistant director of regulatory affairs and specialty legislation.

the state and for specified medical specialties were appropriate, agreement on the proper means to maximize physician participation in providing care to MA recipients was not reached. As a result, this concept was *not* included in the final version of the House-passed bill.

Workers' compensation

Citing escalating costs in all areas of the state's workers' compensation program, efforts have begun to reform the "comp" system. Stimulus for reform came as the result of the business taxes imposed by the state and the proposed 52 percent increase for workers' comp insurance.

Health costs, representing 35-40 percent of the total costs of workers' comp, have been targeted for change. The governor has proposed capping payment for medical costs by using a percentage of the Medicare allowance as a benchmark. This rationale is similar to that which was used in seeking changes to the auto insurance law. The Society is proposing a series of changes to the system to establish reasonable payments for health care and to streamline the processing adjudication of claims. Significant action is expected in early 1992.

Living wills

The battle continues in the ongoing debate about enacting living will legislation. Unlike last session, both Houses have passed comparable, but not identical, pieces of legislation to address this issue. Until recently, action on one of these bills was expected before the holiday recess due to the federal requirements mandating disclosure of a living will policy by health care facilities. Both bills, Senate Bill 3 and House Bill 2017, feature optional living will formats including "pregnancy" language that would void the document for pregnant women in certain circumstances.

Medicare fee reform

Federal attention for the past six months has focused on the regulations outlining the Health Care Financing Administration's (HCFA's) implementation plan for Medicare Physician Payment Reform. The release of the Notice of Proposed Rulemaking in the June 5, 1991, *Federal Register* described the resource based relative value scale (RBRVS), which contained a 16 percent reduction from the originally proposed conversion factor. This reduction sparked the largest and most successful grassroots legislative effort ever undertaken by organized medicine.

Before it was over, 384 of the 535 members of Congress, including the entire Pennsylvania congressional delegation,

"In retrospect, the past legislative year has been anything but mundane."

The PaMPAC difference

PaMPAC, the Pennsylvania Medical Political Action Committee, is a prominent political force and recognized as one of the state's largest political action committees. During the last legislative session, PaMPAC contributed more than $350,000 to candidates seeking elected state offices.

Although it is important to remember that political contributions do not "buy" votes, financial support for persons believed to be "friends" of medicine strengthens communication on issues of interest to organized medicine. Presently, physicians who recognize the importance of PaMPAC's activities are asked to contribute $100 to become a sustaining member or $250 to become a member of the PAC's Keystone Club. PAC participation does make a difference by sending a clear and unified message to legislators that physicians are attuned to the political process and not simply existing in the vacuum of the medical world.

Given the present political climate, the issue of reapportionate, and the perception of the general public about the high cost of medical care, election year 1992 will most assuredly create an exciting display of political grandstanding on health care issues and a great demand on PAC resources. If the physician community chooses not to become more personally involved in these arenas, lawmakers will continue their efforts to control health care costs by smothering the profession with burdensome legislation and regulations. To meet such challenges of organized medicine, PaMPAC is embarking on a new membership campaign not only to increase levels of contributions but also to further educate physicians about the political process.

"As a group interested in the health and welfare of all Pennsylvanians, organized medicine is well poised to be part of the political agenda. . ."

had joined thousands of physicians in petitioning HCFA to restore the conversion factor to the original budget-neutral level intended by Congress. Throughout the process, HCFA received more than 100,000 letters as a result of the federation of organized medicine's call to action. The November 25, 1991, publication of the final rule demonstrates the impact political involvement can produce. The conversion factor was restored to 95 percent of the original figure, representing a $10 billion increase for physician payments over the five-year phase-in period of the program. The State Society's attention will now be directed towards changing other negative aspects of the plan as they become apparent. Program implementation began January 1, 1992.

Laboratory regulations

The Society is presently awaiting publication of the final form regulations for the Clinical Laboratory Improvement Amendments of 1988 (CLIA 88). These regulations will govern certification requirements for all labs that examine human specimens, including labs in physicians' offices. Like RBRVS, CLIA 88 has also generated a great deal of physician response.

A legislative recap

Over the past year, the opportunity to convey the Society's position before a number of legislative committees was carried out by Society Past-President Gordon K. MacLeod, MD. During his term as president, Dr. MacLeod testified before the House Health and Welfare Committee on a number of issues, while also addressing the House Republican Policy Committee highlighting organized medicine's concern on a wide range of health care proposals. Continuing this practice, Society President Robert N. Moyers, MD, has appeared before the Senate Banking and Insurance Committee and the House Insurance Committee to testify on the new auto insurance law.

Although indigent care, workers' compensation, and living will initiatives have captured the top spots in the current legislative agenda, a number of other proposals are awaiting consideration. Here is a glimpse of some of these bills:

Auto insurance regulations: The Automobile Insurance Reform Act (ACT 6) became effective April 1990. The Act limited reimbursement of health care services provided to the victims of auto accidents to 110 percent of the Medicare allowance for such services.

The Society brought suit to attack the basis of the law. Its legal challenge is still ongoing, with a decision by the Commonwealth court expected in the near future. Efforts were also undertaken to seek interpretation of the regulations which were inplemented to carry out the intention of the law.

Numerous meetings between the Society and the Insurance Department focused on problems brought to the Society's attention by member complaints. Clarification of application of the law was also necessary. The Society commented extensively during the development of the regulations, and significant changes were achieved as a result of our actions, especially in safeguards related to utilization review by auto insurers.

The Society will continue to pursue corrective legislation and refinements to regulations, which went into effect on November 30, 1991, to lessen the negative impact of the law on the delivery of health care to auto accident victims.

Optometry: House Bill 1400, which would revise the optometric licensure law, did not pass the current sunset process. The Society opposed passage of this bill, since it could have been amended to expand the scope of practice for optometrists to include the prescribing of therapeutic drugs. Our policy is to support passage of a bill or resolution to extend the optometric law as it presently exists.

Childhood immunization: In coordination with the Pennsylvania Chapter, American Academy of Pediatrics, the Society supports House Bill 536. The measure, which mandates that all commercial insurance carriers cover children's immunizations, has passed the House and is now delayed in the Senate.

Pronouncement of death: House Bill 344, now on the governor's desk, was originally introduced to restrict the power of physicians to certify the death of a relative. Wide media coverage drew attention to a Western Pennsylvania case which involved such an incident and illegal drugs. Subsequent amendments to House Bill 344 will permit nurses to pronounce death with limits, such as when a physician is not able to be present within a reasonable length of time. However, under this bill, nurses could only pronounce death, not certify the cause of death.

HCFA Form 1500: Efforts to require all commercial insurance carriers to use the HCFA Form 1500 have been supported by

the Society under Senate Bill 969. This change would streamline the volume of paperwork now required of physicians by insurance carriers. Unfortunately, the bill's impact would not go beyond private health insurance carriers. The measure has passed the Senate and was placed on the House calendar for future consideration.

State Board of Medicine: Legislation intended to provide certification and regulation for respiratory care practitioners was amended with language that would change the make-up of the State Board of Medicine. Under the amendment, full voting power on the board would be provided to the three professions presently certified by the medical board and a respiratory care practitioner. This change would shift the majority vote of the board to non-physicians. Amendments to either remove these changes or correct them in another manner are being pursued.

Secretary of Health: This measure would remove the requirement that Pennsylvania's secretary of health be a physician. Although efforts to enact this change began last session, thus far the Society has been successful in prohibiting its passage. The bill remains on the Senate table.

Nominations: As of this writing, the governor has nominated Allan Noonan, MD, as secretary of health and Karen Snider as secretary of public welfare. Questions have been raised with regard to the Health position, potentially holding that nomination until regular session resumes on January 21, 1992.

The year ahead

The coming presidential election year will be a pinnacle year for those involved in the legislative process. As legislators begin putting the final touches on re-apportionment and start focusing on the 1992-93 fiscal budget and the November election, the political agenda will certainly prove to be a "free-for-all" for a number of special interest groups.

As a group interested in the health and welfare of all Pennsylvanians, organized medicine is well poised to be part of the political agenda as the General Assembly again considers such proposals as indigent care, workers' compensation, and living wills. In addition to care for the medically indigent, the Society's Board of Trustees has also identified tort reform and third-party reimbursement as priority issues.

The Society must continue to focus on the continuing efforts of non-physician practitioners (optometrists, podiatrists, psychologists, and physical therapists) to expand their scopes of practice. To date, these fronts have been well maintained. However, the process of legislating is one that never ends. Physicians must continue to remain alert and respond quickly to those proposals which may threaten or mandate how they practice medicine.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

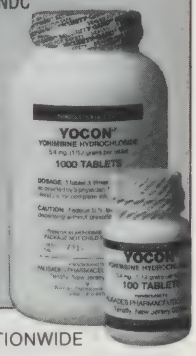
Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatic. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]



Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

RBRVS ENACTMENT PROMPTS NEW E/M CODES

The new year brought many changes to how physicians are paid by Medicare and how those payments are determined. Included is the implementation of a new Medicare coding system for evaluation and management (E/M) services such as visits and consultations.

The previous Current Procedural Terminology (CPT) E/M coding system, used prior to January 1, 1992, was often criticized as being too subjective and susceptible to varying interpretations of the correct code. The new resource based relative value scale (RBRVS) system, however, cannot accomodate such variations because payment inequities would result. Thus, a new coding system was developed to accompany RBRVS.

The new system is quite different from the old system, although, like the old, it divides services by category, sub-category, and level. The new system uses *uniform content descriptors*, which are broken down into six specific components: 1) the extent of the history, 2) the extent of the examination, 3) the complexity of the medical decision making, 4) the extent of the counseling, 5) the extent of the coordination of care, and 6) the nature of the presenting problem. The principle difference is that the new system abandons the *short content descriptors* (e.g., brief, intermediate) used in the old system to differentiate among levels of service within a category or sub-category and substitutes a fundamentally different approach.

In addition to definition and criteria changes, the new system introduces an intra-service time for many of the codes. The time factor is defined as face-to-face time for office and other outpatient visits, as well as unit/floor time for hospital and other inpatient visits. It is used as a controlling or key factor only when counseling and/or coordination of care dominate (more than 50 percent) the intra-service encounter. The new system also emphasizes proper documentation of medical records. Medicare has developed a national, standardized program to be utilized by its carriers in monitoring the use of the new E/M codes. These objective criteria make it necessary to include adequate documentation of the visit.

Pennsylvania Blue Shield mailed educational information to physicians about the new E/M coding system in December 1991. The Society has prepared a supplemental publication entitled, "Evaluation and Management Coding System Analysis," which was advertised in the November/December *Executive Report*. The State Society urges all physicians to purchase the 1992 CPT book, which contains the codes.

The Health Care Financing Administration has allowed a 31-day transition period ending January 31, 1992, for implementation of the new codes. During the transition period, physicians may use the old codes *OR* the new coding system. Physicians who use the old codes will be paid at 1991 payment levels with no update. Those who use the new codes will be paid based on the 1992 fee schedule.

The State Society is offering a series of CPT coding seminars in late January and early February. For dates, locations, and registration information, see page 30. Any other questions should be directed to the State Society's Department of Medical Economics at 1-800-228-7823.

BLUE SHIELD DEVELOPS NEW MANAGED CARE PROGRAM

The State Society has contacted the Department of Health with concerns about Pennsylvania Blue Shield's new preferred provider network, BlueChoice. Blue Shield says the new managed care program is intended to provide flexibility to patients and competitive payments to physicians through fee-for-service reimbursement under a gatekeeper concept.

As originally proposed, the program allowed employers two gatekeeper options. The first, the "passive gatekeeper" approach, would allow subscribers to choose from a panel of primary care physicians. The second, the "designated gatekeeper" approach, would require subscribers to choose one primary care physician.

The Society has concerns that safeguards against risks of insufficient access and underutilization are not clearly defined in the new program. In its recommendations to the Department of Health, the Society suggests BlueChoice should maintain primary care participation levels at least as high as are required and exist in health maintenance organizations (HMOs) operating in the plan service area.

The State Society also criticized:

- The open-endedness of the provider contract terms;
- The lack of an adequate quality assessment program;
- The program's efficiency evaluation system, which appears to rate physicians' efficiency based solely upon their utilization rates without reviewing whether their utilization was appropriate; and
- Blue Shield's plans to exclude physicians without case-by-case review by the Department of Health.

The Society further contends that physicians who already signed BlueChoice contracts should have the opportunity to withdraw according to the outcome of program approval, and new signatures should be required after program changes and approval occur, allowing physicians to make an informed choice whether or not to participate.

At this time, the Department of Health has approved the program for marketing under the following provisions: 1) Blue Shield must resubmit the package utilizing only the passive gatekeeper approach, 2) Blue Shield must provide information to subscribers and providers explaining the passive gatekeeper approach, and 3) Blue Shield must limit differentials between in- and out-of-network enrollee reimbursements to 20 percent.

CAT FUND APPROVED AT 90 PERCENT

The state Insurance Department approved the physician CAT Fund at 90 percent for 1992. The percentage, which fluctuates each year, is a surcharge to basic malpractice insurance premiums and serves as insurance above the amount covered under basic plans. In 1991 the CAT Fund premium was set at 68 percent.

The jump in percentages is based on two factors this year. First, claims paid in 1990 were higher than those paid in 1989, which forced insurers to dip further into the fund than anticipated. Also, this year's premium base has decreased, which will reduce primary rates.

SELECTIVE CONTRACTING UNDER CONSIDERATION

The Pennsylvania Department of Public Welfare (DPW) may introduce a new system of Medicaid reimbursement to Pennsylvania hospitals in the form of selective contracting. To date, only three

states—Illinois, California, and Washington—have initiated such a program.

Selective contracting is a program in which providers bid competively to be an exclusive service provider. Such a program will, according to DPW, accomplish two goals: 1) save money, and 2) help the Department gain more administrative control. DPW staff suggested that since the program probably would not be beneficial statewide, it most likely would be implemented only in the Pittsburgh and Philadelphia metropolitan areas, and other selected areas of the state.

This system is under State Society scrutiny because of concerns about access and continuity of care, a possible disproportionate distribution of the Medicaid burden, and eventual effects on the financial viability of excluded hospitals. While selective contracting has been used in the private sector for managed care programs, it is a relatively new approach for setting Medicaid reimbursement rates.

Developmentally, DPW's proposal appears to be in its embryotic stages, with implementation targeted for July 1993. The Department has formed an internal staff work group and plans to hire a consultant to develop the proposal. Recognizing physicians' concerns, the Department has indicated plans to form an external work group of representatives from various Medical Assistance Advisory Committee subcommittees including the Medical Subcommittee. The State Society is considering this option and other mechanisms for providing input, and its Council on Medical Economics continues to follow the issue closely.

OMBUDSMAN PROGRAM TO ASSIST BILLINGS

The State Society, along with the Department of Public Welfare (DPW), is addressing problems for physicians with Medical Assistance (MA) reimbursement.

The Medicaid Ombudsman Program is a cooperative effort between the Department of Public Welfare (DPW), the State Society, and county medical societies. The program was designed to help physicians and their office staffs address billing, policy, and enrollment questions. Due to budgetary limitations and staff reductions at DPW, access to such information has been a problem.

The program was developed to reduce the hassles associated with the MA Program by training county medical society executives. Ultimately, an MA reimbursement training seminar is provided in the county for providers' office staffs. The costs associated with the program are jointly shared by DPW and the county. The State Society serves as liaison between DPW and the county society and provides assistance when problems occur.

The success of a pilot program in Lackawanna County, headed by Patricia A. Martin, county executive, has prompted an expansion of the program. Allegheny and Beaver counties were trained in December, and training seminars for office staff will be held in the first quarter of 1992. County executives may receive additional information about the program by calling the State Society's Department of Medical Economics at 1-800-228-7823.

Have you made a resolution to update your will in 1992?

It's a startling fact that more than 50 percent of all Americans die without a written will prepared with the help of legal counsel.

That's a sad fact for surviving families.

If you have resolved to see an attorney to prepare or update your will in 1992, you'll want to read a booklet offered by The Educational and Scientific Trust.

It's entitled "37 Things People 'Know' about Wills that Aren't Really So."

It contains valuable advice for you and your family and also offers some tips on how to remember charitable organizations like the Trust in your estate plans.

Let us help you keep a resolution in 1992.

For the free booklet *37 Things People "Know" about Wills that Aren't Really So*, call toll free 1-800-228-7823.

An Open Letter To Magic Johnson

George J. Pazin, MD

The last installment in this series dealt with post-test counseling of a person whose HIV test was negative. The plan was to provide counseling for an HIV-infected person in this installment. NBA basketball star Magic Johnson's surprise announcement on November 7, 1991, of his infection with HIV has provided an unexpected opportunity to counsel a well-known person through an "open letter."

This is part of a continuing series entitled, "Transforming AIDSpeak into AIDSense."

Dear Magic: I listened with interest to news reports of your November 7, 1991, press conference. As a specialist involved in clinical research studies of HIV infections, I was deeply disappointed to hear that you had acquired infection with HIV. On the other hand, as an educator involved in teaching high school students, the general public, medical students, physicians, dentists, nurses, and lawyers about AIDS and infection with HIV, I was pleased to hear that you wished to become a spokesperson for HIV/AIDS education. Acquiring infection with HIV, however, does *not* automatically confer to you immediate HIV/AIDS-educator qualifications.

If you truly wish to promote AIDS education, you must become educated on this subject so you can answer questions thoughtfully, sensibly, and accurately. Becoming well educated will also benefit you personally. Unfortunately, many well-intending HIV/AIDS educators and infectious disease specialists are not completely truthful when dealing with difficult issues of HIV transmission with patients and the public. Instead, we HIV/AIDS educators often try to say things in a nice way to spare patients the anguish of dealing with the troublesome, unpleasant aspects of HIV infections and AIDS.

The first fact you need to learn is that there is such a thing as *safe sex*, but contrary to your belief, it is not simply using a condom and spermicide. Safe sex is any sex in any body orifice without any contraceptive barriers with an *un*infected person. The best you can do if your partner is HIV infected is *perhaps* make sex *safer* with proper use of condoms and spermicide, but that does not make sex *truly safe*. If you wish to promote more widespread condom usage, you should refer to that as "safer sex."

I should re-emphasize that there is such a thing as safe sex, e.g., *sex with uninfected partners*, which is most easily accomplished within faithful, monogamous relationships. You mentioned on the Arsenio Hall show that you want to bring HIV/AIDS education to the Black community. I suggest that you bring the message of *truly safe sex*, as well as safer sex, to the Black community.

There is a religious saying that if someone needs bread, do not give them a stone. If someone needs to be informed about the wisdom of truly safe sex (risk elimination or confining one's sexual intimacy to an uninfected partner), it is unfortunate if you only tell them of risk reduction. I hope that you are able to rise to this higher level of education.

The next, more difficult issue we need to address is whether you should or should not continue to be sexually intimate with your wife or any other woman. Since the so-called "protection" provided by condoms and spermicides is likely not complete, and this is an eventually lethal infection, I suggest that harsh realities require you to confine yourself to intimacy which precludes direct, moist lining surface exchange of any body fluids which may contain HIV. These fluids include blood, semen, and saliva. (HIV-infected women also have to be concerned about direct lining surface exchange of vaginal secretions.)

I am well aware that some HIV/AIDS educators, such as the Pennsylvania Public Health Association, say there is no evidence of spread of the AIDS virus by saliva, but *absence of evidence* is not *evidence of absence* of spread via saliva. Conditions of most epidemiologic studies do not enable the investigators to detect spread of the AIDS virus via saliva, but that does not mean it does not happen. It is just not recognizable. In fact, an informal survey of about a dozen infectious disease specialists revealed that none were willing to passionately kiss HIV-infected persons.

Since the AIDS virus has been found in

". . . there is such a thing as safe sex, but . . . it is not simply using a condom and spermicide."

Dr. Pazin is an infectious disease specialist and associate professor of medicine at the University of Pittsburgh School of Medicine.

saliva, since the mouth has been the portal of entry of HIV during breast feeding and oral sex, since saliva is directly exchanged lining surface to lining surface during passionate kissing, since epidemiologic studies do not enable us to study nor *exclude* this route of spread, and since we are dealing with a terribly serious infection, common sense says we should not play games with passionate kissing as a route of spread. Some investigators have found that incubating the AIDS virus for 60 minutes in saliva seems to inhibit the virus, but I do not feel these studies exclude transmission via saliva. Remember, we are able to culture (grow) HIV from saliva. Therefore, difficult as it may seem, I do not believe we should ignore this threat. The consequences of spread to your lover are too serious to ignore.

A simpler issue that needs addressed is whether you need to take any special precautions regarding casual or close personal contact with friends or acquaintances. Fortunately, the risk of spread via casual contact seems to be too small to measure in household exposure studies. In a dozen such studies of 890 uninfected persons living with 497 persons with AIDS, no accidental spread to non-intimate contacts occurred.

This is good news inasmuch as you don't need to constantly fear accidentally spreading the virus to family or friends. However, this does not mean that you should be careless and cavalier. I suggest that you not directly share straws, glasses, or eating utensils. Simple cleansing of eating utensils between use is sufficient to eliminate the risk of spread in this manner. I also recommend simply rinsing off glasses that might be shared by others. Don't worry about water fountains, but you should not share toothbrushes or razors.

My final point relates to the sexual contact who might have *infected you* and sexual contacts who might have been *infected by you*. Do you, Magic, recommend that any of your sexual partners get tested for infection with HIV? I have heard that you had a negative test in 1988. If so, I suggest that you publicly invite your sexual contacts since 1988 to get tested so that, if infected, they may also benefit from early intervention therapy and take measures to avoid spreading the virus to others. In general, it is advisable for more persons to get tested for personal, as well as societal reasons.

Before ending, I wish to relay to you one more important piece of information which many people have not learned despite several years of educational efforts involving hundreds of millions of dollars. A few days ago, during an AIDS educational session, I asked the audience, "What is the meaning of a *confirmed, unequivocally positive* test for antibodies to HIV in an adult?" Two answers were provided.

1) The confirmed positive test means that the person is *infected* with HIV, *infectious* to intimate or needle-sharing contacts, and *at risk* of having or developing AIDS in the future.

2) The confirmed positive test means the person has been *exposed* to HIV, *may or may not be* infected, *may or may not be* infectious, and *may or may not be* at risk of having or developing AIDS in the future.

Unfortunately, as expected, half the attendees indicated that they thought the second was the answer; the correct answer is the first. It is important that everyone understand that the HIV-positive person is HIV infected and has not just experienced a "close call." The person has been exposed, inoculated, *and* infected with HIV.

One does not develop specific antibodies to HIV merely by being exposed to the virus; the person has to become infected with the virus to develop antibodies. I am sorry to have to be so emphatic, but it is important for people to understand the precise meaning and implications of being HIV positive.

I hope this open letter assists you in learning more about this infection so that you might more responsibly carry out your HIV/AIDS educational goals. I would be happy to communicate more with you if you have any specific questions pertaining to your infection and your concerns for others.

P.S. After I had originally written this letter, I heard that you had changed your teaching regarding safe sex and were promoting abstinence as the only way to achieve truly safe sex. I am delighted to hear you have made that change.

I also read in one of the scandal sheets that you avoided sexual intimacy with your wife during your Hawaiian vacation in order not to infect her. While unfortunate, this is appropriate behavior since it would be especially tragic to transmit the HIV virus to your pregnant wife, who may well not be infected presently. Also, I presume that your physicians have suggested that it might be useful to have your wife tested with the polymerase chain reaction (PCR) test to try to determine more quickly whether she has become infected.

"It is important that everyone understand that the HIV-positive person is HIV infected and has not just experienced a 'close call.'"

STATE MEDICAL BOARD CONSIDERING HIV/HBV POLICY

The Pennsylvania State Medical Board is considering, but has not endorsed, a formal policy statement of the Federation of State Medical Boards on the prevention of HIV/HBV transmission to patients.

The policy was adopted by the Federation's Board of Directors in October and states the following:

- Physicians should comply with the Centers for Disease Control (CDC) guidelines for preventing the transmission of HIV/HBV to patients;
- Physicians who are infected with HIV/HBV should not perform exposure-prone procedures as defined by CDC, except within guidelines set by the state medical board;
- The state medical board should require physicians doing exposure-prone procedures to know their HIV/HBV status, require reporting of HIV/HBV-infected physicians to the state medical board and ensure confidentiality of those reports, and establish practice guidelines and monitor the practices of HIV/HBV-infected physicians; and
- The state medical board should be authorized to discipline physicians who violate the statute(s) or rule(s) related to preventing transmission of the infections to patients.

The Pennsylvania Public Health Association (PPHA) has adopted the CDC policy with one major exception. PPHA believes that notification of physician infection should not be required, labeling it unnecessary and improper.

The State Society opposes the CDC guidelines on HIV/HBV prevention and reporting for similar reasons, and the guidelines counter the Society's current policy. Pennsylvania Medical Society leaders have expressed their concerns to the Pennsylvania State Medical Board and are awaiting a final position statement.

OSHA ISSUES FINAL BLOODBORNE PATHOGENS REGS

The Occupational Safety and Health Administration (OSHA) has issued the long-awaited final regulations on protective requirements for employees exposed to blood in their routine work. According to OSHA, the preventative measures will reduce on-the-job risks for employees and is expected to "prevent more than 9,200 infections and 200 deaths per year."

The regulations, published in the December 5, 1991, *Federal Register*, become effective March 5, 1992, and cover provisions for employees of physician offices, hospitals, nursing homes, and other ambulatory health care settings. Included are strict requirements for the completion of exposure control plans and the provision of initial information and training, as well as other measures.

OSHA estimates the cost of implementing the new guidelines, which will affect approximately five million workers nationwide, at $821 million per year. For physicians, however, abiding by the rules is *extremely important* for employee safety. Additionally, violation of the guidelines could result in a fine up to $70,000 per incident.

The Pennsylvania Medical Society is planning a number of efforts to educate physicians about these regulations. For a copy of the regulations, call the Society's Department of Educational and Scientific Affairs at 1-800-228-7823.

FINAL CLIA REGS DUE

This month the Health Care Financing Administration (HCFA) is scheduled to release regulations to implement Clinical Laboratories Improvement Amendments (CLIA). The regulations will require physician office laboratories and other testing sites to meet federal regulations.

The Commission on Office Laboratory Accreditation (COLA), founded by the American Medical Association (AMA), will help physicians prepare for CLIA evaluations. Also, COLA will apply to HCFA for a "deemed status," so that laboratories accredited by COLA will be accepted as meeting federal standards.

PENNSYLVANIA MEDICINE will publish the final CLIA regulations when they are released.

AIDS PROGRAM PLANNED

The State Society, in cooperation with Penn State and the Pennsylvania Department of Education, is planning a train-the-trainer session focusing on AIDS education. The program will be held in late January or early February at Penn State Harrisburg in Middletown.

The public affairs program is geared toward school administrators and teachers; it will help equip them with information needed to address AIDS issues in the school setting. Depending on the success of the Harrisburg program, similar sessions may be scheduled at other Penn State campuses in the future. For information, call Penn State Harrisburg at 1-800-346-0319.

TASK FORCE ADDRESSES MALTREATMENT OF CHILDREN

The State Society and the Pennsylvania Bar Association (PBA) have joined forces to fight maltreatment of children in the Commonwealth. The Joint Task Force convened as a cooperative effort to fight this public health problem facing Pennsylvania, as well as the nation. Included in that arena are child abuse and violence, the refusal of care for children for varying reasons, and the neglecting of children's needs.

One key goal of the Task Force is to provide a forum for the exchange of expertise between physicians and lawyers. A second major goal is to look cooperatively at Pennsylvania laws and try to update and change those which the Task Force believes need adjustment.

A second meeting of the Task Force was scheduled for early January to discuss the next group action.

SMOKEOUT PARTICIPATION CAUSES CONTROVERSY

In recognition of the American Cancer Society's Great American Smokeout in November 1991, the Pennsylvania Medical Society, in cooperation with the Pennsylvania Pharmaceutical Association, instituted a recognition program encouraging pharmacists to stop selling tobacco products; but tobacco industry representatives have taken offense.

According to an article which appeared in the *Pittsburgh Post-Gazette*, Thomas Lauria, spokesperson for the Tobacco Institute in Washington, DC, calls the Society's efforts "coercion." The Society, however, feels its efforts are worthwhile. The program—the only statewide effort of its kind in the nation—began by recognizing those Pennsylvania pharmacies which had stopped selling tobacco. In the initial phase, more than 60 pharmacies throughout the state were honored with certificates of recognition.

Why buy an office automation system that doesn't offer a long-term solution?

ACCLAIM™ from Sentient is the total system solution.

A lot of medical practices are planning to invest in an office automation system. But a lot of the systems out there just don't offer the comprehensive functions and long-term expandability that your practice may need.

IBM® and compatible hardware.

The ACCLAIM system operates on IBM and compatible hardware, so you know you're getting the quality standard of the industry. And it's completely expandable, so it can grow as your practice grows.

Long-term support.

ACCLAIM is the system solution that fits your needs today. And Sentient's software engineers, customer trainers, and telephone support people are always there to make sure your system fits your needs over the years to come.

Easy to operate.

Even if your staff has no previous computer experience, ACCLAIM is simple to operate effectively and efficiently. Complete training is included in the purchase.

When you're thinking about office automation, call Sentient first, and find out what ACCLAIM can do for you.

1-800-247-9419
(In the D.C. Metro area call 1-301-929-7600.)

We set the standard in medical computing.

Recouping Past-Due Charges

The Health Care Group

Last month we discussed how to establish and maintain a time-of-service payment policy; and we stressed the need for a comprehensive, written collection policy to follow when immediate payment is not made. This month, we describe a collection system to recoup past-due charges.

The region's continuing recession means patients will be slower in paying doctors' bills. This situation underscores your practice's need for a consistent, effective collection policy. The following guidelines will help you develop such a program.

Keep collections in-house

Recognize that a good in-house collection system will produce much better results than a collection agency. In fact, we recommend you use collection agencies only as a last resort. Agencies can charge as much as 50 percent of whatever they collect. Why pay that, when a clear collection program will give your staff a good chance to collect 100 percent?

Two elements are indispensable to an in-office collection system. First, assign one specific employee to manage the collection process for all outstanding patient accounts. Being accountable, that person will follow the collection routine to its conclusion and retrieve more dollars for the practice than would someone irregularly assigned to the task. That employee needs regularly allotted time to work on accounts and a quiet area away from the front desk to ensure confidentiality when making calls.

Second, institute a tracking system, noting where each delinquent account stands in the collection process. The easiest system is to use a 3 x 5-inch card file box with dividers for the days of the current month and the following month. When a patient is first contacted about an overdue account, the name and other information is placed on a card and filed for follow-up on the appropriate day. Each reply the patient gives is also recorded, providing a record of all responses. (Each piece of information can also be recorded on a computerized collections system.)

Making contacts

The basic collections routine can be tailored to a practice's particular needs, but must be strictly enforced. An effective collections system uses both telephone calls and preprinted letters. Personalized letters are far more effective than stickers and handwritten warnings on monthly statements. The telephone is successful because it provides personal contact during which the patient's cooperation can be elicited.

In a collection schedule which uses both letters and calls, timing is an important factor. For example, calling all patients with slightly past-due bills is too time-consuming and ineffective. And many patients feel insulted if they intend to pay and there has been only a slight delay. However, a telephone call can work well if made at the proper time and before a patient's intent not to pay has developed. The blend of firmness and friendliness is also important to the outcome.

Likewise, this system uses a cordial but increasingly firm series of letters. Use "master" letters stored on your word processor, simply typing in each patient's name and address. This system makes collections routine and businesslike, and calls for no physician involvement.

Keeping collections in good shape requires organization, tact, and consistent effort. Establish a comprehensive, written policy, and entrust it to a personable, well-trained staffer. These days, no practice can afford to automatically write off any account.

The contributing authors, Patricia M. Salmon and Edward L. Grab, are consultants with The Health Care Group, a practice management consulting firm in Plymouth Meeting.

SUGGESTED COLLECTION SCHEDULE

1. 45 days after 1st bill: Letter #1—A gentle reminder. Say you haven't heard from patient in response to statements sent: ask whether patient has any questions, inviting them to call if so, and request to hear from them soon.

2. 66 days (three days after the patient should have received the 60 days' bill): Telephone call.

3. 90 days: Letter #2—State payment not received despite statements, letter, and telephone call. Request patient contact you by a specific date about payment.

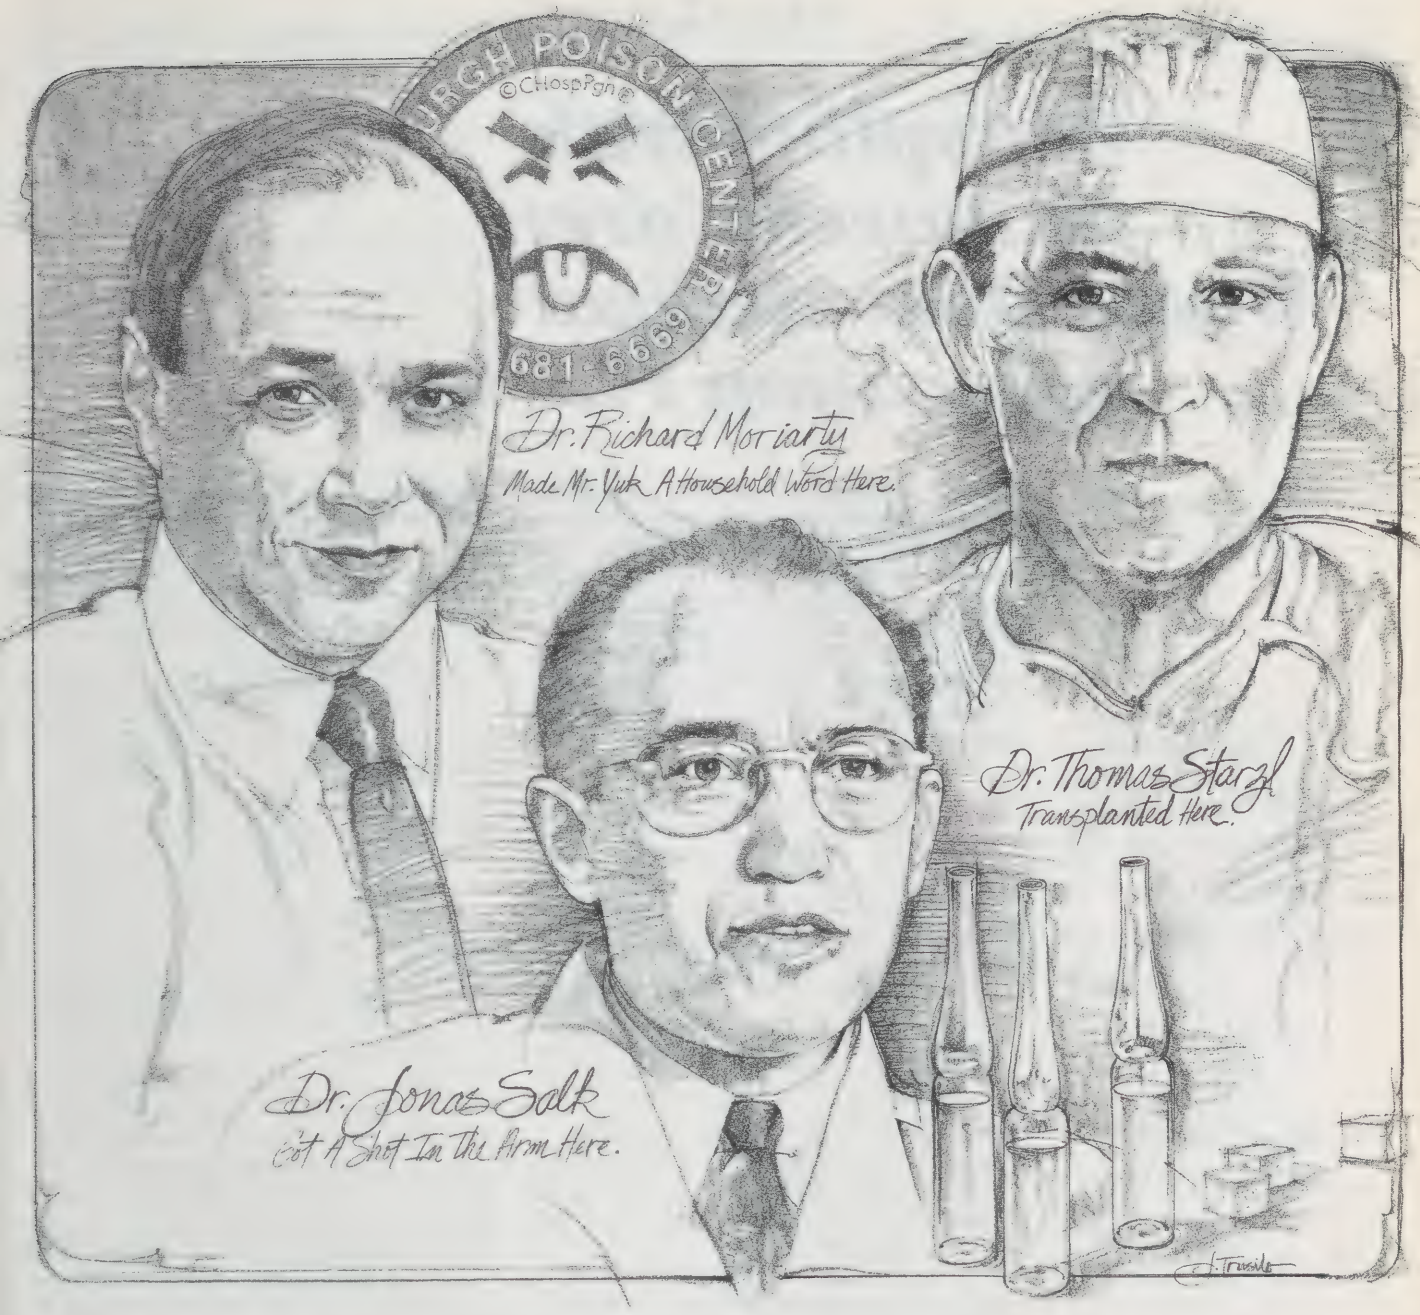
4. 120 days: Letter #3—State account is now three months past due, and, regrettably, must be sent to collection agency if payment not received in 10 days.

5. 125 days: Telephone call (very firm, merely to remind that account is going to collection if payment not received).

6. 135 days: Send to collection agency. Remove account from current file and place in file marked "At Collection."

Schedule for telephone promises

If payment promised by telephone fails to arrive, follow this schedule:



(1) 3 days after promised payment date: Telephone call to remind patient of promise.

(2) 10 days after promised: Letter #4—Remind patient that in your telephone conversation, payment was promised by a date you both agreed on, as the practice record shows, but no payment has been received. Request to hear from patient soon, as they promised.

(3) 30 days after promised: Letter #3 (above).

(4) 35 days after promised: Telephone call (very firm). (Note: If patient makes a second promise, repeat this procedure; however, do not accept a third promise.)

(5) 45 days after promised: Send to collection agency.

Pittsburgh Has Some Positive Side Effects On Doctors.

The kind of side effects that occur when doctors spend some time in Pittsburgh can be really positive. They start developing ideas that lead to the kind of innovations that make medical history. That's one reason why so many medical societies, groups and associations meet here. And the next time you hold a meeting, symposium or convention in Pittsburgh, you'll experience those benefits for yourself.

You'll find first-rate meeting facilities and world-class accommodations at affordable prices. Combined with great ethnic cuisine and activities like exciting performances at Heinz Hall, it leads to astounding results.

To learn more about the positive side effects that we can help make happen during your next event, write to us at Four Gateway Center, Dept. MCP3, Pittsburgh, PA 15222. Or call us toll-free at 1-800-366-0093.

We'll Have An Effect On You.

Grappling With Managed Care: Where Does Medical Education Fit?

John J. Whyte
Michael D. Cantor

While the effects of managed care on access and quality have been extensively debated, the implications of these efforts on medical education have not been widely explored. Because managed care will increasingly impact upon medical education, now is an opportune time to examine its effect and to discuss the need for medical students to be aware of managed care principles.

The primary setting for medical education, the hospital, is changing. In recent years, hospitals have attempted to reduce costs and/or maximize reimbursement by increasing outpatient services. As a result, the patient's principal diagnosis and work-up are frequently performed prior to admission, and much of the recovery takes place after hospital discharge. Such a system not only risks disruption in the continuity of care, but potentially affects medical education. It denies medical students and residents the opportunity to see the full spectrum of illness and instead limits them to treating acute conditions.

A major change in the insurance industry, with subsequent changes for medical education, has been the development of managed care plans. The growth of managed care plans offers a unique opportunity for medical students to broaden their medical education, since such plans offer an ideal setting for students to gain ambulatory care experience. Many health maintenance organizations (HMOs) and managed care plans focus on primary care and prevention, in marked contrast to the tertiary care to which most students are exposed in the hospital. However, the role of such health plans in medical education has been minimal, with the exception of those HMOs either owned by or closely associated with a university hospital. This lack of involvement is due mainly to the interest in containing costs. Most HMOs and managed care plans perceive teaching as a loss of productivity, arguing that medical students and residents slow down the process, thereby increasing costs. Given today's competitive market, few are willing to venture into an area that is not proven to increase revenue or reduce costs. In addition, many HMO physicians have little, if any, interest in teaching.

Despite the common belief that medical education leads to inefficient and costly uses of resources, numerous recent studies challenge this assertion. Buchwald, et al. investigated whether indirect costs are higher early in the training year when house officers might be less efficient—the so-called "July phenomenon."[1] Using analysis of covariance to correct for age, sex, diagnosis-related group, urgency of admission, temporal change, and mortality, they found no differences in length of stay, total charges, or categories of ancillary charges.

A more recent study examined whether medical education increases costs in teaching hospitals by causing longer lengths of stay and greater resource use.[2] After adjusting for severity of illness and demographic characteristics, patients on the teaching services had a shorter length of stay, a lower mean charge, and fewer procedures than for those patients on the non-teaching service.

These studies have important implications; they demonstrate that medical students and residents do not necessarily increase the cost of medical care. As a result, cost-containment attempts aimed at medical education need to be reevaluated, as they may have serious effects.

Given the need for medical students to learn managed care principles and the increasing practice of medicine in managed care and ambulatory settings, medical educators need to provide these experiences. Managed care providers need to reassess the reasons for their lack of involvement in medical education.

Teaching may actually reduce costs and improve the quality of care. The academic environment fosters creative ideas and new approaches to common problems.

The authors are medical students. John Whyte is enrolled in an MD/MPH program between Hahnemann and the Harvard School of Public Health. He serves as vice chair of the State Society's Medical Student Section. Michael Cantor is enrolled in an MD/JD program at the University of Illinois.

Such an environment challenges everyone, not just residents, to improve their clinical skills.

Attempts at cost-containment also have an effect on physician hiring. While current physician hiring is based mainly on residency evaluations, board scores, and letters of recommendation, in the future hiring will hinge on the physician's ability to deliver high-quality care as defined by practice parameters. This concept of "selective contracting," where employers hire physicians based on previous performance and utilization data, is already playing an important role at certain companies.

At U.S. Healthcare (USHC), one of the country's largest HMOs, Hyman Kahn, MD, senior vice president, sees a need for physicians to be aware of managed care principles. He tells newly selected participating physicians that USHC "does not own you, but we want you to practice within the system and know what the rules are."

The current USHC application asks physicians about their previous managed care experience and if they believe in the managed care philosophy. Approximately 25-30 percent of applications are denied annually due to a conflict in philosophy towards patient care.[3]

Robert B. Edmiston, MD, senior vice president for professional affairs at Blue Shield of Pennsylvania, sees managed care and selective contracting as the two most important issues for insurers over the next 10 years. Dr. Edmiston notes that the best way to control costs is to put managed care guidelines in place and to make certain that they are followed. He believes that if insurers can hire only those physicians who already tend to practice within managed care guidelines, it will be easier for insurers to control costs. At the same time, other physicians will be forced to adopt managed care principles if they wish to maintain their patient population. For its BlueChoice Preferred Provider Program, Blue Shield is rejecting approximately 30 percent of physicians who apply. Included in the factors for selection are board certification and the amount of Blue Shield dollars per enrollee that the doctor has billed in the past.

This emphasis on physician behavior as a hiring criterion will, no doubt, continue to increase. Medical students and residents need to be educated early concerning these principles if they wish to maximize their employment opportunities.

The current medical school curriculum must adapt to the changing practice of medicine. Students need to learn about the environment in which health care is delivered. To assume that students can learn the economic, political, ethical, and social issues of health care as a type of on-the-job training is a disservice to all involved.

Students need to be taught how to practice in managed care settings—most likely the future modality of health care delivery. The basic premise of managed care is a good one: coordination of care to limit inefficient and inappropriate medical care. There is nothing inherently superior in a fee-for-service system. Although incentives do exist in managed care settings to reduce the use of services, they also exist in the fee-for-service system to provide unnecessary services. The interest in practice parameters is an attempt to reduce any such incentives/disincentives.

Today's medical students will ultimately be running the medical establishment. Thus, it is important for them to understand managed care as early as possible so they can help transform cost-containment efforts into appropriate, high-quality medical care acceptable to both physician and patient.

"Medical students need to be taught to practice in managed care settings — most likely the future modality of health care delivery."

Learning Generics

David J. Shulkin, MD

The growing use of generic drug substitution may have important implications on quality of care. This study was conducted to determine resident physicians' knowledge of restrictive prescribing policies at the hospitals where they primarily practice.

In May 1991, the Pennsylvania Medical Society Resident Physician Section distributed a questionnaire to physicians-in-training asking about their knowledge of generic substitution policies. A total of 82 questionnaires were distributed to resident physicians at six Pennsylvania teaching hospitals. Seventy-one questionnaires were returned, of which 63 were properly completed and usable (a 77 percent response rate).

A pharmacist at each of the six hospitals was contacted by phone to determine if, in fact, a policy of generic substitution was in effect. Forty-seven percent of resident physicians did not know whether their hospital had policies of generic substitution. All remaining residents believed that such a policy was in existence. There did not appear to be significant differences in residents' responses when stratified by hospital site, type of specialty training, or year of post-graduate training. Results from a phone survey with pharmacists suggested that all six hospitals did indeed have active policies of generic substitution.

The high percent of resident physicians that were unaware of their hospitals' policies on generic substitution is suggestive of poor communication between house staff and the hospital pharmacy. Such a finding is not isolated. Surveys of managed care organizations show that the majority of pharmacies do not notify physicians of substitutions on formularies,[1] therefore making it difficult even for the physician who is aware of the formulary to know what preparations are being dispensed to patients.

Hospital formularies and other administrative interventions have gained momentum in response to the rapid increase in the cost of prescription medications. While these policies are often very effective at reducing utilization,[2] most physicians are opposed to these restrictive policies, both out of concern for the impact on patient care and the challenge to autonomy.[3]

Unfortunately, educational programs which offer an alternative approach to address the efficient use of pharmaceuticals are rare in teaching hospitals.[4] Yet, those academic programs that have initiated education programs have had success in influencing physician prescribing habits by simply providing information on appropriate prescribing behavior.[5,6]

The lack of attention towards prescribing practices in the teaching environment may have both cost and quality implications. Resident physicians have been found to order more expensive drugs than their faculty.[7] In addition, by not devoting attention to presciption practices in our training programs, we may not be addressing the problem of prescription writing errors among house staff. In one study, medication errors were noted in 21 percent of all orders[8]; and in another study, although the error rate was significantly less, it was greatest among those with the least experience: the first-year, postgraduate residents.[9]

Resident physicians, as well as most other doctors, have a deep interest in minimizing the cost of patient medications and a concern about the drug's therapeutic effectiveness. This study shows that many residents were unaware of restrictive policies within their hospitals and therefore were also unlikely to be aware of the specific drug preparation being dispensed.

Improved communication between hospital pharmacies and house staff is needed; and strengthened educational efforts concerning efficient prescribing practices, as well as the therapeutic effectiveness of generic preparations, are warranted.

UNFAVORABLE PROGNOSTIC FACTORS OF STAPHYLOCOCCAL INFECTIVE ENDOCARDITIS: EXPERIENCE IN A COMMUNITY HOSPITAL

James F. Reed, PhD; Charles Gordon, MD; Joanne Harcke

OBJECTIVE: Bacterial endocarditis in the elderly patient is recognized as a potentially life-threatening infection. This study was conducted to compare clinical and laboratory factors in staphylococcal endocarditis patients, and determine whether these factors or a combination of factors are predictive of a fatal outcome.

METHODS: Using specific diagnostic and demographic criteria for infective endocarditis, 48 patients were chosen for comparison. Clinical and laboratory statistics were recorded for each patient, and several methods of analysis were used to examine the data.

RESULTS: In this study the mortality rate was 10.4 percent, which is consistent with similar studies of this nature. Previous publications have identified six risk factors for a fatal outcome including age, known cardiovascular disease, prior hospitalization, neurological symptoms, the platelet count before therapy, and left-sided heart involvement.

CONCLUSION: While S. aureus endocarditis is recognized as a life-threatening disease, and the authors recognize that the power of the study may be limited due to the resticted sample size, evidence of survival of S. aureus septicemia in a community hospital is more favorable than would be expected.

For additional information or a copy of the complete study, contact James Reed III, PhD, at Lehigh Valley Hospital Center Department of Research and Publication Support, (215) 776-8000.

TOBACCO SMOKING IN STATE-OWNED PSYCHIATRIC HOSPITALS: REPORT OF A SURVEY OF PENNSYLVANIA HOSPITALS

Jaan Sidorov, M.D.; Victor Villagra, M.D.

OBJECTIVE: In response to the threats of cigarette smoking, many health care institutions have become smoke-free. However, similar efforts in psychiatric facilities have lagged since smoking is more prevalent among their patients. This survey was conducted to clarify the problem of tobacco usage among psychiatric inpatients.

METHODS: Officials of Pennsylvania's psychiatric hospitals completed a survey related to tobacco usage in their facilities. Respondents were asked to estimate average daily census, the percentage of smokers among their long-term patients, how cigarettes were purchased for patients who smoke, and whether a smoking-cessation program was available.

RESULTS: Ultimately, 100 percent of the officials of Pennsylvania's 14 psychiatric facilities completed the survey. The study confirms a high prevalence of smoking among the inpatients (62 percent). Cigarettes are available to all psychiatric patients across the state who want them, through a number of sources. Only three hospitals offered smoking-cessation programs, one of which was discontinued due to lack of interest.

CONCLUSION: The results indicate that smoking remains a threat to the health of this population, including non-smokers. Since this is the first survey to document information about smoking in this specific population, the authors feel further research is warranted.

For additional information or a complete copy of the study, contact Jaan E. Sidorov, MD, or Victor Villagra, MD, at Geisinger Medical Center Department of General Internal Medicine, (717) 271-6211.

ASPIRATION FOLLOWING ACUTE STROKE: A QUALITY ASSURANCE STUDY

Frederick B. Myers, MD

OBJECTIVE: Swallowing problems following acute strokes historically resolve within three months or result in nonfatal aspiration. In a few cases, however, aspiration pneumonia can occur leading to death. This study was conducted to determine signs, symptoms, and preventative treatments of aspiration pneumonia.

METHODS: All cerebrovascular accident (CVA) discharges over a five-month period were surveyed by discharge diagnosis using software and the personnel of a quality assurance department. Dishcarged CVAs without diagnosed pneumonia were reviewed for fever, and those with a fever were reviewed to determine if aspiration pneumonia was considered. Further comparison occurred to determine the effectiveness of using a plain chest x-ray versus videofluoroscopy in distiguishing aspiration.

RESULTS: Of 137 CVA discharges, 54 cases with fever were reviewed for aspiration pneumonia. Six percent of patients who developed fever after CVA were checked for aspiration pneumonia using a repeat chest x-ray, and none were evaluated for aspiration using videofluoroscopy. Further chart review revealed that aspiration was suspect due to noted secretion/swallowing problems. The mortality rate among the 54 patients was high (7.7 percent), but highest among those who had clinically developed secretion problems (46 percent). Also, the presence of the clinical triad of fever, chest pain, and cough separated patients with a high death rate from others.

CONCLUSION: Aspiration following stroke has been recognized as common and underestimated by clinical observation. Videofluoroscopy is superior and identifies a 50 percent chance of aspiration. At greatest risk are those patients with combined cerebral-brainstem strokes. The observation of dysphonia and its correlation with aspiration has not yet been found to exist. A multi-service, educational effort is needed to enhance medical and nursing staff response to this phenomenon.

For additional information or a copy of the complete study, contact Frederick B. Myers, MD, at (717) 288-8389.

ONLY ONE H_2-ANTAGONIST HEALS REFLUX ESOPHAGITIS AT DUODENAL ULCER DOSAGE. ONLY ONE.

Of all the H_2-receptor antagonists, only Axid heals and relieves reflux esophagitis at its standard duodenal ulcer dosage. Axid, **150** mg b.i.d., relieves heartburn in **86%** of patients after one day and **93%** after one week.[1]

AXID®
nizatidine
150 mg b.i.d.

ACID TESTED. PATIENT PROVEN.

1. Data on file, Lilly Research Laboratories. *See accompanying page for prescribing information.* ©1991, ELI LILLY AND COMPANY NZ-2947-B-249304

AXID®
nizatidine capsules

Brief Summary. Consult the package insert for complete prescribing information.

Indications and Usage: 1. *Active duodenal ulcer*—for up to 8 weeks of treatment at a dosage of 300 mg h.s. or 150 mg b.i.d. Most patients heal within 4 weeks.

2. *Maintenance therapy*—for healed duodenal ulcer patients at a dosage of 150 mg h.s. at bedtime. The consequences of therapy with Axid for longer than 1 year are not known.

3. *Gastroesophageal reflux disease (GERD)*—for up to 12 weeks of treatment of endoscopically diagnosed esophagitis, including erosive and ulcerative esophagitis, and associated heartburn at a dosage of 150 mg b.i.d.

Contraindication: Known hypersensitivity to the drug. Because cross sensitivity in this class of compounds has been observed, H_2-receptor antagonists, including Axid, should not be administered to patients with a history of hypersensitivity to other H_2-receptor antagonists.

Precautions: *General*—1. Symptomatic response to nizatidine therapy does not preclude the presence of gastric malignancy.

2. Dosage should be reduced in patients with moderate to severe renal insufficiency.

3. In patients with normal renal function and uncomplicated hepatic dysfunction, the disposition of nizatidine is similar to that in normal subjects.

Laboratory Tests—False-positive tests for urobilinogen with Multistix® may occur during therapy.

Drug Interactions—No interactions have been observed with theophylline, chlordiazepoxide, lorazepam, lidocaine, phenytoin, and warfarin. Axid does not inhibit the cytochrome P-450 enzyme system; therefore, drug interactions mediated by inhibition of hepatic metabolism are not expected to occur. In patients given very high doses (3,900 mg) of aspirin daily, increased serum salicylate levels were seen when nizatidine, 150 mg b.i.d., was administered concurrently.

Carcinogenesis, Mutagenesis, Impairment of Fertility—A 2-year oral carcinogenicity study in rats with doses as high as 500 mg/kg/day (about 80 times the recommended daily therapeutic dose) showed no evidence of a carcinogenic effect. There was a dose-related increase in the density of enterochromaffin-like (ECL) cells in the gastric oxyntic mucosa. In a 2-year study in mice, there was no evidence of a carcinogenic effect in male mice, although hyperplastic nodules of the liver were increased in the high-dose males as compared with placebo. Female mice given the high dose of Axid (2,000 mg/kg/day, about 330 times the human dose) showed marginally statistically significant increases in hepatic carcinoma and hepatic nodular hyperplasia with no numerical increase seen in any of the other dose groups.The rate of hepatic carcinoma in the high-dose animals was within the historical control limits seen for the strain of mice used. The female mice were given a dose larger than the maximum tolerated dose, as indicated by excessive (30%) weight decrement as compared with concurrent controls and evidence of mild liver injury (transaminase elevations). The occurrence of a marginal finding at high dose only in animals given an excessive and somewhat hepatotoxic dose, with no evidence of a carcinogenic effect in rats, male mice, and female mice (given up to 360 mg/kg/day, about 60 times the human dose), and a negative mutagenicity battery are not considered evidence of a carcinogenic potential for Axid.

Axid was not mutagenic in a battery of tests performed to evaluate its potential genetic toxicity, including bacterial mutation tests, unscheduled DNA synthesis, sister chromatid exchange, mouse lymphoma assay, chromosome aberration tests, and a micronucleus test.

In a 2-generation, perinatal and postnatal fertility study in rats, doses of nizatidine up to 650 mg/kg/day produced no adverse effects on the reproductive performance of parental animals or their progeny.

Pregnancy—Teratogenic Effects—Pregnancy Category C—Oral reproduction studies in rats at doses up to 300 times the human dose and in Dutch Belted rabbits at doses up to 55 times the human dose revealed no evidence of impaired fertility or teratogenic effect; but, at a dose equivalent to 300 times the human dose, treated rabbits had abortions, decreased number of live fetuses, and depressed fetal weights. On intravenous administration to pregnant New Zealand White rabbits, nizatidine at 20 mg/kg produced cardiac enlargement, coarctation of the aortic arch, and cutaneous edema in 1 fetus, and at 50 mg/kg, it produced ventricular anomaly, distended abdomen, spina bifida, hydrocephaly, and enlarged heart in 1 fetus. There are, however, no adequate and well-controlled studies in pregnant women. It is also not known whether nizatidine can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity. Nizatidine should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus.

Nursing Mothers—Studies in lactating women have shown that 0.1% of an oral dose is secreted in human milk in proportion to plasma concentrations. Because of growth depression in pups reared by treated lactating rats, a decision should be made whether to discontinue nursing or the drug, taking into account the importance of the drug to the mother.

Pediatric Use—Safety and effectiveness in children have not been established.

Use in Elderly Patients—Healing rates in elderly patients were similar to those in younger age groups as were the rates of adverse events and laboratory test abnormalities. Age alone may not be an important factor in the disposition of nizatidine. Elderly patients may have reduced renal function.

Adverse Reactions: Worldwide, controlled clinical trials included over 6,000 patients given nizatidine in studies of varying durations. Placebo-controlled trials in the United States and Canada included over 2,600 patients given nizatidine and over 1,700 given placebo. Among the adverse events in these placebo-controlled trials, only anemia (0.2% vs 0%) and urticaria (0.5% vs 0.1%) were significantly more common in the nizatidine group. Of the adverse events that occurred at a frequency of 1% or more, there was no statistically significant difference between Axid and placebo in the incidence of any of these events (see package insert for complete information).

A variety of less common events were also reported; it was not possible to determine whether these were caused by nizatidine.

Hepatic—Hepatocellular injury (elevated liver enzyme tests or alkaline phosphatase) possibly or probably related to nizatidine occurred in some patients. In some cases, there was marked elevation (>500 IU/L) in SGOT or SGPT and, in a single instance, SGPT was >2,000 IU/L. The incidence of elevated liver enzymes overall and elevations of up to 3 times the upper limit of normal, however, did not significantly differ from that in placebo patients. All abnormalities were reversible after discontinuation of Axid. Since market introduction, hepatitis and jaundice have been reported. Rare cases of cholestatic or mixed hepatocellular and cholestatic injury with jaundice have been reported with reversal of the abnormalities after discontinuation of Axid

Cardiovascular—In clinical pharmacology studies, short episodes of asymptomatic ventricular tachycardia occurred in 2 individuals administered Axid and in 3 untreated subjects.

CNS—Rare cases of reversible mental confusion have been reported.

Endocrine—Clinical pharmacology studies and controlled clinical trials showed no evidence of antiandrogenic activity due to nizatidine. Impotence and decreased libido were reported with similar frequency by patients on nizatidine and those on placebo. Gynecomastia has been reported rarely.

Hematologic—Anemia was reported significantly more frequently in nizatidine than in placebo-treated patients. Fatal thrombocytopenia was reported in a patient treated with nizatidine and another H_2-receptor antagonist. This patient had previously experienced thrombocytopenia while taking other drugs. Rare cases of thrombocytopenic purpura have been reported.

Integumental—Urticaria was reported significantly more frequently in nizatidine- than in placebo-treated patients. Rash and exfoliative dermatitis were also reported.

Hypersensitivity—As with other H_2-receptor antagonists, rare cases of anaphylaxis following nizatidine administration have been reported. Rare episodes of hypersensitivity reactions (eg, bronchospasm, laryngeal edema, rash, and eosinophilia) have been reported.

Other—Hyperuricemia unassociated with gout or nephrolithiasis was reported. Eosinophilia, fever, and nausea related to nizatidine have been reported.

Overdosage: Overdoses of Axid have been reported rarely. If overdosage occurs, activated charcoal, emesis, or lavage should be considered along with clinical monitoring and supportive therapy. The ability of hemodialysis to remove nizatidine from the body has not been conclusively demonstrated; however, due to its large volume of distribution, nizatidine is not expected to be efficiently removed from the body by this method.

STATE SOCIETY OFFERS SERIES OF MEDICARE REFORM PROGRAMS

The implementation of the new Medicare payment reform regulations has triggered questions from physicians across the nation and in the Commonwealth. In response, the State Society has developed a series of educational programs.

To kick off the series, leaders of the State Society, county and specialty societies, and hospital medical staffs convened in Harrisburg on December 5, 1991, to be briefed on key elements of the final payment reform regulations. State Society staff discussed regulatory, legislative, and technical aspects of the reform and the resource based relative value scale (RBRVS) system, upon which it is based.

Representatives of Pennsylvania Blue Shield updated the leadership on the new evaluation and management (E/M or visit) codes (see Medical Economics on page 16) and other coding/payment policy changes. An extensive question-and-answer session followed. Based on positive feedback from the leadership meeting, regional meetings scheduled throughout January for all Pennsylvania physicians will feature and/or expand on many of the above issues.

Also as part of the series of educational programs, the Society is offering seminars for physicians' office personnel. The following is a tentative list of Winter/Spring 1992 programs, dates, and locations:

How to Master the New CPT Codes
January 28—Pittsburgh
January 29—Harrisburg
January 30—King of Prussia
February 4—Lehigh Valley
February 5—Erie
February 6—State College

How to Improve Your CPT and ICD-9 Coding Skills
March 17—Pittsburgh
March 18—Allentown
March 19—King of Prussia

How to Appeal Denied Claims
March 18—Pittsburgh
March 19—Allentown
March 20—King of Prussia

Medical Office Management Institute
April 21-24—Pittsburgh
April 28-May 1—King of Prussia

How to Run a More Profitable Place
May 5—Pittsburgh
May 6—Harrisburg
May 7—King of Prussia

Fee Analysis/Claims Analysis
May 12—Pittsburgh
May 13—Erie
May 14—Scranton
May 19—Harrisburg
May 20—Allentown
May 21—King of Prussia

Registration fees are discounted for office personnel employed by Pennsylvania Medical Society members. For specific information or to register by credit card, call the State Society's Department of Physician Services at 1-800-228-7823 or (717) 558-7750.

AMA PRIORITIZES 1992 ACTIVITIES

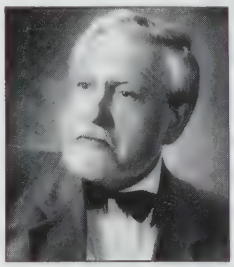
The American Medical Association (AMA) Board of Trustees has released its *1992 Plan and Budget*, which outlines the objectives and strategies the AMA will pursue during the next three years.

The six major issues in the plan include three strategic health policy issues and three strategic support issues:

- *Strategic health policy issues:* patient/physician advocacy, professionalism, and health of the public; and
- *Strategic support issues:* communications, membership, and federation unity.

Both areas cover a variety of more specific issues related to payment, liability, review, reform, and standards.

PHILADELPHIA SOCIETY HONORS PHYSICIANS



The Philadelphia County Medical Society (PCMS) honored outstanding members of Philadelphia's medical community during its annual "Awards Night" in November 1991.

Dr. Weiss

The highest honor of the evening, the Strittmatter Medal, was presented to William Weiss, MD, for his devotion, influence, and outstanding contribution to Philadelphia medicine. Dr. Weiss served as director of the Division of Occupational Medicine at Hahnemann before retiring as emeritus professor of medicine. He is respected for his writing and editing contributions to medicine, which include serving as a member of the editorial board for *Archives of Environmental Health* for almost two decades and as an editor of *Philadelphia Medicine*.

The Cristol Award for contributions to the county society's educational, scientific, and charitable goals was presented to Philip E. Ingaglio, MD, an attending physician at Saint Agnes Medical Center and chair of its Department of Family Medicine. Dr. Ingaglio has been an active and visible member of organized medicine on the county, state, and national levels since 1956.

Dr. Ingaglio

Several other physicians and community members were also honored:

- Vincent J. Zarro, MD, director of the Division of Clinical Pharmacology at Hahnemann, received the C. Nelson Davis Award for excellence in research and service devoted to educating physicians regarding addictive disorders afflicting physicians.
- Alma Dea Morani, MD, emerita professor of surgery at the Medical College of Pennsylvania, received the Krasnoff Award for the Practitioner of the Year for dedication in the area of patient care and community service.
- The Childbirth Education Association of Greater Philadelphia, which helps families be more active, informed, and aware during their childbearing years and beyond, received a Benjamin Rush Award for outstanding voluntary contributions to the health and welfare of the people of Philadelphia County.
- Max Silverstein, DSW, ACSW, emeritus professor of social work at the University of Pennsylvania, also received a Benjamin Rush Award for his volunteer contribution to programs and problems of the seriously chronically mentally ill.
- Marcia Meckler, MD, a practicing psychiatrist in several

national locum tenens positions, received the Kenneth Appel Award presented to the author who submits the best paper on clinical psychiatry relating to an experience in therapy or in research. Dr. Meckler was honored for her paper, "Eminent Care," which tells the story of early modern psychiatry, as seen through the illness and treatment of one man at one institution.

• William Roy Smythe, MD, a third-year surgical resident and assistant instructor in surgery at the University of Pennsylvania, received the Humaneness in Medicine Award for his technical surgical abilities and his compassion for patients.

• Twenty-seven Philadelphia physicians were honored with recognition awards for 50 years of medical service to the community.

ORTHOPEDIC SOCIETY ELECTS NEW PRESIDENT

The Pennsylvania Orthopedic Society elected Thomas H. Malin, MD, Camp Hill, as president for 1992. He will serve a one-year term.

Dr. Malin

Also elected to positions of the Orthopedic Society are: Arnold T. Berman, MD, Philadelphia, first vice president; Harry E. Rubash, MD, Pittsburgh, second vice president; Patrick B. Respet, MD, Allentown, secretary; and E. Michael Okin, MD, Philadelphia, treasurer.

AMA INTRODUCES NEW CONSUMER MAGAZINE

The American Medical Association (AMA) announced its collaboration with *Good Housekeeping* to produce the prototype of a new magazine called *Living Well*. Devoted to health topics, the new magazine will preview as a section in the March 1992 issue of *Good Housekeeping*, and then will appear as a stand-alone magazine on the newsstands in mid-March.

Living Well will provide readers with medical news in a "friendly, family doctor format," according to an AMA news release. It will feature interactive advice columns, essays by medical specialists, case histories, and in-depth features from leading science and health writers.

HARVARD, PENN STATE ANNOUNCE PROGRAM

A new professional development program, designed for leaders in continuing professional education, will be launched at Harvard University, March 22-27, 1992.

Co-sponsored by Harvard and Penn State, the "Leadership Institute for Continuing Professional Education" is a five-day residential program with a dual focus. Presentations will address 1) ways to improve programs, services, and delivery; and 2) ways to impact positively on professionals' learning and performance.

Much of the curriculum will be based on the Harvard case method, and the development of new curriculum materials will be underwritten by the W.K. Kellogg Foundation. For additional information, call Patricia Teti at (617) 495-3572.

MCMS PART OF DRUG/ ALCOHOL EDUCATION

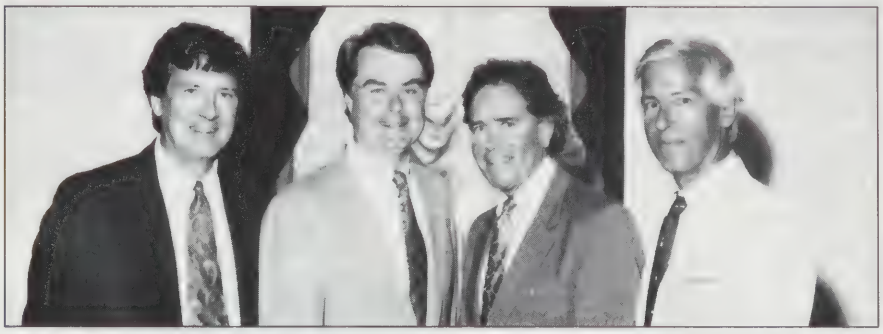
The Montgomery County Medical Society (MCMS) in the past year

Is Your Practice Ready for Major Medicare Payment Reform?

How will RBRVS Affect Your Practice's Income?

If you don't know or are not sure, now is the time to find out. *LEADER Physician Services, Inc.* can help you evaluate the impact that Medicare-based payment reform will have on your practice.

Medicare payment reform, called the **Resource-Based Relative Value System (RBRVS)** will result in a fundamental change in the way medical services are reimbursed. When will it go into effect? Officially, phase-in of RBRVS is scheduled to begin January 1, 1992. The impact on your practice will vary depending on the mix of services provided, your geographic locality, and pre-RBRVS allowances.



LEADER Physician Services is organized to provide quality account management services and systems . . . for billing and collections, in-house operations, practice management consulting and reimbursement review . . . for community and hospital based medical practices. The bottom line is to maximize your first party collections and third party reimbursement, that is, your cash flow. Its a goal we can confidently speak of for we are a proven resource in quality physician services.

Leader provides quality physician services so that you can provide quality patient care.

Leader Physician Services, Inc.
1550 Valley Center Parkway, Suite 180
Bethlehem, PA 18017 ■ (800) 360-6000

A Partner in Improving the
Financial Health and Growth of
Your Medical Practice

The Montgomery County Medical Society (MCMS) invited county legislators to the first annual awards dinner of the County's Drug Awareness Coalition. Pictured (L-R) are: John E. Devenney, MD, MCMS president; The Honorable Joseph M. Gladeck Jr., 61st District representative; and William H. Mahood, MD, and Nicholas R. Rorick, MD, MCMS board members.

participated in several drug and alcohol education efforts.

As a member of the County's Drug Awareness Coalition—comprised of professionals and representatives of education, business, and labor—the county society rallied community, business, and labor groups to support and enhance successful programs already in place for youth to combat drug and alcohol abuse. Programs included: "Help Kids to Say No to Drugs," a full-day seminar for teachers, counselors, and parents; an awards dinner held to recognize three successful neighborhood drug/alcohol programs and distribute grants in support of the programs; a speakers bureau; fund-raising efforts; and an anti-drug public service advertising campaign.

ACMS SUPPORTS OUTREACH PROJECT

The Allegheny County Medical Society (ACMS) this fall lent its expertise to the *Breast Test*, a community outreach project funded by the Jewish Healthcare Foundation in Pittsburgh and produced by the National Outreach Center of QED Communications based in Oakland.

The *Breast Test*, a live television program on breast cancer, mammography, and self-examination, emphasized the need for early cancer detection. During the program, viewers were invited to call with questions. ACMS physicians, nurses, nurse practitioners, and health care management professionals answered the calls.

The one-hour program was interspliced with live interviews and video clips on breast exams, and although the program aired from 10:00-11:00 p.m., the telephones continued ringing until midnight. ACMS President Stanley M. Marks, MD, and his office manager, Karen Buzza, left the studio after midnight with more than 50 call-back requests in hand.

QED's National Media Outreach Center hopes to replicate the Pittsburgh-based pilot project with a national program for broadcast on the Public Broadcasting System (PBS).

Pittsburgh radio reporter Elaine Effort interviewed ACMS President Stanley M. Marks, MD, about breast cancer detection and treatment during the *Breast Test*, a pilot community outreach project.

AGS RELEASES REVISED *SYLLABUS*

The American Geriatrics Society (AGS) has released an expanded edition of *Geriatrics Review Syllabus: A Core Curriculum in Geriatric Medicine (GRS)*. AGS developed the program in clinical geriatrics to bring practicing physicians up-to-date on the practicalities of caring for older adults.

For more information or to request a review copy, call Patricia Miller at (212) 308-1414.

Quality, cost, access — a delicate balance.

1992 Leadership Conference

Pennsylvania Medical Society

April 14-15

Hershey Lodge and Convention Center
Hershey

Watch for details in next month's PENNSYLVANIA MEDICINE . . .

With Princeton, you're in good company.

More than 19,000 medical and health care professionals have chosen Princeton Insurance Company for their professional liability insurance coverage. Here are some reasons why:

• **A solid track record.** Princeton has nearly a decade of experience providing professional liability coverage to physicians, and A.M. Best has ranked us (with our parent company) among the 20 largest medical malpractice insurers nationwide since 1983.

• **Financial strength.** Our loss reserves are carried at full value, not discounted in the hope of earning sufficient interest income to pay claims. We maintain a high quality/low risk investment portfolio, with no junk bonds, no common stock and no real estate speculation. And Standard & Poor's has given us a claims-paying ability rating of "A."

• **Coverage options.** Tail coverage is included in the purchase price of our innovative *Occurrence Plus* policy. A standard claims-made policy is also available, and we offer excess liability coverage (limits up to $5 million) to Pennsylvania physicians regardless of which company writes the primary coverage.

• **Strong defense against claims.** Of the Princeton-managed cases disposed of by the courts in 1990, more than 90 percent were resolved in the policyholder's favor.

It may be easier than you think to change insurance companies. Call today to find out more or return the coupon to receive a copy of the video program, "It's Princeton's Specialty."

Princeton Insurance Company

142ND ANNUAL MEETING OF THE HOUSE OF DELEGATES

Opening Session
October 18, 1991

Jonathan E. Rhoads Jr., MD, Speaker of the House, called the opening session of the House of Delegates to order at 10:05 a.m. in the Exhibit Center of the Adam's Mark Hotel, Philadelphia.

Invocation

The Reverend Stanley Johnson, chaplain at the University of Pennsylvania, offered the invocation.

Pledge of Allegiance

Dr. Rhoads led the House of Delegates in the Pledge of Allegiance.

Credentials Committee

Charles D. Tourtellotte, MD, chairman, presented the following report:

Mr. Speaker, there is a quorum of 190 delegates registered and in attendance today.

Committee on Rules

Presented by:
James L. Cristol, MD

Mr. Speaker, members of the House of Delegates, the Committee on Rules met and reviewed Standing Rules 1, 2, 3, 4, 5, 6, 8, 9, and 10 of the House of Delegates of the Pennsylvania Medical Society as published in the 1991 Official Reports Book. (Standing Rule No. 7 will be addressed in the second report of the Rules Committee.)

Mr. Speaker, the Committee on Rules recommends that Standing Rules 1, 2, 3, 4, 5, 6, 8, 9, and 10 be adopted.

The House adopted Standing Rules 1, 2, 3, 4, 5, 6, 8, 9, and 10.

Approval of proceedings

The proceedings of the 141st Annual Business Meeting of the Pennsylvania Medical Society, held in Hershey October 19-21, 1991, and found on pages 55-79 in the January 1991 issue of PENNSYLVANIA MEDICINE, were approved.

Speaker's announcements

Dr. Rhoads announced that delegates should be aware of Resolution 72-6 prohibiting smoking in the House of Delegates and reference committee hearings.

Dr. Rhoads also announced that anyone encountering a medical emergency should dial 0 on the hotel phones and assistance would be provided.

Dr. Rhoads called to the attention of the House of Delegates the voting demonstration booth set up in the lobby to familiarize the delegates with the computer voting system instituted at the 1990 annual meeting.

Address of the president

Gordon K. MacLeod, MD, Allegheny County, addressed the House, during which he made the following recommendation:

1. Efforts be pursued to focus the decision-making process in the presidency, giving full consideration to upgrading the management of legislative and judicial activities of the Society (Reference Committee F).

Address of the President Elect

Robert N. Moyers, MD, Crawford County, addressed the House, during which he made the following recommendations:

1. The Society investigate the advisability of assisting local societies in establishing a patient grievance/mediation system, working with the American Medical Association and with the Federal Trade Commission to redefine that agency's guidelines (referred to Reference Committee F).

2a. Continue to pursue the Society's indigent care plan, working to implement portions of the plan as practical (referred to Reference Committee C).

2b. The Society continue activity supporting the AMA's Health Access America (referred to Reference Committee E).

2c. The Society strengthen efforts to reverse the "doctor drain" from rural and inner-city areas of the Commonwealth (referred to Reference Committee B).

2d. The Society develop a specific plan to be far more active in the public health arena, a four-step public health plan for the Society to follow for the next several years (referred to Reference Committee G).

3. The Society consider creating an innovative plan to strengthen professionalism (referred to Reference Committee F).

4a. Using the Council on Membership and HMSS Governing Council to establish specific goals and a recruiting plan to focus on non-members;

b. A peer-to-peer, "a member-to-member" plan;

c. Special membership programs at the county level;

d. A challenge to county societies to set specific recruitment goals for 1992. I suggest a two percent increase in principal dues-paying members is reasonable;

e. Special recruiting plans for women and minorities;

f. Incentive plans to sign up members, such as some form of gift, dues reduction, or special recognition; and

g. An innovative plan to reach other groups of non-members in medical school faculties, large group practices, managed care groups, etc. (all referred to Reference Committee F).

5. Establishment of a joint committee with the American Association of Retired Persons as agreed upon at a recent meeting of the AARP State Legislative Committee (referred to Reference Committee D).

6. Consideration of establishing an ongoing program to invite all Pennsylvania Congressional legislative assistants, whose responsibilities include health care, to group educational meetings at appropriate intervals (referred to Reference Committee D).

7a. Development of appropriate educational, informational, and reference capabilities to help members prepare for and deal with RBRVS and the Medicare fee schedule as well as coding changes;

b. Strengthen efforts to achieve use of HCFA form 1500 for all claims; and

c. Continue to pursue legislation mandating reasonable payment timeframes for issues such as coding changes (all referred to Reference Committee E).

d. Pursuing procedural safeguards in the PRO process (referred to Reference Committee C).

Remarks of AMA representative

John H. Hobart, MD, chairman of the Board of Trustees, introduced John J. Ring, MD, president of the American Medical Association, who briefly addressed the House.

Miscellaneous

It was moved and seconded from the floor of the House to adopt Resolution 91-8: Honoring the American Lung Association of Pennsylvania.

RESOLVED, That the Pennsylvania Medical Society applaud the American Lung Association of Pennsylvania on its 100th anniversary and recognize the accomplishments of the American Lung Association of Pennsylvania in its century of service to Pennsylvania.

The House adopted Resolution 91-8.

Official Reports Book

The *Official Reports Book*, containing the 1991 annual reports and Resolutions 91-1 through 91-47, was accepted as business of the House.

Please refer to the index of these proceedings for the subject, author, introducer, and referral of all resolutions.

Referral of business items

Howard A. Richter, MD, vice speaker of the House, announced that Board Report L had been re-referred from Reference Committee E to C.

Dr. Richter also announced that Resolution 91-12 was inadvertently collated in with Reference Committee B resolutions and should be placed with Reference Committee F resolutions; Resolutions 91-25, 91-29, and 91-38, Board Report S, and the attachment to Board Report AA had been revised; and Resolution 91-46 and late Resolution 91-48 had been withdrawn.

Additional business items

Dr. Richter announced that the

following additional reports had been received for consideration: Board Report II, Board Report AAA, and Board Report BBB.

Remarks by Finance Committee

John W. Lawrence, MD, chairman of the Finance Committee, presented brief remarks. A detailed report on the 1992 budget was presented by Dr. Lawrence at the hearing of Reference Committee F.

Presentation of memorial resolution

George F. Buerger Jr., MD, Allegheny County, presented a eulogy and the following memorial resolution for the late Walter M. Greissinger, MD:

WHEREAS, Walter M. Greissinger, MD, passed away suddenly and unexpectedly on June 14, 1991; and

WHEREAS, Dr. Greissinger served the profession of medicine long and well, compassionately caring for his patients and vigorously representing his colleagues in the public eye; and

WHEREAS, At the time of his death, he was serving as the trustee for the Tenth District; therefore be it

RESOLVED, That the Pennsylvania Medical Society extend its deepest sympathy to Dr. Greissinger's wife, Terri, and to his children, Paul, Karl, Michelle, Kimberly, and Lisa, and commend Dr. Greissinger's leadership and timeless work on behalf of his patients and profession.

The House of Delegates adopted the memorial resolution for Walter M. Greissinger, MD.

Remarks by chairman, Pennsylvania Delegation to the AMA

Joseph N. Demko, MD, chairman of the Pennsylvania Delegation to the AMA, briefly addressed the House.

Late Resolutions

Late Resolution 91-49 was received after the mailing of the *Official Reports Book* and required a two-thirds vote to become business of the House. Standing Rule 2, revised by the 1981 House of Delegates, requires that the Rules Committee review each late resolution and make a recommendation to the House as to whether it should be accepted or rejected as business of the House. Standing Rule 2, as revised by the 1987 House of Delegates, states that resolutions emanating from a business meeting of an officially recognized section of the Pennsylvania Medical Society may be presented for consideration by the House of Delegates at any time before the close of business at the opening session of the House and therefore does not require review by the Rules Committee. Resolutions 91-50 through 91-65 were submitted by special sections. In addition, Standing Rule 2, as revised by the 1990 House of Delegates, states that any resolution submitted after the Rules Committee has convened will require a three-fourths favorable vote to become business of the House.

Committee on Rules

Presented by:
James L. Harrison, MD

Mr. Speaker, the Committee on Rules has considered all of the items in the index.

RESOLUTION 91-7: Bullet Balloting

RESOLVED, That henceforth, "bulleting balloting" be eliminated by the House of Delegates of the Pennsylvania Medical Society for all elections.

Mr. Speaker, your Committee on Rules recommends that Resolution 91-7 be adopted and that Standing Rule 7 should read as follows:

The bullet ballot will, henceforth, be discontinued. It is required that if there are multiple candidates for positions of equal rank, a vote for every position must be cast. Failure to vote for all positions will invalidate the ballot.

Resolution 91-7 recommends that the bullet ballot be discontinued. The Rules

Access to health care was one of the many issues debated during hearings of the Reference Committee on Education and Science, chaired by Abram M. Hostetter, MD.

Committee heard considerable testimony on this issue. The issues surrounding the bullet ballot center on (1) requiring delegates to vote for more candidates than they wish to, and (2) compelling delegates to vote for candidates who are relatively unknown to them.

It is the opinion of the Rules Committee that candidates with good qualifications and vast experience have not been elected as a result of the bullet ballot. The committee believes this is not in the best interest of the Society and minimizes the influence of the Society at the AMA House of Delegates. These factors outweigh other concerns.

With regard to delegates' concerns about not knowing all candidates, the committee believes adequate information about nominees is available through printed materials and from the "Meet the Candidates Breakfast."

It was moved and seconded from the floor that the House vote on whether to retain the bullet ballot. The House approved the motion. The House rejected by two-thirds vote the recommendation that the bullet ballot be retained.

RESOLUTION 91-40: Bullet Ballot

RESOLVED, That the Pennsylvania Medical Society House of Delegates charge an ad hoc committee with the responsibility to study adoption of the following Standing Rule:

Standing Rule No. 11
Election rules for offices requiring election of multiple individuals

When a single election ballot contains multiple candidates who are competing to be among a group of people elected to a given position, the previous Standing Rules will be superseded by the following procedure: **The voter will be asked to RANK his/her choices**. When the votes are tabulated, the individual ranked highest on each ballot will receive a number of points equal to the total number of people who are to be elected to this position; the individual ranked next will receive one fewer point, the next will receive two fewer, and so forth either until the voter has ceased to record choices or until a full complement of individuals has been chosen. The individuals with the highest point-totals will be viewed as the winners of the election. In the case of a tie, the position will be awarded to the individual with the greater number of first-place votes or (were the number of first-place votes to have been a tie) to the individual with the greater number of second-place votes, and so forth.

Mr. Speaker, your Committee on Rules recommends that Resolution 91-40 be adopted.

This resolution calls for a study of a voting system which would allow delegates to rank selected candidates. The committee recommends that this resolution be used as a vehicle to study the entire election process including approval voting which is used by many scientific organizations.

The House adopted Resolution 91-40.

RESOLUTION 91-49: Pennsylvania Medical Society Position on Biomedical Research and Testing

Mr. Speaker, your reference committee recommends that Resolution 91-49 be accepted as business of the House.

The House accepted as business Resolution 91-49.

Speaker's announcements

Dr. Richter called to the attention of the House of Delegates the State Society ties and golf shirts available for purchase from The Educational and Scientific Trust at the display in the Exhibit Center Lobby.

Address of Pennsylvania Medical Society Auxiliary president

Dr. Richter introduced Mrs. John Modarress, president of the State Society Auxiliary. Mrs. Modarress briefly addressed the House, and her remarks were referred to Reference Committee F.

Dr. Rhoads introduced Mrs. Gary F.

Strebel, AMA auxiliary president, who also briefly addressed the House.

Reference Committees

Reference committees for the 1991 Annual Business Meeting of the House of Delegates are listed below:

Reference Committee A (Bylaws): James L. Cristol, MD (Philadelphia), chairman; Mary B. Allan, MD (Chester); Ronald J. Clearfield, MD (Radiology); Lewis T. Patterson, MD (Dauphin); Frank J. Santora Jr., MD (Allegheny); and Jeffrey D. Anderson, MD (Resident Physician Section), alternate.

Reference Committee B (Education and Science): Abram M. Hostetter, MD (Lebanon), chairman; Doris G. Bartuska, MD (Philadelphia); Richard T. Bell, MD (Pulmonary Diseases); Mary J. Kinosian, MD (Jefferson); Phillip R. Levine, MD (Allegheny); and Mark S. Friedlander, MD (Resident Physician Section), alternate.

Reference Committee C (Facilities/Peer Review): Alan H. Schragger, MD (Lehigh), chairman; Robert P. Gannon, MD (Allegheny); Stanley P. Mayers Jr., MD (Centre); Gladys M. Miller, MD (Philadelphia); and Mandell J. Much, DO (Delaware).

Reference Committee D (Legislation/Professional Liability): Carol E. Rose, MD (Allegheny), chairman; Andre C. Blanzaco, MD (Philadelphia); David L. Cohen, MD (York); S. Victor King, MD (Blair); Gary J. Levin, MD (Chester); and Daniel S. Henriksen, MD (Resident Physician Section), alternate.

Reference Committee E (Medical Economics): Donald H. Smith, MD (Northampton), chairman; Wilma C. Light, MD (Westmoreland); Leland F. Patterson, MD (Dauphin); Robert B. Sklaroff, MD (Philadelphia); Richard R. Soricelli, MD (Delaware); and Thomas F. Freenock Jr., MD (Resident Physician Section), alternate.

Reference Committee F (Membership/Reports of Officers): Edward J. Resnick, MD (Philadelphia), chairman; Augusto N. Delerme, MD (Blair); John Helwig Jr., MD (Philadelphia); Edward V. Twiggar II, MD (Northumberland); Anne N. Woods, MD (York); and Surendra V. Pawar, MD (Allegheny), alternate.

Reference Committee G (Public Health): Howard L. Carbaugh, MD (Lehigh), chairman; Elias Abrutyn, MD (Philadelphia); Carl A. Frankel, MD (Young Physicians Section); J. Campbell Martin, MD (Columbia); Barbara A. Shelton, MD (Philadelphia); and Ernest M. Wood, MD (Lancaster).

Rules: James L. Harrison, MD (Lycoming), chairman; Richard D. Baltz, MD (Dauphin); Robert J. Carroll, MD (Allegheny); Wallace G. McCune, MD (Philadelphia); and James A. Morris Jr., MD (Delaware).

Credentials: Charles D. Tourtellotte, MD (Rheumatology), chairman; Richard P. Albertson, MD (Montgomery); Norman L. Ekberg, MD (Montour); Nancy S. Nieland, MD (Allegheny); Thomas J. Weida, MD (Lancaster); and Edward M. Zimmerman, MD (Beaver).

Tellers: Samuel G. Woodings, MD (Mercer), chief teller; George H. Benz Jr., MD (Allegheny); Gertrude L. Blumenschein, MD (Fayette); Winston M. Bryant Jr., MD (Philadelphia); Louise Jacobson, MD (Lackawanna); David L. Katz, MD (Allegheny); Michael J. Prendergast, MD (York); and Roberta L. Schneider, MD (Montgomery).

Second Session
October 19, 1991

The second session of the House of Delegates was called to order at 1:06 p.m. in the Exhibit Center of the Adam's Mark Hotel, Philadelphia.

Credentials Committee

Charles D. Tourtellotte, MD, chairman, presented the following report:

Mr. Speaker, there is a quorum of 266 delegates registered and in attendance today.

Dr. Rhoads reported that there was no representation in the House of Delegates from Armstrong, Butler, Carbon, Greene, McKean, Mifflin-Juniata, Perry, Potter, Susquehanna, Warren, Washington, and Wyoming Counties, and the specialties of gastroenterology, neurological surgery, plastic surgery, and otolaryngology.

Reference Committee A

Presented by:
James L. Cristol, MD

Mr. Speaker, members of the House of Delegates, Reference Committee A has considered all of the items in the index.

REPORT A, COMMITTEE ON BYLAWS, SUBJECT 1: Revision to Pennsylvania Medical Society Young Physicians Section County Representation Methodology

Mr. Speaker, your reference committee recommends that the Bylaws change appearing in the Official Call under Subject 1 be adopted.

This Bylaws revision would entitle each county medical society to one voting representative to the Young Physicians Section for every 200 or fraction thereof young physicians in that county.

The Committee heard no negative comment on this Bylaws provision.

The House adopted the Bylaws change as presented in Subject One of the Official Call.

REPORT A, COMMITTEE ON BYLAWS, SUBJECT 2: County Medical Societies Increasing but not Decreasing Their Delegate Count to the Pennsylvania Medical Society House of Delegates for a Period of Two Years Due to Unification with the AMA

Mr. Speaker, your reference committee recommends that the Bylaws changes appearing in the Official Call under Subject 2 be adopted.

The committee heard no negative comments on these Bylaws provisions.

The House adopted the Bylaws changes as presented in Subject Two of the Official Call.

REPORT A, AD HOC COMMITTEE ON BOARD RESTRUCTURING

Mr. Speaker, your reference committee recommends that the report of the Ad Hoc Committee on Board Restructuring be adopted.

The Ad Hoc Committee on Board Restructuring recommends Bylaws changes which would result in the creation of a 13th District (Allegheny County) and a restructured 10th District composed of Lawrence, Beaver, and Westmoreland Counties. These changes would also result in the allocation of two trustees to those districts having over 3,000 members.

Your reference committee heard strong testimony both for and against consideration of the final recommendation of this report. The predominance of discussion was directed at the question of whether the Bylaws changes involved in the report should be considered separately. The majority of the testimony favored adoption of the report in total.

It was moved and seconded from the floor of the House to refer back to the Board of Trustees Report A of the Ad Hoc Committee on Board Restructuring. The House rejected the motion to refer by a vote of 125 to 120.

It was moved and seconded from the floor of the House to divide the issue, voting separately on the recommendation of the Ad Hoc Committee on Board Restructuring that a new District Thirteen be created consisting of Allegheny County, and that two trustees be allocated to districts having over 3,000 members. The House approved the motion to divide the issue.

It was moved and seconded from the floor of the House to amend the recommendation of the Ad Hoc Committee on Board Restructuring to state that Allegheny County remain the Tenth District, Lawrence and Beaver Counties be incorporated into the Ninth District, and Westmoreland County be incorporated into the Eleventh District.

It was moved and seconded from the floor of the House to reconsider referral back to the Board of Trustees Report A of the Ad Hoc Committee on Board Restructuring. The House approved the motion to reconsider referral. The House approved referring Report A by a vote of 148 to 114.

REPORT A, COMMITTEE ON BYLAWS, SUBJECT 4: Waiving the Annual Dues Assessment in the Year after Maternity Leave

Mr. Speaker, your reference committee recommends that the Bylaws change appearing in the Official Call under Subject

4 be adopted.

The reference committee heard no negative comment on these Bylaws provisions.

The House adopted the Bylaws change as presented in Subject Four of the Official Call.

Reference Committee F

Presented by:
Edward J. Resnick, MD

Mr. Speaker, members of the House of Delegates, Reference Committee F has considered all of the items in the index. In addition, your reference committee received a presentation from the chairman of the Finance Committee, John W. Lawrence, MD. Final review and consideration of that report will be the last item of business for this House of Delegates; therefore, it is not included in Reference Committee F's report.

REPORT C, BOARD OF TRUSTEES: RESOLUTION 89-9, Ten-Year Sunset Provision for Pennsylvania Medical Society Policy; RESOLUTION 89-10, Digest of Pennsylvania Medical Society Policy Actions; and RESOLUTION 89-22, Access to Established Policies of Organized Medicine

Mr. Speaker, your reference committee recommends that the actions indicated for each policy in the policy chart referenced in Report C, Board of Trustees be adopted.

It was moved and seconded from the floor of the House to extract Resolution 81-30, Private Sector Medical Economics Administration of Medicaid, from the policy list attached to Board Report C. The House approved the motion. It was moved and seconded that Resolution 81-30 be retained rather than rescinded. The House approved retaining Resolution 81-30. The House adopted the action indicated for all other policies in the policy chart referenced in Board Report C.

Mr. Speaker, your reference committee recommends that the remainder of Report C, Board of Trustees be filed.

The House approved filing the remainder of Board Report C.

REPORT I, BOARD OF TRUSTEES: Recommendation 8 of 1990 President Elect Dealing with a Second Meeting of House of Delegates

Mr. Speaker, your reference committee recommends that the recommendation for a second meeting of the House of Delegates not be adopted.

The issue of a second meeting of the House of Delegates did not generate any discussion and, therefore, your reference committee agrees with the preponderance of information in Report I of the Board of Trustees against a second meeting.

The House did not adopt Recommendation 8.

Mr. Speaker, your reference committee recommends that Report I, Board of Trustees be filed.

The House approved filing Board Report I.

REPORT MM, BOARD OF TRUSTEES: Allocation to Support Student Loan Program

REPORT VV, BOARD OF TRUSTEES: RESOLUTION 90-84, Augmenting Student Loan Program

REPORT A, COMMITTEE ON AID TO EDUCATION: Annual Report of the Activities of the Committee on Aid to Education

Mr. Speaker, your reference committee recommends that Report MM of the Board of Trustees be adopted in lieu of Report VV of the Board of Trustees and Report A of the Committee on Aid to Education.

Report MM, Board of Trustees deals with the allocation of $10 from the 1992 annual assessment of members to support the Student Loan Program. Report VV, Board of Trustees requests that the annual assessment be increased to cover any additional allocation of funds to support student loans. Report A, Committee on Aid to Education requested an increase in the allocation of dues by $2 a year for the next five years beginning with the 1992 dues received from all active members, bringing the total allocation to $20 by 1996. Your reference committee encourages members of the Pennsylvania Medical Society to continue their generous voluntary contributions to The Educational and Scientific Trust.

The House adopted Board Report MM.

REPORT A, SPECIAL COMMITTEE ON AMA DELEGATION MATTERS: REPORT HH, Board of Trustees; RESOLUTION 90-32, Funding of the Pennsylvania Medical Society-AMA Delegation; RESOLUTION 90-40, Funding of the Pennsylvania Medical Society-AMA Delegation; RESOLUTION 90-41, Full Slate of Alternate Delegates; RESOLUTION 90-51, Pennsylvania Medical Society Delegation to the AMA Expenses; RESOLUTION 90-5, Nomination of Delegates and Alternate Delegates to the AMA; and RESOLUTION 90-9, Accountability of the Pennsylvania Delegation and Alternate Delegates to the AMA

REPORT OO, BOARD OF TRUSTEES: Board of Trustees; 1990 REPORT HH; RESOLUTION 90-41, Full Slate of Alternate Delegates; RESOLUTION 90-51, Pennsylvania Medical Society Delegation to the AMA Expenses; and RESOLUTION 90-9, Accountability of the Pennsylvania Delegation and Alternate Delegates to the American Medical Association

Mr. Speaker, your reference committee recommends that Report A, Special Committee on AMA Delegation Matters be adopted.

The general tone of the testimony convinced the committee of the appropriateness of Report A, Special Committee on AMA Delegation Matters.

It was moved and seconded from the floor of the House to refer Report A to the Board. The House did not approve the motion. The House adopted Report A.

Mr. Speaker, your reference committee recommends that Report OO, Board of Trustees be filed.

The House approved filing Board Report OO.

REPORT A, SPECIAL COMMITTEE TO STUDY COMBINING THE OFFICE OF PRESIDENT AND CHAIRMAN

Mr. Speaker, your reference committee recommends that Report A, Special Committee to Study Combining the Office of President and Chairman, be adopted.

This report has to do with combining the office of president and chairman. Your reference committee heard compelling arguments on both sides of the issue. The committee was favorably impressed by the argument for continuity of service by the chairman of the Board and the concept that the president of the Society be the spokesman and public leader of the Society.

It was moved and seconded from the floor of the House to refer Report A back for further study and development of a specific plan. The House did not approve the motion. The House adopted Report A.

RESOLUTION 91-12: Membership Requirements

RESOLVED, That AMA membership no longer be required as a condition for membership in the Pennsylvania Medical Society.

Mr. Speaker, your reference committee recommends that Resolution 91-12 not be adopted.

This resolution recommended deunification with the AMA. The response in the reference committee hearing was strongly against this resolution.

The House did not adopt Resolution 91-12.

RESOLUTION 91-34: Dues Freeze and Prioritization of Society Activities

RESOLVED, That there be no increase in dues this fiscal year; and be it further

RESOLVED, That the Pennsylvania Medical Society House of Delegates mandate the Pennsylvania Medical Society Board of Trustees to prioritize all activities of the Society and to fund only the activities which can be afforded within the dues income; and be it further

RESOLVED, That the Pennsylvania Medical Society Board of Trustees keep the Pennsylvania Medical Society House of Delegates informed of their decisions.

Mr. Speaker, your reference committee recommends that Resolution 91-34 not be adopted.

This resolution dealt with requiring the Society not to increase the dues and to prioritize all Society activities to accomplish that goal. Your reference committee feels that the intent of this resolution has already been accomplished.

The House did not adopt Resolution 91-34 by a vote of 128 to 110.

RESOLUTION 91-35: Effective Mechanism for Installment Payment of Dues

RESOLVED, That the Board of Trustees be directed to implement a quarterly dues payment plan of four equal amounts.

Mr. Speaker, your reference committee recommends that Resolution 91-35 be amended as follows:

RESOLVED, That the Board of Trustees be directed to [implement] study a quarterly dues payment plan of four equal amounts.

Mr. Speaker, your reference committee recommends that Resolution 91-35 be adopted as amended.

This resolution dealt with providing a quarterly dues billing program for members of the Pennsylvania Medical Society. The committee recognizes the complexity of such a plan and feels further study is warranted. Some of the issues that need to be considered include Bylaws changes and administrative problems in managing such a plan. Fiscal impact would also have to be considered.

The House did not adopt the amendment. It was moved and seconded from the floor of the House to amend Resolution 91-35 by replacing the word, implement, with the word, continue, and replacing the words, "four equal amounts." with the words, "with appropriate notification of such a plan on dues notices." The House adopted the amendment. The House adopted Resolution 91-35 as amended.

RESOLUTION 91-55: Conflict of Interest

RESOLVED, That the Pennsylvania Medical Society adopt the following policy and recommend that the AMA do likewise:

Physicians who intend to provide input regarding the formulation of policy within any organ of organized medicine who may have a conflict of interest are encouraged to provide such input, preceded by the provision of a disclaimer (oral or written) regarding the potential for said conflict of interest to affect the recommend policy position.

Mr. Speaker, your reference committee recommends that Resolution 91-55 not be adopted.

The Judicial Council, as reported in Report A of the Judicial Council, is already addressing the issue of conflict of interest. Therefore the committee felt that the resolution is redundant.

The House did not adopt Resolution 91-55.

RESOLUTION 91-59: Number of Pennsylvania Medical Society-Young Physicians Section Delegates to the Pennsylvania Medical Society House of Delegates

RESOLVED, That the Pennsylvania Medical Society alter its Bylaws in order to grant the Pennsylvania Medical Society-Young Physicians Section the same number of delegates and alternate delegates to the Pennsylvania Medical Society House of Delegates as are eligible to be sent to the AMA-YPS Annual Assembly.

Mr. Speaker, your reference committee recommends that Resolution 91-59 not be adopted.

This resolution dealt with increasing the number of YPS delegates in the State Society House of Delegates. Your reference committee felt that it is not necessary to conform to the rules of the AMA Young Physicians Assembly in determining the number of delegates from the YPS to this House.

It was moved and seconded from the floor of the House to refer to the Board of Trustees for study Resolution 91-59. The House approved referring Resolution 91-59 by a vote of 180 to 107.

Waiver of debate list

The following items have been grouped together in a waiver of debate list; little or no testimony was heard, and the committee feels that the items are of a noncontroversial nature.

Mr. Speaker, your reference committee recommends adoption:

REPORT NN, BOARD OF TRUSTEES: Annual Assessment for Students

REPORT B, BOARD OF TRUSTEES: RESOLUTION 90-81, Slotted Alternate Delegate Position on the Pennsylvania AMA Delegation

REPORT D, BOARD OF TRUSTEES: RESOLUTION 90-22, Encouraging Osteopathic Physicians who Are Members of the American Osteopathic Association and Pennsylvania Osteopathic Medical Association to Join Allopathic County Medical Societies by Exemption from Unified Membership Requirements; and RESOLUTION 90-27, Encouraging Encouraging Osteopathic Physicians who Are Members of the Pennsylvania Osteopathic Association and the American Osteopathic Medical Association to Join Allopathic Medical Societies by Exemption from Unified Membership Requirements.

REPORT G, BOARD OF TRUSTEES: RESOLUTION 90-70, Resolving Grievances

REPORT GG, BOARD OF TRUSTEES: Recommendation 1 of the President Elect, Regional Medical Societies

REPORT HH, BOARD OF TRUSTEES: Recommendation 1 of the President, Public Health Initiatives for County Societies

REPORT WW, BOARD OF TRUSTEES: RESOLUTION 90-54, Unified Membership

REPORT XX, BOARD OF TRUSTEES: RESOLUTION 90-16, Pennsylvania Medical Society Staff Contribution to the Process of Formulation of Society Policies

It was moved and seconded from the floor of the House to extract Board Report D from the waiver of debate list. The House approved the motion. It was moved and seconded from the floor of the House to amend Board Report D by deleting lines 33 through 35 in the report which state, "Numerically, this is less than the losses experienced in many specialties. Percentage-wise, the net loss of DO members is not much different than family physicians." The House adopted the amendment. The House adopted as amended Board Report D.

The House adopted the remainder of the waiver of debate items.

Mr. Speaker, your reference committee recommends not for adoption:

RESOLUTION 91-10: Dues Exemption for Fully Retired Physicians

RESOLVED, That the Pennsylvania Medical Society grant dues-exempt status to members who are fully retired and who are least 65 years of age.

RESOLUTION 91-36: Timely Consideration of Actions Effecting Pennsylvania Medical Society Dues

RESOLVED, That all actions which, if approved by the House of Delegates, will cause Pennsylvania Medical Society dues to be other than that announced at the opening of the House must be considered by the House of Delegates by close of business on the next to last day of the annual meeting, currently Saturday.

RESOLUTION 91-56: Recognition of "Specialty" Boarded Status

RESOLVED, That the Pennsylvania Medical Society consider the pursuit of the following policy:

No professional society shall require the payment of an annual fee in order to maintain specialty boarded status.

RESOLUTION 91-60: Fiscal Note

RESOLVED, That the Pennsylvania Medical Society adopt the following policy and recommend its adoption by the AMA:

All resolutions must be submitted with a fiscal note prepared by the author. Critique thereof will be provided by staff at the time adoption of said policy is to be considered (employing a reference committee when such a mechanism is available); if possible, the author will be apprised of the critique ahead of time.

It was moved and seconded from the floor of the House to extract Resolution 91-56. The House approved the motion. It was moved and seconded from the floor of the House to refer for study Resolution 91-56. The House did not approve the motion to refer. The House did not adopt Resolution 91-56.

The House did not adopt the remainder of

the waiver of debate items.

Mr. Speaker, your reference committee recommends for referral to the Board of Trustees for report back to the House of Delegates:

RESOLUTION 91-65: National Scholarship Fund

RESOLVED, That the Pennsylvania Medical Society, Pennsylvania Medical Society Auxiliary, and Pennsylvania Medical Society Medical School Section investigate mechanisms by which a universal scholarship fund may be made available to medical students in the Commonwealth of Pennsylvania; and be it further

RESOLVED, That the State Society AMA Delegation be directed to draft a similar resolution for a national scholarship fund; and be it further

RESOLVED, That these scholarships be made available to medical students who agree to serve, or demonstrate a background of prior service to, the indigent population of the United States; and be it further

RESOLVED, That these scholarships be named in the memory of Walter Greissinger, MD, whose support of medical students and medical professionals in Pennsylvania was without compare.

RESOLUTION 91-26: Honoring a Pennsylvania Medical Society Physician Member for Community Volunteer Service

RESOLVED, That the Pennsylvania Medical Society honor on a yearly basis an outstanding Society member who has distinguished himself or herself in volunteer community service; the Awards Committee shall develop criteria and solicit nominations from the county societies for this award.

ADDRESS OF THE PRESIDENT, GORDON K. MACLEOD, MD: RECOMMENDATION

ADDRESS OF THE PRESIDENT ELECT, ROBERT N. MOYERS, MD: RECOMMENDATION 1

ADDRESS OF THE PRESIDENT ELECT, ROBERT N. MOYERS, MD: RECOMMENDATION 3

ADDRESS OF THE PRESIDENT ELECT, ROBERT N. MOYERS, MD: RECOMMENDATION 4

The House approved referring the waiver of debate items to the Board of Trustees for report back to the House of Delegates.

Mr. Speaker, your reference committee recommends filing:

REPORT A, BOARD OF TRUSTEES

REPORT KK, BOARD OF TRUSTEES

NECROLOGY REPORT, BOARD OF TRUSTEES

REPORT A, COUNCIL ON MEMBERSHIP

REPORT A, JUDICIAL COUNCIL

REPORT A, THE EDUCATIONAL AND SCIENTIFIC TRUST

REPORT A, COMMITTEE ON MEDICAL BENEVOLENCE

REPORT A, ADVISORY COMMITTEE ON PROFESSIONALISM

REPORT A, SECRETARY

REPORT A, TREASURER

REPORT A, AUDITOR

REPORT A, RESIDENT PHYSICIAN SECTION

REPORT A, YOUNG PHYSICIANS SECTION

REPORT A, MEDICAL STUDENT SECTION

REPORT A, EXECUTIVE VICE PRESIDENT

REPORT A, PENNSYLVANIA DELEGATION TO THE AMA

TRUSTEE REPORTS: First through Twelfth Districts, Specialty, Hospital Medical Staff, Young Physician, Resident Physician, and Medical Student

ADDRESS OF THE PENNSYLVANIA MEDICAL SOCIETY AUXILIARY

PRESIDENT, MRS. JOHN MODARRESS

ADDRESS OF THE PRESIDENT, GORDON K. MACLEOD, MD

ADDRESS OF THE PRESIDENT ELECT, ROBERT N. MOYERS, MD

The House approved filing the waiver of debate items.

Reference Committee C

Presented by:
Alan H. Schragger, MD

Mr. Speaker, members of the House of Delegates, Reference Committee C has considered all of the items in the index.

RESOLUTION 91-39: Small Area Analysis

RESOLVED, That the Pennsylvania Medical Society adopt the policy position regarding the technology of Small Area Analysis that it remains of unproven utility; and be it further

RESOLVED, That the Pennsylvania Medical Society ask the AMA to study Small Area Analysis and consider co-adoption of the aforementioned State Society policy *in the absence of data which document its utility.*

Mr. Speaker, your reference committee recommends that the first resolved of Resolution 91-39 be deleted and the second resolved be amended as follows:

RESOLVED, That the Pennsylvania Medical Society ask the AMA to continue its study of Small Area Analysis.

Mr. Speaker, your reference committee recommends that Resolution 91-39 be adopted as amended.

Resolution 91-39 calls on the Pennsylvania Medical Society to adopt the policy position regarding the technology of Small Area Analysis that it remains of unproven utility; and further, calls on the Pennsylvania Medical Society to ask the AMA to study Small Area Analysis and consider co-adoption of the

Thomas H. Malin, MD, (C-seated) and other delegates of the Society's specialty section review materials handed out during the 1991 annual meeting of the House.

aforementioned Pennsylvania Medical Society policy *in the absence of data which document its utility.*

Your reference committee heard considerable testimony in support and opposition to this resolution. The committee does feel, however, that continued study of Small Area Analysis as an epidemiological tool has value and should be encouraged.

The House adopted as amended Resolution 91-39.

RESOLUTION 91-43: Publication in *Federal Register* of Proposed Changes in Pro Review Process or Procedures

RESOLVED, That the Pennsylvania Medical Society work cooperatively with the AMA to urge HCFA to publish in the *Federal Register* any proposed changes in the PRO review process or procedures which would impact on physician practice patterns and/or the delivery of medical care, including the proposed practice guidelines when they are developed.

Mr. Speaker, your reference committee recommends that Resolution 91-43 be adopted.

Resolution 91-43 calls on the Pennsylvania Medical Society to work cooperatively with the AMA to urge HCFA to publish in the *Federal Register* any proposed changes in the PRO review process or procedures which would impact on physician practice patterns and/or the delivery of medical care, including the proposed practice guidelines when they are developed.

Your reference committee heard testimony in support of this resolution. It was also noted that KePRO supports this resolution as well.

It was moved and seconded from the floor of the House to refer Resolution 91-43. The House did not approve the motion. The House adopted Resolution 91-43.

RESOLUTION 91-52: Proper Notification of a Physician Regarding Possible Loss of Medical Staff Membership or Privileges

RESOLVED, That the Pennsylvania Medical Society adopt the policy that hospital notification of possible loss of medical staff membership must be sent by certified mail, return receipt requested; and be it further

RESOLVED, That the Pennsylvania Medical Society adopt the policy that an appropriate appeals process (such as that which is written in the Pennsylvania Medical Society Model Medical Staff Bylaws) for possible loss of medical staff membership for *any* reason must be part of the medical staff Bylaws; and be it further

RESOLVED, That the aforementioned procedure must be included in the Pennsylvania Medical Society Model Medical Staff Bylaws; and be it further

RESOLVED, That the existence of the aforementioned procedure must be communicated to all Pennsylvania hospital medical staffs.

RESOLUTION 91-53: Appropriate Appeals Procedure Following Recommendation by the Medical Executive Committee Regarding Loss of Medical Staff Membership or Privileges

RESOLVED, That the Pennsylvania Medical Society adopt the policy that appropriate due process rights must be assured to a physician who has received an adverse recommendation regarding medical staff membership or privileges from the Medical Executive Committee; and be it further

RESOLVED, That such due process rights shall include the following: (1) that an appeal must be conducted by an impartial body consisting of physicians who did not participate in the previous recommendation; and (2) if a negative action is taken by the physician hearing committee, a hearing must be held by a committee of the Board of Trustees (both already part of the revised Pennsylvania Model Medical Staff Bylaws); and be it further

RESOLVED, That the Pennsylvania Medical Society notify all Pennsylvania hospital medical staffs of the aforementioned procedure.

Mr. Speaker, your reference committee recommends that the following substitute resolution be adopted in lieu of Resolutions 91-52 and 91-53.

RESOLVED, That the Pennsylvania Medical Society adopt the policy that hospital notification of possible loss of medical staff membership must be sent by certified mail, return receipt requested; and be it further

RESOLVED, That the Pennsylvania Medical Society adopt the policy that appropriate due process rights must be assured to a physician who has received an adverse recommendation regarding medical staff membership or privileges from the Medical Executive Committee; and be it further

RESOLVED, That such due process rights shall include the following: (1) that an appeal must be conducted by an impartial body consisting of physicians who did not participate in the previous recommendation; and (2) if a negative action is taken by the physician hearing committee, a hearing must be held by a committee of the Board of Trustees; and be it further

RESOLVED, That the Pennsylvania Medical Society notify all Pennsylvania hospital medical staffs of the aforementioned procedure.

Because these two resolutions addressed similar issues, your reference committee has combined them for your consideration. Both resolutions were precipitated by a single episode. Testimony was generally sympathetic to the intent of the resolutions. The due process rights as outlined in the third resolved are already part of the revised Pennsylvania Model Medical Staff Bylaws.

It was moved and seconded from the floor of the House to add the following words to the end of the first resolved of the substitute resolution, "and that this procedure become part of the Pennsylvania Medical Society Model Hospital Medical Staff Bylaws"; this was accepted as an editorial revision.

It was moved and seconded from the floor of the House to delete from the third resolved of the substitute resolution the words, "a committee of the Board of Trustees"; this was accepted as an editorial revision.

Dr. Schragger, chairman of Reference Committee C, recommended deleting from the second resolved of the substitute resolution the words, "from the Medical Executive Committee."

It was moved and seconded from the floor of the House to postpone action on the substitute resolution until a definite time to allow the reference committee and the author of the resolution to bring back specific language to the House. The House approved the motion.

RESOLUTION 91-54: Study of Medical Staff Experiences with the National Practitioner Data Bank

RESOLVED, That the Pennsylvania Medical Society call upon its members to report the experience of medical staffs in dealing with the National Practitioner Data Bank and to document problems such as violating confidentiality, not responding promptly, and excessive fees, and to report such experiences to the Pennsylvania Medical Society which will in turn report this data to the American Medical Association.

Mr. Speaker, your reference committee recommends that Resolution 91-54 be adopted.

Resolution 91-54 calls for the Pennsylvania Medical Society to call upon its members to report the experience of medical staffs in dealing with the National Practitioner Data Bank to the Pennsylvania Medical Society which will in turn report this data to the AMA.

The House adopted Resolution 91-54.

RECOMMENDATION 2a, ADDRESS OF THE PRESIDENT ELECT: Continue Pursuing the Society's Indigent Care Plan, Working to Implement Portions of the Plan as Practical

Mr. Speaker, your reference committee recommends that Recommendation 2a be adopted.

The president elect recommended in his address that the Society take certain steps in the public health arena. Of the four steps recommended, your reference committee concurs with continued pursuit of the Society's indigent care plan.

The House adopted Recommendation 2a.

RECOMMENDATION 7d, ADDRESS OF THE PRESIDENT ELECT: Pursuing Procedural Safeguards in the Pro Process

Mr. Speaker, your reference committee

recommends that Recommendation 7d be adopted.

The president elect outlined in his address four specific recommendations to decrease the physician hassle factor. Your reference committee agrees with the recommendation specific to pursuing procedural safeguards in the PRO process.

The House adopted Recommendation 7d.

REPORT L, BOARD OF TRUSTEES: SUBSTITUTE RESOLUTION 89-24, Mandated Appeals Mechanism for Physicians

Mr. Speaker, your reference committee recommends that Board of Trustees Report L be adopted.

Report L, Board of Trustees: Substitute Resolution 89-24 directed the Society to study the following proposal: "All physicians participating in mandated health care systems must be afforded an appeals mechanism for a specific medically necessary test or therapy if denied by the insurer/employer."

It was moved and seconded from the floor of the House that Resolution 89-24 be adopted in lieu of Board Report L. The House adopted Resolution 89-24.

REPORT T, BOARD OF TRUSTEES: RESOLUTION 90-48, Reporting of Pennsylvania Hospitals' Annual Advertising Costs to the Health Care Cost Containment Council

Mr. Speaker, your reference committee recommends that Board of Trustees Report T be adopted.

Report T, Board of Trustees: Resolution 90-48 directed that the annual cost of advertising for each of the hospitals in Pennsylvania be reported to the Pennsylvania Health Care Cost Containment Council and appear as a separate entity in the Pennsylvania Health Care Cost Containment Council's hospital financial report.

Your reference committee heard testimony in support and opposition to this resolution. Although it would be desirable to have access to this kind of data, hospitals are not uniform in their definition of what is included in advertising costs.

It was moved and seconded from the floor of the House to refer back to the Board Report T. The House approved referring Board Report T.

REPORT RR, BOARD OF TRUSTEES: Neuroleptic Drug Use in Nursing Homes

Mr. Speaker, your reference committee recommends that Board of Trustees Report RR be adopted.

Report RR, Board of Trustees calls on Pennsylvania Medical Society, in cooperation with the American Medical Association, to seek a comprehensive revision of HCFA guidelines governing the use of psychotropic drugs in nursing homes.

It was moved and seconded from the floor of the House to amend the reference committee recommendation by adding that Board Report RR be referred to the AMA Delegation for implementation. The House approved the amendment. The House adopted Board Report RR and referred it to the AMA Delegation for implementation.

Waiver of debate list

The following items have been grouped together in a waiver of debate list; little or no testimony was heard, and the committee feels that the items are of noncontroversial nature.

Mr. Speaker, your reference committee recommends that the following nine items be filed:

REPORT F, BOARD OF TRUSTEES: AMENDED RESOLUTION 90-25, Procurement of Medical Records

REPORT H, BOARD OF TRUSTEES: RECOMMENDATION 6 of the President Elect, Occupational Medicine

REPORT O, BOARD OF TRUSTEES: Task Force on Federally Mandated Peer Review Cost Effectiveness

REPORT U, BOARD OF TRUSTEES: RESOLUTION 89-19, KePRO's Activities in the Small Area Analysis Feedback Map Program

REPORT LL, BOARD OF TRUSTEES: Task Force on Health Care Cost Containment

REPORT QQ, BOARD OF TRUSTEES: HAP/Pennsylvania Medical Society /POMA Joint Committee on Health Care Data

REPORT A, COUNCIL ON MEDICAL PRACTICE

REPORT A, HOSPITAL MEDICAL STAFF SECTION (HMSS)

REPORT A, KEYSTONE PEER REVIEW ORGANIZATION (KePRO)

The House approved filing the waiver of debate items.

Nominations and Elections

In accordance with Standing Rule 10 (adopted October 22, 1982), nominations of delegates to the AMA were held Friday morning, October 18, 1991, and elections were held Saturday morning, October 19, 1991. Nominations for all other offices were held on Saturday, October 19, 1991, and voting for those offices contested was held Sunday morning, October 20, 1991. As mandated by Resolution 89-2, Publishing the Results of Elections, the following is an account of those elections. The new officers for 1991-92 are:

President: Robert N. Moyers, MD (Crawford) was installed as the president.

President Elect: Donald G. Ferguson, MD (Allegheny) acceded to the office of president elect.

Vice President: Martin A. Murcek, MD (Westmoreland) was elected to the office of vice president with 153 votes; Irving Williams, III, MD (Union) received 103 votes.

Speaker: Jonathan E. Rhoads, Jr., MD (York) was elected by acclamation as speaker.

Vice Speaker: Howard A. Richter, MD (Delaware) was elected by acclamation as vice speaker.

The following trustees were elected by acclamation:

Seventh District: William R. Beltz, MD (Lycoming)

Twelfth District: Victor F. Greco, MD (Luzerne)

Interspecialty Section: James R. Regan, MD

Resident Physicians: Daniel S. Henriksen, MD

Young Physicians: Richard J. Greco, MD

Medical Students: Mark V. Caliendo

Elections were held for the following contested positions:

Sixth District: Edward H. Dench, Jr., MD (Centre) was elected with 183 votes; Augusto N. Delerme, MD (Blair) received 74 votes.

Tenth District: John W. Lehman, MD (Beaver) was elected with 132 votes; George F. Buerger Jr., MD (Allegheny) received 124 votes.

Matthew Marshall Jr., MD (Allegheny), was reelected by acclamation to serve a three-year term on the Committee to Nominate Delegates and Alternates to the AMA. Donald E. Parlee, MD (Bucks), was elected to serve a three-year term on the Committee to Nominate Delegates and Alternates to the AMA with 141 votes; Gerald L. Andriole, MD (Luzerne), received 83 votes; and Joanne S. Zenker, MD (Lackawanna), received 32 votes.

Raymond C. Grandon, MD (Dauphin), was reelected to a three-year term on the Pennsylvania Medical Society Judicial Council with 170 votes; Frank J. Tornetta, MD (Montgomery), received 63 votes; and G. Winfield Yarnall, MD (Dauphin), received 23 votes. David W. Clare, MD (Allegheny), was elected to a three-year term on the Pennsylvania Medical Society Judicial Council with 118 votes; Robert S. Sanford, MD (Tioga), received 77 votes; and Wilbur E. Flannery, MD (Lawrence), received 61 votes.

Report of the Committee to Nominate Delegates and Alternates to the AMA

The nominations of the Committee to Nominate Delegates and Alternates to the American Medical Association were published on pages 1 and 2 of the *Official Reports Book*. The following were nominated for 12 two-year AMA delegate positions beginning January 1, 1992, and expiring December 31, 1993, and for one one-year term beginning January 1, 1992, and expiring December 31, 1992. The persons receiving the 12 highest number

of votes were elected to the two-year terms, and the person receiving the thirteenth highest number of votes was elected to the one-year term: Donald C. Brown, MD (Westmoreland-239 votes); Ronald J. Clearfield, MD (Westmoreland-236 votes); Donald G. Ferguson, MD (Allegheny-227 votes); George R. Fisher III, MD (Philadelphia-222 votes); Robert L. Lasher, MD (Erie-215 votes); William H. Mahood, MD (Montgomery-247 votes); Robert N. Moyers, MD (Crawford-246 votes); Lewis T. Patterson, MD (Dauphin-195 votes); Michael J. Prendergast, MD (York-231 votes); Robert D. Reinecke, MD (Philadelphia-191 votes); Jonathan E. Rhoads Jr., MD (York-239 votes); and Barbara A. Shelton, MD (Philadelphia-215 votes). Joseph N. Demko, MD (Lackawanna), was elected to the one-year term with 183 votes.

The following is an account of the votes received by those not elected to AMA delegate positions: Gerald L. Andriole, MD (Luzerne-182 votes); Charles A. Heisterkamp, III, MD (Lancaster-80 votes); and Gordon K. MacLeod, MD (Allegheny-154 votes).

The following were nominated for 12 two-year AMA alternate delegate positions beginning January 1, 1992, and expiring December 31, 1993, and for two one-and-one-half year terms beginning October 20, 1991, and expiring December 31, 1992. The persons receiving the 12 highest number of votes were elected to the two-year terms, and the persons receiving the thirteenth and fourteenth highest number of votes were elected to the one-and-one-half year terms: Brenda K. Baumann, MD (Luzerne-239 votes); Richard T. Bell, MD (Berks-253 votes); George F. Buerger Jr., MD (Allegheny-249 votes); David L. Cohen, MD (York-234 votes); James L. Cristol, MD (Philadelphia-229 votes); Jay L. Funkhouser, MD (Beaver-239 votes); Joseph A.C. Girone, MD (Bucks-244 votes); William W. Lander, MD (Montgomery-216 votes); John W. Lehman, MD (Beaver-238 votes); Leland F. Patterson, MD (Dauphin-252 votes); Carol E. Rose, MD (Allegheny-244 votes); and J. Walter Valenteen, MD (Delaware-240 votes). Elias Abrutyn, MD (Philadelphia-200 votes), and John D. Lane, MD (Bucks-197 votes), were elected to the two one-and-one-half year terms.

The following is an account of the votes received by those not elected to AMA alternate delegate positions: Charles A. Heisterkamp III, MD (Lancaster-119 votes), and Dinesh C. Khera, MD (Erie-177 votes).

James M. Brian was elected by acclamation to the slotted AMA alternate delegate position for a medical student for a one-year term beginning January 1, 1992, and expiring December 31, 1992. Thomas F. Freenock Jr., MD was elected by acclamation to the slotted AMA alternate delegate position for a resident physician for a one-year term beginning January 1, 1992, and expiring December 31, 1992.

Reference Committee D

Presented by:
Carol E. Rose, MD

Mr. Speaker, members of the House of Delegates, Reference Committee D has considered all of the items in the index.

REPORT K, BOARD OF TRUSTEES: REPORT F: RESOLUTION 89-60: Advertisement Encouraging the Filing of Malpractice Lawsuits

Mr. Speaker, your reference committee recommends that Report K, Board of Trustees be adopted.

This report dealt with inappropriate advertisements soliciting the filing of malpractice suits against physicians. Although no testimony was heard, the committee notes that "endeavors to resolve this issue satisfactorily" will continue and we look forward to future updated reports to the House of Delegates.

The House adopted Board Report K.

REPORT M, BOARD OF TRUSTEES: AMENDED SUBSTITUTE RESOLUTION 90-57: Amendments to Medicare Fee Control Act

Mr. Speaker, your reference committee recommends that Report M, Board of Trustees be adopted.

The committee heard no testimony and appreciates that state legislation has been introduced relating to a means test (Senate Bill 458) and that the RBRVS regulations may address the geographic charge issue.

The House adopted Board Report M.

RESOLUTION 91-1: Scope of Psychological Practice in the Hospital Setting

RESOLVED, That the Pennsylvania Medical Society adopt the following positions to be used to guide Pennsylvania Medical Society representatives and staff in considering and responding to legislative and regulatory initiatives addressing the scope of psychological practice in the hospital setting.

(1) A psychologist with clinical duties may, with the concurrence of any psychiatric member of the medical staff, recommend patients for admission. The attending psychiatrist shall assume responsibility and authority for the care of the patient throughout the hospital stay, including the collaborative participation of the recommending psychologist. The extent and nature of the collaboration should be determined by the Bylaws of the individual hospital in accordance with existing regulations;

(2) Psychologists should be included as voting members on committees where appropriate and not in conflict with the Bylaws of the individual hospital;

(3) "Psychologists" in this regard shall be defined as licensed, clinical, doctoral-level psychologists operating within the scope of their license; and

(4) Efforts to enlarge upon the role of psychologists in hospitals beyond these areas shall be opposed by the Pennsylvania Medical Society as not in the interest of the best health care for the citizens of Pennsylvania.

Mr. Speaker, your reference committee recommends that Resolution 91-1 be adopted.

This resolution deals with threatened legislative and regulatory changes designed to broaden the hospital privileges of psychologists. Testimony by several psychiatrists supported adoption of this resolution. We agree that these policies would serve to protect patients appropriately.

The House adopted Resolution 91-1.

RESOLUTION 91-24: Pennsylvania Medical Society 's Legislative Lobbying Organization

RESOLVED, That the Pennsylvania Medical Society seek immediate restructuring of its present lobbying organization to better meet the needs and goals of physicians.

Mr. Speaker, your reference committee recommends that Resolution 91-24 be amended as follows:

RESOLVED, That the Pennsylvania Medical Society [seek immediate restructuring] *review and evaluate* [of] its present lobbying [organization] *process* to better meet the needs and goals of physicians and to facilitate the education of our members with regard to this process.

Mr. Speaker, your reference committee recommends that Resolution 91-24 be adopted as amended.

In view of the recent restructuring of the Society's lobbying staff, the original intent of this resolution has been addressed. Testimony supports the above amendment because increased emphasis is needed on physician education and participation.

The House adopted as amended Resolution 91-24.

RESOLUTION 91-47: Transfer of Funds from the Federal Defense Budget to Health Care Needs

RESOLVED, That the Pennsylvania Medical Society send a letter to President Bush and to the Majority and Minority leaders of the House of Representatives and Senate, requesting that by mutual consent they revise last year's budget agreement and permit some of the defense funds made available by the lessening Soviet threat to be transferred to childhood immunization programs, to AIDS research and treatment, and to an adequate Medicare budget.

Mr. Speaker, your reference committee recommends that Resolution 91-47 be amended as follows:

RESOLVED, That the Pennsylvania Medical Society send a letter to President

Bush, [and to] the Majority and Minority leaders of the [House of Representatives and Senate] *U.S. Congress and the Pennsylvania Congressional delegation*, requesting that by mutual consent they revise last year's budget agreement and permit some of the defense funds made available by the lessening Soviet threat to be transferred to childhood immunization programs, to AIDS research and treatment, and to [an adequate] *the* Medicare budget.

Mr. Speaker, your reference committee recommends that Resolution 91-47 be adopted as amended.

Although we heard testimony only from a sponsor of this resolution, we agree that any movement in this direction would be beneficial.

The House adopted as amended Resolution 91-47.

RECOMMENDATION 5 OF THE PRESIDENT ELECT: Joint Committee with the American Association of Retired Persons

Mr. Speaker, your reference committee recommends that Recommendation 5 of the President Elect be adopted.

The committee believes that this proposal should be strongly endorsed, because a coalition between medicine and the AARP would be beneficial to both groups.

It was moved and seconded from the floor of the House to refer Recommendation 5. The House did not approve the motion. The House adopted Recommendation 5.

RECOMMENDATION 6 OF THE PRESIDENT ELECT: Meetings with Congressional Legislative Assistants

Mr. Speaker, your reference committee recommends that Recommendation 6 of the President Elect be adopted.

This recommendation is an appropriate expansion of the Society's current Federal Key Contact program and will enhance a lobbying effort by physicians which has already been recognized as a model among the states.

The House adopted Recommendation 6.

Waiver of debate list

The following items have been grouped together in a waiver of debate list; no testimony was heard, and the committee feels that the items are of a noncontroversial nature.

Mr. Speaker, your reference committee recommends that the following item be adopted:

RESOLUTION 91-19: Tort Reform

RESOLVED, That the Pennsylvania Medical Society continue its high priority efforts to promote meaningful tort reform in Pennsylvania.

The House adopted the waiver of debate item.

Mr. Speaker, your reference committee recommends that the following three items be filed:

REPORT A, COUNCIL ON GOVERNMENTAL RELATIONS

REPORT A, PENNSYLVANIA MEDICAL POLITICAL ACTION COMMITTEE

REPORT II, BOARD OF TRUSTEES: Auto Insurance and Medicare Balance Billing Litigation

The House approved filing the waiver of debate items.

Recess

The House of Delegates recessed at 4:50 p.m. for the inaugural program and reception.

Inaugural Program and Reception

The inaugural program was held at 6:30 p.m. in the Exhibit Center of the Adam's Mark Hotel, Philadelphia.

Opening remarks—Jonathan E. Rhoads Jr., MD, speaker of the House of Delegates, presented opening remarks.

Master of Ceremonies—John H. Hobart, MD, chairman of the Pennsylvania Medical Society Board of Trustees, presided as the master of ceremonies.

Prior to his inauguration, new Society President Robert N. Moyers, MD, outlined challenges facing physicians in the year to come.

Invocation—The invocation was presented by The Reverend Christopher A. Fuji and The Reverend Penney A. Fuji of the Fifth Street Presbyterian Church of Conneaut Lake.

Pledge of Allegiance—John H. Hobart, MD, led the attendees in the pledge of allegiance.

Singing of "The National Anthem"—"The National Anthem" was sung by Susan Katz.

Introductions—John H. Hobart, MD, made the following introductions: Pennsylvania Medical Society officers and trustees; Pennsylvania Medical Society past presidents; Pennsylvania Medical Society Auxiliary president and immediate past president; auxiliary dignitaries and Board of Directors; and visiting dignitaries.

Presentation of Plaques to Retiring Leaders—John H. Hobart, MD, presented plaques to Brenda K. Baumann, MD; Betty L. Cottle, MD; Martin A. Murcek, MD; Steven F. Nemerson; Carl A. Sirio, MD; and Irving Williams III, MD.

Presentation of Past President's Medallion—John H. Hobart, MD, presented the past president's medallion to Gordon K. MacLeod, MD, Allegheny County, as the 141st president.

Installation of the President—John H. Hobart, MD, installed Robert N. Moyers, MD, Crawford County, as the 142nd president of the Pennsylvania Medical Society. After taking the oath of office, Dr. Moyers delivered brief remarks.

Closing remarks—Jonathan E. Rhoads Jr., MD, presented closing remarks. Following the program, a reception was held in Grand Ballrooms A-F.

Final Session

October 20, 1991

The final session of the 1991 House of Delegates was called to order at 9:06 a.m. in the Exhibit Center of the Adam's Mark Hotel, Philadelphia.

Credentials Committee

Charles D. Tourtellotte, MD, presented the following report.

Mr. Speaker, there is a quorum of 274 delegates registered and in attendance today.

Reference Committee C

Presented by:
Alan H. Schragger, MD

RESOLUTION 91-52: Proper Notification of a Physician Regarding Possible Loss of Medical Staff Membership or Privileges

RESOLVED, That the Pennsylvania Medical Society adopt the policy that hospital notification of possible loss of medical staff membership must be sent by certified mail, return receipt requested; and be it further

RESOLVED, That the Pennsylvania Medical Society adopt the policy that an appropriate appeals process (such as that which is written in the Pennsylvania Medical Society Model Medical Staff Bylaws) for possible loss of medical staff membership for any reason must be part of the medical staff Bylaws; and be it further

RESOLVED, That the aforementioned procedure must be included in the Pennsylvania Medical Society Model Medical Staff Bylaws; and be it further

RESOLVED, That the existence of the aforementioned procedure must be communicated to all Pennsylvania hospital medical staffs.

RESOLUTION 91-53: Appropriate Appeals Procedure Following Recommendation by the Medical Executive Committee Regarding Loss of Medical Staff Membership or Privileges

RESOLVED, That the Pennsylvania

Medical Society adopt the policy that appropriate due process rights must be assured to a physician who has received an adverse recommendation regarding medical staff membership or privileges from the Medical Executive Committee; and be it further

RESOLVED, That such due process rights shall include the following: (1) that an appeal must be conducted by an impartial body consisting of physicians who did not participate in the previous recommendation; and (2) if a negative action is taken by the physician hearing committee, a hearing must be held by a committee of the Board of Trustees (both already part of the revised Pennsylvania Model Medical Staff Bylaws); and be it further

RESOLVED, That the Pennsylvania Medical Society notify all Pennsylvania hospital medical staffs of the aforementioned procedure.

Mr. Speaker, your reference committee recommends that the following amended substitute resolution be adopted in lieu of Resolutions 91-52 and 91-53.

RESOLVED, That the Pennsylvania Medical Society adopt the policy that hospital notification of possible loss of medical staff membership must be sent by certified mail, return receipt requested; and that this procedure become part of the Pennsylvania Medical Society Model Medical Staff Bylaws; and be it further

RESOLVED, That the Pennsylvania Medical Society adopt the policy that appropriate due process rights must be assured to a physician who has received an adverse recommendation regarding medical staff membership or privileges [from the Medical Executive Committee]; and be it further

RESOLVED, That such due process rights shall include the following: (1) that an appeal must be conducted by an impartial body consisting of physicians who did not participate in the previous recommendation; and (2) if a negative action is taken by the physician hearing committee, a hearing must be held by a committee of the [Board of Trustees] hospital governing body; and be it further

RESOLVED, That the Pennsylvania Medical Society notify all Pennsylvania hospital medical staffs of the aforementioned procedure.

The House adopted the amended substitute resolution.

Reference Committee E

Presented by:
Donald H. Smith, MD

Mr. Speaker, members of the House of Delegates, Reference Committee E has considered all of the items in the index.

REPORT A, COUNCIL ON MEDICAL ECONOMICS: Referrals from 1990 House of Delegates

Mr. Speaker, your reference committee recommends that Report A be referred to the Board of Trustees for further action.

Report A outlines the accomplishments and activities of the Council on Medical Economics and includes reports on the status of implementation of resolutions of the 1990 House of Delegates.

Resolution 90-38 directed the Society to go on record as recommending that prepaid prescription plans allow participants to receive prescriptions for drugs in quantities smaller than a three-month supply.

Your reference committee received testimony indicating the Society's efforts to seek changes from the State Board of Pharmacy, but feels additional action is necessary to address the intent of this resolution.

Several portions of Report A referred to ongoing activities of the Society to review and evaluate third-party plans and contracts. Your reference committee heard considerable testimony regarding the need for analysis and information pertaining to individual physicians' rights and responsibilities under plans of this type. Testimony reflected concern that the Society needed, through its various administrative components, to provide additional support for physicians in this area.

The House approved referring Report A.

RESOLUTION 91-2: Practice Parameters

RESOLVED, That the Pennsylvania Medical Society recognize and approve the further development of practice parameters through appropriate specialty societies in conjunction with the American Medical Association; and be it further

RESOLVED, That the Pennsylvania Medical Society continue educating its membership about the current and future trends in practice parameters in not only clinical practice, but in residency and medical school training programs.

Mr. Speaker, your reference committee recommends that the first resolved of Resolution 91-2 be amended as follows:

RESOLVED, That the Pennsylvania Medical Society recognize and [approve] *support* the further development of practice parameters through appropriate specialty societies in conjunction with the American Medical Association;

Mr. Speaker, your reference committee recommends that Resolution 91-2 be adopted as amended.

Resolution 91-2 directs the Society to develop a process for the development, recognition, and approval of practice parameters for medical care.

Your reference committee heard testimony on current efforts at the national level by the American Medical Association and the national specialty societies to establish and disseminate appropriate practice parameters. The difficulty and the potential expense of initiating development of such parameters at the state level was discussed. It was felt that the first resolved of the resolution should reflect the need for the Society to use existing structural mechanisms in carrying out this task.

The House adopted as amended Resolution 91-2.

REPORT N, BOARD OF TRUSTEES: Standards of Medical Practice (RESOLUTION 90-33)

Mr. Speaker, your reference committee recommends that Report N be referred to the Board of Trustees for further study.

Report N responds to Resolution 90-33 which called on the Society to take an active role in recommending approval of new procedures for acceptance for reimbursement purposes by third parties.

Your reference committee heard testimony from representatives of Blue Cross and Blue Shield dealing with the experimental status of new procedures and services for reimbursement. The Blue Cross criteria includes the recognition of procedures by appropriate regulatory agencies; accumulation of research data and reports; selection of the best treatment alternative; and the need to improve the net outcome of care.

Your reference committee commends Blue Cross and Blue Shield for their efforts in this regard to date, but feels there is still room for improving and expediting this process.

The House approved referring Board Report N.

REPORT Q, BOARD OF TRUSTEES: Third-Party Utilization Review (RESOLUTION 90-63)

Mr. Speaker, your reference committee recommends that Report Q be referred to the Board of Trustees for further study.

Report Q outlines the history of the Society's efforts in the area of peer and utilization review. It concludes that, given the current legal climate, the Society should not engage in such activities.

Your reference committee, despite receiving no testimony, felt that a discrepancy exists between the substance of Resolution 90-63 and the report. Therefore, additional study of the problem and exploration of alternative approaches should be undertaken.

The House approved referring Board Report Q.

RESOLUTION 91-14: Geriatrics as Valid Medical Specialty for Medicare

RESOLVED, That the Pennsylvania Medical Society encourage Pennsylvania Blue Shield to declare that *geriatrics* is a valid medical specialty for Medicare in the state of Pennsylvania.

Mr. Speaker, your reference committee recommends that Resolution 91-14 not be adopted.

Resolution 91-14 requests Pennsylvania Blue Shield to recognize geriatrics as a specialty for reimbursement purposes.

Your reference committee heard testimony that the implementation of the Medicare Physician Payment System in 1992 will do away with differences in payout by specialty. It was further

indicated that Blue Shield currently has a procedure for recognition of specialties which includes the existence of the national certification board with certification examination. Currently, geriatrics is recognized by the granting of a certificate of additional training, but is not recognized by a national specialty certifying board.

It was moved and seconded from the floor of the House to refer Resolution 91-14 to the Board of Trustees for study. The House approved referring Resolution 91-14.

REPORT SS, BOARD OF TRUSTEES: Worker's Compensation Reform

Mr. Speaker, your reference committee recommends that Report SS be filed.

Report SS outlines the status of the Society's activities with respect to seeking reform to the Commonwealth's workers' compensation system.

Your reference committee wishes to commend the Board of Trustees for its prompt and ongoing action to address this emerging issue.

The House approved filing Board Report SS.

REPORT ZZ, BOARD OF TRUSTEES: Auto Insurance Reform (ACT 6)

Mr. Speaker, your reference committee recommends that Report ZZ be filed.

Report ZZ addresses the efforts of the Society to respond to the enactment of the Automobile Insurance Reform Act and its implementing regulations.

Your reference committee commends the Board of Trustees for its ongoing activities to mitigate the negative impact of the Act and its regulations.

The House approved filing Board Report ZZ.

RESOLUTION 91-21: Medical Assistance Participation

RESOLVED, That the Pennsylvania Medical Society work in concert with the Department of Public Welfare and the Department of Health to orchestrate a program of increased compensation for physicians, especially in those areas where the need for service is demonstrated to be the greatest.

Mr. Speaker, your reference committee recommends that the first resolved of Resolution 91-21 be amended as follows:

RESOLVED, That the Pennsylvania Medical Society work in concert with the Department of Public Welfare [and], the Department of Health, *and the Pennsylvania General Assembly* to orchestrate a program [of increased compensation for physicians, especially in those areas where the need for service is demonstrated to be the greatest.] *to expand coverage under Medicaid to those citizens of the Commonwealth who qualify under the federal definition of poverty; to increase access to medical care for beneficiaries; and to allow for appropriate compensation for providers.*

Mr. Speaker, your reference committee recommends that Resolution 91-21 be adopted as amended.

Resolution 91-21 addresses the current plight of the medically indigent and uninsured/underinsured population in Pennsylvania and calls for the Society to seek improvements.

Your reference committee heard testimony on the Society's current efforts to work with the Office of Medical Assistance, Department of Public Welfare and members of the Pennsylvania General Assembly to improve the existing Medical Assistance Program and to expand health care coverage to the additional 1.7 million people without adequate health benefits.

It was moved and seconded from the floor of the House to further amend the first resolved of Resolution 91-21 by deleting the words, "under the federal definition of poverty", and deleting the words, "allow for appropriate compensation for providers." and inserting the words, "remove administrative and financial barriers to provider participation." The House approved the amendments.

It was moved and seconded from the floor of the House to refer to the Board of Trustees for action amended Resolution 91-21. The House approved referring amended Resolution 91-21.

RESOLUTION 91-13: [Efforts to Improve Care and Control Costs] *Federal Restrictions for Long-Term Care*

RESOLVED, That the Pennsylvania Medical Society support efforts to reduce the burden of federal regulations and oversight regarding the provision of long-term care; and be it further

RESOLVED, That a similar resolution be considered by the Pennsylvania Delegation to the American Medical Association for submission at the national level.

Mr. Speaker, your reference committee recommends that the first resolved of Resolution 91-13 be amended as follows:

RESOLVED, That the Pennsylvania Medical Society support efforts to reduce the burden of federal [regulations] *restrictions* and *federal and state* oversight regarding the provision of long term care;

Mr. Speaker, your reference committee recommends that Resolution 91-13 be adopted as amended.

Resolution 91-13 calls for the Society to work to lessen the constraints of federal law and regulations on the delivery of long term care.

Your reference committee understands a portion of the problem relates to the law while other restrictions are contained in regulations. Testimony addressed the negative impact of such restrictions of quality care to patients in long term facilities.

It was moved and seconded from the floor of the House to further amend Resolution 91-13 by substituting the second resolved with the following, "RESOLVED, That the American Medical Association support legislation to reduce federal control of long-term care so that the individual states would be empowered to devise and experiment with various strategies in the financing and provision of long-term care." The House approved the substitute. The House adopted as amended Resolution 91-13.

RECOMMENDATION 2b, ADDRESS OF PRESIDENT ELECT: Supporting AMA's Health Access America

Mr. Speaker, your reference committee recommends that Recommendation 2b of the address of the President Elect (Robert N. Moyers, MD) be filed.

Recommendation 2b calls on the Society to continue its support of the American Medical Association's Health Access America initiative.

Your reference committee wishes to commend the President Elect (Dr. Moyers) for keeping the AMA initiative before the Society as a basic policy for addressing issues related to access to health care.

The House approved filing Recommendation 2b.

RECOMMENDATION 7, ADDRESS OF THE PRESIDENT ELECT: RBRVS and Medicare Fee Schedule Changes

Mr. Speaker, your reference committee recommends that Recommendation 7 of the address of the President Elect (Robert N. Moyers, MD) be filed.

Recommendation 7 contains the following provisions: (a) development of capabilities to assist members to prepare for and deal with the Medicare Physician Payment System; (b) strengthening efforts to achieve utilization of the Health Care Financing Administration (HCFA) form 1500 for all claims; and (c) pursuit of legislation mandating reasonable payment timeframes.

Filing is recommended since these recommendations are consistent with ongoing Society policy and activities.

The House approved filing Recommendation 7.

Waiver of debate list

The following items have been grouped together in a waiver of debate list; no testimony was heard, and the committee feels the items are of a noncontroversial nature.

Mr. Speaker, your reference committee recommends for adoption:

REPORT R, BOARD OF TRUSTEES: Level II PA Blue Shield Fees (RESOLUTION 90-73)

RESOLUTION 91-33: Automatic Processing of Major Medical Claims

RESOLVED, That the Pennsylvania Medical Society draft proposed legislation to mandate automatic processing of Major Medical claims and identify sponsors to introduce the legislation; and be it further

RESOLVED, That the Pennsylvania Medical Society take whatever other steps are necessary to have Pennsylvania legislate mandatory automatic processing of Major Medical claims.

RESOLUTION 91-44: Explanation of Payments by Health Insurers

RESOLVED, That the Pennsylvania Medical Society work toward state legislation requiring any and all insurance companies conducting health insurance business within the Commonwealth of Pennsylvania to itemize and encode, on their "Explanation of Payments," all payments made to medical providers in the same way that medical providers are required to itemize and encode their claims for payment.

RESOLUTION 91-16: Medicaid Reform in House Bill 20

RESOLVED, That the Pennsylvania Medical Society investigate the possibility of having private insurers bid to provide insurance to Medicaid recipients.

RESOLUTION 91-51: [Proposed] *Legislative Action to Oppose* Elimination of Professional Component Reimbursement for EKG Interpretation

RESOLVED, That the Pennsylvania Medical Society urge each of its members to petition their representative to cosponsor HR 3373, prime sponsor, Tom McMillen (D-MD), or other such legislation.

REPORT YY, BOARD OF TRUSTEES: Resource Based Relative Value Study (RBRVS)

The House adopted the waiver of debate items.

Mr. Speaker, your reference committee recommends for filing:

REPORT P, BOARD OF TRUSTEES: Exploring New Relationships with a Variety of Insurance Companies (Recommendations of the President Elect [Gordon K. MacLeod, MD])

The House approved filing the waiver of debate item.

Reference Committee G

Presented by:
Howard L. Carbaugh, MD

Mr. Speaker, members of the House of Delegates, Reference Committee G has considered all the items in the index.

REPORT TT, BOARD OF TRUSTEES: Preoperative HIV Testing on Patients (RESOLUTION 90-50)

RESOLUTION 91-15: Mandatory HIV Testing

RESOLVED, That the Pennsylvania Medical Society continue to serve as a voice of reason and leadership and oppose across-the-board mandatory HIV testing of health care workers as well as across-the-board HIV testing of patients without their consent, except in the limited cases where current Pennsylvania law allows testing without consent; and be it further

RESOLVED, That the Pennsylvania Medical Society continue its advocacy of appropriate voluntary HIV testing for all Pennsylvanians at risk including health care workers; and be it further

RESOLVED, That the Pennsylvania Medical Society continue to support the concept of peer consultation and supervision of HIV- infected health care workers in order to appropriately protect patients.

RESOLUTION 91-11: HIV Testing of Providers

RESOLVED, That the Pennsylvania Medical Society support the position that physicians in the state of Pennsylvania need not heed the AMA and other groups' demands that they reveal their HIV status to their patients or that they restrict their care to their patients in inner respect, including the invasive procedures, provided that they utilize universal precautions; and be it further

RESOLVED, That the Pennsylvania Medical Society push for reforms in the area of HIV testing so that it can be more easily accomplished and that those results, if positive, be reported to the State Board of Health for tracking and contact identification.

RESOLUTION 91-38: AIDS/HIV Testing

RESOLVED, That the Pennsylvania Medical Society urge our legislators to:

(1) allow for unlimited and unrestricted testing for HIV whenever it appears to be medically appropriate in order to reduce the rate of spread of this incurable disease among the general population and to begin early treatment so as to delay the onset of symptoms in the individual patient who is as yet asymptomatic; and

(2) require reporting of all HIV positivity to the State Department of Health those unfortunate victims who have contracted the disease, and at the same time require confidentiality so as to avoid persecution in the workplace and unnecessary hardship in the patient's social environment.

RESOLUTION 91-42: HIV Testing

RESOLVED, That medical personnel involved in invasive procedures may legally and ethically request pre-procedure HIV testing; and be it further

RESOLVED, That appropriate measures be taken to protect the health care worker as with syphilis, hepatitis B, tuberculosis, or any other infectious disease; and be it further

RESOLVED, That the Pennsylvania Medical Society lobby the Pennsylvania legislature to adopt an AIDS Discovery Law.

Mr. Speaker, your reference committee recommends that the Board policy statement contained within Board of Trustees Report TT be amended as follows:

Whenever in the judgment of a physician, AIDS testing is necessary, either for the care of the patient or the protection of health care workers, that testing should be carried out. *The value of appropriate pre-test and post-test counseling is recognized.* Efforts to educate the public, the legal profession, and the legislators as to the reasonableness of this approach should be expanded.

Mr. Speaker, your reference committee recommends that Report TT, as amended, be adopted in lieu of Resolutions 91-15, 91-11, 91-38, and 91-42.

Report TT responds to Resolution 90-50 calling for the Pennsylvania Medical Society to recommend HIV testing for all pre-operative patients. The Board of Trustees adopted a policy calling for testing at the physician's discretion implying that informed consent not be required. Since testing is performed at the physician's discretion, it may not always be appropriate to test all pre-operative patients, so the physician is free to decide when to test.

Resolution 91-15 calls for the Pennsylvania Medical Society to continue to oppose across-the-board mandatory HIV testing for patients or physicians. It calls for continuation of policies which call for voluntary testing of all members of high-risk groups including physicians. It also calls for continued support for peer consultation and supervision of HIV-infected health care workers.

The purpose of Resolution 91-11 is to have the Pennsylvania Medical Society oppose the American Medical Association's position calling for HIV-infected physicians to inform their patients of their infection prior to performing invasive procedures. In addition, the resolution calls for the Pennsylvania Medical Society to seek reform in the area of HIV testing to make testing easier and to assure that positive results are reported to public health authorities.

Two resolveds are included in Resolution 91-38. The first calls for the State Society to urge legislators to allow for unlimited and unrestricted testing for HIV. The second calls for the Pennsylvania Medical Society to support reporting of all HIV positive test results to the Pennsylvania Department of Health with appropriate safeguards to protect patient confidentiality.

Resolution 91-42 calls upon the Pennsylvania Medical Society to support the position that medical personnel may ethically and legally request pre-procedure HIV testing. It calls for all appropriate measures to be taken to protect health care workers from HIV, as with any other infectious disease. Finally, it calls for the State Society to lobby the Pennsylvania legislature to adopt an AIDS discovery law.

All of these items address similar

issues, and your reference committee has combined them for your consideration. All deal with the debate surrounding HIV testing. Your reference committee believes that the adoption of Report TT as amended addresses all of these issues adequately. Your reference committee wishes to point out that pre- and post-test counseling for HIV testing is still important and in the best interest of the patient.

It was moved and seconded from the floor of the House to further amend the policy statement contained in Board Report TT by inserting after the words, "either for the care of the patient or the protection of", the words, "the public and" The House approved the amendment.

It was moved and seconded from the floor of the House to replace the word, AIDS, with the word, HIV; this was accepted as an editorial revision.

It was moved and seconded from the floor of the House to adopt Resolution 91-38. It was moved and seconded from the floor of the House to amend Resolution 91-38 by inserting in (2) of the resolved the word, "confirmed", after the words, "require reporting of all"; this was accepted as an editorial revision. The House adopted as editorially revised Resolution 91-38.

It was moved and seconded from the floor of the House to adopt Resolution 91-15. It was moved and seconded from the floor of the House to amend Resolution 91-15 by replacing the three resolveds with the following, "RESOLVED, That the Pennsylvania Medical Society is against unwarranted mandatory testing." The House did not approve the amendment. The House did not adopt Resolution 91-15. The House adopted as amended Board Report TT in lieu of Resolutions 91-15, 91-11, and 91-42.

REPORT J, BOARD OF TRUSTEES: AIDS/HIV Testing (RESOLUTION 90-80)

Mr. Speaker, your reference committee recommends that Board of Trustees Report J be adopted.

Report J was created in response to Resolution 90-80 calling for removal of informed consent requirements for HIV testing and reporting of the results to public health authorities. The report outlines the actions of the Council on Governmental Relations in the difficult negotiating process which resulted in the AIDS Confidentiality Law. This law did include testing without consent if a health care worker was exposed to the patient's blood.

Your reference committee heard very little testimony regarding this report. That which was heard was not critical of the report, and your reference committee believes that Report J adequately addresses the substance of Resolution 90-80.

The House adopted Board Report J.

REPORT CC, BOARD OF TRUSTEES: HIV Positive Reporting (RESOLUTION 90-60)

Mr. Speaker, your reference committee recommends that Report CC be amended by adding the following sentence to the end of the report:

The Board of Trustees shall provide a report to the 1992 House of Delegates regarding the status of HIV positive test result reporting in Pennsylvania.

Mr. Speaker, your reference committee recommends that Report CC be adopted as amended.

This report was created in response to Resolution 90-60: HIV Positive Reporting which called for Pennsylvania Medical Society to recommend that all

HIV-positive test results be reported to the Commonwealth of Pennsylvania. The report points out that the Pennsylvania Medical Society has been on record supporting this position for several years.

Your reference committee was satisfied that the Board of Trustees has done all that could be done to assure that the Pennsylvania Department of Health makes HIV-positive test reporting mandatory. Since the Department of Health has promised to take this action, your reference committee believes that the House should be informed of the status of mandatory reporting in Pennsylvania.

Raymond C. Grandon, MD, Dauphin County, talks with Mrs. Michael J. Prendergast at a reception held for physicians and their spouses.

The House adopted as amended Board Report CC.

REPORT AAA, BOARD OF TRUSTEES: Pennsylvania Medical Society Policy Statement on CDC Guidelines

Mr. Speaker, your reference committee recommends that Report AAA be adopted.

The Pennsylvania Medical Society Board of Trustees created Report AAA in response to the "Recommendations for Preventing Transmission of Human Immunodeficiency Virus (HIV) and Hepatitis B Virus (HBV) to Patients During Exposure-Prone Invasive Procedures" published by the Centers for Disease Control. The Board believes that the restrictions upon infected health care workers contained in these recommendations are politically motivated and are not justified by epidemiologic data.

Your reference committee heard no debate regarding this report. The reference committee believes that the report is quite good and recommends a very reasonable policy.

The House adopted Board Report AAA.

RESOLUTION 91-63: The Compliance of Pennsylvania Physicians to CDC Guidelines on HIV Control

RESOLVED, That the Pennsylvania Medical Society HIV Task Force investigate the degree of compliance of Pennsylvania health care professionals with the CDC guidelines designed to limit the spread of HIV infection, and to investigate the effectiveness of said compliance; and be it further

RESOLVED, That the HIV Task Force of the Pennsylvania Medical Society use its findings to determine whether or not further action needs to be taken by Pennsylvania health care professionals and/or the Pennsylvania state government.

Mr. Speaker, your reference committee recommends that Resolution 91-63 not be adopted.

Resolution 91-63 calls for the Pennsylvania Medical Society to investigate the degree of compliance with CDC guidelines for preventing transmission of HIV and HBV to patients and determine whether or not additional actions are required of health care professionals or state government.

Your reference committee believes that the study called for by this resolution would be extremely difficult for the Pennsylvania Medical Society to perform. The resolution does not advocate any particular methodology.

It was moved and seconded to postpone temporarily Resolution 91-63. The House approved the motion.

RESOLUTION 91-41: Physicians with AIDS

RESOLVED, That physicians with positive serology for HIV or AIDS be reported to public health authorities; and be it further

RESOLVED, That the physician with positive serology for HIV or AIDS should be encouraged to seek employment with no direct patient contact.

Mr. Speaker, your reference committee recommends that Resolution 91-41 not be adopted.

The purpose of Resolution 91-41 is to assure that physicians who test positive for HIV or AIDS be reported to public health authorities. Its second purpose is to have the Pennsylvania Medical Society encourage HIV-positive physicians to seek employment with no direct patient contact.

Your reference committee believes that the first resolved of Resolution 91-41 is

already addressed by State Society policy calling for all HIV-positive test results to be reported to public health authorities. The majority of testimony heard by your reference committee was in opposition to the second resolved in this report and it appears to conflict with Report AAA of the Board of Trustees.

The House did not adopt Resolution 91-41.

RESOLUTION 91-31: Insurance for HIV-Positive Health Care Providers During the Period of Retraining

RESOLVED, That the Pennsylvania Medical Society study how insurance coverage could be made available to health care providers which would supplement the income of health care providers who are HIV positive during the period of retraining.

Mr. Speaker, your reference committee recommends that Resolution 91-31 be amended as follows:

RESOLVED, That the Pennsylvania Medical Society study [how] *what* insurance coverage [could be made] *is* available to *HIV-positive* health care providers which would supplement [the] *their* income [of health care providers who are HIV positive] during the period of retraining *and publicize the study results*.

Mr. Speaker, your reference committee recommends that Resolution 91-31 be adopted as amended.

Resolution 91-31 seeks to have the Pennsylvania Medical Society study how insurance coverage would be made available to HIV-positive health care providers which would supplement their income during the period of retraining.

Your reference committee heard testimony from the resolution's author indicating that several such insurance policies are already available. It would, therefore, be better for the Medical Society to publicize the availability of existing policies than to attempt to develop another approach to the problem.

It was moved and seconded from the floor of the House to refer Resolution 91-31 for further study. The House did not approve the motion by a vote of 133 to 78.

It was moved and seconded from the floor of the House to further amend Resolution 91-31 by deleting the words, "during the period of retraining" in the title and in the amended resolved. The House approved the motion. The House adopted as amended Resolution 91-31.

RESOLUTION 91-32: Retraining Courses for HIV-Positive Health Care Providers

RESOLVED, That the Pennsylvania Medical Society study how counseling and retraining programs should be made available to health care providers who are HIV positive and who perform invasive procedures; and be it further

RESOLVED, That the Pennsylvania Medical Society play a leadership role in developing retraining courses for HIV-positive health care providers.

Mr. Speaker, your reference committee recommends that the second resolve of Resolution 91-32 be amended as follows:

RESOLVED, That the Pennsylvania Medical Society play a leadership role in [developing] *the development of* retraining courses for HIV-positive health care providers.

Resolution 91-32 calls upon the Pennsylvania Medical Society to study how counseling and retraining programs should be made available for health care providers who are HIV positive and perform invasive procedures. It also calls for the Pennsylvania Medical Society to play a leadership role in developing retraining courses for HIV-positive health care providers.

Your reference committee believes it is a more appropriate role for the Pennsylvania Medical Society to provide leadership in developing retraining programs than to actually develop the training program itself.

The House adopted as amended Resolution 91-32.

RESOLUTION 91-25: AIDS Confidentiality of HIV-Related Information Act (ACT 148 OF 1990)

RESOLVED, That the Pennsylvania Medical Society seek revision of the AIDS-Confidentiality of HIV-Related Information Act (Act 148 of 1990) to *exclude physicians and their personnel from seeking other health care practitioners when significant exposure is encountered and allow these physicians to test themselves, their personnel, and their patients.*

Mr. Speaker, your reference committee recommends that Resolution 91-25 be amended as follows:

RESOLVED, That the Pennsylvania Medical Society seek revision of *that portion of* the AIDS-Confidentiality of HIV-Related Information Act (Act 148 of 1990) *which mandates* that physicians and their personnel seek other health care practitioners when significant exposure is encountered and *instead* allow these physicians to test themselves, their personnel, and their patients.

Mr. Speaker, your reference committee recommends that Resolution 91-25 be adopted as amended.

The author of Resolution 91-25 wishes to see the Pennsylvania Medical Society seek revision of the AIDS-Confidentiality of HIV-Related Information Act to allow physicians to certify their own and their employees' exposure to HIV as significant.

Your reference committee agrees with the intent of the resolution, but believes that these amendments make that intent much clearer.

It was moved and seconded from the floor of the House to further amend Resolution 91-25 by adding the words, "the consultation of" after the words, "which mandates that physicians and their personnel seek." The House approved the amendment. The House adopted as amended Resolution 91-25.

RESOLUTION 91-6: Student Exposure to HIV, Hepatitis B, and Other Infectious Agents

RESOLVED, That the Pennsylvania Medical Society investigate the education residents and students-in-training in Pennsylvania receive to limit their risk of exposure to HIV and Hepatitis B; investigate the status of policies at medical schools for students who may have been exposed to HIV and Hepatitis B during training; and develop a policy on these issues.

Mr. Speaker, your reference committee recommends that Resolution 91-6 be amended as follows:

RESOLVED, That the Pennsylvania Medical Society investigate the education residents and students-in-training in Pennsylvania receive [to limit their risk of exposure to HIV and Hepatitis B] *regarding infectious disease control policies and procedures, particularly universal precautions*; investigate the status of policies at medical schools for students who may have been exposed to HIV and Hepatitis B during training; [and develop a policy on these issues] *and encourage all medical schools without such a policy to develop one.*

Mr. Speaker, your reference committee recommends that Resolution 91-6 be adopted as amended.

Resolution 91-6 would have the Pennsylvania Medical Society investigate the education residents and students in Pennsylvania receive to limit their risk of exposure to HIV and Hepatitis B. It also calls for the Pennsylvania Medical Society to investigate the status of policies at medical schools for students who may have been exposed to HIV and Hepatitis B during training. The Pennsylvania Medical Society is then to develop a policy on these issues.

Your reference committee believes that students should be educated in preventing the transmission of all infectious diseases through proper use of universal precautions.

Your reference committee received testimony from the Pennsylvania Medical Society Medical School Section suggesting that the State Society not dictate that the medical schools adopt a particular training program, but assure that all medical schools have their own training programs. Your reference committee sees wisdom in that recommendation.

It was moved and seconded from the floor of the House to insert "/or" after the words, "investigate the status of policies at medical schools for students who have have been exposed to HIV and"; this was accepted as an editorial revision.

It was moved and seconded from the floor of the House to further amend Resolution 91-6 by replacing the words, "medical schools" with the words, "other medical educational institutions" so as to

read, "and encourage all other medical educational institutions without such a policy to develop one." The House approved the amendment. The House adopted as amended Resolution 91-6.

RESOLUTION 91-58: The Pennsylvania Clean Indoor Air Act

RESOLVED, That the Pennsylvania Medical Society recommend adoption of policies by the Commonwealth of Pennsylvania:

1. The need to eliminate smoking in public places and the need to include lobbies and hallways in this definition.
2. The need to eliminate smoking in businesses (including all workplaces) and the need to include factories and warehouses in this definition.
3. The need to allow localities (in addition to Allegheny County) to enact more stringent measures than the law which is applicable statewide.

; and be it further

RESOLVED, That the Pennsylvania Medical Society study whether the use of physical barriers between smoking areas and nonsmoking areas within restaurants should be mandated, taking into account the technology of air-exchange per unit time; and be it further

RESOLVED, That the Pennsylvania Medical Society study whether the penalties associated with violations of the law should be strengthened, and whether individuals should be permitted to report violations thereof.

Mr. Speaker, your reference committee recommends that Resolution 91-58 be amended by deletion of the second resolved.

Mr. Speaker, your reference committee recommends adoption of Resolution 91-58 as amended.

The purpose of Resolution 91-58 is to eliminate smoking in public places and businesses, and to allow local governments to enact more stringent measures than the current state law. It would also have the Pennsylvania Medical Society study whether physical barriers between smoking and non-smoking areas should be mandated. Finally, it would have the Pennsylvania Medical Society study whether the penalties for violation of the Clean Indoor Air Act should be strengthened and if individuals should be permitted to report violations of the law.

Your reference committee believes that the action called for by the second resolve is not practical. It would be prohibitively expensive for business owners to comply with such a mandate if the study indicates that it is necessary. It would not be feasible to call upon the business community to make such a large sacrifice at this time, nor would such legislation be likely to be enacted.

The House adopted as amended Resolution 91-58.

REPORT UU, BOARD OF TRUSTEES: Substance Abuse (RESOLUTION 90-65)

Mr. Speaker, your reference committee recommends that Board of Trustees Report UU be adopted.

This report is submitted by the Board in response to Resolution 90-65: Substance Abuse. It includes a comprehensive report on decriminalization of illicit drugs prepared by the Pennsylvania Medical Society Task Force on Drug Abuse.

Your reference committee heard nothing but positive testimony regarding this report. The reference committee wishes to commend the Pennsylvania Medical Society's Task Force on Drug Abuse for its hard work in creating this outstanding report.

The House adopted Board Report UU.

RESOLUTION 91-9: Pennsylvania Department of Health Fund a Facility to Treat Difficult Tuberculosis Cases

RESOLVED, That the Pennsylvania Medical Society urge the Pennsylvania Department of Health to identify and fund a facility where difficult-to-treat tuberculosis cases can be effectively treated to reduce the incidence of tuberculosis and to avoid the risk of spreading drug-resistant organisms.

Mr. Speaker, your reference committee recommends that Resolution 91-9 be amended as follows:

RESOLVED, That the Pennsylvania Medical Society urge the Pennsylvania Department of Health to identify and fund [a facility where] *appropriate mechanisms whereby* difficult-to-treat tuberculosis cases can be effectively treated to reduce the incidence of tuberculosis and to avoid the risk of spreading drug resistant organisms.

Mr. Speaker, your reference committee recommends that Resolution 91-9 be adopted as amended.

Resolution 91-9 would have the Pennsylvania Medical Society urge the Pennsylvania Department of Health to identify and fund a facility for treating difficult tuberculosis cases.

Your reference committee heard testimony suggesting that the critical issue involved in this resolution is providing adequate funding. Funding may be provided to existing facilities as appropriate so your reference committee did not wish to tie the Medical Society to the concept of supporting a new facility.

It was moved and seconded from the floor of the House to further amend Resolution 91-9 by inserting after the words, "RESOLVED, That the Pennsylvania Medical Society urge the Pennsylvania Department of Health to identify and" the words, "and the legislature to"; and to amend the title by changing the word, a, to the word, an, and deleting the word, facility, and replacing it with the words, appropriate mechanism, so as to read: Pennsylvania Department of Health Fund an Appropriate Mechanism to Treat Difficult Tuberculosis Cases. The House approved the amendments. The House adopted as amended Resolution 91-9.

Waiver of Debate List

The following items have been grouped together in a waiver of debate list; no testimony was heard, and the committee feels that the items are of a noncontroversial nature.

Mr. Speaker, your reference committee recommends that the following item be filed:

REPORT JJ, BOARD OF TRUSTEES: Task Force on Drug Abuse

The House approved filing the waiver of debate item.

Mr. Speaker, your reference committee recommends that the following items be adopted:

REPORT W, BOARD OF TRUSTEES: Tobacco-Related Legislation (RESOLUTION 90-13)

RESOLUTION 91-50: Pennsylvania Clean Indoor Air Act

RESOLVED, That the Pennsylvania Medical Society seek changes in appropriate Pennsylvania laws to include the following policies:

1. The need to eliminate smoking in public places and the need to include lobbies and hallways in this definition.
2. The need to eliminate smoking in businesses (including all work places) and the need to include factories and warehouses in this definition.
3. The need to allow all localities to enact more stringent measures than the law which is applicable statewide.

REPORT X, BOARD OF TRUSTEES: Tobacco Use (RESOLUTION 90-28)

RESOLUTION 91-37: Smoking Cessation

RESOLVED, That the Pennsylvania Medical Society urge all hospitals to have a mechanism(s) in place, be it pharmaceutical and/or other means, to facilitate the treatment of patients who desire help with smoking cessation; and be it further

RESOLVED, That the Pennsylvania Medical Society call upon the AMA to also urge all hospitals to have a mechanism(s) in place to facilitate the treatment of patients who desire help with smoking cessation.

REPORT DD, BOARD OF TRUSTEES: Substance Abuse Counselors and Substance Abuse Sobriety Houses (RESOLUTIONS 90-61 AND 90-62)

REPORT FF, BOARD OF TRUSTEES: Guidelines for Health Education in Pennsylvania

RESOLUTION 91-17: Access to Maternal and Child Health Care

RESOLVED, That the Pennsylvania Medical Society establish, as a public health priority, the issue of access to and delivery of maternal and child health care services; and be it further

RESOLVED, That the Society attempt to involve, in the furtherance of the priority of access to and delivery of maternal and child health care services, a broad spectrum of lay and professional organizations and agencies with demonstrated interest in the establishment of a comprehensive approach to delivery of quality maternal and child health care services in Pennsylvania.

RESOLUTION 91-23: Farm Injury Prevention for Low-Income Farmers

RESOLVED, That the Pennsylvania Medical Society ask the Commonwealth of Pennsylvania to consider implementation of a program offering to substantially subsidize the retrofitting of rollover protection and safety shielding of older farm equipment used by farmers having an annual income of less than 150 percent of the federal poverty level.

RESOLUTION 91-49: Pennsylvania Medical Society Position on Biomedical Research and Testing

RESOLVED, That the Pennsylvania Medical Society strongly endorse the policy of the American Medical Association which unequivocally supports the humane use of animals in biomedical research and teaching; and be it further

RESOLVED, That the use of animals in research and teaching must be carried out in compliance with current federal, state, local, and institutional laws and regulations; the development of suitable alternatives to the use of animals should be encouraged and supported by government and private organizations; and be it further

RESOLVED, That the Pennsylvania Medical Society support efforts by the American Medical Association and other medical societies to actively defend and promote such research, and to develop and present educational programs to inform physicians and the public of the benefits of the use of animals in research and teaching; and be it further

RESOLVED, That the Pennsylvania Medical Society support the current American Medical Association intent to organize national meetings to discuss the issue of research and the problems posed by animal rights activists; and be it further

RESOLVED, That the Pennsylvania Medical Society stress to the public its concern regarding the impact of animal rights activists and "animal liberation" groups on the conduct of biomedical research, and condemn all illegal activities which may be used by these groups; and be it further

RESOLVED, That the Pennsylvania Medical Society oppose many of the other tactics used by animal rights activists and "animal liberation" groups, including picketing, sit-ins, threats, and boycotts.

RECOMMENDATION 2d OF THE PRESIDENT-ELECT: Public Health Plan

The House adopted the waiver of debate items.

Reference Committee B

Presented by:
Abram M. Hostetter, MD

Mr. Speaker, members of the House of Delegates, Reference Committee B has considered all of the above items in the index.

RESOLUTION 91-28: Abortion

RESOLVED, That the Pennsylvania Medical Society inform the American College of Obstetrics and Gynecology and the American Board of Obstetrics and Gynecology of its opposition to the recommendations of the American College of Obstetrics and Gynecology regarding training and certification to perform abortions; and be it further

RESOLVED, That the Pennsylvania Delegation to the AMA present this same resolution for like action at the national level.

Mr. Speaker, your reference committee recommends that Resolution 91-28 be withdrawn at the request of the author.

The House approved the withdrawal of Resolution 91-28.

RESOLUTION 91-3: Abortion

RESOLVED, That the Pennsylvania Medical Society strongly urge the AMA to remain neutral on the issue of abortion, and that its officials cease any lobbying efforts to influence judicial or political opinion regarding the rendering of abortion services.

Mr. Speaker, your reference committee recommends that 91-3 not be adopted.

Resolution 91-3 urges the AMA to remain neutral on the issue of abortion and to refrain from lobbying efforts to influence judicial or political opinion on abortion. The intent of the resolution is to avoid alienating and disenfranchising those physicians that do not agree with either a pro or anti-abortion stance.

Considerable testimony was heard on both sides of the resolution. The author suggested amending the resolution to delete reference to lobbying efforts. However, further discussion did not resolve semantic and substantive differences regarding "neutral" versus "no position" policies.

RESOLUTION 91-45: Pennsylvania Medical Society Policy on Abortion

RESOLVED, That the Pennsylvania Medical Society recognizes the following three positions exist among its membership:

A. Those who believe that the pregnant women, when concurred with by her physician, herself shall determine that abortion is necessitated in her case; this is sometimes referred to as the "pro-choice" position.

B. Those who believe that fetal life has intrinsic individual value, but this can be overridden by specific grave medical risks and by specific socially undesirable conditions facing the mother and/or child.

C. Those who believe that the unborn child, from the moment of fertilization, has absolute intrinsic value to that of any child already born and equal to the mother herself. Sometimes called the "pro-life" ethic, this position places a responsibility on the physician to counsel and advise against induced abortion on demand, and to provide positive alternatives for women with socially undesirable pregnancies; and be it further

RESOLVED, That the Pennsylvania Medical Society not endorse a single position on abortion to the exclusion of the others; and be it further

RESOLVED, That the Pennsylvania Medical Society ask the AMA to adopt the aforementioned policies.

Mr. Speaker, your reference committee recommends that Resolution 91-45 not be adopted.

Resolution 91-45 calls for the Society to recognize that its members hold three distinct positions on the issue of abortion, to abstain from endorsing any one of these positions, and to ask the AMA to take a similar stance.

Again, this resolution generated considerable debate, and various proposals to amend were made by the authors. Your reference committee believes that this resolution is essentially identical with Resolution 91-3 and thus should not be adopted.

It was moved and seconded from the floor of the House to postpone temporarily Resolutions 91-3 and 91-45. The House approved postponing temporarily Resolutions 91-3 and 91-45.

RESOLUTION 91-4: Access to Health Care

RESOLVED, That the Pennsylvania Medical Society request the American Medical Association to develop a liaison task force with the Liaison Council on Medical Education to study the availability, distribution, and need for family physicians compared with the graduating statistics of medical schools with and without departments of family practice; and be it further

RESOLVED, That this task force report its results back to the Pennsylvania Medical Society House of Delegates.

RECOMMENDATION 2C OF THE PRESIDENT ELECT

Mr. Speaker, your reference committee recommends that Resolution 91-4 and Recommendation 2c be referred to the Board of Trustees for further study.

Resolution 91-4 requests the AMA, in collaboration with the Liaison Council on Medical Education, to conduct a comparative study of the need, distribution, and availability of family physicians versus graduation statistics for medical schools with and without family practice departments. The president elect's proposal calls on the Society to

strengthen efforts to reverse the "doctor drain" from rural and inner-city areas of the Commonwealth.

During testimony, it was indicated that several studies on this issue are currently in progress. Moreover, some witnesses suggested expanding the study parameters. There also appeared to be differences concerning limiting the scope to family practice as opposed to primary care. For these reasons, your reference committee believes further study is appropriate.

The House approved referring to the Board of Trustees for further study Resolution 91-4 and Recommendation 2c.

RESOLUTION 91-5: Resident Working Hours

RESOLVED, That the Pennsylvania Medical Society encourage residency programs to continually evaluate their individual programs with respect to appropriateness of resident working hours; and be it further

RESOLVED, That the Pennsylvania Medical Society discourage state legislation directed toward mandating specific regulations restricting resident working hours; and be it further

RESOLVED, That the Pennsylvania Medical Society address the issue of resident working hours with the AMA Accreditation Council on Graduate Medical Education.

Mr. Speaker, your reference committee recommends that Resolution 91-5 not be adopted.

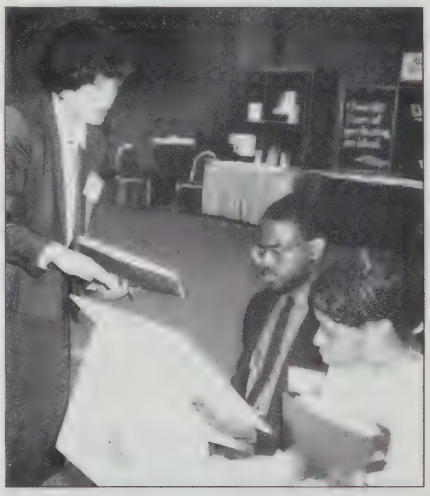
Resolution 91-5 outlines a Society position that discourages legislative efforts to control working hours and encourages attention to the matter by residency programs and the AMA. The intent is to overcome a perception that resident working hours relate to the quality of health care and possible attempts to control such hours legislatively.

Testimony indicated that such a resolution is unnecessary since the Pennsylvania Medical Society already has a similar policy that adequately addresses the issue of resident working hours.

It was moved and seconded from the floor of the House to amend Resolution 91-5 with the insertion of the following additional resolved:

"RESOLVED, That the Pennsylvania Medical Society communicate directly to James Todd, MD, AMA executive vice president, its view that the following issue should be weighed when formulating a position regarding resident working hours: Limitations on resident working hours and on moonlighting are both subject to the relationship between the resident physician and the graduate medical education program director.

The House did not approve the amendment. The House did not adopt Resolution 91-5.



RESOLUTION 91-18: Physicians' Medical Records

RESOLVED, That the Pennsylvania Medical Society compile the existing guidelines regarding the disposition, storage, and dispersal of medical records belonging to retired/deceased physicians and report back at the next meeting; and be it further

RESOLVED, That the Pennsylvania Medical Society study the feasibility of maintaining a records retrieval data bank and storage system.

Mr. Speaker, your reference committee recommends that Resolution 91-18 be adopted.

Resolution 91-18 calls for the Society to compile existing guidelines regarding disposition, storage, and dispersal of medical records of a retired or deceased physician and to study the feasibility of the Society maintaining a storage and retrieval system for such records.

Shelley Urich, manager of administration and loans for the Society's Educational and Scientific Trust, discusses Trust programs with meeting attendees.

Your reference committee heard testimony that the Council on Medical Practice is preparing a comprehensive physician desk reference which will include a section on medical records and is investigating the feasibility of a storage and retrieval system. This resolution will serve to provide additional impetus to these efforts. It was also noted that a storage and retrieval system would have to protect patient confidentiality.

The House adopted Resolution 91-18.

RESOLUTION 91-22: Recognition of Osteopathic Medicine and Allopathic Medicine as Separate Entities within the Practice of Medicine

RESOLVED, That the Pennsylvania Medical Society acknowledge that the practice of osteopathic medicine is separate and distinct from the practice of allopathic medicine; and be it further

RESOLVED, That the Pennsylvania Medical Society intensify efforts to ensure a smooth working relationship with osteopathic physicians and their organizations so as to further the joint interests of both allopathic and osteopathic physicians.

Mr. Speaker, your reference committee recommends that Resolution 91-22 not be adopted.

Resolution 91-22 calls upon the Society to acknowledge the separateness and distinction between osteopathic and allopathic medicine while at the same time to ensure a smooth working relationship between the two to further their joint interests.

Your reference committee heard testimony on the history of unification efforts and their impact on the membership status of osteopathic physicians. We believe that Report D of the Board of Trustees being considered in Reference Committee F adequately addresses this issue and that this resolution would be in contradiction to that report.

The House did not adopt Resolution 91-22.

RESOLUTION 91-27: Adverse Experience Survey Regarding Dangerous Cults

RESOLVED, That the Pennsylvania Medical Society fund and participate in a confidential survey of physicians' experiences, both personal and professional, in cults.

RESOLUTION 91-29: Cults: A Medical Issue

RESOLVED, That the Pennsylvania Medical Society call upon the AMA to:

- Study the medical consequences of participation in cults;
- Inform America's physicians of the health risks associated with cult participation, including early identification of the symptoms and diagnosis of syndromes associated with cults, treatment options for cult victims, support services for the ex-cult member and his or her family, assessment of the potential practice of medicine in which these so-called "self help" groups engage; and
- Educate the American public, and particularly America's youth, about the dangers of participation in such groups.

Mr. Speaker, your reference committee recommends that Resolutions 91-27 and 91-29 be referred to the Board of Trustees for further study.

Resolution 91-27 calls for the Society to fund and conduct a confidential survey of physicians' experiences with cults. The intent is to develop a more quantitative estimate of the breadth and depth of the problem of cults. Resolution 91-29 calls on the Society to ask the AMA to: (1) study the medical consequences of participation in cults; (2) inform physicians of the associated health risks, to include diagnosis, treatment options, and support services; and (3) educate the American public about these dangers.

Testimony was overwhelmingly supportive of the intent of these resolutions. However, some witnesses

expressed legal and fiscal concerns in implementing them. Your reference committee believes, therefore, that further study is required.

The House approved referring Resolutions 91-27 and 91-29.

RESOLUTION 91-61: Provision for Student Health Insurance

RESOLVED, That the Pennsylvania Medical Society commission a study on health care coverage for all medical professionals-in-training in the Commonwealth of Pennsylvania (including medical students, nursing students, allied health care students, and residents); and be it further

RESOLVED, That the following issues be considered in that study:

1. The risks of occupationally acquired illness and resultant financial injury to medical, nursing, and allied health care students.

2. Student loan coverage of health insurance and health care costs.

3. Mechanisms for *providing* all medical professionals-in-training in the Commonwealth of Pennsylvania with adequate health care coverage at an affordable cost.

4. Mechanisms for *protecting* all medical professionals-in-training in the Commonwealth of Pennsylvania *and their dependents* from catastrophic financial loss resulting from an occupationally acquired illness or injury; and be it further

RESOLVED, That input from the Medical Student Section, Resident Physician Section, Medical School Section, and The Educational and Scientific Trust will be solicited in reference to this study.

Mr. Speaker, your reference committee recommends that Resolution 91-61 be adopted.

Resolution 91-61 requires the Society to conduct a study on the provision of health care coverage for all medical professionals-in-training. This study should consider occupational risks, student loans, mechanisms for affordable health coverage, and protective measures. Input is to be sought from the Medical Student Section, Resident Physician Section, Medical School Section, and The Educational and Scientific Trust.

Testimony was highly supportive of the intent to provide cost effective health insurance to medical professionals-in-training. However, there was not consensus on how this insurance could be funded.

The House adopted Resolution 91-61.

RESOLUTION 91-62: Sexual Harassment

RESOLVED, That the Pennsylvania Medical Society adopt the AMA guidelines as their own policy on sexual harassment; and be it further

RESOLVED, That the Pennsylvania Medical Society endorse and enact future AMA measures which decrease the prevalence of sexual harassment in all areas of the medical profession, and not only medical training; and be it further

RESOLVED, That the Pennsylvania Medical Society adopt the AMA guidelines or similar guidelines on their own.

Mr. Speaker, your reference committee recommends that Resolution 91-62 be referred to the Board of Trustees for further study.

Resolution 91-62 calls on the Society to adopt either the AMA guidelines on sexual harassment or similar ones of our own. Your reference committee heard testimony from the Medical Student Section to clarify the resolution. Nonetheless, without access to the AMA guidelines themselves, your reference committee was hesitant to take a position on this most important issue.

The House approved referring Resolution 91-62.

RESOLUTION 91-64: Confidentiality Rights of Pharmaceutical Companies

RESOLVED, That the Pennsylvania Medical Society consider an investigation into the practicalities and adverse medical consequences of pharmaceutical confidentiality rights; and be it further

RESOLVED, That the Pennsylvania Medical Society report their findings back to the Pennsylvania Medical Society Medical Student Section.

Mr. Speaker, your reference committee recommends that Resolution 91-64 not be adopted.

Resolution 91-64 asks the Society to consider investigating the practicalities and adverse medical consequences of pharmaceutical confidentiality rights and report its findings to the Medical Student Section. This resolution stems from recent publicity concerning the Upjohn Company and its sleep medication, Halcion.

The reference committee believes that the resolution is based on media reports and that the Medical Society has no means to determine the validity of such claims. Moreover, it was believed that existing federal agencies, such as the FDA, already have the mandate and the resources to investigate such matters.

The House did not adopt Resolution 91-64.

REPORT Y, BOARD OF TRUSTEES: Right to Die Legislation (RESOLUTION 90-20)

Mr. Speaker, your reference committee recommends that Board of Trustees Report Y be referred to the Board of Trustees for further study.

Report Y recommends that the Society not adopt Resolution 90-20 which advocates the concept of a court-appointed health care representative for patients who become incompetent to make their own health care decisions and who have not designated a surrogate. The report expresses great reservations about this concept because of the increased likelihood of judicial involvement in the physician-patient relationship.

Testimony heard by your reference committee suggested that the requirements of the Patient Self-Determination Act which will be implemented on December 1, 1991, will impact on this report. Accordingly, your reference committee believes that further study is required.

The House approved referring Board Report Y.

REPORT EE, BOARD OF TRUSTEES: Dispensing of Medication (RESOLUTION 90-66)

Mr. Speaker, your reference committee recommends that Board of Trustees Report EE be referred to the Board of Trustees for further study.

Report EE reaffirms the right of physicians to dispense medications from their offices and supports adoption of the AMA Ethical Principles on Dispensing of Medication as the appropriate guidelines for such physicians.

Several witnesses questioned the impact of the recently promulgated Safe Harbor regulations. As it was unclear what effect these regulations would have on physician dispensing, the report should be referred.

The House approved referring Board Report EE.

REPORT BBB, BOARD OF TRUSTEES: Expert Witness Policy for all Salaried and Volunteer Staff Physicians

Mr. Speaker, your reference committee recommends that Board of Trustees Report BBB be referred to the Board of Trustees for further study.

Report BBB establishes general principles for medical school faculty members to participate as expert witnesses and for the monitoring responsibilities of their respective departments. The resolution solicits possible action by the House of Delegates.

This report generated considerable discussion for and against. Several conflicting points of view emerged which will require further study to resolve.

The House approved referring Board Report BBB.

Waiver of debate list

The following have been grouped together in a waiver of debate list. No testimony was heard and the committee feels that these items are of a noncontroversial nature.

Mr. Speaker, your reference committee recommends that the following item be filed:

REPORT A, COUNCIL ON EDUCATION AND SCIENCE

The House approved filing the waiver of debate item.

Mr. Speaker, your reference committee recommends that the following item be

referred to the Board of Trustees for further study:

RESOLUTION 91-20: Expert Testimony and Independent Medical Reports

RESOLVED, That the Pennsylvania Medical Society use its resources to encourage the Pennsylvania State Board of Medicine to adopt a stated policy to scrutinize the provision of forensic medical services by its licensees in the same manner in which the Board scrutinizes the provision of expert medical care by those licensees.

It was moved and seconded from the floor of the House to adopt Resolution 91-20. The House adopted Resolution 91-20.

Mr. Speaker, your reference committee recommends that the following items be adopted:

RESOLUTION 91-30: Organ Donation

RESOLVED, That the Pennsylvania Medical Society work with The Hospital Association of Pennsylvania to insure that no hospital in Pennsylvania charges donor families for organs that are donated; and be it further

RESOLVED, That the Pennsylvania Medical Society work with The Hospital Association of Pennsylvania to insure that patients and the public are informed that there will be no charge for organ donations.

REPORT E, BOARD OF TRUSTEES: Support of Medical Schools (RESOLUTION 90-83)

REPORT S, BOARD OF TRUSTEES: Prioritization of Health Care Resources (RESOLUTION 90-58 and 1990 REPORT O, BOARD OF TRUSTEES)

REPORT V, BOARD OF TRUSTEES: REVISION OF STATE DEATH Certificates (RESOLUTION 90-1)

REPORT Z, BOARD OF TRUSTEES: Physician Involvement with Euthanasia (RESOLUTION 90-21)

REPORT AA, BOARD OF TRUSTEES: State Funds for Adult Day Care Centers (RESOLUTION 90-75)

REPORT BB, BOARD OF TRUSTEES: Discrimination Against International Medical Graduates (RESOLUTION 90-47)

REPORT PP, BOARD OF TRUSTEES: Policy Review (1990 REPORT L, BOARD OF TRUSTEES)

It was moved and seconded from the floor of the House to extract Board Report S from the waiver of debate list. The House approved the motion. It was moved and seconded from the floor of the House to amend Board Report S by deleting the first sentence in the fourth paragraph which states, "The Council continues its efforts to establish priorities." and inserting in its place the sentence, "The Pennsylvania Medical Society will study the establishment of priorities for medical care in Pennsylvania and report back to the House after the study is completed."

It was moved and seconded from the floor of the House to refer back to the Board Report S. The House approved referring Board Report S.

The House adopted the remainder of the waiver of debate items.

Mr. Speaker, your reference committee recommends that the following item not be adopted:

RESOLUTION 91-57: The Impact of the Iraq-Kuwait Conflict on the American Soldier

RESOLVED, That the Pennsylvania Medical Society ask the AMA to provide information and educational materials to the public and to the profession regarding the psychological impact of participation in all wars including the Iraq-Kuwait War.

The House did not adopt Resolution 91-57.

It was moved and seconded from the floor of the House to resume consideration of Resolutions 91-3 and 91-45. The House did not approve the motion.

Annual Assessment

John W. Lawrence, MD, chairman of the Finance Committee of the Board of Trustees, presented the following report containing the recommendation of the Finance Committee that the annual assessment for dues-paying members for 1992 remain at $430.

Mr. Speaker and members of the House of Delegates, at the first session of this House, I presented a report on the 1992 budget which included a recommendation of no dues increase. In that report, I stated that the actions of this House could have an effect on the 1992 budget. House actions have not resulted in a significant change in the budget from that presented Friday.

Consequently, the Board of Trustees recommends that the regular dues for 1992 be $430 for each full dues-paying member and a proportionate share thereof in other dues-paying categories.

Further, the House has approved a recommendation from the Board of Trustees setting student dues at $5 and a report from the Board recommending that $10 from the 1992 annual assessment be allocated to the Education Fund of The Educational and Scientific Trust.

It was moved and seconded from the floor of the House to approve the recommendation of the Finance Committee that the 1992 annual assessment be $430 per active member. The House approved the motion.

Dr. Rhoads recognized Kay A. Barrett, Director of House Operations, who reported that there was no new business before the House.

The House of Delegates adjourned at 11:15 a.m.

Respectfully submitted,
Jonathan E. Rhoads Jr., MD, Speaker
Howard A. Richter, MD, Vice Speaker
Ferdinand L. Soisson Jr., MD, Secretary
Kay A. Barrett, Director of House Operations and Policy Maintenance
Arnold W. Cushner, Vice President for General Administration

Resolutions

91-1 (Reference Committee D), Subject: Scope of Psychological Practice in the Hospital Setting; Introduced by: James R. Regan, MD, chairman, on behalf of the Interspecialty Section, and Diehl M. Snyder, MD, delegate, on behalf of the Psychiatric Physicians of Pennsylvania; Author: Lawrence L. Altaker, MD, president, on behalf of the Psychiatric Physicians of Pennsylvania

91-2 (Reference Committee E), Subject: Practice Parameters; Introduced by: James J. Houser, MD, secretary, Venango County Medical Society; Author: James J. Houser, MD

91-3 (Reference Committee B), Subject: Abortion; Introduced by: William R. Beltz, MD, secretary, Lycoming County Medical Society; Author: James W. Redka, MD, Lycoming County Medical Society

91-4 (Reference Committee B), Subject: Access to Health Care; Introduced by: Robert J. Fagioletti, MD, on behalf of the Pennsylvania Academy of Family Physicians; Author: Pennsylvania Academy of Family Physicians Board of Directors

91-5 (Reference Committee B), Subject: Resident Working Hours; Introduced by: Robert J. Fagioletti, MD, on behalf of the Pennsylvania Academy of Family Physicians; Author: Pennsylvania Academy of Family Physicians Board of Directors

91-6 (Reference Committee G), Subject: Student Exposure to HIV, Hepatitis B, and Other Infectious Agents; Introduced by: Robert J. Fagioletti, MD, on behalf of the Pennsylvania Academy of Family Physicians; Author: Pennsylvania Academy of Family Physicians Board of Directors

91-7 (Rules Committee), Subject: "Bullet Balloting"; Introduced by: Leland F. Patterson, MD, on behalf of the Dauphin County Medical Society; Author: Dauphin County Medical Society

91-8 (Reference Committee G), Subject: Honoring the American Lung Association of Pennsylvania; Introduced by: Richard T. Bell, MD, Pennsylvania Society for Pulmonary Disease; Author: Richard T. Bell, MD

91-9 (Reference Committee G), Subject: Pennsylvania Department of Health Fund a Facility to Treat Difficult Tuberculosis Cases; Introduced by: Richard T. Bell, MD, Pennsylvania Society for Pulmonary Disease; Author: Richard T. Bell, MD

91-10 (Reference Committee F), Subject: Dues Exemption for Fully Retired Physicians; Introduced by: George E. Connerton, MD, secretary, Berks County Medical Society; Author: Mark S. Reed, MD, Berks County Medical Society

91-11 (Reference Committee G), Subject: HIV Testing of Providers; Introduced by: James L. Harrison, MD, on behalf of the Lycoming County Medical Society; Author: James P. Speichinger, MD, Lycoming County Medical Society

91-12 (Reference Committee F), Subject: Membership Requirements; Introduced by: Norman A. Goldstein, MD, Chester County Medical Society; Author: Lucy E. Hornstein, MD, Chester County Medical Society

91-13 (Reference Committee E), Subject: Efforts to Improve Care and Control Costs; Introduced by: Robert J. Carroll, MD, Allegheny County Medical Society; Author: Robert J. Carroll, MD

91-14 (Reference Committee E), Subject: Geriatrics as Valid Medical Specialty for Medicare; Introduced by: Richard P. Kennedy, MD, secretary, Monroe County Medical Society; Author: Marc S. Berger, MD, Monroe County Medical Society

91-15 (Reference Committee G), Subject: Mandatory HIV Testing; Introduced by: Robert J. Fagioletti, MD, Pennsylvania Academy of Family Physicians; Author: Robert J. Fagioletti, MD

91-16 (Reference Committee E), Subject: Medicaid Reform in House Bill 20; Introduced by: Ernest M. Wood, MD, Lancaster City and County Medical Society; Author: Robert G. Doe, MD, Lancaster City and County Medical Society

91-17 (Reference Committee G), Subject: Access to Maternal and Child Health Care; Introduced by: Peter A. Schwartz, MD, on behalf of the Pennsylvania Section of the American College of Obstetricians and Gynecologists, and F. Dennis Dawgert, MD, on behalf of the Pennsylvania Chapter of the American Academy of Pediatrics; Author: Peter A. Schwartz, MD

91-18 (Reference Committee B), Subject: Physicians' Medical Records; Introduced by: J. Walter Valenteen, MD, Delaware County Medical Society; Author: Delaware County Medical Society Board of Directors

91-19 (Reference Committee D), Subject: Tort Reform; Introduced by: James A.

Morris Jr., MD, Delaware County Medical Society; Author: Delaware County Medical Society Board of Directors

91-20 (Reference Committee B), Subject: Expert Testimony and Independent Medical Reports; Introduced by: David L. Cohen, MD, on behalf of the York County Medical Society, and Charles A. Heisterkamp III, MD, on behalf of the Lancaster City and County Medical Society; Author: David L. Cohen, MD

91-21 (Reference Committee E), Subject: Medical Assistance Participation; Introduced by: James J. Houser, MD, Venango County Medical Society; Author: James J. Houser, MD

91-22 (Reference Committee B), Subject: Recognition of Osteopathic Medicine and Allopathic Medicine as Separate Entities within the Practice of Medicine; Introduced by: John A. Malcolm Jr. MD, Secretary, Union County Medical Society; Author: John A. Malcolm Jr., MD

91-23 (Reference Committee G), Subject: Farm Machine Injury Prevention for Low-Income Farmers; Introduced by: John A. Malcolm Jr. MD, Secretary, Union County Medical Society; Author: Union County Medical Society

91-24 (Reference Committee D), Subject: Pennsylvania Medical Society's Legislative Lobbying Organization; Introduced by Samuel G. Woodings, MD, Mercer County Medical Society; Author: Joseph A. Giordano, MD, Mercer County Medical Society

91-25 (Reference Committee G), Subject: AIDS-Confidentiality of HIV-Related Information Act (Act 148 of 1990); Introduced by: Samuel G. Woodings, MD, Mercer County Medical Society; Author: Joseph A. Giordano, MD, Mercer County Medical Society

91-26 (Reference Committee F), Subject: Honoring a Pennsylvania Medical Society Physician Member for Community Volunteer Service; Introduced by: Barton L. Smith, MD, president, Berks County Medical Society; Author: Richard T. Bell, MD, Berks County Medical Society

91-27 (Reference Committee B), Subject: Adverse Experience Survey Regarding Dangerous Cults; Introduced by: Edward A. Lottick, MD, on behalf of the Luzerne County Medical Society; Author: Edward A. Lottick, MD

91-28 (Reference Committee B), Subject: Abortion; Introduced by: Timothy M. Heilmann, MD, secretary, Lawrence County Medical Society; Authors: Timothy M. Heilman, MD, and Anthony S. Mastrian, MD, Lawrence County Medical Society

91-29 (Reference Committee B), Subject: Cults: A Medical Issue; Introduced by: Andre C. Blanzaco, MD, secretary, on behalf of the Board of Directors of the Philadelphia County Medical Society; Author: Barbara A. Shelton, MD, Philadelphia County Medical Society

91-30 (Reference Committee B), Subject: Organ Donation; Introduced by: Andre C. Blanzaco, MD, secretary, on behalf of the Board of Directors of the Philadelphia County Medical Society; Author: Andre C. Blanzaco, MD

91-31 (Reference Committee G), Subject: Insurance for HIV-Positive Health Care Providers During the Period of Retraining; Introduced by: Andre C. Blanzaco, MD, secretary, on behalf of the Board of Directors of the Philadelphia County Medical Society; Author: Donald Kaye, MD, Philadelphia County Medical Society

Mrs. Gary Strebel, president of the AMA Auxiliary, was one of several guests who spoke during the 1991 House session.

91-32 (Reference Committee G), Subject: Retraining Courses for HIV-Positive Health Care Providers; Introduced by: Andre C. Blanzaco, MD, secretary, on behalf of the Board of Directors of the Philadelphia County Medical Society; Author: Donald Kaye, MD, Philadelphia County Medical Society

91-33 (Reference Committee E), Subject: Automatic Processing of Major Medical Claims; Introduced by: Andre C. Blanzaco, MD, secretary, on behalf of the Board of Directors of the Philadelphia County Medical Society; Author: Donald Kaye, MD, Philadelphia County Medical Society

91-34 (Reference Committee F), Subject: Dues Freeze and Prioritization of Society Activities; Introduced by: Andre C. Blanzaco, MD, secretary, on behalf of the Board of Directors of the Philadelphia County Medical Society; Author: Richard M. Gash, MD, Philadelphia County Medical Society

91-35 (Reference Committee F), Subject: Effective Mechanism for Installment Payment of Dues; Introduced by: Andre C. Blanzaco, MD, secretary, on behalf of the Board of Directors of the Philadelphia County Medical Society; Author: Richard M. Gash, MD, Philadelphia County Medical Society

91-36 (Reference Committee F), Subject: Timely Consideration of Actions Affecting Pennsylvania Medical Society Dues; Introduced by: Andre C. Blanzaco, MD, secretary, on behalf of the Board of Directors of the Philadelphia County Medical Society; Author: Timothy J. Michals, MD, Philadelphia County Medical Society

91-37 (Reference Committee G), Subject: Smoking Cessation; Introduced by: Andre C. Blanzaco, MD, secretary, on behalf of the Board of Directors of the Philadelphia County Medical Society; Authors: David J. Shulkin, MD, and Robert B. Sklaroff, MD, Philadelphia County Medical Society

91-38 (Reference Committee G), Subject: AIDS/HIV Testing; Introduced by: James L. Harrison, MD, FACS, on behalf of the Lycoming County Medical Society, and John H. Moyer, MD, DSc, Pennsylvania Society of Internal Medicine; Author: James L. Harrison, MD, FACS, and John H. Moyer, MD, DSc

91-39 (Reference Committee C), Subject: Small Area Analysis; Introduced by: Robert B. Sklaroff, MD, Philadelphia County Medical Society; Authors: Robert B. Sklaroff, MD, David M. Sklaroff, MD, and Rachmel Cherner, MD, Philadelphia County Medical Society

91-40 (Rules Committee), Subject: Pennsylvania Medical Society "Bullet Ballot"; Introduced by: Robert B. Sklaroff, MD, Philadelphia County Medical Society; Authors: Robert B. Sklaroff, MD, David M. Sklaroff, MD, and Rachmel Cherner, MD, Philadelphia County Medical Society

91-41 (Reference Committee G), Subject: Physicians with AIDS; Introduced by: Gilbert A. Friday Jr., MD, Allegheny County Medical Society; Author: Gilbert A. Friday Jr., MD

91-42 (Reference Committee G), Subject: HIV Testing; Introduced by: Gilbert A. Friday Jr., MD, Allegheny County Medical Society; Author: Gilbert A. Friday Jr., MD

91-43 (Reference Committee C), Subject: Publication in *Federal Register* of Proposed Changes in PRO Review Process or Procedures; Introduced by: Robert D. Reinecke, MD, Pennsylvania Academy of

Ophthalmology; Author: Robert D. Reinecke, MD

91-44 (Reference Committee E), Subject: Explanation of Payments by Health Insurers; Introduced by: James C. Barton, MD, Franklin County Medical Society; Author: Calvin B. Early, MD, Franklin County Medical Society

91-45 (Reference Committee B), Subject: Pennsylvania Medical Society Policy on Abortion; Introduced by: Robert Sklaroff, MD, Philadelphia County Medical Society; Authors: John D. Lane, MD, Bucks County Medical Society, and Louis Gerstley III, MD, Philadelphia County Medical Society

91-46 (Reference Committee C), Subject: Pennsylvania State Health Department Reviews; Introduced by: Stanley M. Marks, MD, president, Allegheny County Medical Society; Author: Stanley M. Marks, MD (Withdrawn)

91-47 (Reference Committee D), Subject: Transfer of Funds from the Federal Defense Budget to Health Care Needs; Introduced by: William A. Freeman, MD, Franklin County Medical Society; Author: William A. Freeman, MD

91-48 (Reference Committee E), Subject: Deletion of CPT Code; Introduced by: Lawrence K. Harris, MD, FACC, on behalf of the Pennsylvania Chapter, American College of Cardiology; Author: Lawrence K. Harris, MD, FACC (Withdrawn)

91-49 (Reference Committee G), Subject: Pennsylvania Medical Society Position on Biomedical Research and Testing; Introduced by: Robert B. Buckingham, MD, Allegheny County Medical Society; Author: Robert B. Buckingham, MD

91-50 (Reference Committee G), Subject: Pennsylvania Clean Indoor Air Act; Introduced by: Edward H. Dench Jr., MD, on behalf of the Pennsylvania Medical Society Hospital Medical Staff Section; Authors: James H. Dovnarsky, MD and Robert B. Sklaroff, MD, Pennsylvania Medical Society Hospital Medical Staff Section

91-51 (Reference Committee E), Subject: Proposed Elimination of Professional Component Reimbursement for EKG Interpretation; Introduced by: Edward H. Dench Jr., MD, on behalf of the Pennsylvania Medical Society Hospital Medical Staff Section; Author: Michael Daniels, MD, Pennsylvania Medical Society Hospital Medical Staff Section

91-52 (Reference Committee C), Subject: Proper Notification of a Physician Regarding Possible Loss of Medical Staff Membership or Privileges; Introduced by: Edward H. Dench Jr., MD, on behalf of the Pennsylvania Medical Society Hospital Medical Staff Section; Author: Erwin A. Cohen, MD, Pennsylvania Medical Society Hospital Medical Staff Section

91-53 (Reference Committee C), Subject: Appropriate Appeals Procedure Following Recommendation by the Medical Executive Committee Regarding Loss of Medical Staff Membership or Privileges; Introduced by: Edward H. Dench Jr., MD, on behalf of the Pennsylvania Medical Society Hospital Medical Staff Section; Author: Erwin A. Cohen, MD, Pennsylvania Medical Society Hospital Medical Staff Section

91-54 (Reference Committee C), Subject: Study of Medical Staff Experiences with the National Practitioner Data Bank; Introduced by: Edward H. Dench Jr., MD, on behalf of the Pennsylvania Medical Society Hospital Medical Staff Section; Author: Erwin A. Cohen, MD, Pennsylvania Medical Society Hospital Medical Staff Section

91-55 (Reference Committee F), Subject: Conflict of Interest; Introduced by: Carl A. Frankel, MD, on behalf of the Pennsylvania Medical Society Young Physicians Section; Author: Robert B. Sklaroff, MD, Pennsylvania Medical Society Young Physicians Section

91-56 (Reference Committee F), Subject: Recognition of "Specialty" Boarded-Status; Introduced by: Carl A. Frankel, MD, on behalf of the Pennsylvania Medical Society Young Physicians Section; Author: Robert B. Sklaroff, MD, Pennsylvania Medical Society Young Physicians Section

91-57 (Reference Committee B), Subject: The Impact of the Iraq-Kuwait Conflict on the American Soldier; Introduced by: Carl A. Frankel, MD, on behalf of the Pennsylvania Medical Society Young Physicians Section; Author: Robert B. Sklaroff, MD, Pennsylvania Medical Society Young Physicians Section

91-58 (Reference Committee G), Subject: The Pennsylvania Clean Indoor Air Act; Introduced by: Carl A. Frankel, MD, on behalf of the Pennsylvania Medical Society Young Physicians Section; Author: Robert B. Sklaroff, MD, Pennsylvania Medical Society Young Physicians Section

91-59 (Reference Committee F), Subject: Number of Pennsylvania Medical Society Young Physicians Section Delegates to the Pennsylvania Medical Society House of Delegates; Introduced by: Carl A. Frankel, MD, on behalf of the Pennsylvania Medical Society Young Physicians Section; Author: Robert B. Sklaroff, MD, Pennsylvania Medical Society Young Physicians Section

91-60 (Reference Committee F), Subject: Fiscal Note; Introduced by: Carl A. Frankel, MD, on behalf of the Pennsylvania Medical Society Young Physicians Section; Author: Robert B. Sklaroff, MD, Pennsylvania Medical Society Young Physicians Section

91-61 (Reference Committee B), Subject: Provision for Student Health Insurance; Introduced by: Belinda Enders, on behalf of the Pennsylvania Medical Society Medical Student Section; Author: Pennsylvania Medical Society Medical Student Section

91-62 (Reference Committee B), Subject: Sexual Harassment; Introduced by: Belinda Enders, on behalf of the Pennsylvania Medical Society Medical Student Section; Author: Pennsylvania Medical Society Medical Student Section

91-63 (Reference Committee G), Subject: The Compliance of Pennsylvania Physicians to CDC Guidelines on HIV Control; Introduced by: Belinda Enders, on behalf of the Pennsylvania Medical Society Medical Student Section; Author: Pennsylvania Medical Society Medical Student Section

91-64 (Reference Committee B), Subject: Confidentiality Rights of Pharmaceutical Companies; Introduced by: Belinda Enders, on behalf of the Pennsylvania Medical Society Medical Student Section; Author: Pennsylvania Medical Society Medical Student Section

91-65 (Reference Committee F), Subject: National Scholarship Fund; Introduced by: Belinda Enders, on behalf of the Pennsylvania Medical Society Medical Student Section; Author: Pennsylvania Medical Society Medical Student Section

Update: Medicare Patient Records in Physicians' Offices

Donald E. Harrop, MD

We have become aware of a growing concern among physicians who are under the impression that review of Medicare patients' records in physicians' offices is imminent. Our current activity of reviewing care provided by health maintenance organizations (HMOs) may have caused some physicians to believe that such review had already started. HMO review may, at times, include a request for office records, but such requests are made to the HMO. The review does *not* take place at the physician's office.

Although the law mandates that private office review commence on January 1, 1992, the Health Care Financing Administration (HCFA) has not yet drafted a methodology or proposed regulations for such review. Presently, there are three pilot projects in progress in other states which focus on office review; these involve voluntary participation by local physicians and use widely varying approaches. The aim of such projects is to define in a descriptive way what is actually happening in physicians' offices, and how the quality and cost effectiveness of care delivered in the ambulatory setting may be monitored.

Because of the January 1 mandates and the "possibility" that HCFA may require the start of office review within the foreseeable future, the American Medical Peer Review Association (AMPRA), in conjunction with a number of specialty societies, has proposed guidelines for documentation of ambulatory encounters. (See "Guidelines..." on page 59.) The intent in developing the guidelines is to encourage additional dialogue and to provide some advance instructions on medical record documentation so that when review of office records becomes a reality, physicians will be better prepared.

Regardless of what type of review is eventually implemented and how cases are selected for review, the basis will be the medical record, just as it is for inpatient hospital cases. The guidelines will permit physicians to assess their current documentation practices and give some thought as to what changes or improvements are appropriate. Physicians and others who currently manage ambulatory quality assurance programs may find the guidelines similarly useful. We are hopeful that re-examining current practices and making changes, when necessary, will result in a less eventful introduction of office record review.

This is not to say that office review is necessarily near; it's hard to tell how long it will be before it becomes a reality. My personal opinion is that it is probably years away. I say this for several reasons. First, just because a law has been enacted does not mean that a program to implement it will immediately be developed and put into place. For example, PRO denials for substandard care were mandated by the 1985 Consolidated Omnibus Budget Reconciliation Act (COBRA). Draft regulations were not published in the *Federal Register* until January 1989 and elicited an unusually large number of comments from the public and the medical and provider communities. This appeared to cause HCFA to rethink their implementation approach. Final regulations, which were originally due for publication in August 1991, are now scheduled for March 1992. We will see.

Developing an office-based review program which will be fair, will not be disruptive to a physician's practice, and will be cost effective, is an extremely difficult task. HCFA recently discontinued preadmission/preprocedure review of 10 selected procedures because the program could not meet those criteria. I would not expect them to make a similar mistake and, therefore, do not think there will be review in physicians' offices until there is a thoroughly considered, tested, and acceptable plan of how the review will be accomplished. That will take time.

Donald E. Harrop, MD, is president of the Keystone Peer Review Organization.

Guidelines for Documentation of Ambulatory Encounters

Operational philosophy

A patient's health record should include sufficient information:

1. to assess the previous treatment,
2. to ensure continuity of care, and
3. to ensure necessary and appropriate testing and/or therapy.

Guidelines for documentation for ambulatory encounters

1. The medical record should be clearly legible and reviewable.

2. The documentation of a patient encounter should include clinical history, clinical findings, assessment, and plan for care.

3. The plan of care should, when appropriate, include medication types, frequency, dosage, specific instructions for follow-up, informed consent, and education indicating patient participation.

4. The documentation should support that the intensity of the patient evaluation and treatment reflected the reason for the encounter, the intensity of the problem, and the findings of the examination.

5. It is suggested that the date and time of day of each encounter be documented.

6. Patient non-compliance, such as failure to return for an appointment, should be documented.

7. Significant x-rays, lab tests, and other ancillary study results should be addressed.

8. The reason for x-rays, lab tests, and other ancillary studies should be documented in the medical record.

9. The originator of the medical record entry should be identifiable.

10. If the physician assumes management of a patient in another locale, that management should be documented in the appropriate medical record.

11. Relevant risk factors should be identified.

12. When appropriate, past and present diagnoses should be accessible to the consulting/treating physician.

13. Patient referrals and consultations should be documented.

Referral: Care transferred to another physician who assumes management of the care which precipitated the referral.

Consultation: The primary physician retains responsibility for the patient.

14. The documentation in the record should support the CPT/ICD codes billed.

Unpaid Receivables Can Make You Sick.

- Endorsed by the Allegheny County Medical Society for over 20 years
- Now available to all Pennsylvania physicians

This Will Make You Feel Better.

The longer you wait to collect, the less your receivables are worth. I.C. System handles more health care debts than any other collection agency in the country and offers:

- Competitive rates and local representation
- Expert collection practices sensitive to health care issues
- Endorsements from over 1,100 business and professional associations and societies

When it comes to unpaid receivables, I.C. System makes speedy recoveries. Call us today.

1-800-325-6884

I.C. System
The System Works

E. Albert Reece, MD, the Abraham Roth professor and chairperson of the Department of Obstetrics, Gynecology, and Reproductive Services at Temple University School of Medicine, has been named national chairperson for the OB/GYN section of the National Medical Association.

Leon S. Malmud, MD, vice president of Temple University's Health Sciences Center, recently attended the European Society of Nuclear Medicine meeting in Vienna, Austria. At the meeting he chaired a plenary session on gastrointestinal nuclear medicine. Dr. Malmud also recently participated in a leadership meeting in Phoenix, Arizona, of all specialty groups representing nuclear medicine, as well as the American College of Nuclear Physicians meeting in Washington, DC.

At its fifth annual Physicians' Tribute Dinner, Albert Einstein Healthcare Foundation recently honored three physicians for their clinical excellence and compassion for patients. They are **Bernard Zamostein, MD,** and **Hallam Hurt, MD,** of Albert Einstein Medical Center; and **Michael Zal, DO,** of Philadelphia Psychiatric Center.

Frederick R. Heckler, MD, was elected president of the American Association for Hand Surgery. Dr. Heckler is director of the Division of Plastic Surgery at Allegheny General Hospital.

Jane Summers, MD, has been named director of Pennsylvania Hospital's Postpartum Disorders Project. Dr. Summers is an associate psychiatrist at The Institute of Pennsylvania Hospital and liaison to the hospital's Department of Obstetrics and Gynecology.

Dana C. Mears, MD, has been named to the board of trustees at D.T. Watson Rehabilitation Hospital. Dr. Mears is chief of the Division of Orthopedic Surgery at Shadyside Hospital.

Dennis J. Hurwitz, MD, has been elected president of the Ohio Valley Society of Plastic and Reconstructive Surgery.

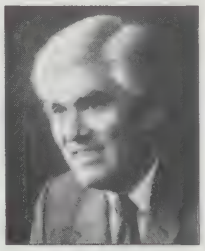
Alan S. Berger, MD, clinical senior instructor of otolaryngology at Hahnemann University, recently served as chairman and presenter at two sinusitis seminars sponsored by Hahnemann. His associate, **William Henry, MD,** also presented.

George F. Murphy, MD, has been named the Herman Beerman Professor of Dermatology at the University of Pennsylvania.

Henry D. Unger, MD, has been appointed assistant professor of surgery and director of the Division of Emergency Medicine of Hahnemann University.

Albert J. Finestone, MD, associate dean emeritus of continuing medical education and professor and geriatrics coordinator at Temple University School of Medicine, was named director of Temple's Institute on Aging.

Teresa A. Nolan, MD, internal medicine specialist, received a three-year appointment as cancer liaison physician for the cancer program at Forbes Health System.



Harold J. Isard, MD, chairman emeritus of the Radiological Department at Albert Einstein Medical Center, received the Pennsylvania Radiological Society's prestigious Gold Medallion Award. Dr. Isard was recognized for his major contribution to the advancement of mammography and other breast imaging techniques in the battle against breast cancer.

Renowned neurologist and author Oliver Sacks, MD, whose book *Awakenings* received wide acclaim as a motion picture, recently discussed mental illness and its impact on family life at Albert Einstein Medical Center during the Annual Freda Kraftsow Sacks/Albert Einstein Society Lecture, commemorating Mental Health Awareness Week. Pictured (L-R) are: Paul Fink, MD, chairman of Einstein's Department of Psychiatry and medical director of the Philadelphia Psychiatric Center; Freda Kraftsow Sacks; and Oliver Sacks, MD.

Dr. H. Ostrum

Dr. B. Ostrum

Bernard J. Ostrum, MD, Nazareth Hospital radiologist, received the 1991 Philadelphia Roentgen Ray Society Award in recognition of his outstanding teaching skills and his pioneering work in and service to the field of radiology. His father, **Herman W. Ostrum, MD,** received the same award in 1966.

The American Academy of Family Physicians established a memorial lecture in memory of **Mark A. Connelly, MD,** a Lancaster physician killed in February 1990 by a land mine in Iraq. The lecture will be offered annually to focus on the human side of family medicine, the "art of family medicine," or the role of the family in the family physician's personal life.

Peter R. Laibson, MD, director of the cornea service at Wills Eye Hospital, received the Castroviejo Medal for his outstanding work in the field of corneal diseases and surgery.

Dr. Laibson

Robert E. Campbell, MD, chairman of the Department of Radiology at Pennsylvania Hospital, was awarded honorary membership in the European Congress of Radiology and Association of Radiologists.

Cyril H. Wecht, MD, JD, was appointed adjunct professor in the Department of Physician Assistants at the Graduate School of Health Sciences at Duquesne University.

Robert J. Sclabassi, MD, professor of neurosurgery at the University of Pittsburgh, received the Distinguished Alumni Award for Professional Achievement from Loyola Marymount University.

Gary Ferguson, MD, a Pittsburgh orthopedic surgeon, participated in a

We specialize in musculoskeletal tumors.

Many patients with primary and metastatic bone and soft tissue tumors are dying--unnecessarily. They're not all dying from disease, but because many physicians haven't recognized the sub-specialty of musculoskeletal tumor treatment that saves lives and limbs.

It's time you knew about The Schmidt Reconstruction Center at The Graduate Hospital in Philadelphia. Here, the thinking is advanced and the treatment is aggressive. Dr. Schmidt and his highly skilled team attack bone and soft tissue tumors with a comprehensive program. There's a complete diagnostic workup prior to biopsy. Biopsies are performed to permit limb salvage. Adjuvant therapy is utilized with chemotherapy and radiation therapy. New clinical trials are constantly being developed. And the quality of life is improved for adults and adolescents.

In our world of specialized medicine, patients deserve the finest treatment available. Now that you know about The Schmidt Reconstruction Center, shouldn't you share it?

520 S. 19th Street, 2nd Floor
Philadelphia, PA 19148
(215) 732-9005

Soviet/American exchange in November. During time in Lithuania, Dr. Ferguson worked with a group of surgeons who studied at the Latvian Scientific Research Institute of Orthopedics and Traumatology, which jointly coordinated the program with the Keggi Orthopedic Foundation.

Gerald Andriole, MD, past president of the Pennsylvania Medical Society, participated in a panel discussion at a meeting of the Wyoming Valley Association of Life Underwriters. The discussion focused on "Solutions to the Health Care Crisis."

Dr. Andriole

Christopher J. Daly, MD, Pittsburgh, was visiting professor of surgery at the British Hospital in Buenos Aires, Argentina, in 1991. He also was visiting professor of surgery at the University of Kuala Lumpar, Malaysia.

Bruce L. Wilder, MD, JD, a Pittsburgh neurosurgeon, presented "Informed Consent," the first of a series of medical malpractice seminars cosponsored by the Allegheny County Medical Society. Other speakers participating included: **John A. Burkholder, MD; James D. O'Toole, MD; Daniel R. Sullivan, MD, JD;** and **Anne L. Wedemeyer, MD, JD.**

Harvey Silberman, MD (L), physician at Albert Einstein Medical Center, and Alfred Meltzer, vice president and general director of the Philadelphia Psychiatric Center, orgranized a one-month fellowship for Eva Janelovics, MD, one of five staff physicians at the Jewish Hospital and Home of Budapest, Hungary. Albert Einstein Medical Center "adopted" the 250-bed hospital and brought Dr. Janelovics to Philadelphia to learn modern medical techniques.

Gregory C. Moran, MD, of Geisinger Medical Center, was elected as one of two resident delegates to the 1992 American Academy of Family Physicians Congress of Delegates.

Irwin Becker, MD; Harry Frankel, MD; Paul McCausland, MD; and **Barry Cooper, MD,** were named as top family physicians in *Philadelphia* magazine's September 1991 issue. The four were the most frequently named by their physician colleagues as quality practitioners in their chosen specialties.

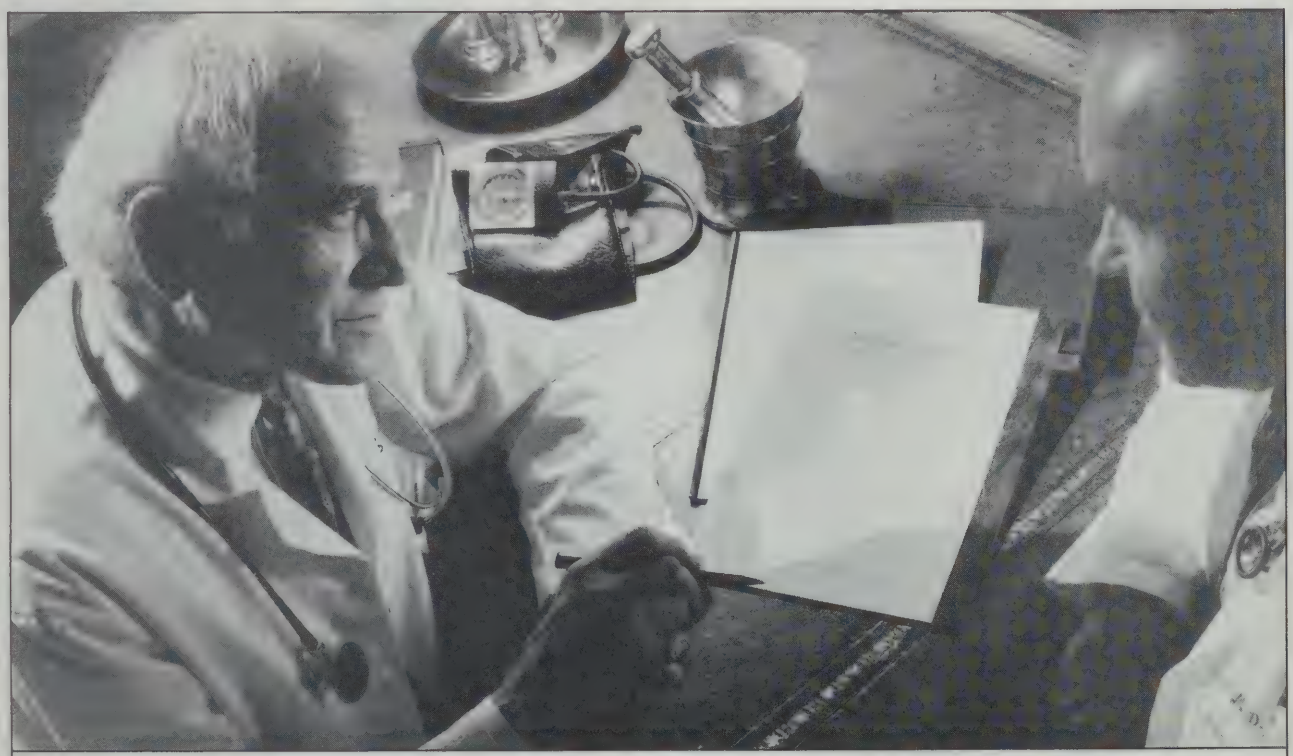
Donald W. Marion, MD, chief of the head injury service at Presyterian University Hospital, is the principal investigator for a University of Pittsburgh Medical Center project to develop a comprehensive head injury research center. The Medical Center received a grant of more than $1 million for the project.

Michael F. Gleeson, MD, was named director of the Department of Surgery at Carbondale General Hospital.

Francis J. Duggan Jr., MD, urologist with the Central Pennsylvania Urologic Association, was re-elected chairman of the Capital Area Health Foundation board of directors.

Abraham J. Twerski, MD, psychiatrist at Gateway Rehabilitation Center, served as keynote speaker for a Pittsburgh Theological Seminary workshop entitled, "The Role of Clergy in Chemical Dependency Treatment." Dr. Twerski also served as keynoter at the D.T. Watson Rehabilitation Hospital's Second Annual Jonus Salk Lecture.

Ivo P. Janecka, MD, associate professor of otolaryngology at the University of Pittsburgh School of Medicine, received the American Academy of Otolaryngology's Honor Award in recognition of his professional and academic activities.



A. Linn Weigel, MD, general surgeon, was elected to a fourth term as president of the Emergency Medical Service Institute in Pittsburgh and was also elected to serve on the Institute's Board of Directors. **Richard S. Evans, MD,** will serve as alternate director-at-large.

David William Kennedy, MD, professor and chairman of the Department of Otorhinolaryngology: Head and Neck Surgery at the University of Pennsylvania Medical Center, has become president-elect of the American Rhinologic Society.

Mary Ann Peberdy, MD, Oreland, was appointed director of the coronary care unit of the Medical College of Pennsylvania.

Harry J. Buncke, MD (far right), director of the Department of Microsurgical Replantation and Transplantation at Davies Medical Center in San Francisco, and clinical professor of the Division of Plastic Surgery at the University of California Medical School, discussed "The Development of Microsurgery" as visiting professor in hand surgery for the 15th Annual Dorothy B. Kaufmann Lectureship, sponsored by Jefferson Medical College and the Hand Rehabilitation Foundation. Pictured with Dr. Buncke are (L-R): Lawrence H. Schneider, MD, director of the Division of Hand Surgery and Rehabilitation, Orthopedic Surgery at Jefferson; Evelyn J. Mackin, PT, Foundation executive director; James M. Hunter, MD, distinguished professor of orthopedic surgery, and president of the Hand Rehabilitation Center and the Foundation; and Mrs. Dorothy B. Kaufmann.

"When you compare malpractice insurers, there is no comparison."

"What do you look for first? Rates, naturally. So that was the first item that attracted me to Physicians Insurance Company. They're stable, well run—and their rates have *decreased continuously* since 1986; while at the same time they have continued to broaden their coverage.

Additionally, the Company's performance seems to have forced other insurers to lower their rates.

Still, no one matches Physicians Insurance Company, on rates *or* support;

- they won't settle a case without your consent,
- when they fight your case, it's with confidence and intelligence, as shown by their 98% success rate at trial,
- you receive 40 hours of *free* legal representation for disciplinary proceedings, including staff privilege disputes and service on peer review committees,
- you receive legal counsel if you are called for a deposition in a medical malpractice case in which you are not named in the suit.

And Physicians Insurance Company doesn't automatically increase your rate for individual loss experience, or for corporate or partnership coverage.

I had good reasons for originally changing to Physicians Insurance Company. Those reasons are even truer today — the rates, the service, the support. It's an easy choice."

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months or longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES**, as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

MEDICAL PERSONNEL POOL

• *Medicare Certified Home Health Agency*

$30,000 BONUS OFFERED TO HEALTH CARE PROFESSIONALS

If you are a board-certified physician or a candidate for board certification in one of the following specialties, you may qualify for a bonus of up to $30,000 in the Army Reserve.

Anesthesiology
General Surgery
Thoracic Surgery
Pediatric Surgery
Orthopedic Surgery
Colon-Rectal Surgery
Vascular Surgery
Neurosurgery

A test program is being conducted which offers a bonus to eligible physicians who reside in certain geographic areas (Pennsylvania, West Virginia, Ohio, Michigan, Illinois, Indiana, Wisconsin, Minnesota and Iowa). You would receive a $10,000 bonus for each year you serve as an Army Reserve physician—for a maximum of three years.

You may serve near your home, at times convenient for you, or at Army medical facilities in the United States and abroad. There are also opportunities to attend conferences and participate in special training programs, such as the Advanced Trauma Life Support Course.

To learn more about the Army Reserve and the Bonus Test Program, call one of our experienced Medical Personnel Counselors:

How To Organize For Legislative Effectiveness

John E. Devenney, MD

Organization directly impacts the effectiveness of any legislative effort, and grassroots leadership is the key to organization. The following article originated as a message from the president to the members of the Montgomery County Medical Society (MCMS). Recognizing the broader implications of the letter, MCMS Executive Director U. Berkley Ellis submitted Dr. Devenney's article to be excerpted in PENNSYLVANIA MEDICINE.

A very highly respected physician was once quoted as saying, "Pick an area and focus all your energy on its development. Then you will have something worthwhile." Because every problem facing physicians and patients today has its origin in a rule, regulation, or law, we need to focus on legislation.

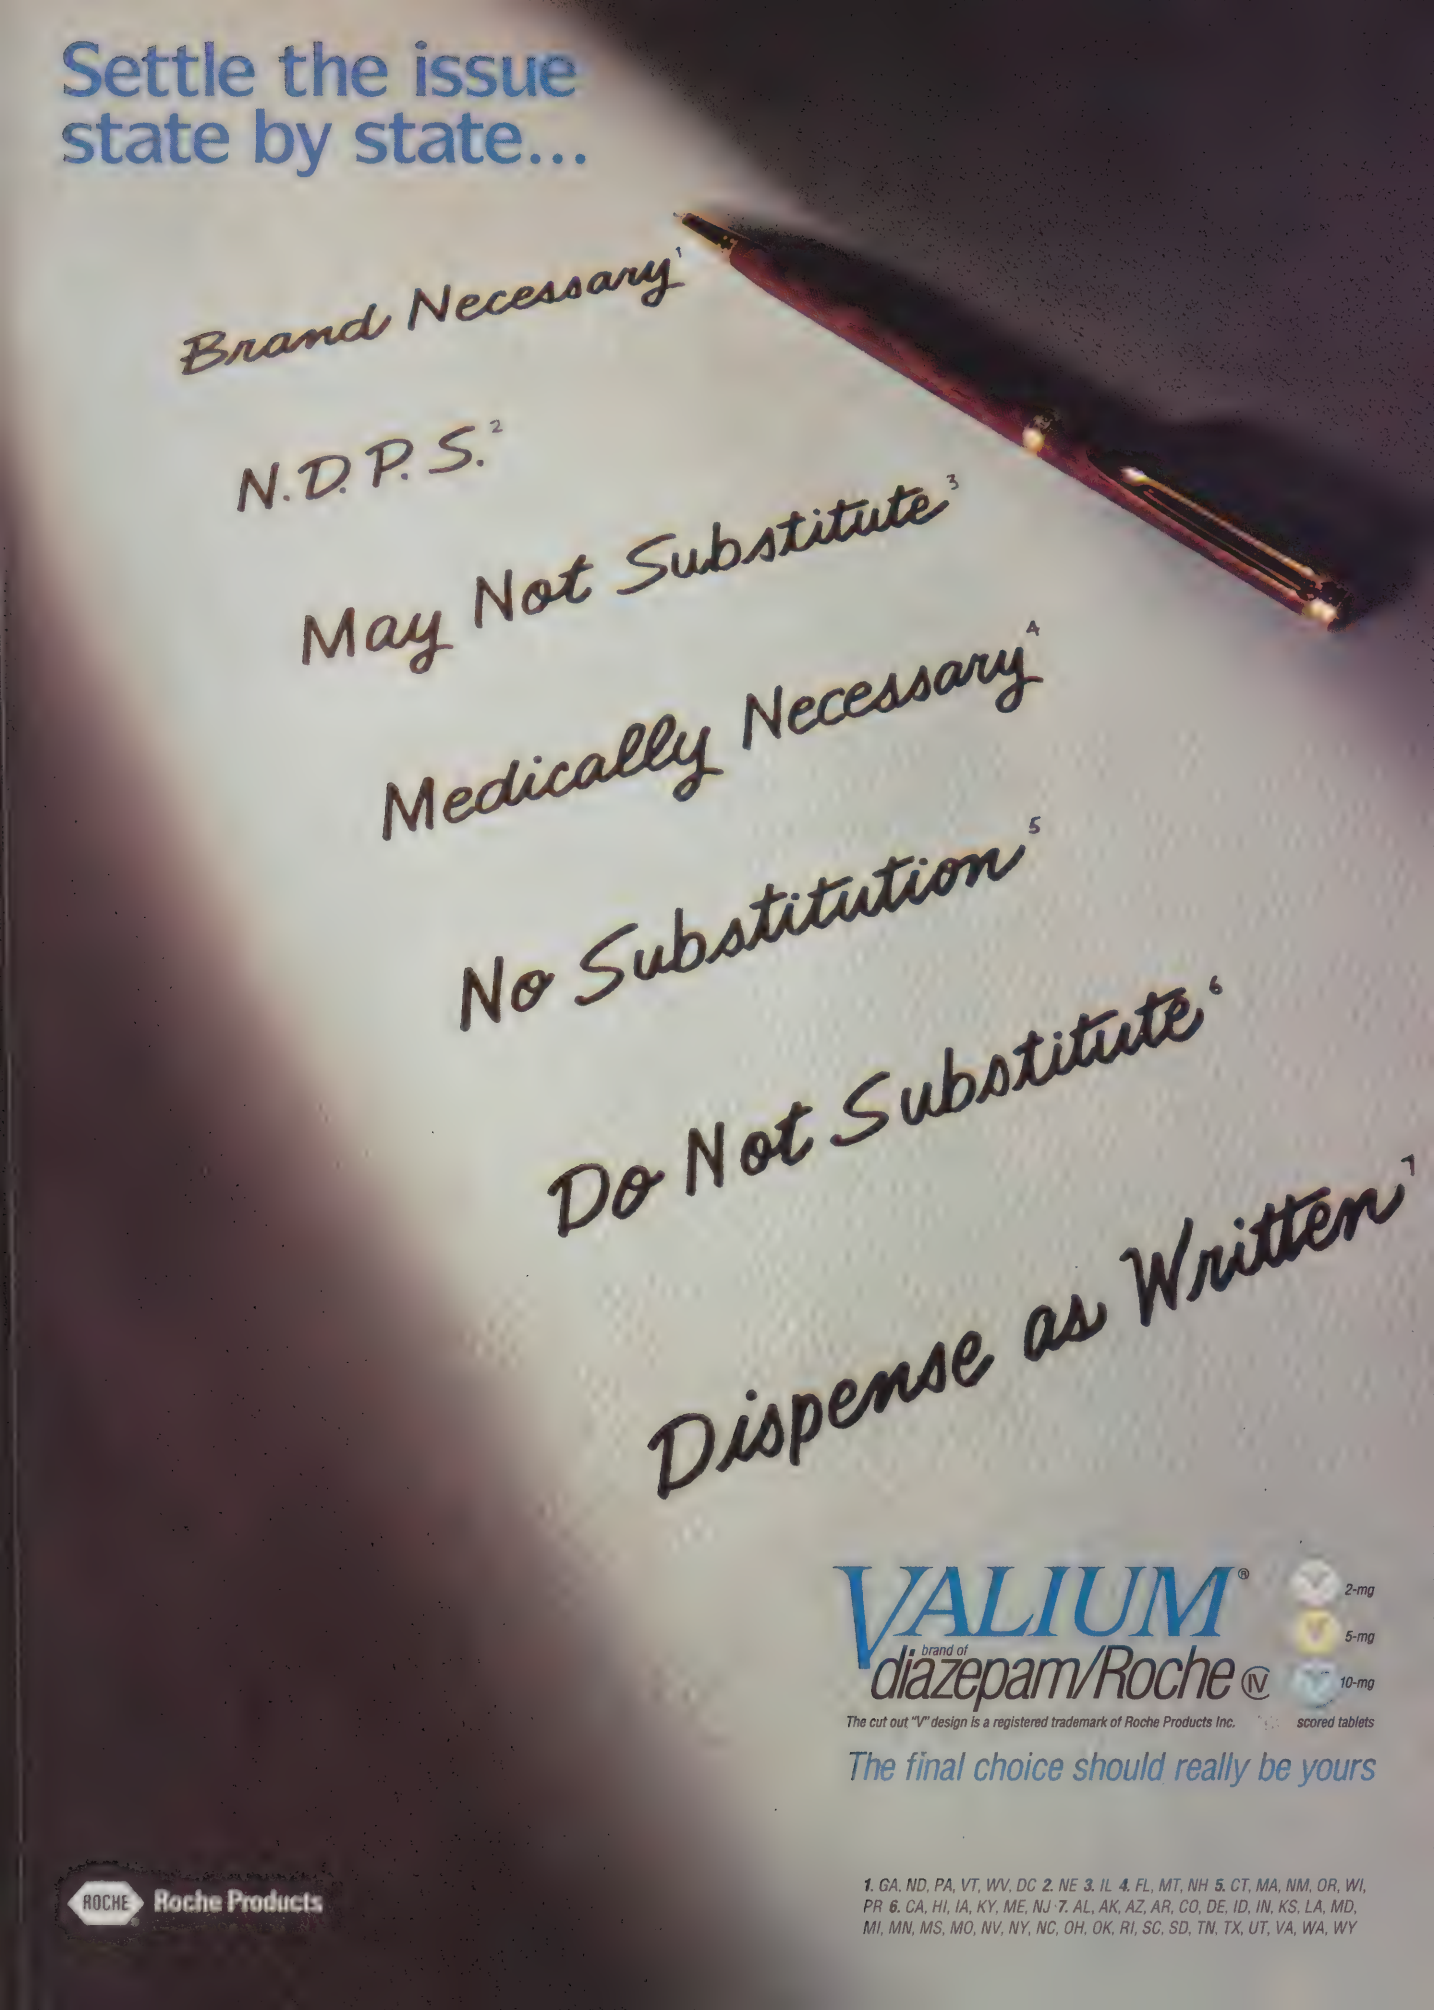
It is my goal to develop an integrated grassroots physician network not only in Montgomery County, but also in the surrounding Second Councilor District of Bucks, Berks, Delaware, Chester, and Lehigh counties.

I intend to build on the present Legislative Action Teams and the Federal Key Contacts in a number of different ways. Instead of depending only on moral suasion and rational argument, as in the past, I want to take it to the next level of influence: *money and votes*.

Money in the political arena equates to fundraising. Several of us have begun to develop this idea locally. Dr. Roberta Schneider and myself have had a successful fundraiser in Montgomery County in which more than 50 physicians participated in support of a friend of medicine. Delaware County was a major influence in getting in excess of 60 physicians to contribute to a fundraiser for a local Pennsylvania legislator. These prototype efforts have not gone unnoticed. Comments such as, "those are very impressive, surprising efforts," and "it looks like physicians are finally getting serious," are being heard in Harrisburg frequently.

The point is that we are getting their attention and I don't intend to lose this momentum. We want to expand and build upon these initial efforts. The goal is to get a nucleus of physicians for each senator and representative in our district. This group, approximately 10 in number, will commit themselves to financial backing of a specific legislator in their area and will then become the "go to" group for that legislator.

Equally important to legislators are *votes*. An individual physician vote doesn't amount to much, but a bloc of Second Councilor District, as well as individual county physician votes, will be enough to sway elections. In conjunction with the State Society, we embarked on a major voter registration effort. If we can get all targeted county societies' memberships registered, it would equate to approximately 5,000 votes (theoretically 10,000-15,000 if spouse and eligible offspring were included). That's a lot of votes!



To turn that body of votes into a unified bloc, we will obtain and disseminate the legislators' voting records on health care to these registered voters.

It is important that the legislators know that we have this large bloc of votes and that these voters be kept regularly informed of the voting history of legislators on health care issues. We intend to communicate this.

It is my opinion that if we can achieve these two goals and add them to the existing Legislative Action Teams and the Federal Key Contact Program, we will go a long way toward becoming "serious players in the legislative arena." I will do everything I can to get us there.

Dr. Devenney is president of the Montgomery County Medical Society and chair of its Political Action Committee. He also serves as chair of the Federal Key Contact Program and a member of the State Society's Council on Government Relations.

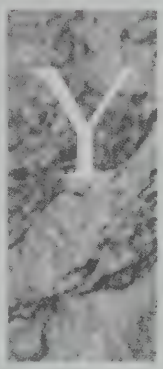
Helping Physicians Cope with the New Medicare System

YOU CAN IMPROVE TECHNOLOGY AND STILL BE STUCK IN THE SAME JAM

Technology is supposed to make your people more productive, your practice more competitive. We anticipate how technology will affect not only processes, but the structure of your practice as well. The Valley Medical Management concept revolves around a team of reimbursement specialists, managers, systems analysis and CPA's. This is the formula for our success. Our approach is scientific, comprehensive, and informative. Services provided include:



- ✦ Practice Reviews
- ✦ Administrative & Financial Management
- ✦ Billing
- ✦ Hardware/Software

Our objective is to make you a more successful professional.
Call us for more information.

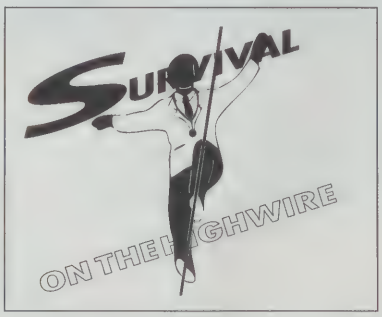
10 *Understanding the New Medicare Fee Schedule*

Though physicians are not responsible for calculation of complex resource based relative value scale (RBRVS) fee schedule amounts, they need to understand and work within the new Medicare payment system. The Society offers this overview to help them do just that.

Cover photo by John Wright: Physicians attending a Society-sponsored meeting in Allentown to inform them about Medicare payment system changes.

32 *Diverse Leaders Strive for Common Goal*



Over the course of the next three issues of PENNSYLVANIA MEDICINE, readers will meet the Society's newly elected trustees and learn their interests and views on practice, politics, and organized medicine.

40 *Leadership Conference: Survival on the Highwire*

A nationally known leader of organized medicine will be the featured speaker at the Society's annual conference, which will focus on issues that can cause physicians to "wobble" on the highwire of medical practice in today's financial and social climate.

HCFA EXTENDS E/M CODE GRACE PERIOD: The Health Care Financing Administration (HCFA) has granted physicians an extension of the evaluation and management (E/M) code grace period. Previously, the grace period only applied to services rendered on or before January 31, 1992. The grace period has been extended an additional month: *physicians may use the old E/M codes for services rendered on or before February 29, 1992.* As previously, a claim must be made at 1991 reimbursement levels if an old code is used. The AMA is still attempting to secure an extension of the grace period to three months.

CARRIERS TO REJECT MEDICARE SUPERBILLS: Effective May 1, Medicare carriers will no longer accept claim attachments in lieu of information that should have been included in the designated blocks of the HCFA 1500 claim form. Preprinted forms (i.e., superbills) used by some physicians will no longer be accepted. Incomplete claim forms will be returned to the billing individual for proper completion and resubmission. Carriers will accept claim attachments only for information and evidence that cannot be entered in designated blocks (i.e., medical records to justify medical necessity).

SOCIETY CONTINUES TO OPPOSE WORKERS' COMPENSATION LINK TO MEDICARE: The State Society has taken several steps to warn against linking the state workers' compensation system to the federal Medicare system. During a January 28 news conference in Harrisburg, Society President Robert N. Moyers, MD, called upon the Senate to reject the Medicare tie and consider an alternative developed by the Society in cooperation with the Hospital Association of Pennsylvania. Several other organizations—including the Pennsylvania Osteopathic Medical Association and those representing orthopedics, psychology, podiatry, chiropractics, orthotics, and prosthetics—supported the Society. A series of letters to the editor, a display in the Senate side of the rotunda, and a 60-second radio spot were also developed by the Society to address the issue. At publication, legislative action is imminent.

SOCIETY TO HOST HEALTH FORUM: The State Society will convene a forum on the health effects of hazardous waste incineration early next month in Harrisburg. Participants are to include physician leaders, members of the Society's Commission on Public Health, and state and national experts. Though the State Society maintains a neutral position on such incineration, the idea for the forum was prompted by physician concern about the proposal to locate a hazardous industrial waste incinerator in Union County. Currently, the state Department of Environmental Resources is holding public hearings on that case, and a decision on whether to issue a site permit is due by March 12. For additional information about the forum, call 1-800-228-7823.

LEADERSHIP CONFERENCE DEADLINES SET: The following registration deadlines have been set for "Survival on the High Wire," the State Society's annual Leadership Conference to be held April 14-15, 1992, at the Hershey Lodge and Convention Center: hotel registration deadline—March 13, 1992; conference registration deadline—March 20, 1992. For additional information, see page 40 or call 1-800-228-7823.

BLUES UNVEIL "SPECIAL CARE" PROGRAM: In January, Blue Cross/Blue Shield unveiled a newly proposed insurance program, "Special Care," which would provide medical benefits and services to the under- and uninsured in Pennsylvania. The specifics of the program are currently under review by the State Society to determine if Special Care objectives are consistent with Society policy.

We value family. When an individual suffers a debilitating illness or injury, the whole family feels the pain. Lives change. Emotions surface. It takes more than the proper diagnosis and therapies to help that person regain his or her greatest level of independence. It takes a team-centered approach uniting specialists with the individual and family.

Bryn Mawr Rehab's *continuum of care* program encourages families to take an active role in their loved one's recovery. Family members consult with the treatment team, attend therapy sessions and actively participate in neurological and orthopedic support groups and educational services.

Successful rehabilitation involves a nurturing process and requires a total commitment from therapists, nurses, spouses, parents and children. So patients have the confidence to fly. Again.

If you would like to receive a copy of the comprehensive Bryn Mawr Rehab brochure, please call (215) 251-5401.

"Physician, Heal Thyself": In the '90s and Beyond

John W. Mills, MD
Medical Editor

It seems incongruous to me that the Health Care Financing Administration (HCFA) picked the holiday season to begin the new Medicare payment system for health care providers—physicians being the largest targeted group. While illness and medical emergencies continue unabated throughout the year, we physicians generally look to the holiday season as a time when there will be less demand for our services so we can, with the rest of the nation, spend some precious time with family and friends and reflect on our traditions.

"We must assimilate the stressors so we are not only survivors, but examples of successful survivors."

OBRA '89 mandated the new RBRVS system. HCFA, in working out the details, underestimated the medical profession's reaction to some "slight-of-hand" calculations when they published the proposed rules in June 1991. The avalanche of comments from physicians, led by organized medicine, stunned HCFA and made Congress realize that HCFA had misinterpreted their mandate and overstepped their bounds with some assumptions and calculations.

This unprecedented reaction caused a delay in the smooth transition to resource based relative value scale (RBRVS) system expected by HCFA. So, while the holiday season should have been a time for physicians to relax with family and friends, it was instead filled with frustration, doubt, fear, and uncertainty. Our professional lives have always been stressful; now we must add this new "stressor" to an already overstimulated professional being.

So that we won't suddenly light up the "TILT" in our central nervous system, I suggest that each physician consider an integrated program to help manage the increasing stress. Make a concentrated effort to abide by the following resolutions, which will have a far greater effect on your well-being than the usual, half-hearted, joking New Year's resolutions:

- Use seatbelts at all times, behind the wheel and as a passenger.
- Stop tobacco usage.
- Be extremely careful with alcohol usage.
- Pay more attention to your diet—the essential ingredient: keeping fat content below 25 percent of total calorie intake.
- Avoid all substance abuse; and if you are having trouble, call the Society's Physicians Health Programs at 1-800-228-7823 and get help STAT!
- Attempt three 40- to 60-minute periods a week of brisk walking—if possible, outdoors.
- Find daily time (two 15-minute periods) to "reflect."
- Spend some worship time weekly—whatever your faith.
- Try to keep your pace a bit slower/steadier, rather than spiked with spurts.
- Drive defensively—stop trying to beat the other guy.
- Do unto others as you would have them do unto you.

"Physician, Heal Thyself," quoted from St. Luke (Chapter 4, Verse 23), bears careful thought by each of us. We, as a profession and as individuals, need to set an example for the rest of the nation on how to conduct healthy lives. We must assimilate the stressors so we are not only survivors, but examples of *successful* survivors.

Government is not through with us yet. I have little doubt (as I have expressed before) that a national health plan of some sort will be our lot before the turn of the century. Witness the presidential candidates and their debates. Listen to the people of our state, as well as those in New Hampshire, where the first presidential primary occurs this month. The social ills in this country are out of control, and medical care or the lack of same for so many people multiplies the concern.

We physicians must be able to deal with these changes, keep our sanity, and continue to provide the best care we are capable of giving. We must be physically and mentally at our best to meet the challenges we will face.

My R_X is not new or original, but it works: be serious about your 1992 resolutions, and make them your standard as you head for the turn of the century. "Physician, Heal Thyself."

One to One is a series that invites physicians to ask questions about Pennsylvania Blue Shield.

We've designed *One to One* to be another open line of communication between physicians and Blue Shield. Our goal is to give you the opportunity to ask questions — and to give us the chance to provide more physicians with information about both our Private Business and Medicare operations.

Your questions will be addressed by Joseph A. Ricci, M.D., Blue Shield's Vice President of Medical Affairs. In the first several installments of *One to One*, Dr. Ricci answers some of the most commonly asked questions about Blue Shield.

If you have a question, please write Dr. Ricci at: Pennsylvania Blue Shield, P.O. Box 890089, Camp Hill, PA 17089.

One to One.

Has there been an increase or decrease in the amount of Medicare Part B benefits paid out in Pennsylvania over the last several years?

Since 1985, the amount of Medicare Part B benefits paid in Pennsylvania has jumped from $1.1 billion to over $2 billion. That's an increase of almost 76 percent that can be attributed to a number of factors — including an overall increase in demands for services, new advances in technology and changes in the way medicine is practiced.

Despite a general aging of the population across the nation, the number of Medicare beneficiaries has not increased dramatically in Pennsylvania. Over the last several years the total has remained at approximately 1,900,000 people.

The increased Medicare Part B payout corresponds with a 53 percent increase in the number of claims processed over the last six years. As the Medicare Part B Carrier for Pennsylvania, Blue Shield processed 29,348,808 Medicare claims for the state in 1990. That is over 10 million more than the 19,216,040 processed in 1985.

Concurrent with the increases in the number of claims, Pennsylvania Blue Shield's Government Business Unit has had to increase staff and update its technology. That has allowed us to continue processing claims and providing reimbursements to physicians in a timely manner.

One of these technological updates was discussed in the last issue of *One to One*. Providers can submit claims electronically to Blue Shield by using their personal computers and a modem. This is known as "electronic claims submission" or ECS.

And, in light of the increases in the number of claims processed, the use of ECS would benefit everyone by eliminating paperwork and helping speed up the turnaround of reimbursements.

Here are the year to year numbers:

Benefits Paid

1985	$1.1 billion
1986	$1.3
1987	$1.4
1988	$1.6
1989	$1.7
1990	$2.0

Claims Processed

1985	19,216,040
1986	19,553,822
1987	22,363,739
1988	24,238,785
1989	26,245,894
1990	29,348,808

Has the national total for Medicare Part B benefits risen over the last six years?

Yes. Just as Pennsylvania's total rose, so did the nation's. The Health Care Financing Administration, which administers Medicare, paid out $108.9 billion in 1990 — or $38.5 billion more than in 1985.

Here are the year by year totals:

Benefits Paid

1985	$70.4 billion
1986	$75.7
1987	$81.7
1988	$88.5
1989	$100.3
1990	$108.9

The right information. Right away.

Of Medicine and the Environment

Robert N. Moyers, MD

Next month the State Society is sponsoring a public forum to discuss a proposal for a hazardous industrial waste incinerator to be located in Union County. Substantial public opposition has been generated as a result of growing concerns about public health and safety. The Union, Lycoming, and Montour county medical societies have joined in this opposition.

The state Department of Environmental Resources (DER) has begun public hearings on the incinerator, to be built by USPCI of Pennsylvania, Inc., and DER expects to make a decision on the company's site permit application by March 12.

Public health and safety has been a focus of organized medicine from the very beginning, and your Society carries on that concern.

In fact, about a year ago, the Board of Trustees adopted a policy statement by the then Commission on Public Health and Toxic Substances (now the Commission on Environmental and Occupational Health) about the incineration of hazardous wastes, in general, and about the Union County facility. The policy lists 47 issues and questions regarding the technical, safety, and regulatory aspects of hazardous waste incineration.

These issues remain germane today. They include such matters as the identity of the toxic substances to be handled in the facility, the limits of safe human exposure, the nature of incineration by-products, the characteristics of the incinerator itself, the details and cautions relating to transportation of materials to and from the site. Other issues include the impact on the local community infrastructure, tax base, property values, and emergency personnel. Preeminent among these, and implied in each of them, is the concern for the public good.

The policy statement, which has been released in the news media at least twice since it was adopted, reflects the Society's generally neutral stance on the concept of incineration.

However, we also want to promote continued attention to public health issues, and we cannot support the USPCI project until there are satisfactory answers to questions raised by the medical societies and by those who will live near the proposed incinerator.

Toward the end of December, I received a letter from George C. Miller II, MD, of Lewisburg, requesting that the Society become involved in the public discussion about the incinerator during the several weeks before the DER decision about the Union County incinerator.

David Brill, MD, of Geisinger Medical Center, an expert in environmental health matters, has been actively involved in the Union County discussion, as has Immediate Past President Gordon K. McLeod, MD.

I have called for a forum of experts to be convened to discuss the issue in detail, to explore the medical aspects of this controversy. Your Society is, and ought to be, in a position of leadership with regard to public health policies.

As physicians, we help to generate certain kinds of hazardous waste, and we are mindful of our serious responsibilities to help find solutions for its disposal. We will *not* add our voices to the NIMBY forces, whose only concern is that incinerators and other facilities be located somewhere else — and Not In My Back Yard.

The proper role of your Society in this issue is to search out the truth, based on scientific evidence. We want to foster the dissemination of good, solid, expert information that will enable decision-makers to properly assess the impact of the proposed incinerator on the public health and welfare.

We do not expect to find ourselves in the midst of every licensing discussion for every waste facility. However, when our colleagues see sufficient cause for concern in their communities, we will offer assistance where we can and leadership where it is our responsibility to do so.

We specialize in musculoskeletal tumors.

Many patients with primary and metastatic bone and soft tissue tumors are dying--unnecessarily. They're not all dying from disease, but because many physicians haven't recognized the sub-specialty of musculoskeletal tumor treatment that saves lives and limbs.

It's time you knew about The Schmidt Reconstruction Center at The Graduate Hospital in Philadelphia. Here, the thinking is advanced and the treatment is aggressive. Dr. Schmidt and his highly skilled team attack bone and soft tissue tumors with a comprehensive program. There's a complete diagnostic workup prior to biopsy. Biopsies are performed to permit limb salvage. Adjuvant therapy is utilized with chemotherapy and radiation therapy. New clinical trials are constantly being developed. And the quality of life is improved for adults and adolescents.

In our world of specialized medicine, patients deserve the finest treatment available. Now that you know about The Schmidt Reconstruction Center, shouldn't you share it?

Understanding the New Medicare Fee Schedule

The methodology for determining the Medicare allowance for physician services changed effective January 1, 1992. Prior to the new year, the allowance for most physician services was determined by the reasonable charge system; now, however, the Medicare allowance for most physician services is determined by the resource based relative value scale (RBRVS) fee schedule system. The RBRVS fee schedule is being phased in over a five-year transition period.

Determining the RBRVS fee schedule amount is extremely complex; however, physicians need not calculate those numbers. Fee schedule amounts will be calculated by the state Medicare carrier, Pennsylvania Blue Shield (PBS), and physicians can obtain those amounts from PBS (see sidebar on page 12).

The formula

Under RBRVS, the Medicare allowance is the lesser of: 1) the physician's actual charge; and 2) the RBRVS or transition fee schedule amount, adjusted in some cases by Medicare payment policies. The formula for computing the RBRVS fee schedule amount is shown in Graphic 1.

The RBRVS fee schedule amount is the product of three numbers:

- The relative value units (RVUs) for the service, calculated from the total RVUs for three components: physician work, practice expense, and malpractice expense;
- The geographic adjustment factor (GAF) for the service in the locality where it was rendered, which is the weighted average of the geographic practice cost indices (GPCIs) for each RVU component (see Graphic 2); and
- A national monetary conversion factor (CF), which transforms the GPCI-adjusted RVUs into payment amounts. Currently, a single national CF applies to all services except anesthesia; in the future, different categories of services could have different CFs due to different updates.

In contrast to the reasonable charge system, which permitted prevailing charges to differ by specialty, the RBRVS payment levels do *not* differ by specialty.

Transition

Both nationally and in Pennsylvania, approximately one-third of physician services moved directly to the RBRVS fee schedule as of January 1, 1992. The remaining two-thirds are being phased in, and by 1996 all physician services will be paid based exclusively on the RBRVS fee schedule.

Transition determinations depend upon the interrelationship of the 1992 RBRVS fee schedule amount and the adjusted historical payment base (AHPB). The HPB (historical payment base) basically is the weighted average 1991 Medicare allowance for the service in the lo-

The information in this article is taken in part from the "Medicare RBRVS Payment System," a monograph prepared by the State Society's Department of Medical Economics and distributed to attendees of the Society's regional meetings in January on Medicare payment reform. Member physicians who did not receive a copy of the monograph may request one copy by calling the Society's Department of Physician Services.

Graphic 1

RBRVS FEE SCHEDULE FORMULA

$$F = [(RV_w \times GPCI_w) + (RV_p \times GPCI_p) + (RV_m \times GPCI_m)] \times CF$$

F	RBRVS fee schedule amount
RV_w	The work relative value units for the service
RV_p	The practice expense relative value units for the service
RV_m	The malpractice expense relative value units for the service
$GPCI_w$	The work GPCI in the locality
$GPCI_p$	The practice expense GPCI in the locality
$GPCI_m$	The malpractice expense GPCI in the locality
CF	The national conversion factor

Graphic 2

GEOGRAPHIC PRACTICE COST INDICES (GPCIs) FOR PENNSYLVANIA

LOCALITY NUMBER	LOCALITY NAME	WORK	PRACTICE EXPENSE	MALPRACTICE
1	Philly/Pitt	1.014	1.014	1.552
2	Large PA Cities	1.008	1.001	1.440
3	Small PA Cities	0.984	0.945	0.986
4	Rest of PA	0.975	0.929	0.986
Statewide	Statewide	0.997	0.978	1.268

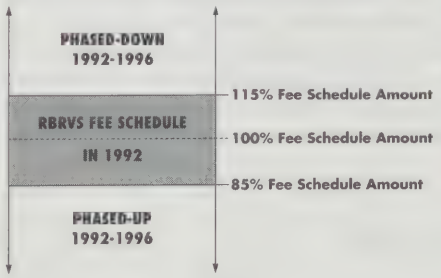
In order to compute the geographic adjustment factor (GAF) for a service in a locality, a GPCI is calculated for each RVU component. As shown, four localities have been set up for Pennsylvania. The use of one statewide locality is an option currently under review.

The indices for each locality reflect the relative cost of the component compared to the national average. Each recognizes the variation from the national average: the variation for practice and malpractice expense GPCIs is weighted at 100 percent, and the variation for work (cost-of-living) GPCIs is weighted at 25 percent (as directed by law). For example, the Locality I malpractice GPCI is 1.552, meaning average malpractice premiums in that locality are 55.2 percent higher than the national average.

cality. The AHPB is the HPB increased by the 1992 update of 1.9 percent and decreased by a 5.5 percent adjustment imposed by HCFA to ensure budget neutrality during the transition. (For an explanation of the phase-in determination and transition formulas, see Graphics 3-5.)

Locality

There are four localities in Pennsylvania: 1) Philadelphia/Pittsburgh, 2) large Pennsylvania cities, 3) small Pennsylvania cities, and 4) the rest of Pennsylvania. Pennsylvania had the same localities for purposes of calculating prevailing charges under the reasonable charge system, with three exceptions: Geisinger Medical Center, Guthrie Clinic, and Lankenau Hospital were placed in a locality *outside* their geographic area prior to RBRVS. Under RBRVS, these facilities are *within* their geographic areas.



Impact of RBRVS

The AMA has developed several simulations of the impact of RBRVS; however, many physicians will experience an impact different from AMA simulations, and the full effect of RBRVS will not occur until 1996. In addition to inevitable forecasting errors, variances may occur due to:

- averages: the simulations are averages, and the actual impact will vary by service, specialty, and geographic area;
- AHPB impact: the AHPB can be significantly less than a physician's 1991 payment for two principle reasons: 1) the AHPB is not specialty specific, and 2) the AHPB included a 5.5 percent asymmetry reduction; if the AHPB is the culprit, physicians will attain expected gains by 1996;
- new physician reductions (for detailed information, see "New Physician Reductions Under Medicare" on page 13), non-participating physician penalties, and new Medicare coding and payment policy changes: some physicians may be

Graphic 3

PHASE-IN DETERMINATION

The above phase-in determination chart can be used for all services except radiology and anesthesiology services, which have their own determination methods. Phase-in occurs as follows:

- **A service moves directly to the RBRVS fee schedule in 1992 if the AHPB for the service is within 15 percent of the 1992 RBRVS fee schedule amount.**
- **A service is phased *up* to the RBRVS fee schedule from 1992-1996 if the AHPB for the service is less than 85 percent of the 1992 RBRVS fee schedule amount.**
- **A service is phased *down* to the RBRVS fee schedule from 1992-1996 if the AHPB for the service is greater than 115 percent of the 1992 RBRVS fee schedule amount.**

taking multiple hits in addition to payment-per-service reductions as a result of the RBRVS fee schedule.

Conclusion

Though implementation of the Medicare payment reform occurred on January 1, the AMA House of Delegates, at its interim meeting in December, did not endorse the system as it now stands. The delegates adopted a report of the Board of Trustees which directs the AMA to pursue several revisions to the system, including:

- extension of HCFA's grace period on the new visit codes;
- immediate analysis of the implementation of the payment schedule, focusing on whether carrier implementation is consistent with Medicare law and HCFA regulations;
- prevention of further reduction of current Medicare limiting charges;
- replacement of the "current flawed proxy data basis" for the GPCIs; and
- establishment of a program to monitor changes in patient access and physician practice patterns.

The report also includes provisions to assist physicians and carriers during the transition period.

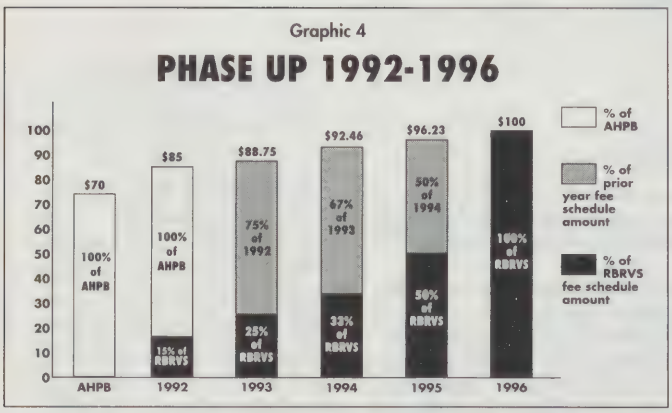
In Pennsylvania, the State Society is in the process of developing policy on a number of related issues, including the interim work RVUs and whether to support a statewide locality. Also, the Society is offering a series of publications and CPT coding seminars to help members.

Society members, who have questions regarding RBRVS or other physician payment reform policies being implemented with RBRVS, should call the Society's Department of Medical Economics at 1-800-228-7823 for assistance. Members interested in Society publications and educational meetings may call the same number and ask for the Department of Physician Services.

HOW TO...

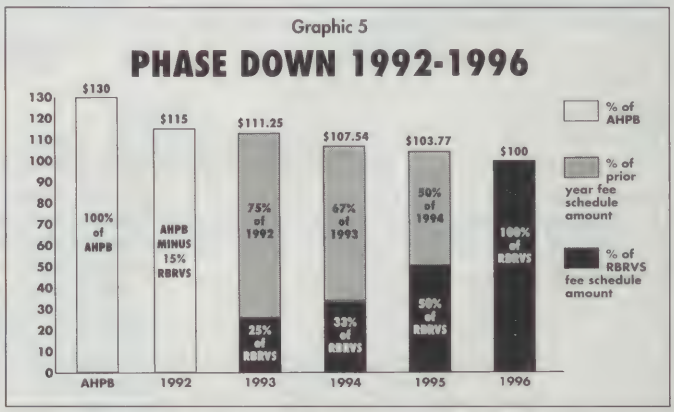
...Comment on Work RVUs

Write to HCFA, Department of Health and Human Services, ATTN: BPD-712-F, P.O. Box 26688, Baltimore, MD 21207. Deadline: March 24, 1992.



...Obtain Fee Schedule Amounts

Write to Pennsylvania Blue Shield, Medicare Provider Reimbursement, Inquiry and Monitoring, P.O. Box 890316, Camp Hill, PA 17089-0316; or call (717) 763-6622 for fee schedule amounts or (717) 763-5700 for limiting charges. Provide the following information: provider number, procedure code(s), and charge class area. Limit: five procedure codes per call.



...Obtain Copies of the Final RBRVS Regulation

Paper or Microfiche
Stock #069-001-000-37-8
($1.50 per copy)
Diskette (3.5 inch)
Stock #069-001-000-38-6
($44.00 per copy)
Write to U.S. Government Printing Office, Order and Information Desk, Washington, DC 20402-9329—enclose check or money order payable to "Superintendent of Documents," or VISA or MasterCard number and expiration date; or call (202) 783-3238 or fax (202) 512-2250—credit card orders only.

Graphic 4

Graphic 5

In 1992 the fee schedule amount for a service phased into the RBRVS fee schedule is a blend of the AHPB and the 1992 RBRVS schedule amount. If the AHPB is less than 85 percent of the 1992 RBRVS amount, 15 percent of the amount is added to the AHPB. If it is greater than 115 percent, 15 percent is deducted. From 1993 through 1995, the fee schedule amount for a service phased into the RBRVS fee schedule is a blend of the prior year payment (adjusted by the current year update) and the RBRVS fee schedule payment as shown. Note: the example transition payment levels for 1993-1996 presented in these graphics do not reflect any updates, since they have not yet been established.

New Physician Reductions Under Medicare

Medicare fee schedule amounts are reduced for new physicians during their first through fourth years of practice with limited exceptions. While these reductions applied prior to the new Medicare payment system, they are impacting many new physicians for the first time under the new system. Previously, the Health Care Financing Administration (HCFA) did not apply the reductions to physicians in group practices. That exception no longer applies.

New physician reductions are based on a percentage of the Medicare fee schedule amount as follows: 80 percent for the first year, 85 percent for the second year, 90 percent for the third year, and 95 percent for the fourth year.

Exceptions

The new physician reductions do not apply in the case of primary care services, which are defined by HCFA as the following procedure codes: Office visits (codes 99201-99215); emergency department visits (codes 99281-99285); home visits (codes 99341-99353); nursing facility visits (codes 99301-99313); rest home visits (codes 99321-99333), and new patient ophthalmological services (codes 92002, 92004).

The reductions also do not apply to services provided in a rural Health Professional Shortage Area (HPSA). Services provided in a rural HPSA should be coded with the "QB" modifier. Appropriate use of that modifier will exempt the services from the new physician reductions, as well as qualify the service for an HPSA bonus payment. (For more information, see the HPSA map on page 16.)

Defining the first through fourth years

The first year of practice *begins* when the physician first provides a Medicare Part B service and *ends* on December 31 of the first calendar year during which the physician provided Medicare Part B services during:

- April through June of the year for years prior to 1990, or
- January through June of the year for 1990 and thereafter.

The second, third, and fourth years of practice are the second, third, and fourth calendar years, respectively, following the expiration of the first year.

HCFA will consider a physician to have provided Medicare Part B services during January through June of a year *only if* the physician provided a Medicare Part B service during January of the year. For example, if a physician began providing services in January 1992, the first year of practice expires December 31, 19**92**. However, if a physician began providing services in March 1992, the first year of practice expires December 31, 19**93**.

Medicare Part B services

A physician must provide *Medicare Part B* services to begin the first year of practice. Services provided to patients who are not Medicare beneficiaries do not qualify. For example, a military physician, who spent 10 years exclusively treating military personnel and their families covered by CHAMPUS, would be considered a new physician when leaving the military and beginning to treat Medicare Part B beneficiaries.

Services provided to Medicare patients *within* a residency program also do not qualify, since they are covered by Medicare Part A. On the other hand, services provided *apart from* the residency program while the resident is "moonlighting," either outside the training facility or in the outpatient department or emergency room of the training facility, may qualify.

The services of a resident in "moonlighting" settings are covered by Part B, as opposed to Part A, when: 1) the services are not related to the resident's training program; 2) the services are identifiable physician services, the nature of which requires performance by a physician in person and contributes to the diagnosis or treatment of the patient's condition; 3) the resident is fully licensed to practice by the state in which the services are performed;

The information in this article is taken in part from the "Medicare RBRVS Payment System," a monograph prepared by the State Society's Department of Medical Economics. See page 10 for more information about the monograph.

and 4) in the case of services provided in the outpatient or emergency department of the training facility, the services performed can be separately identified from those services that are required by the training program.

In addition, it is not necessary for the physician to actually submit claims to Medicare Part B for the service to qualify. It is only necessary for the service to be *covered* by Medicare Part B. For example, a physician can provide services covered by Part B while employed by an HMO. Those services qualify even though the HMO is reimbursed for the services.

"In essence, the Bush administration believes that the services of new physicians are worth less than those of other physicians."

Purported rationale

Initially, the federal government claimed the new physician reductions were necessary to remedy an inequity created by the reasonable charge system, then used to determine the Medicare allowances for most physician services. Under that system, the customary charge of a new physician—i.e. one who had insufficient charge data to calculate a customary charge—was set at the fiftieth percentile of the customary charge of physicians in the same specialty and locality. Because of that rule, it was possible for a new physician to be paid at a higher rate than a more experienced physician.

In 1990 the Bush administration advanced a new rationale. In an appearance before the House Ways and Means Health Subcommittee last spring, HCFA Administrator Gail Wilensky, PhD, testified in support of the OBRA '90 legislation, stating: "The vast majority of American workers earn more as they gain experience." In essence, the Bush administration believes that the services of new physicians are worth less than those of other physicians.

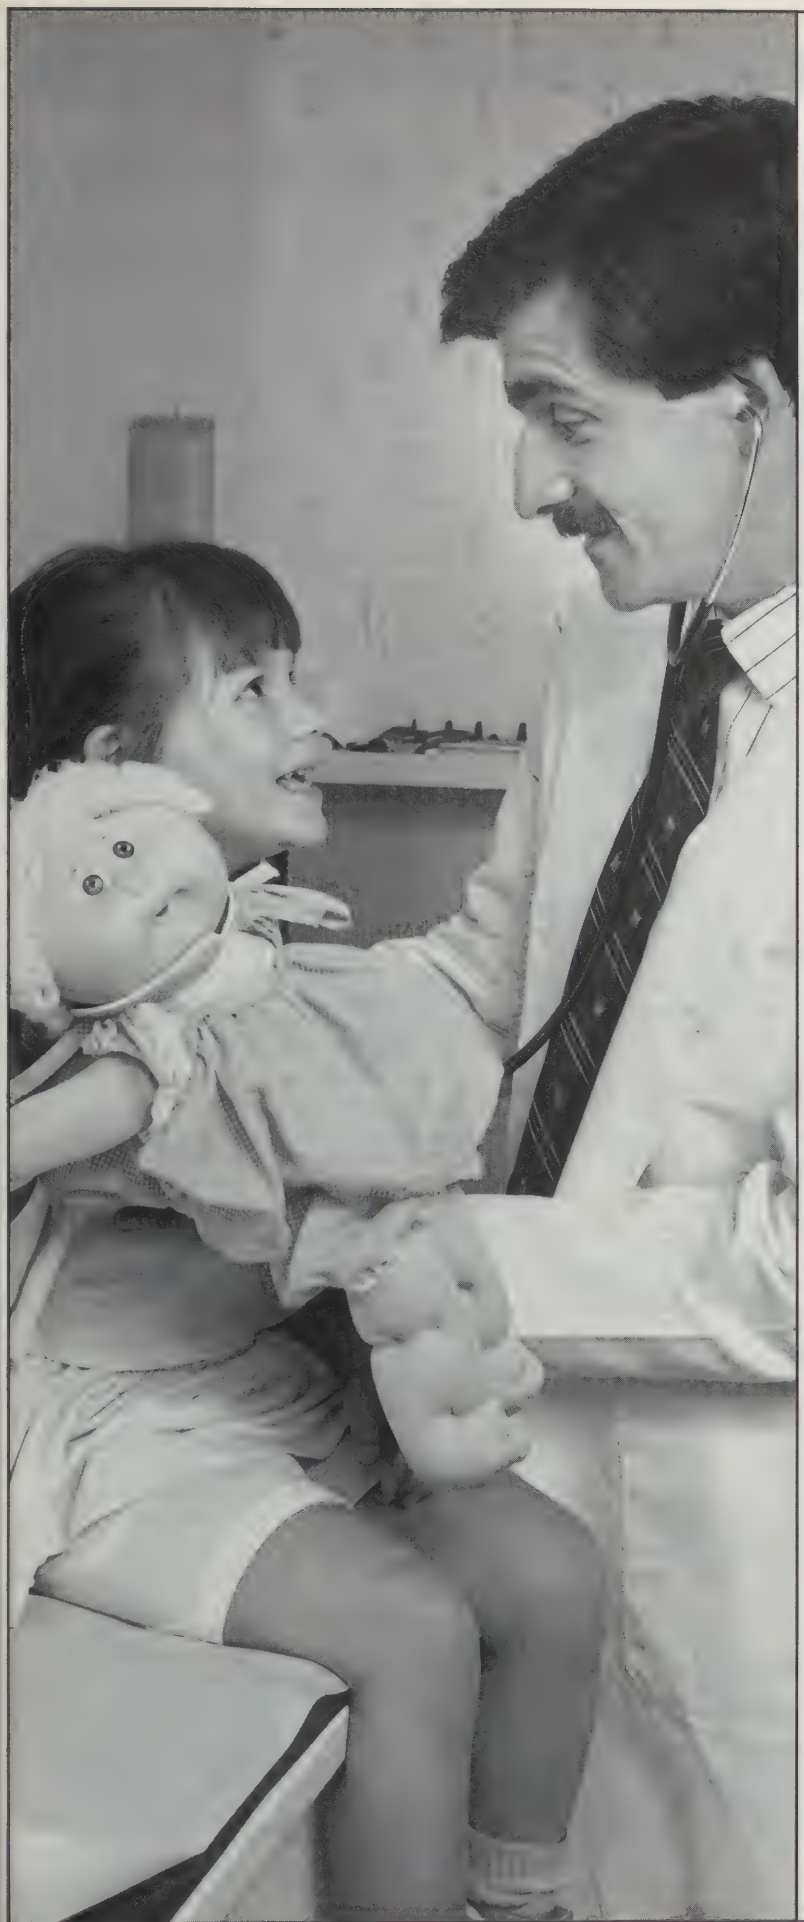
Prospects for change

The AMA has opposed new physician reductions from the outset and is seeking to have them eliminated. Because the reductions are mandated by law, a legislative reversal is required. Legislation which would eliminate the new physician reductions has been introduced by Representative Ed Towns of New York.

The projected savings from new physician reductions are estimated at $580 million during the five-year fiscal period 1991-1995. Under the terms of the 1990 budget agreement, elimination of these savings would have to be "offset" by other savings, cuts, or increased taxes. Because of the linkage between eliminating the new physician reduction and replacing the savings, convincing Congress to adopt Representative Towns' bill is a monumental task. The AMA Young Physicians' Section has issued a Legislative Alert urging young physicians to help its legislative representatives fight for passage of Representative Towns' bill (see "Call to Action" below).

Important advice

In the meantime, because of the new physician reductions, residents should consider moonlighting so their resident years qualify as new physician years. Also, physicians beginning to provide Medicare Part B services to Medicare beneficiaries for the first time should consider beginning in January so they will not be subject to the first-year reduction for longer than a 12-month period.



CALL TO ACTION

Call and write your member of Congress and senators at both their home and Washington addresses:

- Let them know the rationale for repealing those provisions that discriminate against young physicians (see "Talking points").
- Ask them to support repeal of Section 1842(b)(4)(F) of the Social Security Act (42 USC 1395u(b)(4)(F)) and to contact members of the House Ways and Means Committee, the House Energy and Commerce Committee, and the Senate Finance Committee.
- Ask other physicians and groups to support repeal.
- Send copies of your letters to the Pennsylvania Medical Society Council on Governmental Affairs, 777 East Park Drive, Harrisburg, PA 17105-8820.

Talking points

- The law is nothing more than a tax on young physicians designed to achieve arbitrary budget cuts.
- The law violates the concept of Medicare payment differentials being determined on the basis of resource costs, a concept adopted by Congress in landmark payment reform.
- Reimbursement rates under Medicare have not been and are not supposed to be based on mere prejudice. To say that a young physician's services are worth less because he/she has not been in practice as long as older physicians is simplistic.
- No data exists indicating that young physicians have lower resource costs for their practices. In fact, the cost of education, lost opportunity costs for years of training, professional liability costs, and costs of starting a practice are often higher for new physicians than for others.
- Such an approach penalizes the group of physicians who most likely have high Medicare patient populations and who accept claims on an assigned basis.
- Such an approach may discourage physicians from seeking training in the lower-paying specialties, so they can meet their educational and other debts.

Will your next decision be based on good medicine or good law?

No doctor should ever have to choose between what's best for the patient and what's legally expedient. That's why there's PMSLIC. We're a professional liability insurance company owned and operated by doctors. Doctors who understand how carefully you weigh each professional decision. Because we do, too.

Doctor Owned, Doctor Run.

RBRVS COVERS LIMITED LICENSE PRACTITIONERS

Medicare law uses the term "physician" to refer to certain limited license practitioners (including optometrists, dentists, podiatrists, and chiropractors), as well as medical and osteopathic doctors. These practitioners are also covered by the new Medicare payment system.

The Health Care Financing Administration (HCFA) has elected to pay these practitioners at the same level as physicians when they provide an identically coded service. For example, the relative value units (RVUs) for foot surgery are the same regardless of whether the surgery is performed by an othopedic surgeon or a podiatrist.

Both the State Society and the AMA are opposed to the HCFA policy, because it ignores the differences between physicians and limited license practitioners: physicians have more extensive education and training, and pay higher malpractice premiums. Organized medicine believes that while the services may be identically coded, the resources used would be quite different and should be recognized.

As a result of a resolution introduced by the Pennsylvania delegation at the December 1991 AMA interim meeting of the House, the AMA is developing documented evidence of the differences to use to seek reversal of the HCFA policy.

UNDERSTANDING THE "UPIN" FROM HCFA

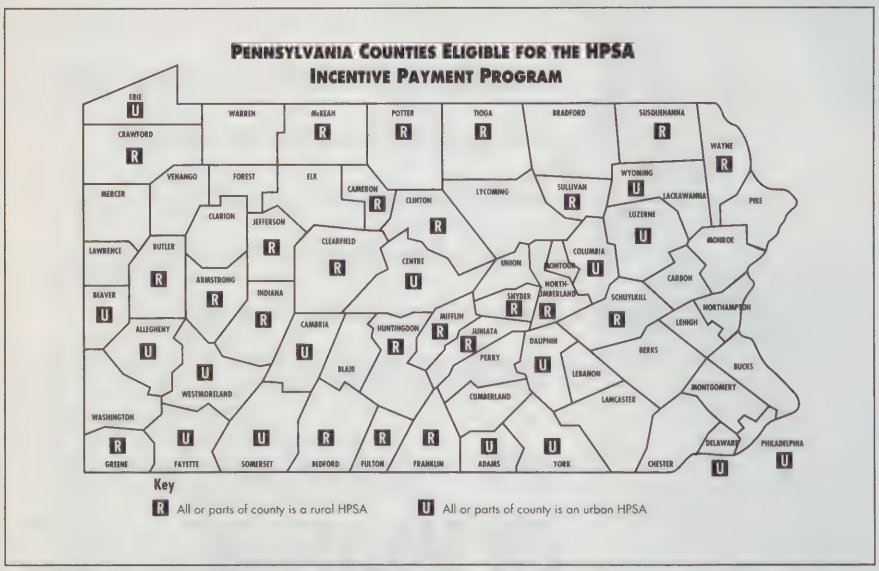
The Unique Physician Identification Number (UPIN) is a Medicare-specific, six-character identifier consisting of one letter and five numbers. It is assigned to physicians by HCFA and used to identify physicians who have referred patients to or ordered services from another physician.

A *referring physician* is defined as a physician who 1) requests an item or service for the beneficiary, including a request for a consultation with a specialist physician; or 2) requests or establishes a plan of care which includes the provision of an item or service. An *ordering physician* is a physician who orders non-physician services for the patient, such as diagnostic laboratory tests, clinical laboratory tests, pharmaceutical services, durable medical equipment, or the technical component of diagnostic tests.

Implementation

Effective January 1, 1992, the name of the physician and UPIN are required for Medicare claims for all referred or ordered services. The information should be reported in Block 19 of the current HCFA 1500 claim form. The UPIN is also required on Certificates of Medical Necessity (CMN) when the physician prescribes home oxygen. The UPIN should be reported next to the physician's signature. Additionally, when prescribing durable medical equipment, the UPIN should be reported on the CMN or beside the physician's name on the prescription.

Effective January 1, 1992, claims received without UPINs will be rejected by Medicare, and resubmission with the information will be required.



Surrogate UPINs

In some situations, physicians have not been issued UPINs. "Surrogate" UPINs would be used for interns and residents, physicians retired from practice prior to the issuance of UPINs who are not currently billing Medicare, and physicians serving with the Veterans Administration and other non-Medicare involved practice settings, such as the Public Health Service. A surrogate UPIN also exists for self-referrals, where the beneficiary obtains a service without an attending physician's referral. This may occur with podiatry, optometry, ambulance, and physical therapy services.

Obtaining a UPIN

Most physicians have received information about their UPIN by now, but those who have not should make a Request for Assignment by writing to: Pennsylvania Blue Shield, P.O. Box 898842, Camp Hill, PA 17089-8842. Include: physician's name and practice address; Medicare provider number; name of medical school and graduation year; medical license number; and whether a UPIN was previously applied for, and if yes, the month and year of application. Call Sandy Mitchem, Pennsylvania Blue Shield, at (717) 975-3001 for additional information about obtaining a UPIN.

To obtain UPIN information about a referring physician, first attempt to

PHYSICIANS DUE BONUSES IN PENNSYLVANIA HEALTH PROFESSIONAL SHORTAGE AREAS
Physicians are entitled to a bonus payment, in addition to the Medicare allowance, when they perform a service in a Health Professional Shortage Area (HPSA). The state map above shows that all or part of 40 Pennsylvania counties are HPSAs. The bonus payment is equal to 10 percent of Medicare's share of the allowance and applies to both assigned and unassigned claims. HPSA payments are made on a quarterly basis, *BUT physicians must apply for them.* To do so, code the service with the appropriate modifier: "QB" for rural and "QU" for urban. Direct any questions to the State Society or Pennsylvania Blue Shield.

do so from the referring physician. If unsuccessful, write to: Pennsylvania Referring Physicians, Medicare—Pennsylvania, P.O. Box 890317, Camp Hill, PA 17089-0317.

UPIN directories listing all physicians and their UPINs by state are available free of charge from Pennsylvania Blue Shield.

For additional information, call the Society's Council on Medical Economics staff at 1-800-228-7823 or Pennsylvania Blue Shield at (717) 763-6589.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

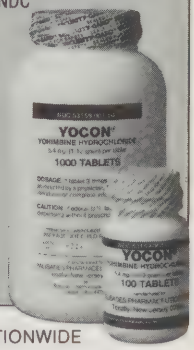
Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]



Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

Responding to the Workers' Compensation Crisis

A proposal on the structure and management of workers' compensation programs

Herbert E. Segal, MD, MPH

In 1990 job-related injuries are estimated to have cost American employers over $60 billion in direct workers' compensation expenses, a figure which has doubled in the past four years and which may do so again by 1995.[1] The medical costs of treating work-related injuries and illnesses are estimated to have consumed 41 percent of workers' compensation payouts for 1990, the remainder by indemnity claims costs.[2] Taken together with a 17.1 percent increase in group health care costs in 1990,[3] there is concern for the maintenance of a reasonable business atmosphere[4] under which businesses may remain competitive and prosperous, and employment will be available.

"The objective [of KePRO] is to insure the delivery of quality medical care while containing costs, whether or not there is legislative change."

Fueled by a possible 52 percent increase in insurance rates,[5] the governor, legislature, business community, and labor, among others, have begun to critically reexamine the direction and management of workers' compensation programs. The Pennsylvania Medical Society has been actively involved in these discussions and has developed a legislative approach to cost containment. While much of the discussion on workers' compensation cost containment strategies has focused on control of physicians' costs, usually through development of a fee schedule,[6] KePRO's response to the expressed interest of several large insurers has been to develop a more comprehensive management strategy. The objective is to insure the delivery of quality medical care while containing costs, whether or not there is legislative change.

KePRO's strategy

The effort envisioned is significantly broader than current proposals and might usefully be divided into pre-injury, acute post-injury, chronic post-injury, and rehabilitation phases. The program management initiatives relevant to each phase are listed in the table at right, with the understanding that some overlap does occur. The 17 initiatives are listed in descending order of employer preference.[7]

KePRO and other quality assessment/utilization review organizations, working with workers' compensation carriers and self-insured businesses, face a daunting task, i.e., developing a comprehensive, consistent approach. KePRO has chosen to recognize the importance of the pre-injury and rehabilitation phases, but concentrate its efforts in the review of care provided in the acute and chronic post-injury phases ("KeyCare"). We have taken as a statement of purpose evaluating, communicating, and facilitating the injured workers' return to the workplace; evaluating services and expenses certifiable as being of high quality and as medically appropriate; and communicating cost-effective alternatives, providers, services, and treatment sites.

Within the pre-injury phase, KePRO works with carriers and self-insured companies to develop thresholds for injuries which require review of care. It is not efficient to review all care provided, since many injuries are self-limited and return to work is prompt. Referrals for review should be considered when hospitalization, anticipated indemnity, or treatment over certain time or dollar thresholds, surgery, or catastrophic injuries occur. If a record is received for review in the acute post-injury phase, i.e., the injury has occurred within the past 26 weeks, as a rule, concurrent review is initiated. This review may include precertification as well as assessment of ongoing care.

Upon receipt of a request for concurrent review, KePRO conducts a telephone interview with the injured worker. In this interview, the worker provides demographic data, a description of the accident and injury, a summary of the care provided to that point, and the identity of the treating practitioner. The interviewer es-

Dr. Segal is central medical director of the Keystone Peer Review Organization.

tablishes a caring, friendly relationship with the worker, expresses interest in facilitating the workers' early return to the workplace, and schedules follow-up phone calls keyed to the next visit with the practitioner or scheduled diagnostic procedure. The data obtained through the initial and subsequent interviews are subjected to an expert system analysis to determine if care provided is appropriate to the diagnosis, physical findings, etc.

KePRO also notifies the attending practitioner by mail that the care being provided is under review because of the threshold anticipated or reached. The physician is provided with an exact description of the workers' duties, to be a guide in making decisions as to when the worker is able to return to the job. This is also an appropriate opportunity to describe the employer's light-duty or work-hardening program, if one is available. No further contact is made with the practitioner unless the expert system raises a flag suggesting the value of a peer-to-peer contact.

If a question about the care being provided is in fact raised, a KePRO physician or other professional will phone the attending practitioner to clarify the diagnosis or treatment plan. An effort is made to reach a consensus on a proposed treatment plan or a return to work. The value of resolving issues in discussion between peers cannot be overemphasized. If that cannot be accomplished, impasses are reported to the insurer or employer. Telephone contacts with the worker and the practitioner, when appropriate, continue until the case is closed and/or the worker returns to duty.

Insurers and employers may have substantial backlogs of unresolved cases; KePRO conducts retrospective review of these cases. This includes a utilization review and a hospital bill or fee audit. These audits are done utilizing the appropriate fee schedule agreed upon with the insurer/employer or the schedule mandated by state law. Expert systems are also available to address issues such as unbundling and duplicate billings of the employee's group health coverages. KePRO recommends, on the basis of retrospective review, which billed charges should be approved and which should not.

Apart from concurrent and retrospective review, there are several additional services KePRO proposes as useful to insurers and self-insured employers. One is assistance in preparation of depositions and testimony, given the volume of litigation and arbitration which currently occurs. Another is the development of tailored reports to identify workplaces or jobs at high risk for injury. Reports may also be developed to identify those practitioners and providers whose performance is consistently within or outside review parameters. A contract for review may also include the communication of review results to practitioners and providers. Such data could serve as a basis for re-examining performance and making modifications where appropriate.

Identification of administrative or program management expenses which could be eliminated should also be considered. It is possible, for example, to translate review decisions directly into payments for practitioners and/or providers through electronic means.

Management of workers' compensation programs is a complex venture which requires the commitment of the worker, the care provider, the employer and insurer, and the peer review firm when employed. All parties must focus on returning the worker to the workplace as promptly as possible and on facilitating that return through the exchange of information and the promotion of timely, appropriate, and properly priced care. Approaches which do not recognize the complexity of workers' compensation program management may achieve short-term gain, but at the peril of unbalancing or upsetting efforts at system reform. The KePRO approach is put forward as one way to address the acute and chronic post-injury phases within such reform.

With Princeton, you're in good company.

More than 19,000 medical and health care professionals have chosen Princeton Insurance Company for their professional liability insurance coverage. Here are some reasons why:

• **A solid track record.** Princeton has nearly a decade of experience providing professional liability coverage to physicians, and A.M. Best has ranked us (with our parent company) among the 20 largest medical malpractice insurers nationwide since 1983.

• **Financial strength.** Our loss reserves are carried at full value, not discounted in the hope of earning sufficient interest income to pay claims. We maintain a high quality/low risk investment portfolio, with no junk bonds, no common stock and no real estate speculation. And Standard & Poor's has given us a claims-paying ability rating of "A."

• **Coverage options.** Tail coverage is included in the purchase price of our innovative *Occurrence Plus* policy. A standard claims-made policy is also available, and we offer excess liability coverage (limits up to $5 million) to Pennsylvania physicians regardless of which company writes the primary coverage.

• **Strong defense against claims.** Of the Princeton-managed cases disposed of by the courts in 1990, more than 90 percent were resolved in the policyholder's favor.

It may be easier than you think to change insurance companies. Call today to find out more or return the coupon to receive a copy of the video program, "It's Princeton's Specialty."

The Role of KePRO Medical Directors

Donald E. Harrop, MD

As I read through my KePRO mail, or when I have occasion to address a group of physicians, one issue that continually requires additional explanation is the role of our medical directors.

Often, questions asked of me imply that physicians believe KePRO medical directors are making review decisions, probably because their signatures appear on quality and utilization review determination letters. This is, in fact, not correct. All review decisions are made by credentialed physician advisors who are matched for the case under review by specialty or type of service provided. The medical directors do have the responsibility to assess reviews from the procedural perspective (e.g., "Did the proper physician specialist see the case?"), but otherwise their roles are quite unique. Five physicians hold these management positions.

The central medical director, Herbert E. Segal, MD, is responsible for overseeing all activities of KePRO's Medical Affairs Division. Reporting to him in this capacity are the director of medical affairs operations; the director of professional relations; the staff epidemiologist; the associate medical directors for Areas I, II, III, and central review; and the manager of associate medical director support services. These staff members are responsible for activities which deal with the performance and follow-up of physician review, from the actual recruitment and credentialing of physician advisors through the interventions/sanctions process.

As a member of the senior management staff of the organization, Dr. Segal is also involved in a number of other corporate functions such as the development of private review business and academic/research endeavors. He devotes a significant amount of his energy to maintaining positive relations with hospital medical staffs, specialty societies, and the physician and provider communities in general.

Our associate medical directors who work out of our area offices are: Kevin Kenny, MD, Area I; Alfred W. Meneely, MD, Area II; and Lester Sablosky, MD, Area III. They are responsible for ensuring that quality review policies, procedures, and interventions are implemented and monitored appropriately in their respective areas. Specific duties include analyzing physician data profiles, monitoring the appropriateness and effectiveness of quality interventions, assigning the specialized quality intervention physicians to manage specific case interventions, reviewing confirmed severity level III quality problem cases to determine whether immediate interventions should be taken, and referring cases that appear to require a higher level of decision-making authority (i.e., to the central medical director, Board of Directors, etc.).

The associate medical director for central review, Robert L. Tecau, DO, has similar responsibilities to the other associate medical directors in his newly created position, except that he oversees those physician review activities that are conducted only in the central office. These include: ambulatory surgery review, intervening care review, HMO review, and preprocedure review of assistants at cataract surgery.

Physicians do occasionally have concerns which they believe should be brought to KePRO's attention. If these concerns relate to individual case review, it is usually most efficient to communicate within the context of the review process, so that additional information can properly be considered by the physician advisor reviewing the case. If the review process has been completed, it is most appropriate to direct inquiries to the associate medical director responsible for the area office in which the review was conducted. Dissatisfaction with a response at that level should be directed to the central medical director or the Pennsylvania Medical Society Committee on KePRO Oversight, again understanding that only procedural issues will be addressed at those levels. Broader issues relating to the conduct of the KePRO physician review process in general or to specific specialty issues should be addressed to the central medical director.

One strength of KePRO is its commitment to physician management of the review process. The medical directors are in place to actuate that commitment.

Possible Health Effects of EMF

David R. Brill, MD

In the last 15 years, a new environmental health concern has emerged: electric and magnetic fields (EMF) associated with 60 hertz (Hz), alternating current (AC) electricity. Because recent reports in the popular press have stirred public attention, patients may well ask their physicians about it. The Soviets were the first to speculate about health effects from electric fields in the early 1970s. Other studies followed throughout the '70s and '80s. Public debate has grown to include concerns about household electrical appliances.

Dr. Brill is chairman of the State Society's Commission on Environmental and Occupational Medicine, and chief of the nuclear medicine section at Geisinger Medical Center, Danville.

The possible public health effects of electromagnetic fields (EMF) are not trivial given the ubiquity of electric lines and appliances. Physicians should be aware that their patients are beneficiaries of activities which create these effects.

Hospitals may be the source of higher-than-average exposures to EMF, considering their use of electricity and the number of devices that energy supplies. Electrically heated bassinets, electrocautery, electrically operated life support devices, computers, video display terminals, and virtually all radiographic equipment are sources of EMF. Magnetic resonance imaging (MRI) is far and away the most powerful source of magnetic fields to be found in hospitals. Employees and the public are shielded as carefully as possible. The American College of Radiology's Commission on Radiologic Units, Standards, and Protection (CRUSP) says that all commercial MRI units operate within guidelines set by the FDA as being acceptable, and exposure of personnel outside the scanner is less than 1/1000 of that of patients within the bore of the magnet.[1]

History of studies

The first serious suggestion of a carcinogenic effect was the study reported by Wertheimer and Leeper in 1979.[2] The researchers studied all deaths from childhood leukemia reported in Denver, Colorado, from 1950 through 1973, looking for associations with various environmental stimuli. They found that children dying of all leukemias were three times as likely as children who were healthy to live within two houses of a transformer which stepped down voltage from distribution lines to household levels. They concluded an association with EMF. The study made some assumptions, most notably that dose absorbed could be estimated from the size of the wires (and thus their voltage), that all forms of leukemia were equally likely to be induced, that no other environmental stimuli were present, and that socioeconomic status and lifestyle played no role in the differences between patients and controls. The study was not carried out in a blinded fashion.

In ensuing years, similar studies were undertaken in Rhode Island,[3] Sweden,[4] and elsewhere.[5,6] Many of the flaws of the original study were corrected. The results of these studies were mixed. Some concluded a small, but statistically significant correlation between EMF and leukemia; others found a trend, not significant; and still others found no relationship whatsoever. A very important study was carried out by Savitz[7] in Denver and reported in 1987. Using an entirely different group of leukemia deaths (1973 through 1980) and correcting many of the design flaws of the original review, he found a weak but significant correlation between the likelihood of leukemia and doses of EMF, estimated from actual measurement of flux. Reanalyzing his data using the cruder dosimetric techniques of the 1979 study, he closely approximated the Wertheimer-Leeper numbers. The same author performed a metaanalysis of 11 different studies[8] of EMF and leukemia, finding a marginally significant 1.2-fold increased risk among those exposed to high flux EMF as opposed to those who were not.

Leukemia is not the only cancer risk studied. Other studies have concentrated on adults, especially those exposed to high density EMF flux. Correlation between male breast cancer,[9] brain cancer,[10] and melanomas has been suggested. No study was able to compensate effectively for such confounding factors as exposure to chemical carcinogens, tobacco, etc. Moreover, many studies correlated high risk with job title—an electrician may be classified as having a high exposure, but in re-

ality, since most electricians work with the current turned off, actual exposure might be much lower. The inaccuracies introduced by such practices could bias a study either way. Such studies suggest a cancer risk from EMF which is at the lower border of statistical significance.

Other effects have been postulated. Wertheimer and Leeper[11] studied progeny of women who used electric blankets or electrically heated water beds and found a statistically significant incidence of low birth weight and slowed development. That heat might have produced such an effect was apparently not considered.

Numerous other studies are under way, but for now the possibility of somatic damage related to EMF exposure lies tantalizingly balanced upon the lowest levels of statistical significance. A great deal of reluctance to accept the possibility of health risk by the scientific and medical communities has been due to the lack of a plausible mechanism. In fact, for a long time biologic damage was thought to be due only to ionization or heating.

What is EMF?

Electricity moving in a wire is characterized by its voltage (V, a measure of energy) and its current (A, measured in amperes or amps, the number of electrons flowing). Multiplied together, voltage and current give the power (W, measured in watts). Thus, a given wattage may be maintained by increasing voltage while decreasing amperage or vice versa. This concept is important when considering transformers which may boost voltage for more efficient transmission of electricity over long distances or step it down for local consumption. In the U.S. and Canada, virtually all electricity is alternating current. Current oscillates through 360 degrees 60 times per second. The measure of a cycle per second is the hertz (Hz). North American power is 60 Hz AC.

Electricity moving in a wire will induce adjacent electrical and magnetic fields. Electrical fields are parallel to the flow of current and proportional to voltage (Figure 1A). Magnetic fields are perpendicular to the flow of current and proportional to amperage (Figure 1B). Both diminish in proportion to distance from the source. Electrical fields are strongly affected by environment and can be sharply attenuated by objects interposed between the source and the point of measurement. Magnetic fields, on the other hand, are attenuated by very little other than rather massive ferromagnetic structures. Alternating current introduces sine wave variations in the strength and direction of both electrical and magnetic fields. Interaction between AC fields from two sources can produce either accentuation or dampening of strength, depending on whether two peaks coincide (Figure 2A) or a peak and a valley (Figure 2B) occur simultaneously.

EMF may induce small fields and weak currents in other objects. Because electrical lines are sometimes grounded to underground plumbing, water and sewer pipes may act as secondary sources of EMF, as may other metallic objects. Appliances may also generate EMF. Video display terminals (VDTs), hair dryers, electric blankets, water beds, microwave ovens, and coffee makers have been shown to be the sources of strong (but generally very focal) EMFs. An appliance does not need to be running to be a source of an electrical field. If plugged in, a voltage difference exists, and nothing else is required. Magnetic fields occur only when the appliance is in operation. EMF can also interact with chemical ions, including those in the body, and herein lies the basis of the health controversy.

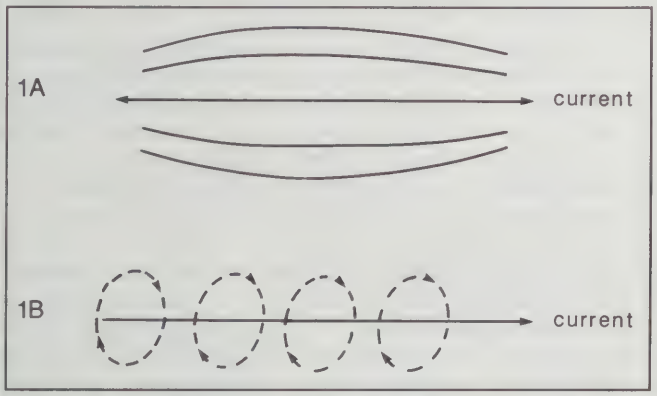

Figure 1A: Electrical field: As current flows, the field is generated parallel to the axis of flow.
Figure 1B: Magnetic field: As current flows, the field is generated radially around the axis of flow.

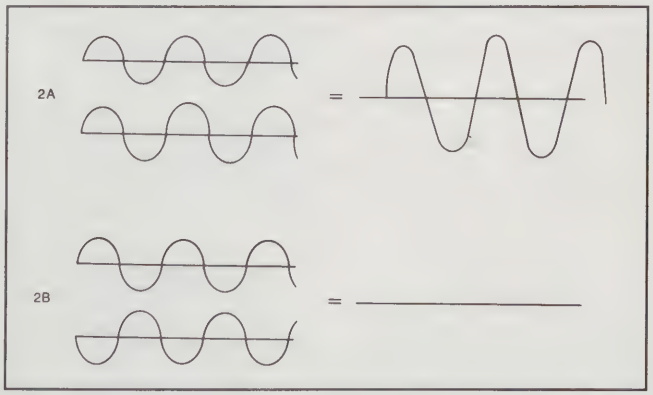

Figure 2A: Diagram of augmentation of electrical or magnetic field strengths when alternating current waves are in phase.
Figure 2B: Diagram of cancellation of electrical or magnetic field strengths when alternating current waves are completely out of phase.

1. **Volt**—unit of electrical potential or energy; a product of current times resistance. Volts = amperes x ohms

2. **Ampere**—unit of electrical current; the number of electrons flowing in a circuit. Amperes = coulombs ÷ sec

3. **Watt**—unit of electrical power; a product of potential times current. Watts = volts x amperes

4. **Gauss**—unit of magnetic field strength or intensity. The natural magnetic field of the earth is <1 gauss at the surface.

5. **Tesla**—10,000 gauss. Magnetic resonance imagers normally employ field strengths of 0.15-1.5 tesla.

Ionization can be caused by high energy electromagnetic radiation, such as x-rays, gamma rays, and ultraviolet light. Proteins and ribonucleic acids may be broken directly or by contact with ionized water species such as peroxides, hydroxyl ions, etc. EMF, having extremely low energy, is utterly incapable of ionization. Heating is a property of radar and microwaves. Low-energy EMF radiation is also incapable of imparting enough energy to heat anything. Other effects at the cellular level have come to light only recently. Although the existence of these effects is not disputed, no unified theory of how they relate to cancer induction has emerged so far. Investigational evidence is derived from whole animal experiments and cellular preparations. As with epidemiologic studies, numerous variables in experimental design, voltage, current, field strength, duration of exposure, and coexisting conditions make comparison and addition of results difficult. In the few cases where similar designs were used, results differ so that, as with epidemiology, no firm conclusions as to the magnitude of an effect can be made.

At the cellular level, three major effects have been seen repeatedly: 1) an alteration of the cell membrane which interferes with ion, especially calcium, transport into and out of the cell; 2) alterations in the transcription of information from DNA to mRNA and a subsequent change in protein synthesis; and 3) depression in the production of melatonin by the pineal gland.[12] Melatonin has been implicated in circadian rhythmicity and in suppression of tumors, possibly by limiting production of sex hormones.

A plausible, but by no means demonstrable, link to the somatic symptoms of Russian switchyard workers and the apparently increased incidence of male breast cancer among electricians, power plant workers, and linemen could exist. The intensity of EMF required to produce such effects is generally greater than is found in the environment, although some investigators have observed these changes at field strengths that are in the range of those found around utility power lines. Some researchers report changes only in cells pretreated with a mitogen, raising the possibility that EMF might act as a potentiator of cancers, not as a primary carcinogen.

EMF also produces effects in laboratory animals. Rats exposed to strong microwave fields have shown enhanced growth of mammary carcinoma induced by benzo-a-pyrene when compared to non-exposed rats.[13] This also hints at promotion vis-a-vis induction. Other work done with rats[14] shows definite suppression of melatonin in vivo when animals are exposed to fields of 0.8 gauss (roughly twice the field of the earth). Such rats experience a higher rate of spontaneous tumors, as do rats which are pinealectomized. Parenteral melatonin reverses the trend in pinealectomized rats. Experiments are under way to see if exogenous melatonin will protect rats exposed to EMF.

As with epidemiologic studies, a great deal of variability exists. Some studies strongly suggest a link with cancer, others show none at all. Equally disturbing is the apparent lack of a dose-response relationship. With virtually all other physical or chemical carcinogens, an effect becomes more pronounced with a stronger stimulus. Such is apparently not the case with EMF. A possible explanation of this phenomenon is that certain atoms are known to resonate at certain frequencies. Application of exactly the right field strength and frequency of electromagnetic radiation can cause those atoms to absorb energy and change their physical behavior. This principle is employed in MRI.

Observations from studies

Regardless of whether a biological effect exists or not, two observations are in order. First, biological effects do not necessarily translate to human effects, and any human effects which exist are rather small. Cells in a culture medium and rats in a cage are not the same as human beings in their homes, at work, or at school. The whole organism may have protective or compensatory mechanisms not present in a laboratory preparation. Furthermore, epidemiologic evidence is inconclusive. While a deleterious effect cannot be dismissed in the light of current evidence, any such effect cannot be very large.

Given the ubiquity of EMF in our environment, it is not reasonable to try to avoid it. Dr. Granger Morgan of Carnegie-Mellon University[15] offers three approaches. One, the simplest, is to ignore any concern about EMF. Such a position might be justified by citing the lack of consistency in epidemiologic data and the failure of all investigations so far to demonstrate any measurable hazard from EMF. This is the least expensive

from society's and the individual's perspective and could even be the safest from the standpoint of total society, considering that increasing the cost of energy could deny it to families in the lowest income brackets.

At the other extreme, failure to demonstrate a hazard so far does not mean that harm cannot be done. Using this approach, some might argue for greater rights of way for electrical distribution systems, more effective shielding, and the redesign of appliances to minimize stray EMF. This would certainly diminish ambient EMF, but at a potentially high cost. The price of land and cost of acquiring it would significantly elevate the financial investment in new electrical distribution systems and would have to be passed along to rate payers. Household appliances might or might not cost more, but the price tag associated with bringing public buildings such as hospitals into a lower EMF status needs to be thought through very carefully.

Morgan's third approach, "prudent avoidance," is a middle road. If it is easy and inexpensive to avoid exposure, then we should do so. For example, use an electric blanket to heat up the bed prior to retiring, but turn it off (and unplug it) upon getting into bed.

For individuals concerned about levels of EMF in their homes or on their property, many electrical utility companies will perform measurements at no charge. While these are accurate, they assess only what is present at that moment. Furthermore, no national standards for maximal EMF flux have been adopted, since the existence of a real hazard has been so hard to prove.

A balance needs to be achieved, however, since appliances and activities which generate EMFs benefit society. Alternate sources of energy and substitutes for EMF-emitting appliances may have other hazards which are equal to or even exceed that of EMF.

Utilities and appliance manufacturers are beginning to respond to concerns about EMF exposure. For example, a new electric blanket has been marketed with reduced EMF, and utility companies have looked at ways to reconfigure high-tension lines so their individual fields dampen rather than augment one another.

Theoretical, experimental, and epidemiologic evidence suggests a health hazard from EMF, but this is not conclusive and the hazard, if it exists, is apparently rather weak.

Unless stronger evidence of a hazard comes to light, the position of the Pennsylvania Medical Society should be that only prudent steps be taken to reduce the risk to those exposed to levels routinely encountered in the environment. Further research is needed to clarify whether a hazard exists to those occupationally exposed, and, if so, its magnitude and how to mitigate it. If patients are concerned, the strategy of "prudent avoidance" is a reasonable way of reducing exposure without losing benefits.

26th Annual Main Line Conference

Thursday, Friday and Saturday

April 9, 10 and 11, 1992

THE AMERICAN COLLEGE
BRYN MAWR, PA

Sponsored by
THE BRYN MAWR HOSPITAL
In affiliation with Jefferson Medical College

GUEST SPEAKERS

Donald O. Castell, MD
Professor of Medicine and Director, Division of Gastroenterology and Hepatology
Jefferson Medical College

Suzanne D. Fields, MD
Chief, Geriatric Section
St. Vincent's Hospital
New York

H. Howard Goldstein, MD
Lecturer in Medicine
Harvard Medical School

Marc C. Hockberg, MD
Professor of Medicine
Epidemiology and Preventative Medicine
University of Maryland School of Medicine

Lawrence J. Mellon, MD
Clinical Assistant Professor of Preventative Medicine (Adjunct)
Jefferson Medical College

Joel L. Schwartz, MD
Assistant Medical Director and Director of Child and Adolescent Services
Northwestern Institute

PROGRAM INCLUDES:

- Arthritis Management
- Colon Cancer
- Diabetes
- Environmental Hazards
- Gastroenterology
- Geriatric Management
- Inflammatory and Infectious Diseases
- Neurologic Problems
- Prostatic Disease
- Skin Lesions
- Surgical Office Procedures
- Syncope
- Plus 24 Concurrent Clinics

REGISTRATION FEE: $275.00
(includes 3 luncheons and 1 dinner with cocktails)

FOR INFORMATION WRITE:
Harold J. Robinson, MD
Director, Main Line Conference
The Bryn Mawr Hospital
Bryn Mawr, PA 19010

ACCREDITATION:

AMA
As an organization accredited by the Accreditation Council for Medical Education (ACCME) for its continuing medical education program, Jefferson Medical College designates this activity as meeting the criteria for 21 credit hours in Category 1 of the Physician's Recognition Award of the American Medical Association.

AAFP
This program has been reviewed and is acceptable for 21 Prescribed hours by the American Academy of Family Physicians.

"We've tried othe or exist—withou

"The business of medicine has gotten so complicated, there's no way we could have continued to manage the practice without the right kind of automation. Now, with our Keystone system, the staf can respond to all our requests — patient requests, too — in no time flat. And KMS is what you'd call user friendly... everyone's happy with it." **Charles W. Kinzer, M.D., P.A.**

The KMS practice management system enables you to streamline office operations quickly and realiz dramatic increases in efficiency. Time spent shuffling papers can be devoted to patient care — and growing your practice.

"We're using their Intelligent Payment Posting module. It's saved us 16% in staff hours at one office, 25% at another. That' part of the reason we selected Keystone: efficiency. We also chose them for their flexibility, support and long-term commitment. **Benjamin L. Levin**

Annapolis, MD

OFFICE AUTOMATION FROM KEYSTONE

systems and realize we can't grow— our computer from Keystone."

Carol Matthews, President
Lebanon Medical Management, Inc.
Lebanon, PA

"We've been with Keystone for over eight years. They've always provided us with options as we've grown and done whatever it takes to keep the system up and running. Their support is worth every penny." **Carol Matthews**

Keystone has designed a system that allows you to start with the basics (Accounts Receivable, Billing, Practice Analysis and Electronic Claims) and add on other capabilities as you need them. KMS gives you a total picture of your involvement with the patient — and provides you with all pertinent information easily and instantaneously. Among the KMS modules receiving praise from the industry and our clients are Patient Scheduling, Intelligent Payment Posting, and Credit and Collections.

"We were searching for a company sophisticated enough to support the growing demands of our company, and we found that in Keystone. The KMS Credit and Collections module allowed us to convert from a manual collections system that took forever to a computerized system that saves us 25% in manhours — without having to change our collections style one bit." **Cindy Groux**

"Their system ties all of our offices together, letting us keep track of everything that goes on — every facet of the practice — electronically. We feel secure that the business end is running expertly and efficiently. When I think how inaccurate we might have been before KMS, I know we couldn't survive now without it." **Paul J. Killian, M.D.**

Lemoyne, PA 17043

STATE'S NEW AUTO REGS DIRECTLY EFFECT PHYSICIANS

Since last fall, when controversial new auto insurance regulations became law in Pennsylvania, the state's medical providers have been dealing with the impact of these new rules. The following is an analysis of the new regulations from the State Society's Division of Governmental Affairs:

Act 6, the Pennsylvania Vehicle Financial Responsibility Law, including Automobile Insurance Medical Cost Containment regulations, became effective November 30, 1991. The auto regulation general rule states that payment for treatment of an insured resident by a licensed medical provider will be paid at the lesser of: 1) 110 percent of the applicable Medicare allowance charge, or 2) the provider's usual and customary charge. If no Medicare payment has been calculated, payment will be 80 percent of the provider's usual and customary charge.

Billing

According to the provisions, the 110 percent Medicare payment limit will be applied by insurers to provider services covered by an auto insurance policy. Within 30 days of *receipt* of the provider's bill, the insurer must inform both the provider and the insured when first-party benefits have been exhausted. At that time a provider may directly bill the insured or a secondary carrier for the remaining services. However, the provider's bill is limited to those services *not* paid under the primary policy.

In cases of multiple providers, insurers will pay bills as submitted, and if they are received at the same time, the lowest payment amount will be paid first. Medicare payment limits do not apply if the provider's bill is not covered under the insurance policy.

Coding

Part-B providers should use the HCFA Common Procedure Coding System, the HCFA 1500 form (or other current Medicare form in use), and provider diagnostic specific codes when available. *Unbundling* of charges imposed for specific care is not permitted except as consistent with the Medicare program, and changes to a provider code can only be made when the insurer has sufficient information to make the change and *after* provider consultation. Insurers must substantiate in writing their reasons for any coding change.

Peer Review

The Act includes several provisions related to peer review:

- An insurer must notify a provider in writing that their bills have been referred to a Peer Review Organization (PRO).
- PRO referral must be made within 90 days of the insurer's receipt of sufficient documentation supporting a bill.
- An insurer must pay any bill for care *not referred* to a PRO within *30* days of receiving sufficient documentation supporting a bill.
- If the insurer makes its referral after the thirtieth day, but on or before the ninetieth day, the provider's bill for care must be paid.
- PRO requests to providers for information must be in writing.
- Providers will have an opportunity to discuss their case with the reviewer and submit additional information prior to a final determination.
- The PRO initial determination must be completed within 30 days after the receipt of requested information *OR* 30 days after the request for information is postmarked.
- The PRO shall provide a written analysis (including specific reasons for its decision) to insurers, who must within five days of receipt provide copies to providers and insureds. Such notice should inform all parties that they have 30 days from the day the initial determination is effected to request reconsideration.
- An initial denial of a claim can only be effected by a licensed practitioner of like specialty or a licensed practitioner with experience providing and prescribing the care subject to the review.
- Any or all parties may request in writing a reconsideration of the initial PRO determination within 30 days from the date effected.
- A PRO may set a reasonable charge for a reconsideration but it may not exceed the charge for the initial review.
- *The insurer must make full payment to the PRO for the reconsideration*; ultimately, however, the cost is borne by the losing party.
- Reconsiderations will be conducted by a different licensed practitioner of like specialty than that which rendered the initial determination.
- A PRO must complete a reconsideration within 30 days after receipt of: the information used in the initial determination, new information in medical records, or additional evidence submitted by the requesting party.
- The insured may not be billed during the peer review process.

The following provisions relate to PRO standards, report responsibilities, and criterial for approval:

- The PRO must contract with an insurer for peer review services and may not mediate disputes for or engage in the administration of claims for insurers.
- Providers will be reimbursed the cost of copying records at the current rate HCFA reimburses its contracted PROs.
- Written notice of a determination must be mailed to the insurer within three working days of the conclusion of a PRO's review.
- PROs must submit annual reports to the insurance commissioner.
- PROs must apply in writing for the insurance commissioner's approval to contract with an insurer.
- A PRO may not be owned by a Pennsylvania licensed insurer and must certify that reviews are conducted by medical personnel licensed in this Commonwealth.
- A PRO may not charge for services on a percentage or contingency fee basis.

Provider complaints

To file a complaint, providers must first attempt to resolve it in writing with the affected insurer, who must send a response within 30 days of receipt. Only after a filed attempt at the resolution has been made may the provider submit the complaint to the Insurance Department.

For a complete copy of the auto regulations or additional information, call the Society's Division of Governmental Affairs at 1-800-228-7823.

Donald M. McCoy, director, and Frani Battista, assistant director of regulatory affairs and specialty legislation, contributed to this article.

Diverse Leaders Strive for Common Goal

Maria T. Montesano
Assistant Managing Editor

Each year PENNSYLVANIA MEDICINE interviews the Society's newly elected trustees. Over the course of the next three issues, you will meet them and learn their interests and views on practice, politics, and organized medicine.

Next month:
Look for profiles of newly elected trustees, William R. Beltz, MD, and James R. Regan, MD.

Diverse as the following leaders' stories may be, their intentions as trustees of the Society center around one goal: to maintain high quality care for patients by participating in the political process affecting medicine.

The patient advocate

Since becoming involved in organized medicine in 1963, John W. Lehman, MD, the Society's new Tenth District trustee, has been active on all levels. In the State Society, he is immediate past-chairman of the Council on Medical Economics, secretary of the Governing Council of the HMSS, and a member of: the Commission on Access to Health Care, the Indigent Care Quick Response Committee, the Keystone Peer Review Organization Board of Directors, and several other committees. He is a past-president of the Beaver County Medical Society, and he serves as an alternate delegate to the AMA.

In 1958 Dr. Lehman graduated from Temple University School of Medicine, where he also completed his residency in orthopedic surgery. He then returned to his hometown in Beaver County to start a private practice, which he manages today with two partners.

"I've always wanted to be a doctor," he says. "I don't recall any particular reason why; that was just my career choice from very early on." He enjoys his profession and has become a strong supporter of patient advocacy: "Organized medicine has a multi-faceted role: first, as a patient advocate to monitor and develop the quality of care delivered," he says. "Another major role is to be the voice and advocate of its membership."

Dr. Lehman says that the Society should assume leadership in the health care arena, especially to develop its strength and influence among other provider groups. "We should be bold enough and strong enough to become *the* consultant group for health care issues in the legislative process." He cites recent government and the insurance industry actions as major forces behind key challenges facing medicine today. Important among these challenges to physicians are the high cost of and access to health care, according to Dr. Lehman. As a trustee, he is interested in the Society "working with government and policymakers to come up with some creative solution [to the problem] in terms of being fiscally responsible...and solving some access to care issues."

But even with all the problems, Dr. Lehman says, "The health care system in this country is second to none in the world despite all the rhetoric you hear." He finds benefits to a system, such as the Oregon plan which prioritizes care, and supports changes to insurance plans: "We need to look at deductibles and co-payments as ways to cut health care costs."

No matter what direction health care takes in this country, physician participation helps make the voice of organized medicine strong. That participation and strength make solutions possible, in the short and long terms, according to Dr. Lehman. "Organized medicine—with the difficulties it may have or perhaps the inability to accomplish what many practitioners feel it should—is still the best system around. It is much better to work *through* organized medicine than to try to do things on your own."

The civic leader

Not everyone begins a career in aerospace engineering, moves on to anesthesiology, runs rescue missions in the U.S. Navy, and has worked with C. Everett Koop, MD. Joining the State Society's Board of Trustees with those credentials is Edward N. Dench Jr., MD., of the Sixth District.

Dr. Dench, an anesthesiologist at Centre Community Hospital in State College, received his B.S. in aerospace engineering from Penn State. His interest in research/

John W. Lehman, MD

Edward N. Dench Jr., MD

Richard J. Greco, MD

clinical work drew him toward his career switch, and he completed a medical degree specializing in anesthesiology at the University of Pennsylvania.

It was during his residency at Children's Hospital at Penn that Dr. Dench gave anesthesia for C. Everett Koop, MD, an experience he cites as one of the most exciting of his career. He also calls his work on rescue missions as a Naval flight surgeon "exciting," but finds the real challenge to be the "cognitive part" of his specialty. "Most people only think of the technical aspects of anesthesiology, but the real challenge," he says, "is where you are thinking and deciding what to do."

One interest that has remained constant throughout Dr. Dench's education and career is his involvement in the political process. His political career, which began when he served on the Undergraduate Student Government Senate at Penn State, includes serving in a number of local government positions and heading several political campaigns.

"I was involved in public politics long before organized medicine." In the early '80s, however, he became concerned about medicine. He realized that "unless doctors got more attuned to real politics, we were going to have a major problem," he says. "Politics were going to dictate the future of medicine, and without [physician involvement], there would not be good quality care." As an introduction to organized medicine, he served as an alternate delegate from his hospital to the AMA-HMSS.

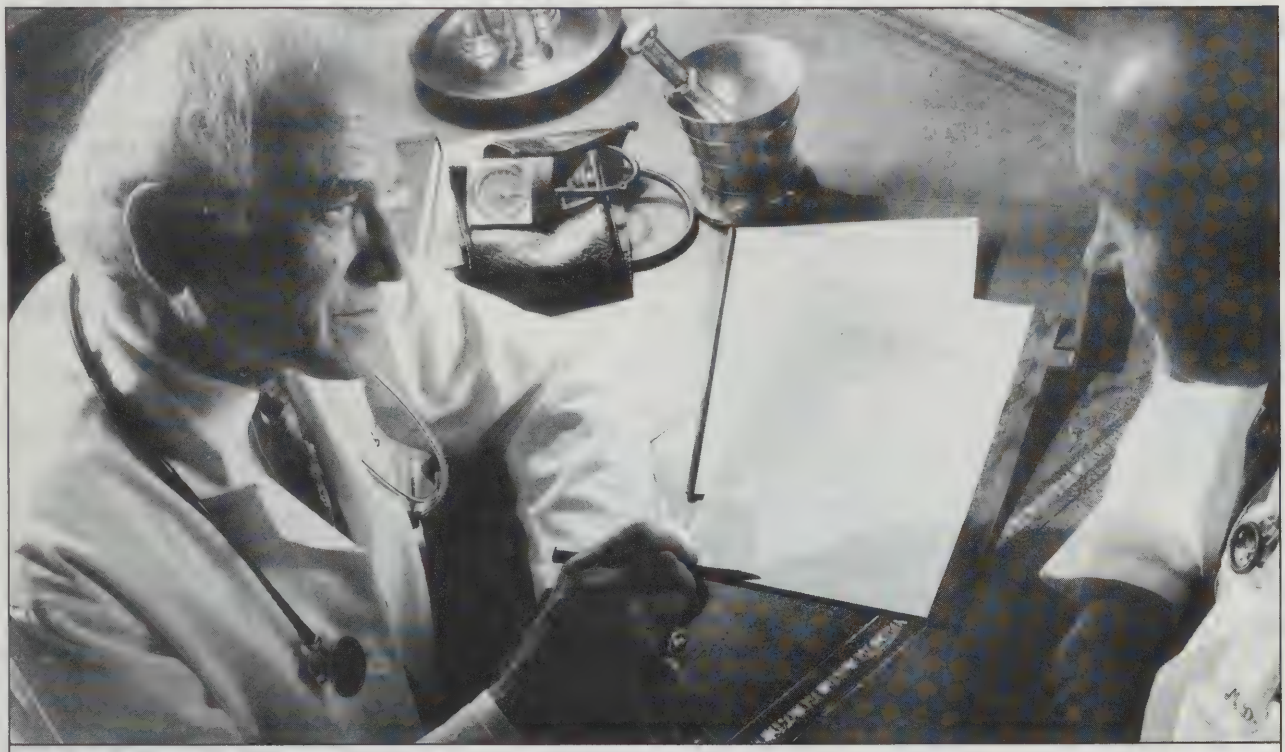
The list of positions he has held since then within organized medicine is extensive, including: immediate past president of Centre County Medical Society, at-large member of the HMSS Council of the AMA, delegate from the HMSS to the State Society's House of Delegates, and president of the Pennsylvania Society of Anesthesiologists. Dr. Dench has also been an active participant of the Pennsylvania Medical Society's Federal Key Contact program since May 1989. In fact, he cites grassroots support as a crucial element for success in political battles.

Being elected to the State Society's Board of Trustees was his next logical step: "My biggest concern is maintaining the professional ethics of our profession...as well as serving the Society as best as I can." He says, "I have never pursued a position I was not sincere about or interested in...and I am very *sincere* about this."

The teacher

Like Dr. Dench, Young Physician Trustee Richard J. Greco, MD, began his political career in school. At Thomas Jefferson University, he became involved with the American Medical Student Association (AMSA), for which he served as president of the chapter and delegate to the national AMSA convention.

As a third-year medical student, Dr. Greco helped organize the Jefferson Chapter of the AMA and served as one of the original members of the governing council for the Pennsylvania Medical Student Section. That experience gave him the opportunity to attend several regional, state, and national conventions of organized medicine, where he became "very interested in how government was trying to impact medicine."



Dr. Greco is the fifth of six children of two State Society leaders. His father, Victor F. Greco, MD, serves as a trustee from the Twelfth District, and his mother, Jean Greco, is president of the Auxiliary. He trained in plastic and reconstructive surgery at the University of Pittsburgh, where he now teaches, and received his aesthetic surgery training at Manhattan Eye and Ear. He was also the recipient of a Hand Fellowship at the Hand Center in Philadelphia.

As a surgeon, Dr. Greco is affiliated with several hospitals in the Pittsburgh area including Presbyterian Hospital, Children's Hospital, McGee Women's Hospital, the VA in Oakland, and Montefiero University Hospital. Yet, his true love is teaching. "I stayed in academic medicine because I really enjoy the thrill of teaching young minds."

Still, involvement in organized medicine remains a priority for him. He cites the government's involvement with and possible banning of breast implants as one of the triggers of his personal involvement in organized medicine: "All specialties have specialized problems ...and as a society, we help decide what is safe and what is not safe."

"Part of my joining and staying involved in the Young Physician Section [is because] it is important for all physicians, especially young physicians, to be involved in organized medicine." He adds, "The changes that occur now will change the practice of young physicians for our entire careers...and one of my goals will be to get more young physicians involved because we have the most to gain from being involved."

When talking about teaching, Dr. Greco talks of "helping to shape the pathway" of his students. Referring back to that statement, he stresses physician involvement in organized medicine to "help shape *our own* pathway."

"When you compare malpractice insurers, there is no comparison."

"What do you look for first? Rates, naturally. So that was the first item that attracted me to Physicians Insurance Company. They're stable, well run—and their rates have *decreased continuously* since 1986; while at the same time they have continued to broaden their coverage.

Additionally, the Company's performance seems to have forced other insurers to lower their rates.

Still, no one matches Physicians Insurance Company, on rates *or* support;

- they won't settle a case without your consent,
- when they fight your case, it's with confidence and intelligence, as shown by their 98% success rate at trial,
- you receive 40 hours of *free* legal representation for disciplinary proceedings, including staff privilege disputes and service on peer review committees,
- you receive legal counsel if you are called for a deposition in a medical malpractice case in which you are not named in the suit.

And Physicians Insurance Company doesn't automatically increase your rate for individual loss experience, or for corporate or partnership coverage.

I had good reasons for originally changing to Physicians Insurance Company. Those reasons are even truer today — the rates, the service, the support. It's an easy choice."

525 Plymouth Road, Suite 315
Plymouth Meeting, PA 19462

Actions of the Board of Trustees, January 8, 1992

INFORMING MEMBERS ABOUT RBRVS IS PRIORITY

The State Society's Board of Trustees approved funds to expand the Society's RBRVS communications plan, set up to inform members of the impact of the new fee schedule. In 1992 the Society will use funds for member communications, publications, and physician services, including the January regional meetings. In related business, the Board directed Society staff to gather information from specialists and all Pennsylvania physicians for recommended improvements to the RBRVS fee schedule.

STEP TO ALTER AUTO LAW APPROVED

A recommendation of the Interspecialty Section relating to Act 6, the Auto Insurance Reform Act, was approved by the Board of Trustees.

Currently, Act 6 reimburses at a higher level when acute care is provided to a patient with a life-threatening or urgent injury in facilities accredited by the Pennsylvania Trauma Systems Foundation (PTSF). The recommendation directs the Society to seek amendments to the Act that would assure equal payment of trauma services regardless of PTSF accreditation status.

WORKERS' COMP ACTION PLAN IN MOTION

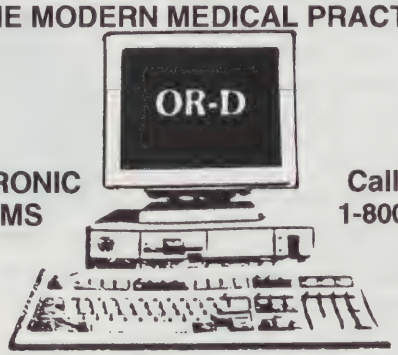
The Board approved as amended a strategic work plan presented by the Society's Workers' Compensation Quick Response Committee. The plan, already being implemented, seeks to promote the Society's alternative legislation plan by targeting audiences for specific messages. Elements include: face-to-face meetings, president's letters, publications, and informational pieces for the General Assembly.

BOARD FAVORS REDISTRICTING AND SUNSET OF ACT 89

The Board will support a by-laws change at the 1992 House of Delegates annual meeting to create a Thirteenth District of the State Society. The new district would consist of Allegheny County, and the Tenth District would change to include Beaver, Lawrence, and Westmoreland Counties. In the past two years, the House has looked at other plans for redistricting and has referred them back to the Board.

Also the Board of Trustees rejected a recommendation to support an amended version of Act 89 of 1986, the Health Care Cost Containment Act. Instead the Board voted to maintain its position that Act 89 should be sunset.

SOCIETY TO SEEK DPW TRAINING FUNDS



During meetings with the Society, the Department of Public Welfare (DPW) has said funds are needed to properly train providers' office staff about Medical Assistance (MA) billing. Though funds were included in previous DPW budgets, the state administration eliminated them during the budget process.

To try to remedy this problem, the Board approved a recommendation that the Society: 1) encourage DPW to continue requesting funds, and 2) lobby for inclusion of the funds in the Commonwealth's final budget.

SOCIETY TO INVESTIGATE GROUP MEMBERSHIP RATES

The Board of Trustees directed the Council on Membership to investigate the feasibility of the Society offering group membership rates. Considering the growing number of groups requesting such a plan, the trustees emphasized the importance of the proposal to investigate such incentives. The Society will seek AMA support.

THE COMPLETE PRACTICE MANAGEMENT SYSTEM THAT TRULY REFLECTS THE NEEDS OF THE MODERN MEDICAL PRACTICE

ELECTRONIC CLAIMS

Why buy an office automation system that doesn't offer a long-term solution?

ACCLAIM™ from Sentient is the total system solution.

A lot of medical practices are planning to invest in an office automation system. But a lot of the systems out there just don't offer the comprehensive functions and long-term expandability that your practice may need.

IBM® and compatible hardware.

The ACCLAIM system operates on IBM and compatible hardware, so you know you're getting the quality standard of the industry. And it's completely expandable, so it can grow as your practice grows.

Long-term support.

ACCLAIM is the system solution that fits your needs today. And Sentient's software engineers, customer trainers, and telephone support people are always there to make sure your system fits your needs over the years to come.

Easy to operate.

Even if your staff has no previous computer experience, ACCLAIM is simple to operate effectively and efficiently. Complete training is included in the purchase.

When you're thinking about office automation, call Sentient first, and find out what ACCLAIM can do for you.

THE NEW OCCUPATIONAL EXPOSURE RULES: CRITICAL TO PHYSICIANS

On December 6, 1991, the Occupational Safety and Health Administration (OSHA) issued final regulations on occupational exposure to bloodborne pathogens. These regulations apply to all occupational exposure to blood or other potentially infectious materials in *all* medical settings and are critical for physicians. The following summary was taken in part from a report by the State Society's Council on Education and Science.

Exposure control plan

The regulations require physicians and other employers to create an exposure control plan, which must be: 1) in written form; 2) available to all employees; 3) updated annually or as required by changes in procedures, new equipment, etc; and 4) available to OSHA upon request. Several elements are required in the plan, including an exposure determination, methods of compliance, communication of hazards to employees, and record-keeping.

Exposure determination

The exposure determination is the consideration of which jobs include potential exposure to infectious materials as part of the normal routine. The employer must list all jobs which bear potential for exposure, and the procedures and tasks which employees will perform which place them at risk for exposure to infectious materials. When developing the exposure determination, the employer should disregard the use of personal protective equipment for tasks; even if the use of equipment drastically reduces the chances of exposure, the task *must* be listed.

Methods of compliance

The OSHA regulations make universal precautions mandatory, and all employers must ensure that employees are religiously practicing them. The regulations outline how engineering and work practice controls should be used to reduce the chances of occupational transmission of infectious disease.

Various controls are used to reduce exposure. For example, equipment must be examined and maintained or replaced on a regular schedule to ensure its effectiveness in reducing exposure. Also, mandated work practice controls are used, such as proper hand washing and disposal or labeling of sharp objects, including needles; and other "common sense" procedures are listed within work practice controls.

The regulations specify how to package infectious materials including sharps in leak-proof containers properly labeled for collection, handling, processing, storage, transport, or shipping. The regulations also apply to contaminated equipment and include the use of biohazard labels.

Personal protective equipment includes gloves, gowns, laboratory coats, face shields or masks, eye protection, mouth pieces, resuscitation bags, pocket masks, etc. The equipment is considered appropriate if it prevents blood or other infectious materials from passing through to the employee's street clothing or body. Physicians and other employers should be aware that these regulations mandate the provision of the equipment at no cost to employees.

Employers must require employees to use the protective equipment unless the employee declines because, in his/her professional judgment, it would prevent the delivery of health care or public safety services, or would pose an increased hazard to worker/co-worker safety. Such cases must be carefully documented.

The employer is also responsible: 1) to assure that all personal protective equipment is in proper sizes, clean, and laundered or discarded if disposable; 2) to repair and replace any equipment which is no longer effective; and 3) to implement good housekeeping procedures.

Hepatitis B vaccinations

Employers must make hepatitis B vaccinations available at no cost to all employees who risk occupational exposure. The vaccination must be made available after the employee has received required training in preventing occupational exposure to infectious diseases and within 10 working days of initial assignment to a job which carries the risk of occupational exposure. The only exceptions are for employees who have either previously received the complete vaccination series, demonstrated through antibody testing that they are immune, or proved the vaccine is contraindicated for medical reasons.

Employees may decline the vaccination, but the employer must obtain written verification of refusal. Specific language for the refusal is included in the regulations. Employers should note that if employees who decline the vaccination later change their minds, the employer is still responsible for its provision.

Post-exposure evaluation, follow up

Methods for dealing with post-exposure evaluation and follow-up are required and become applicable when an employee reports exposure. Under such circumstances, the employer must immediately make a confidential medical evaluation and follow up available to the exposed employee.

The evaluation and follow-up must include documentation of the routes of exposure, the circumstances under which exposure occurred, and the source individual, unless prohibited by law. The source individual's blood should also be tested, after obtaining consent, to determine HBV or HIV infection. Physicians should note that Pennsylvania law allows testing of a source patient's blood for HIV infection without consent as long as procedures outlined in the law are followed. The employee's blood should then be collected and, if the employee declines to be tested for HIV or HBV, the blood must be kept for 90 days in case the employee changes his/her mind during that period.

The employer is responsible for obtaining the evaluation of a health care professional, and for maintaining and reporting vaccination and exposure information about the employee to the professional. The employer must then provide a written copy of that health care professional's opinion to the employee within 15 days of completion of the evaluation. The post-exposure evaluation and follow-up report should be limited to the fact that the employee has been informed of the results of the evaluation and any medical conditions resulting from the exposure.

Communication of hazards to employees

The regulations outline how to

communicate hazards to employees, including labeling and packaging potentially infectious materials, and providing training to all employees at risk to occupational exposure. The training must be provided at no cost to employees during work hours and repeated annually. Additional training is required when tasks or procedures are modified, or new tasks or procedures affecting the employee's potential for exposure are implemented. Specific guidelines are outlined in the regulations.

Record keeping

Employers are required to establish procedures for maintaining accurate records for each employee with occupational exposure. All pertinent information—the employee's training program, hepatitis vaccination status, copies of all results of examinations, medical testing and follow-up, the employer's copy of a health care professional's written opinions, and copies of all information provided to the health care professional who provided the opinion—must be contained within the record. The records must be kept confidential except for reporting required by law, and maintained for at least the duration of the employee's employment plus 30 years.

Effective dates

The regulations as a whole become effective March 6, 1992. Employers are required to complete their exposure control plans on or before May 5, 1992; and the requirements of information, training, and record keeping take effect on or before June 4, 1992. All other requirements take effect July 6, 1992.

Many of the regulations are common sense and include universal precautions practiced by health care professionals for years. However, the regulations are extensive and fairly specific, and the creation of documents such as the infection control plan will create additional burdens for physicians. Physicians must remember that the regulations are now final and mandatory, and not open to debate.

The Society urges physicians to review the complete regulations for more detailed information. Noncompliance could endanger employees and lead to severe penalties, ranging up to $70,000 per incident. For additional information or a copy of the complete regulations, contact the Society's Council on Education and Science at 1-800-228-7823.

"INFECTIOUS DISEASES IN EVERYDAY MEDICINE - 2ND ANNUAL SYMPOSIUM"

This symposium will update the clinician on serious infections masquerading as more trivial problems, advances in understanding of HIV infection, and the status of new diseases, epidemics, and therapies. A syllabus will be provided.

JUNE 8-12TH, 1992

LEADERSHIP CONFERENCE: SURVIVAL ON THE HIGHWIRE

Pressures on physicians to perform have traditionally been high in the medical arena. Now outside forces attempting to control the economics of the practice of medicine often leave physicians feeling like they're walking the circus highwire. As government and consumer groups "shake the wire" with increasing regulations and demands, the cost of falling into the liability insurance/litigation net continues to rise. These factors—and many more—make survival of the practice of medicine a sideshow of its own.

This year's State Society Leadership Conference, "Survival on the Highwire," will address a wide range of issues which often cause physicians to "wobble" in their economic viability and medical authority. The annual conference on April 14-15, 1992, at the Hershey Lodge and Convention Center, will feature nationally known speakers on practice parameters, managed care, medical ethics, peer review, and other topics.

Robert E. McAfee, MD, vice chairman of the AMA Board of Trustees, will take center ring with a keynote presentation on practice parameters. He will be followed by Lucian Leape, MD, a lecturer at the Harvard School of Public Health and Tufts University School of Medicine, who will speak on liability reform.

Dr. McAfee

The remainder of the first day will be devoted to a panel discussion, "Can Quality Medicine Survive in a Managed Care Environment?" moderated by health law attorney Alice Gosfield, Esq., of Philadelphia. The panel includes: Neil Schlackman, MD, medical director for U.S. Healthcare; Michael A. Hattwick, MD, a practicing physician from Annandale, Virginia; and David B. Nash, MD, director of health policy and clinical outcomes at Thomas Jefferson University Hospital and Jefferson Medical College.

First in the ring on the second day is Monsignor Andrew J. McGowen, director of community relations at Mercy Hospital in Scranton, to speak on ethical issues affecting medicine. Eleanor Clift, *Newsweek* correspondent, and Fred Barnes, *New Republic* writer, will play tug-of-war with the highwire during a political point-counterpoint discussion.

Mr. Barnes

The Leadership Conference will wrap up with a series of workshops. Nicholas P. Constantakis, partner-in-charge of Arthur Anderson Healthcare Services in Pittsburgh, will present findings of the American College of Health Care Executives' Delphi Study conducted by Arthur Anderson. Michael Sheehan, a communications consultant based in Washington, DC, will lead "Presentation Skills and Image Building"; and Donald Harrop, MD, president of the Keystone Peer Review Organization (KePRO), will lead "Coping with KePRO." Three additional workshops are slated to address the topics of practical political involvement for physicians, stress management, and leadership for women physicians. The latter is sponsored by the Institute for Physician Leadership.

Mr. Constantakis

For additional information about the Leadership Conference, contact the State Society at 1-800-228-7823.

AMA DELEGATES TACKLE "HOT" ISSUES

Physicians across the U.S. are fighting battles similar to those faced by Pennsylvania physicians. This was readily apparent at the December 1991 interim meeting of the AMA House of Delegates, where Medicare payment reform (implemented on January 1, 1992), AIDS testing issues, and several other familiar "hot" topics were discussed.

Medicare payment reform

Hours of debate at the interim meeting reflected the anger many physicians feel about the new Medicare reform. Yet, delegates opposed several suggestions during the meeting designed to halt the new Medicare payment system. Instead, they agreed not to endorse the new system until substantial improvements are made. Adopted recommendations for the AMA are detailed in "Understanding the New Medicare Fee Schedule" (see page 10).

AIDS testing issues

Newspapers across the state and the country reported that AMA delegates debated several measures relating to HIV infection and AIDS. One measure called for abandonment of the idea of developing an "AIDS Risk List"—a list of procedures health care workers should not perform if they are infected with HIV. Instead, the House adopted an AMA Board of Trustees report calling for voluntary testing for physicians who perform certain exposure-prone procedures and for supervision of physicians who are infected with HIV.

The AMA adopted measures for universal precautions, insurance options, confidentiality for patients, education of patients, and further research on reducing transmission risks, and reaffirmed its opposition to mandatory testing and reporting of physicians. The House also approved a measure which states that physicians should be able to perform HIV testing without consent on patients suspected of being infected.

Self-referral guidelines

Prompted by concerns over potential conflicts of interest, the AMA says physicians should not refer patients to facilities in which they have large investments. An adopted report outlines exceptions related to quality care issues.

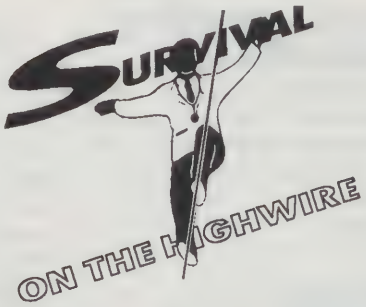
Resident work hours

The Governing Council of the AMA Resident Physicians Section agreed to a compromise regarding resident work hours. The compromise, developed by section leaders and representatives of the Residency Review Committee for Surgery, leaves the work hour decision in the hands of surgeons. However, according to AMA sources, the report states that "it is 'desirable' for surgery training programs to allow overnight call no more than once every third night and to permit one day off duty each week." The compromise may conclude the five-year debate on the issue.

Health Access America
Increased political and public interest in national health care reform has prompted the AMA to refine and strengthen its health reform plan, first released in March 1990. The plan, Health Access America, calls for comprehensive reform on several levels, including in the workplace and within the Medicaid system. The plan was endorsed with only minor revisions.

National Practitioner Data Bank
Continued frustration and confusion among physicians were obvious this year as the delegates voted to seek abolishment of the data bank, in operation for less than two years. Physicians are concerned about inadequate confidentiality safeguards of information in the bank. According to AMA trustees, the action will not halt efforts to modify the bank's operation, but if modification does not work, the AMA will then seek abolishment of the bank.

YPS action
The AMA Young Physicians Section (YPS) debated HIV testing, sexual harassment, interpersonal violence education, and abortion. Highlighting the debate, however, was Medicare payment limits on physicians in the first four years of practice (see "New Physician Reductions Under Medicare" on page 13). The YPS was instrumental in engaging AMA support to repeal the limits.



Pennsylvania resolutions
Seven of the nine resolutions submitted to the AMA House of Delegates by the Pennsylvania delegation were adopted during this year's interim meeting. These resolutions direct the AMA to:

- Respond to the report, "Manipulation of Procedure Codes by Physicians to Maximize Medicare and Medicaid Reimbursements," recently released by the Office of the Inspector General of the Department of Health and Human Services;
- Study several specific aspects of the new Medicare payment system related to the RBRVS conversion factor and fully licensed versus limited licensed practitioners (see "RBRVS Covers Limited Licensed Practitioners" on page 16);
- Continue to monitor the study of small area analysis; and
- Urge HFCA to publish in the *Federal Register* for review and comment any significant proposed changes in the peer review organization (PRO) process or procedures which would affect physician practice patterns and/or the delivery of medical care.

Other resolutions addressed federal restrictions for long-term care, smoking cessation, federal regulation of antipsychotic drug use in nursing homes, and AMA representation.

Pennsylvania officers
Officers of the State Society's AMA Delegation elected at the interim meeting are: Howard A. Richter, MD, Wynnewood, chairman; Donald H. Smith, MD, Easton, vice chairman; Michael J. Prendergast, MD, York, secretary; Victor F. Greco, MD, Drums, delegate-at-large; and Joseph A.C. Girone, MD, Sellersville, alternate delegate-at-large.

Quality, cost, access — a delicate balance.

Don't miss this forum on today's health care issues!

1992 Leadership Conference

of the
The Pennsylvania Medical Society

April 14-15

Hershey Lodge and Convention Center, Hershey

Featuring:

- "Can Quality Medicine Survive in a Managed Care Environment?" with panelists Alice Gosfield, Esq.; Neil Schlackman, MD, Medical Director, U.S. Healthcare; Michael A. Hattwick, MD; David B. Nash, MD, Jefferson Medical College;
- "Health Care: Election '92" with *Newsweek*'s Eleanor Clift and *The New Republic*'s Fred Barnes;
- "Practical Political Involvement for Physicians";
- A workshop for the future leaders of medicine;
- "Coping with KePRO," with Donald Harrop, MD, President, Keystone Peer Review Organization;
- "Practice Parameters," with Robert E. McAfee, MD, Vice Chairman of the AMA Board of Trustees;
- "Liability Reform," with Lucian Leape, MD, Harvard;
- *Pittsburgh Press* political cartoonist Rob Rogers.

The Pennsylvania Medical Society is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians.

Watch for registration information in the next issue of Executive Report.

Call (717) 558-7750 for more information.

The Pennsylvania Medical Society designates this continuing medical education activity for 7 1/2 credit hours in Category 1 of the Physicians Recognition Award of the American Medical Association and the Pennsylvania Medical Society membership requirement.

BURKHOLDER INAUGURATED 127TH ACMS PRESIDENT

John A. Burkholder, MD, was inaugurated as the 127th president of the Allegheny County Medical Society (ACMS) at the annual installation of officers on January 17, 1992. He succeeds Stanley M. Marks, MD.

Dr. Burkholder, a thoracic surgeon, practices at Allegheny General Hospital and is affiliated with the Health Center Hospitals of the University of Pittsburgh and St. Francis General Hospital. He also serves as associate professor of surgery at the Medical College of Pennsylvania and is a clinical assistant professor of surgery at the University of Pittsburgh.

Dr. Burkholder

He joined ACMS in 1971 and has held several leadership positions since 1972, when he was named to the Environmental Problems Committee. Since that time, he has also been active in the State Society, the AMA, and several specialty societies.

Dr. Burkholder received his medical degree from Johns Hopkins University and completed his surgical and cardiac surgery residencies at the Health Center Hospitals of the University of Pittsburgh.

Other ACMS officers installed are: George J. Gerneth, MD, an ophthalmologist affiliated with Eye & Ear, Braddock, and St. Francis Hospital, as president-elect; Lee H. McCormick, MD, a family practice specialist affiliated with Jefferson Hospital and Braddock Medical Center, as vice president; and Nancy S. Nieland, MD, a dermatologist and clinical assistant professor of medicine at the University of Pittsburgh School of Medicine, as secretary. John S. Oehrle, MD, a pathologist and hemotologist at Allegheny Valley Hospital, will serve a fourth term as ACMS treasurer.

Dr. McCormick

Each year, as part of the inauguration dinner, ACMS honors county leaders for outstanding contributions to organized medicine and the community. Morry Shapiro, MD, a specialist in internal, pulmonary, and occupational medicine at Braddock General Hospital, was honored with the Nathaniel Bedford Award for his lifelong dedication to patient care. Ralph Gaudio, MD, specialist in internal medicine and pulmonary disease, received the Frederick M. Jacob Physician's Merit Award for his outstanding contribution to ACMS.

Two Benjamin Rush Awards were also presented. Ursuline Center, Inc. (UCI), a non-denominational, non-profit human service agency, received the Organization Award for its Senior Adult Services Program. Margaret (Nina) Ciccozzi, a member of the oncology health care team at Sewickley Valley Hospital, received the Individual Award for her devotion to and compassion for patients.

SOCIETY RELEASES POLL FINDINGS

The State Society has released the findings of the 1991 Membership/Leadership Poll conducted by The Educational and Scientific Trust in August 1991. The poll, last taken in 1989, sought to discover how members and leaders view specific medical and public health issues. Physicians' opinions were then compared with Gallup Poll public opinion of specific health care issues. The following is an overview of issues addressed.

Health Issues

Regulations, government control, and third-party reimbursement are the main problems facing health care and medicine in Pennsylvania today, according to physician responses in the final report. That differs from public opinion, in which one-third of Pennsylvanians feel the high cost of health care, including medical care and the cost of insurance, is the dominant problem.

Practice issues

Survey recipients were asked to rank, from a given list, the three most important issues affecting the practice of medicine in Pennsylvania that the State Society should address. Approximately 75 percent of members agreed that outside regulation of the practice of medicine was number one, followed by Medicare reimbursement issues and medical malpractice litigation. Public opinion indicated a concern for access and indigent care issues.

Public health/affairs issues

Respondents were asked to rank, from a given list, the top three public health and affairs issues the Society should address. A majority (78.6 percent) of respondents ranked health care costs as one of the top three issues. Access to health care, substance abuse, and HIV testing also received majority votes.

The membership poll included two questions about AIDS testing issues. First, when asked if there should be mandatory *patient* testing for HIV, 38.8 percent of physicians said "yes," 21.9 percent said "no," and 37.9 percent said "only in certain circumstances." Second, when asked what type of HIV testing there should be *for physicians*, approximately 30 percent of the membership replied, "Only for physicians performing invasive procedures"; and an equal percent responded, "Only for physicians in high-risk groups." Twenty percent replied that physicians should receive mandatory testing on a regular basis.

An additional public health issue Gallup Poll respondents were asked about by the Society was the role physicians play in fighting substance abuse. Fifty-four percent perceived physicians as either "leading the fight" or "visibly involved in the fight" against substance abuse. Look for additional information about the Society's Membership/Leadership Poll in future issues of PENNSYLVANIA MEDICINE.

ORTHOPEDIC SOCIETY MEETING SCHEDULED

The Pennsylvania Orthopedic Society will hold its spring meeting, April 30-May 2, 1992, at the Registry Resort in Naples, Florida. The program, "The Knee: Pediatrics to the Senior Citizen," will feature the following guest speakers: Jay S. Cox, MD; Kenneth A. Krackow, MD; Lyle J. Micheli, MD; Richard D. Parker, MD; and Kelly Vince, MD. For additional information, contact the Pennsylvania Orthopedic Society at P.O. Box 8820, Harrisburg, PA 17105-8820, 1-800-228-7823.

AARP SURVEY RESULTS STRESS COOPERATION

Extended cooperation and better communication are needed between aging, social service, and medical communities. According to a survey released in December 1991 by the American Association of Retired Persons (AARP), when those two goals are achieved, the communities will be able to provide more complete information to consumers and each other about the options and issues of long-term care.

AARP conducted the two-year research initiative to learn more about information needs relevant to long-term care and how best to respond to those needs. The consumer survey found "that many consumers in search of long-term care information don't know where to find information and know relatively little about the resources that might be available to them."

Physicians and long-term care facilities were found to be the most common sources of long-term care information for consumers.

EICHELBERGER TO KEYNOTE ATS CONFERENCE

Martin Eichelberger, MD, director of trauma at Children's National Medical Center and president of the "Safe Kids" Coalition, is slated to speak at the sixth annual conference of the American Trauma Society (ATS), Pennsylvania Division. The conference is scheduled for April 9-10, 1992, at the Hershey Lodge and Convention Center in Hershey.

Session topics will include: societal violence, insurance reimbursement in trauma, dealing with death, families and organ donation, management of the head-injured patient, the ethics of trauma care, violence in the emergency department, and the many faces of pediatric trauma. For more information about the conference and fees, call the ATS Pennsylvania Division at (717) 766-1616.

CORRECTION

The State Society's Task Force on Aging regrets the omission of the following Geriatric Assessment Centers inadvertently omitted from the *Physicians Resource Guide: Caring for the Elderly*, which was included as an insert in the November 1991 issue of PENNSYLVANIA MEDICINE.

York Hospital Geriatric Assessment Center

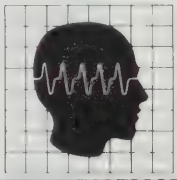
HEADACHE
IN THE DECADE OF THE BRAIN

SATURDAY, MARCH 28, 1992, 8:15 A.M. TO 3:15 P.M.

*The Seventh Headache Symposium presented by The Comprehensive Headache Center at The Germantown Hospital and Medical Center and *Temple University School of Medicine*

On July 25, 1989 President George Bush signed into law H.J. Res. 174 declaring the 1990's "The Decade of The Brain." Its passage signals a new age of research surrounding disorders of the brain. Please join us and our panel of international experts to explore some of the topics that will shape the decade.



Our faculty will include:

Neil Raskin, M.D.
University of California, San Francisco

Michel Ferrari, M.D.
University Hospital, Leiden, Netherlands

Steven B. Graff-Radford, D.D.S.
Cedars - Sinai Medical Ctr., Los Angeles, CA

Stephen D. Silberstein, M.D.
The Germantown Hospital & Medical Center

COMPREHENSIVE HEADACHE CENTER

Call **(215) 951-8926** to register before March 7, 1992 or write: The Germantown Hospital and Medical Center - Comprehensive Headache Center, One Penn Boulevard, Philadelphia, PA 19144. A $25 registration fee is required (payable to The Germantown Hospital and Medical Center). Lunch and handout materials are included.

** Temple University School of Medicine is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor Continuing Education for physicians.*

Temple University School of Medicine designates this CME activity for 6 credit hours in Category 1 of the Physicians' Recognition Award of the A.M.A.

Symposium funding provided by GLAXO, Inc.

The Germantown Hospital and Medical Center
One Penn Boulevard • Philadelphia, PA 19144 • (215) 951-8926

When Your Patient Declares Bankruptcy

With tough economic times continuing, more of your patients may file for bankruptcy; and if the bankrupt patient has an outstanding bill, your practice will be directly affected.

Bankruptcy means that: 1) creditors must cease collection action, and 2) most debts are "discharged" (considered paid-in-full after the proceeding). Debtors pay a price for this protection. Typically assets must be used to pay creditors, and certainly financial records are tarnished. Nevertheless, bankruptcy has lost much of its stigma. It is inexpensive and simple to file, and today lawyers specialize in consumer bankruptcy. Also, the law prohibits hiring discrimination based on a past bankruptcy.

While there are several types of bankruptcy, patients will usually be protected under either "Chapter 7" or "Chapter 13." Here's how to handle those debtor-patients.

1. *Verify the bankruptcy:* As part of the filing of a petition of bankruptcy, the debtor must identify all creditors. Within a few days, the court mails notice of the bankruptcy to the creditors. There is no reason for the debtor to omit creditors, since only listed debts are discharged.

But don't take the patient's word for a filing. If a court notice hasn't been received, verify the filing. Ask for the name, address, and phone number of the patient's attorney, and call to make sure copies of all court papers will be received. The patient's attorney may be contacted periodically, but since these are low-fee cases, physicians are unlikely to receive much information.

2. *Stop collection action:* There are penalties for pursuing collection action after notice of bankruptcy. Mark the file so that collection stops—including phone calls, letters, or use of an agency. If the account is with an agency, notify them to stop processing it and return the file.

3. *File a claim:* Consult the practice's attorney to assure that everything necessary is completed to protect right to payment. A Proof of Claim may need to be filed with the court, supplying the amount of and basis for the patient's debt (i.e., the bill). In most districts, the court clerk will mail the form directly to the physician.

There is not much else for the practice to do during the bankruptcy proceeding. A meeting of creditors is held, but usually physicians need not attend, unless there is an objection to the bankruptcy. In a Chapter 13 filing, creditors must vote on a repayment plan. Typically there is nothing to object to, from the viewpoint of "small" creditors. Consult the practice's lawyer, however, if anything appears out-of-the-ordinary.

4. *Don't expect much:* Usually, an "unsecured creditor," such as a physician, can expect to be paid no more than pennies for each dollar.

In Chapter 7, the more common consumer filing, payment of 8 to 10 cents per dollar owed is typical. Chapter 7 requires liquidation of most of the debtor's assets. The debtor keeps post-filing income as a fresh start. Chapter 7 debtors typically have insignificant assets and little income. To minimize payments to creditors, consumer bankruptcy lawyers often advise Chapter 7 debtors to spend all cash and other liquid assets prior to filing.

In a Chapter 13 bankruptcy, the debtor can keep any assets, but must use "disposable income" to pay debts in installments. Unsecured creditors usually receive more dollars under Chapter 13, but the value is reduced by the long wait for repayment—from three years minimum to five years maximum (as opposed to six months in Chapter 7).

In both Chapters 7 and 13, amounts owed to secured creditors (e.g., mortgage holders) and for taxes and administrative expenses (e.g., lawyers' fees), are deducted first, dollar-for-dollar, from available monies. Any remaining funds are then divvied up among unsecured creditors in proportion to the amounts owed to them. In either case, the payment from the bankruptcy—discharging the debt—is probably all the practice will get.

Be aware of two other technical points: first, if the patient paid a bill within 90 days of filing, the creditor may have to return the payment to the patient's trustee for redistribution among creditors. If a debtor's representative demands repayment of this "preference," consult an attorney.

Second, if the patient has an insurance-covered bill owing at the time of filing, the physician may be able to collect in full from the carrier, depending on the circumstances and coverage. Speak with the insurer, and consult an attorney if questions arise.

5. *Consider the future:* Bankruptcy only applies to existing debts. What if the patient asks for services in the future? Bankruptcy law doesn't prohibit requiring more security for payment, demanding payment at time of service, or refusing to deal with the patient. A physician should consult the practice attorney for assurance that such refusal doesn't constitute patient abandonment. Also, insurers' rules may require a physician to continue the relationship. Always consider the cause of bankruptcy. If the patient's problem is temporary (perhaps disability or a job layoff), a physician may want to create a very flexible payment plan or make other accommodations.

These fairly simple steps—verifying the filing, stopping collection action, and filing a claim—afford the best protection possible for a practice's interests in a patient's bankruptcy. In the long run, of course, the patient's goodwill toward the practice may be more valuable than the amount of the debt.

The contributing authors, Susan Gorn, JD, and Judith A. Mackarey, JD, are attorneys and consultants with The Health Care Group, a medical practice management consulting firm based in Plymouth Meeting.

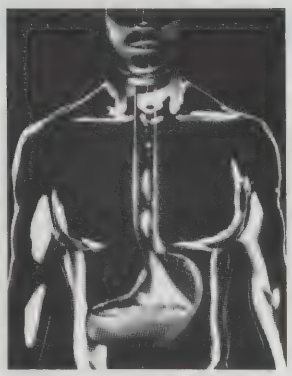
ONLY ONE H_2-ANTAGONIST HEALS REFLUX ESOPHAGITIS AT DUODENAL ULCER DOSAGE. ONLY ONE.



Of all the H_2-receptor antagonists, only Axid heals and relieves reflux esophagitis at its standard duodenal ulcer dosage. Axid, **150** mg b.i.d., relieves heartburn in **86%** of patients after one day and **93%** after one week.[1]

AXID®
nizatidine
150 mg b.i.d.

ACID TESTED. PATIENT PROVEN.

1. Data on file, Lilly Research Laboratories. *See accompanying page for prescribing information.* ©1991, ELI LILLY AND COMPANY NZ-2947-B-249304

AXID®
nizatidine capsules

Brief Summary. Consult the package insert for complete prescribing information.

Indications and Usage: 1. *Active duodenal ulcer*—for up to 8 weeks of treatment at a dosage of 300 mg h.s. or 150 mg b.i.d. Most patients heal within 4 weeks.

2. *Maintenance therapy*—for healed duodenal ulcer patients at a dosage of 150 mg h.s. at bedtime. The consequences of therapy with Axid for longer than 1 year are not known.

3. *Gastroesophageal reflux disease (GERD)*—for up to 12 weeks of treatment of endoscopically diagnosed esophagitis, including erosive and ulcerative esophagitis, and associated heartburn at a dosage of 150 mg b.i.d.

Contraindication: Known hypersensitivity to the drug. Because cross sensitivity in this class of compounds has been observed, H_2-receptor antagonists, including Axid, should not be administered to patients with a history of hypersensitivity to other H_2-receptor antagonists.

Precautions: *General*—1. Symptomatic response to nizatidine therapy does not preclude the presence of gastric malignancy.

2. Dosage should be reduced in patients with moderate to severe renal insufficiency.

3. In patients with normal renal function and uncomplicated hepatic dysfunction, the disposition of nizatidine is similar to that in normal subjects.

Laboratory Tests—False-positive tests for urobilinogen with Multistix® may occur during therapy.

Drug Interactions—No interactions have been observed with theophylline, chlordiazepoxide, lorazepam, lidocaine, phenytoin, and warfarin. Axid does not inhibit the cytochrome P-450 enzyme system; therefore, drug interactions mediated by inhibition of hepatic metabolism are not expected to occur. In patients given very high doses (3,900 mg) of aspirin daily, increased serum salicylate levels were seen when nizatidine, 150 mg b.i.d., was administered concurrently.

Carcinogenesis, Mutagenesis, Impairment of Fertility—A 2-year oral carcinogenicity study in rats with doses as high as 500 mg/kg/day (about 80 times the recommended daily therapeutic dose) showed no evidence of a carcinogenic effect. There was a dose-related increase in the density of enterochromaffin-like (ECL) cells in the gastric oxyntic mucosa. In a 2-year study in mice, there was no evidence of a carcinogenic effect in male mice, although hyperplastic nodules of the liver were increased in the high-dose males as compared with placebo. Female mice given the high dose of Axid (2,000 mg/kg/day, about 330 times the human dose) showed marginally statistically significant increases in hepatic carcinoma and hepatic nodular hyperplasia with no numerical increase seen in any of the other dose groups.The rate of hepatic carcinoma in the high-dose animals was within the historical control limits seen for the strain of mice used. The female mice were given a dose larger than the maximum tolerated dose, as indicated by excessive (30%) weight decrement as compared with concurrent controls and evidence of mild liver injury (transaminase elevations). The occurrence of a marginal finding at high dose only in animals given an excessive and somewhat hepatotoxic dose, with no evidence of a carcinogenic effect in rats, male mice, and female mice (given up to 360 mg/kg/day, about 60 times the human dose), and a negative mutagenicity battery are not considered evidence of a carcinogenic potential for Axid.

Axid was not mutagenic in a battery of tests performed to evaluate its potential genetic toxicity, including bacterial mutation tests, unscheduled DNA synthesis, sister chromatid exchange, mouse lymphoma assay, chromosome aberration tests, and a micronucleus test.

In a 2-generation, perinatal and postnatal fertility study in rats, doses of nizatidine up to 650 mg/kg/day produced no adverse effects on the reproductive performance of parental animals or their progeny.

Pregnancy—Teratogenic Effects—Pregnancy Category C—Oral reproduction studies in rats at doses up to 300 times the human dose and in Dutch Belted rabbits at doses up to 55 times the human dose revealed no evidence of impaired fertility or teratogenic effect; but, at a dose equivalent to 300 times the human dose, treated rabbits had abortions, decreased number of live fetuses, and depressed fetal weights. On intravenous administration to pregnant New Zealand White rabbits, nizatidine at 20 mg/kg produced cardiac enlargement, coarctation of the aortic arch, and cutaneous edema in 1 fetus, and at 50 mg/kg, it produced ventricular anomaly, distended abdomen, spina bifida, hydrocephaly, and enlarged heart in 1 fetus. There are, however, no adequate and well-controlled studies in pregnant women. It is also not known whether nizatidine can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity. Nizatidine should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus.

Nursing Mothers—Studies in lactating women have shown that 0.1% of an oral dose is secreted in human milk in proportion to plasma concentrations. Because of growth depression in pups reared by treated lactating rats, a decision should be made whether to discontinue nursing or the drug, taking into account the importance of the drug to the mother.

Pediatric Use—Safety and effectiveness in children have not been established.

Use in Elderly Patients—Healing rates in elderly patients were similar to those in younger age groups as were the rates of adverse events and laboratory test abnormalities. Age alone may not be an important factor in the disposition of nizatidine. Elderly patients may have reduced renal function.

Adverse Reactions: Worldwide, controlled clinical trials included over 6,000 patients given nizatidine in studies of varying durations. Placebo-controlled trials in the United States and Canada included over 2,600 patients given nizatidine and over 1,700 given placebo. Among the adverse events in these placebo-controlled trials, only anemia (0.2% vs 0%) and urticaria (0.5% vs 0.1%) were significantly more common in the nizatidine group. Of the adverse events that occurred at a frequency of 1% or more, there was no statistically significant difference between Axid and placebo in the incidence of any of these events (see package insert for complete information).

A variety of less common events were also reported; it was not possible to determine whether these were caused by nizatidine.

Hepatic—Hepatocellular injury (elevated liver enzyme tests or alkaline phosphatase) possibly or probably related to nizatidine occurred in some patients. In some cases, there was marked elevation (>500 IU/L) in SGOT or SGPT and, in a single instance, SGPT was >2,000 IU/L. The incidence of elevated liver enzymes overall and elevations of up to 3 times the upper limit of normal, however, did not significantly differ from that in placebo patients. All abnormalities were reversible after discontinuation of Axid. Since market introduction, hepatitis and jaundice have been reported. Rare cases of cholestatic or mixed hepatocellular and cholestatic injury with jaundice have been reported with reversal of the abnormalities after discontinuation of Axid.

Cardiovascular—In clinical pharmacology studies, short episodes of asymptomatic ventricular tachycardia occurred in 2 individuals administered Axid and in 3 untreated subjects.

CNS—Rare cases of reversible mental confusion have been reported.

Endocrine—Clinical pharmacology studies and controlled clinical trials showed no evidence of anti-androgenic activity due to nizatidine. Impotence and decreased libido were reported with similar frequency by patients on nizatidine and those on placebo. Gynecomastia has been reported rarely.

Hematologic—Anemia was reported significantly more frequently in nizatidine than in placebo-treated patients. Fatal thrombocytopenia was reported in a patient treated with nizatidine and another H_2-receptor antagonist. This patient had previously experienced thrombocytopenia while taking other drugs. Rare cases of thrombocytopenic purpura have been reported.

Integumental—Urticaria was reported significantly more frequently in nizatidine- than in placebo-treated patients. Rash and exfoliative dermatitis were also reported.

Hypersensitivity—As with other H_2-receptor antagonists, rare cases of anaphylaxis following nizatidine administration have been reported. Rare episodes of hypersensitivity reactions (eg, bronchospasm, laryngeal edema, rash, and eosinophilia) have been reported.

Other—Hyperuricemia unassociated with gout or nephrolithiasis was reported. Eosinophilia, fever, and nausea related to nizatidine have been reported.

Overdosage: Overdoses of Axid have been reported rarely. If overdosage occurs, activated charcoal, emesis, or lavage should be considered along with clinical monitoring and supportive therapy. The ability of hemodialysis to remove nizatidine from the body has not been conclusively demonstrated; however, due to its large volume of distribution, nizatidine is not expected to be efficiently removed from the body by this method.

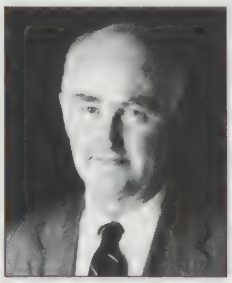
US THEM



WHEN YOU NEED TIME ON YOUR SIDE, THE CHOICE IS CLEAR.

NO CLINICAL CLUTTER– PGM ARTICLES ARE CLEAR, CONCISE, WELL ILLUSTRATED, AND PRACTICAL.

Postgraduate Medicine

Gordon K. MacLeod, MD, immediate past-president of the State Society, has been appointed to serve on a subcommitee of the Board of Scientific Counselors of the National Cancer Institute.

Dr. MacLeod

John L. Melvin, MD, a noted specialist in physical medicine and rehabilitation (PM&R), has been named vice president for medical affairs of MossRehab, Inc., parent corporation of Moss Rehabilitation Hospital. Dr. Melvin has also been named chairman of the Department of Rehabilitation Medicine at Albert Einstein Medical Center and professor/deputy chairman of the Department of PM&R at Temple University School of Medicine.

Dr. Melvin

Jouni Uitto, MD, PhD, chairman and professor of dermatology at Thomas Jefferson University, served as senior author of a genetics study which identified the gene that binds skin. The results were published in several national medical journals in Fall 1991.

Perry Black, MD, chief of neurosurgery at Hahnemann University, was elected president of the Pennsylvania Neurosurgical Society.

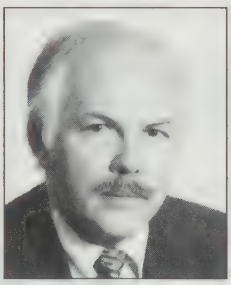
Abraham J. Twerski, MD, founder and medical director of Gateway Rehabilitation Center, will receive in March the 1992 Joseph F. Mulach Jr. Award from the Vocational and Rehabilitation Center in Pittsburgh. The award is given annually to a person who has significantly improved the quality of life for people with disabilities.

Jerome M. Cotler, MD, was named the first Dr. Everett J. and Marian Gordon Professor of Orthopedic Surgery at Jefferson Medical College of Thomas Jefferson University.

Marguerite Bonaventura, MD, Pittsburgh, received a three-year appointment as cancer liaison physician for the Cancer Program at Western Pennsylvania Hospital.

Edwin C. Fischl, MD, general surgeon, was elected vice president of the Medical Bureau of Pittsburgh for 1992. **Peter J. Wargo, MD,** OB/GYN, was elected secretary.

James M. Herman, MD, was appointed chairman of the Department of Family and Community Medicine at Penn State's College of Medicine at The Milton S. Hershey Medical Center.



Roy L. Titchworth, MD, specialist in internal medicine and cardiopulmonary disease, was elected chairman of the Allegheny County Board of Health.

Jack A. Gomberg, MD, was appointed director of specialized adolescent services at Friends Hospital.

Yahya Fadl, MD, internal medicine and oncology specialist at Frick Medical Center, was elected to the board of directors of Fairmont Affiliates, Inc.

William H. Fee Jr., MD, internist and pulmonologist at Franklin Regional Medical Center, was named medical advisor to the board of directors of the American Heart Association.

John W. Hoyt, MD, head of critical care medicine at St. Francis Medical Center in Pittsburgh, has been selected for inclusion in an upcoming publication, *The Best Doctors in America*.

Dr. Hoyt

Mark R. Publicker, MD, a family practitioner in Pittsburgh, was appointed chairman of the United Way Task Force on Medication Management for the Elderly.

Gregory J. Salko, MD, was named president of the medical staff at Carbondale General Hospital.

Joyce Frye, DO, FACOG, was appointed chair of the Gynecology Department at Presbyterian Medical Center.

James B. Stephenson, MD, was appointed director of the Trauma Program at Brandywine Hospital.

Clara Jean Ersoz, MD, vice president of medical affairs at St. Clair Hospital, has co-authored a book entitled, *The Health Care Manager's Guide to Continuous Quality Improvement*.

Francis D. Beyer, MD, pathologist at Frick Medical Center, was elected to the board of directors of Frick Diversified Services Corporation.

Juan E. Grunwald, MD, was appointed to serve as a member of the National Institutes of Health's Visual Sciences C Study Section, Division of Research Grants, until June 1995. Dr. Grunwald is an associate professor of ophthalmology at the University of Pennsylvania and an ophthalmologist and research scientist at Penn's Scheie Eye Institute.

Dr. Grunwald

Macy I. Levine, MD, Pittsburgh allergist, spoke on the subject, "Insect Sting Allergy," before the Society of Basic and Clinical Allergy in Tokyo, Japan.

Jeffrey Malumed, MD, orthopedic surgeon at Taylor Hospital, will be the sole physician to accompany the men's U.S. ski team to Europe for two World Cup competitions.

R. Barrett Noone, MD, was named director of the Department of Surgery at Bryn Mawr Hospital.

Joel Safier, MD, will serve as president of the Pittsburgh Pediatric Society for the 1991-93 term. **Paul F. Dubner, MD,** will serve as program chairman.

Benjamin Krevsky, MD, will serve as principal investigator for a study at Temple University Hospital to research and determine the optimal therapy for esophageal cancer. Temple received a three-year, $478,000 grant from the National Cancer Institute of the National Institutes of Health in Washington, DC, to fund the project.

Unpaid Receivables Can Make You Sick.

This Will Make You Feel Better.

The longer you wait to collect, the less your receivables are worth. I.C. System handles more health care debts than any other collection agency in the country and offers:

- Competitive rates and local representation
- Expert collection practices sensitive to health care issues
- Endorsements from over 1,100 business and professional associations and societies

When it comes to unpaid receivables, I.C. System makes speedy recoveries. Call us today.

- Endorsed by the Allegheny County Medical Society for over 20 years
- Now available to all Pennsylvania physicians

No collateral credit line. Up to $50,000. No placement fees, annual fees, or prepayment penalties. Competitive rates - rapid processing. Call 800-331-4951 Ext. 511.

Internal Medicine practice available. One hour east of Pittsburgh in university town with a 200-bed hospital. Over 65% of practice has private insurance, remainder Medicare with virtually no Medical Assistance. Priced at half the estimated value for quick sale to conscientious internist who will be able to give continuity of care to my patients. Box 373, PENNSYLVANIA MEDICINE, 777 East Park Dr., P.O. Box 8820, Harrisburg, PA 17105-8820.

CLASSIFIED ADVERTISING

Rates: $38 per insertion ($25 for PMS members) for the first 30 words or part thereof; $1.30 for each additional word; $6 per insertion for a box number. Payment should be in advance. No agency commission is paid on classified advertising.

Submissions: Copy must be submitted in writing to PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820. For more information, call (717) 558-7750.

Box Numbers: Advertisers using box numbers forbid disclosure of their identity. Written inquiries are forwarded to such advertisers, but no information can be revealed by the publisher.

Word Count: Count as one word all single words, two initials of a name, single numbers or groups of numbers, hyphenated words, and abbreviations.

Medical Practice Sales and Appraisals

Fulton, Longshore & Associates is a leader in the appraisal and sale of medical practices.

Listed below are several of the practices which are currently for sale:

SPECIALTY	LOCATION	ANNUAL REVENUE
Cardiology	Philadelphia	$ 260,000
Dermatology	Northern Delaware	$ 400,000
Dermatology	Coastal New Jersey	$ 700,000
Dermatology	Northern Delaware	$ 415,000
Family Practice	Northern Delaware	$ 250,000
General Practice	Philadelphia	$ 500,000
Internal Medicine	Bayonne, New Jersey	$ 350,000
Ophthalmology	D.C. Area	$ 600,000
Ophthalmology	Philadelphia	$ 300,000
Ophthalmology	Michigan	$ 700,000
Ophthalmology	North Virginia	$1,000,000
Ophthalmology	Cleveland	$1,200,000
Pediatrics	Fort Lauderdale, FL	$ 400,000
Pediatrics	Central New Jersey	$ 210,000
Radiology	South Jersey	$ 850,000

PITTSBURGH!

Hospital-guaranteed and private practice opportunities for board certified/eligible physicians are available in Western Pennsylvania in the following specialties:

- **Cardiology**
  - *Invasive*
  - *Noninvasive*
- **Emergency Medicine**
- **Family Medicine**
- **Internal Medicine**
- **OB/GYN**
- **Surgery**
  - *General*
  - *Vascular*

Our search and business advisory services are paid by our sponsoring hospital and physician clients. We will provide:

- **Compensation planning**
- **Practice start-up planning and implementation**
- **Practice valuation and purchase assistance**
- **Fee schedule/profile development**
- **Partnership buy-in valuation and structuring**

If you would like additional information on current opportunities or assistance in the above areas before making your decision, please send your CV or call John Fenner for a confidential discussion:

Family Unity: A Point of View

Victor F. Greco, MD

"In life everything depends upon your point of view."

I don't have to remind you about what is happening in our society. I certainly don't like to quote statistics because we all know them very well, but there are a few that stick out in my mind which, perhaps, help us focus a bit. We know we are in the midst of a scourge called AIDS. In Pennsylvania alone, we have 4,800 reported cases of active AIDS and of these, about 3,200 have already died. We know that 65 percent of all children born in the United States are born of unwed mothers between the ages of 15 and 19. In Pennsylvania that figure is 78.5 percent. We also know that sexually transmitted disease is on the increase, and the divorce rate climbed from 50 percent to 67 percent. I find these statistics rather startling!

What is it that we in organized medicine are not addressing or doing correctly? Life is not simple, but there are reasons for these statistics. However, to sit back and wring our hands in emotion and cry to the heavens is not the answer; addressing family unity is.

Family unity is important because every great civilization that has fallen, has fallen because of a decline in the family unit. If you don't have a family unit, you don't have a community unit; and if you don't have a community unit, you don't have a state unit or a country. It all goes back to the family.

Where did we all go wrong? In trying to analyze this problem, we should start with our good friend and renowned educator, John Dewey. His philosophy of education was pragmatism: "If it isn't something that's going to be useful, don't teach it." We began to worship at the altar of mediocrity because we had to teach pragmatism. Those who were gifted and intelligent were made to feel as outcasts because they were not jocks. Intelligent bookworms were looked down on.

Then one of our colleagues came along by the name of Dr. Benjamin Spock and said, "We must allow our children to do what they want to do, and you must not discipline them...Do not spank, do not say no, let them do what they want to do." So we became pliant parents. We abrogated our responsibilities as parents from whom love should have been dispensed and from whom discipline, responsibilities, and obligations should have been taught. Thus we ended up with mediocre children who could do what they wanted to do.

Next came Hugh Hefner, the god of hedonism, who said, "If it feels good, do it." Now we had young adults without discipline, obligations, or responsibilities who found out that what they did was fun.

With all due respect to the women of this country, soon came the women's lib movement. I respect and admire the movement as much as anybody else, but it promoted, initially, a few fallacies as far as I'm concerned. One was that being a good housewife and mother was the lowest form of existence for any female. Those who aspired to that nobel profession were ridiculed in the media. It became important for women to succeed in a career, and latch-key children became a norm. Why did we do it? So we would have more material things that we could give our children in place of love and discipline, which they cried out for.

Thus we have the root cause of our problems today: We adults failed our children because we were not good role models, nor did we take time out to teach them the dangers of alcohol and other drugs. We showered this generation with all the things they wanted. We could afford to do so without allowing them to work for anything and without teaching them to say no or appreciate the value of life and love.

How can we correct our mistakes? By going back to the morality and discipline of our grandparents. The principles they lived by included: love of spouse and family, love of children, discipline of children, high goal-setting, and emphasis on the family unit.

It sounds simple; but I have found in medicine—as a pre-med student, medical student, and practicing physician—that anytime somebody gave me a complicated answer to a problem, it was usually wrong. The best answers are usually very simple—that is the way nature works.

Dr. Greco, a thoracic surgeon in Luzerne County, is the State Society's Twelfth District Trustee.

One Of A Kind

Zantac®

ranitidine HCl/Glaxo 150 mg and 300 mg tablets

Zantac® 150 Tablets
(ranitidine hydrochloride)

Zantac® 300 Tablets
(ranitidine hydrochloride)

Zantac® Syrup
(ranitidine hydrochloride)

BRIEF SUMMARY

The following is a brief summary only. Before prescribing, see complete prescribing information in Zantac® product labeling.

INDICATIONS AND USAGE: Zantac® is indicated in:
1. Short-term treatment of **active duodenal ulcer.** Most patients heal within four weeks.
2. **Maintenance therapy** for duodenal ulcer patients at reduced dosage after healing of acute ulcers.
3. The treatment of **pathological hypersecretory conditions** (eg, Zollinger-Ellison syndrome and systemic mastocytosis).
4. Short-term treatment of **active, benign gastric ulcer.** Most patients heal within six weeks and the usefulness of further treatment has not been demonstrated.
5. Treatment of **gastroesophageal reflux disease (GERD).** Symptomatic relief commonly occurs within one or two weeks after starting therapy. Therapy for longer than six weeks has not been studied.

In active duodenal ulcer; active, benign gastric ulcer; hypersecretory states; and GERD, concomitant antacids should be given as needed for relief of pain.

CONTRAINDICATIONS: Zantac® is contraindicated for patients known to have hypersensitivity to the drug.

PRECAUTIONS:

General: 1. Symptomatic response to Zantac® therapy does not preclude the presence of gastric malignancy.
2. Since Zantac is excreted primarily by the kidney, dosage should be adjusted in patients with impaired renal function (see DOSAGE AND ADMINISTRATION). Caution should be observed in patients with hepatic dysfunction since Zantac is metabolized in the liver.

Laboratory Tests: False-positive tests for urine protein with Multistix® may occur during Zantac therapy, and therefore testing with sulfosalicylic acid is recommended.

Drug Interactions: Although Zantac has been reported to bind weakly to cytochrome P-450 *in vitro*, recommended doses of the drug do not inhibit the action of the cytochrome P-450-linked oxygenase enzymes in the liver. However, there have been isolated reports of drug interactions that suggest that Zantac may affect the bioavailability of certain drugs by some mechanism as yet unidentified (eg, a pH-dependent effect on absorption or a change in volume of distribution).

Carcinogenesis, Mutagenesis, Impairment of Fertility: There was no indication of tumorigenic or carcinogenic effects in lifespan studies in mice and rats at doses up to 2,000 mg/kg/d.

Ranitidine was not mutagenic in standard bacterial tests (*Salmonella, Escherichia coli*) for mutagenicity at concentrations up to the maximum recommended for these assays.

In a dominant lethal assay, a single oral dose of 1,000 mg/kg to male rats was without effect on the outcome of two matings per week for the next nine weeks.

Pregnancy: ***Teratogenic Effects: Pregnancy Category B:*** Reproduction studies have been performed in rats and rabbits at doses up to 160 times the human dose and have revealed no evidence of impaired fertility or harm to the fetus due to Zantac. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

Nursing Mothers: Zantac is secreted in human milk. Caution should be exercised when Zantac is administered to a nursing mother.

Pediatric Use: Safety and effectiveness in children have not been established.

Use in Elderly Patients: Ulcer healing rates in elderly patients (65 to 82 years of age) were no different from those in younger age groups. The incidence rates for adverse events and laboratory abnormalities were also not different from those seen in other age groups.

ADVERSE REACTIONS: The following have been reported as events in clinical trials or in the routine management of patients treated with Zantac®. The relationship to Zantac therapy has been unclear in many cases. Headache, sometimes severe, seems to be related to Zantac administration.

Central Nervous System: Rarely, malaise, dizziness, somnolence, insomnia, and vertigo. Rare cases of reversible mental confusion, agitation, depression, and hallucinations have been reported, predominantly in severely ill elderly patients. Rare cases of reversible blurred vision suggestive of a change in accommodation have been reported.

Cardiovascular: As with other H_2-blockers, rare reports of arrhythmias such as tachycardia, bradycardia, atrioventricular block, and premature ventricular beats.

Gastrointestinal: Constipation, diarrhea, nausea/vomiting, abdominal discomfort/pain, and rare reports of pancreatitis.

Hepatic: In normal volunteers, SGPT values were increased to at least twice the pretreatment levels in 6 of 12 subjects receiving 100 mg qid intravenously for seven days, and in 4 of 24 subjects receiving 50 mg qid intravenously for five days. There have been occasional reports of hepatitis, hepatocellular or hepatocanalicular or mixed, with or without jaundice. In such circumstances, ranitidine should be immediately discontinued. These events are usually

Zantac® 150 and 300 (ranitidine hydrochloride) Tablets
Zantac® (ranitidine hydrochloride) Syrup

reversible, but in exceedingly rare circumstances death has occurred.

Musculoskeletal: Rare reports of arthralgias.

Hematologic: Blood count changes (leukopenia, granulocytopenia, thrombocytopenia) have occurred in a few patients. These were usually reversible. Rare cases of agranulocytosis, pancytopenia, sometimes with marrow hypoplasia, and aplastic anemia have been reported.

Endocrine: Controlled studies in animals and man have shown no stimulation of any pituitary hormone by Zantac and no antiandrogenic activity, and cimetidine-induced gynecomastia and impotence in hypersecretory patients have resolved when Zantac has been substituted. However, occasional cases of gynecomastia, impotence, and loss of libido have been reported in male patients receiving Zantac, but the incidence did not differ from that in the general population.

Integumentary: Rash, including rare cases suggestive of mild erythema multiforme, and, rarely, alopecia.

Other: Rare cases of hypersensitivity reactions (eg, bronchospasm, fever, rash, eosinophilia), anaphylaxis, angioneurotic edema, and small increases in serum creatinine.

OVERDOSAGE: Information concerning possible overdosage and its treatment appears in the full prescribing information.

DOSAGE AND ADMINISTRATION: (See complete prescribing information in Zantac® product labeling).

Active Duodenal Ulcer: The current recommended adult oral dosage is 150 mg or 10 ml (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice daily. An alternate dosage of 300 mg or 20 ml (4 teaspoonfuls equivalent to 300 mg of ranitidine) once daily at bedtime can be used for patients in whom dosing convenience is important. The advantages of one treatment regimen compared to the other in a particular patient population have yet to be demonstrated.

Maintenance Therapy: The current recommended adult oral dosage is 150 mg or 10 ml (2 teaspoonfuls equivalent to 150 mg of ranitidine) at bedtime.

Pathological Hypersecretory Conditions (such as Zollinger-Ellison syndrome): The current recommended adult oral dosage is 150 mg or 10 ml (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice a day. In some patients it may be necessary to administer Zantac® 150-mg doses more frequently. Doses should be adjusted to individual patient needs, and should continue as long as clinically indicated. Doses up to 6 g/d have been employed in patients with severe disease.

Benign Gastric Ulcer: The current recommended adult oral dosage is 150 mg or 10 ml (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice a day.

GERD: The current recommended adult oral dosage is 150 mg or 10 ml (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice a day.

Dosage Adjustment for Patients with Impaired Renal Function: On the basis of experience with a group of subjects with severely impaired renal function treated with Zantac, the recommended dosage in patients with a creatinine clearance less than 50 ml/min is 150 mg or 10 ml (2 teaspoonfuls equivalent to 150 mg of ranitidine) every 24 hours. Should the patient's condition require, the frequency of dosing may be increased to every 12 hours or even further with caution. Hemodialysis reduces the level of circulating ranitidine. Ideally, the dosage schedule should be adjusted so that the timing of a scheduled dose coincides with the end of hemodialysis.

HOW SUPPLIED: Zantac® 300 Tablets (ranitidine hydrochloride equivalent to 300 mg of ranitidine) are yellow, capsule-shaped tablets embossed with "ZANTAC 300" on one side and "Glaxo" on the other. They are available in bottles of 30 (NDC 0173-0393-40) tablets and unit dose packs of 100 (NDC 0173-0393-47) tablets.

Zantac® 150 Tablets (ranitidine hydrochloride equivalent to 150 mg of ranitidine) are white tablets embossed with "ZANTAC 150" on one side and "Glaxo" on the other. They are available in bottles of 60 (NDC 0173-0344-42) and 100 (NDC 0173-0344-09) tablets and unit dose packs of 100 (NDC 0173-0344-47) tablets.

Store between 15° and 30° C (59° and 86° F) in a dry place. Protect from light. Replace cap securely after each opening.

Zantac® Syrup, a clear, peppermint-flavored liquid, contains 16.8 mg of ranitidine hydrochloride equivalent to 15 mg of ranitidine per 1 ml in bottles of 16 fluid ounces (one pint) (NDC 0173-0383-54).

Store between 4° and 25° C (39° and 77° F). Dispense in tight, light-resistant containers as defined in the USP/NF.

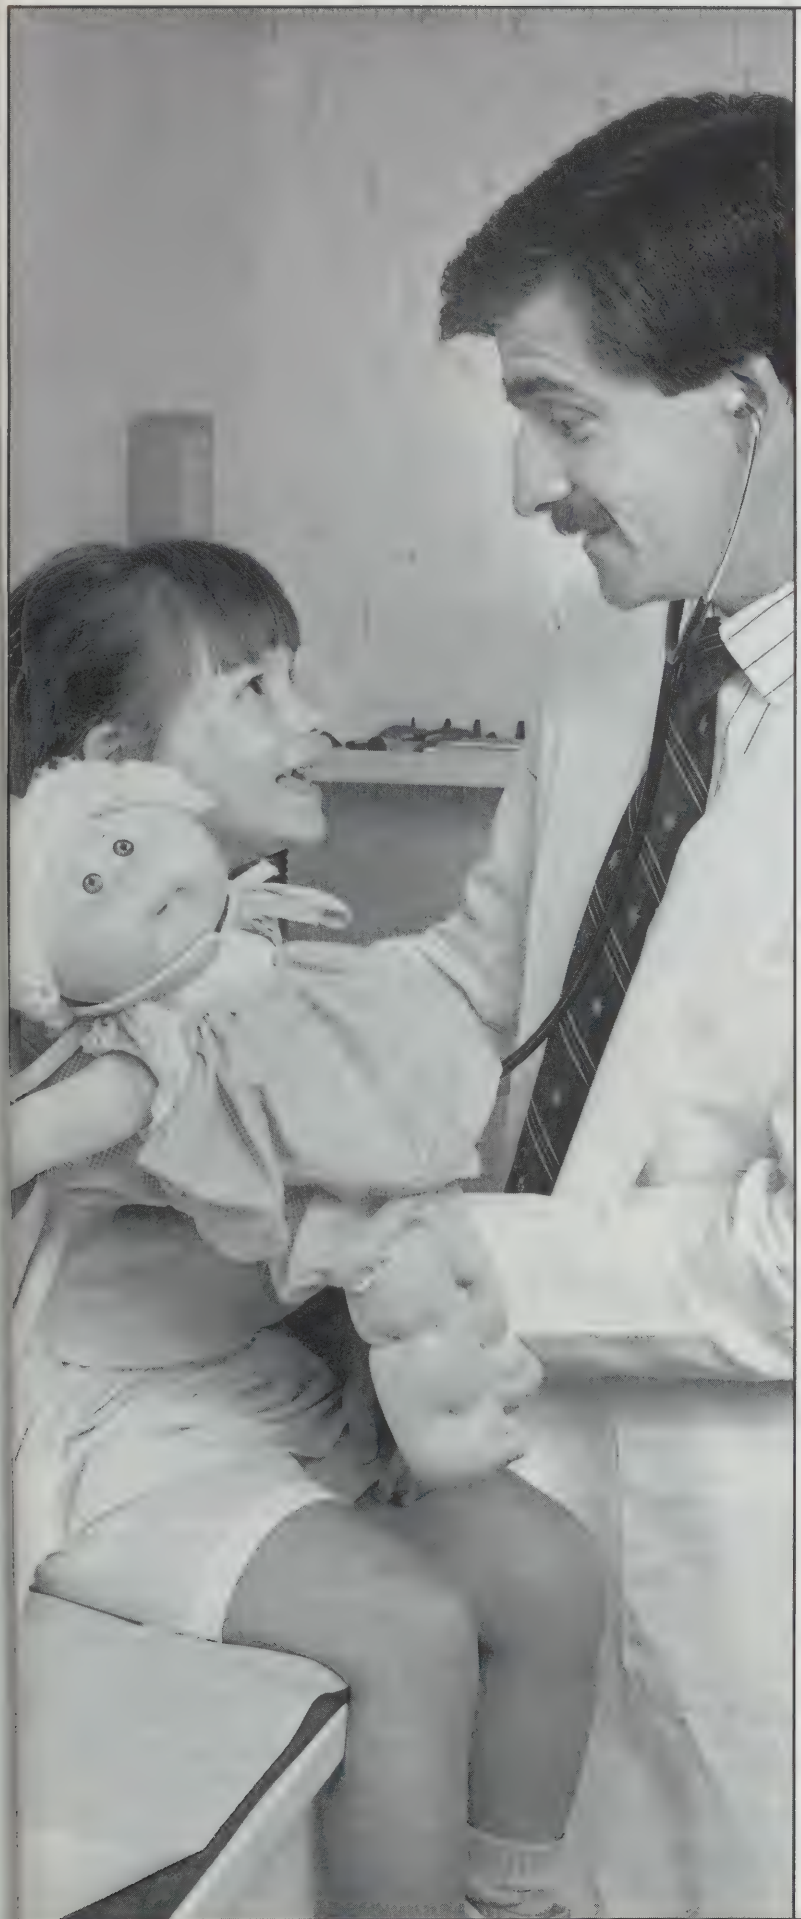
YOU CAN IMPROVE TECHNOLOGY AND STILL BE STUCK IN THE SAME JAM

Technology is supposed to make your people more productive, your practice more competitive. We anticipate how technology will affect not only processes, but the structure of your practice as well. The Valley Medical Management concept revolves around a team of reimbursement specialists, managers, systems analysis and CPA's. This is the formula for our success. Our approach is scientific, comprehensive, and informative. Services provided include:



- ✦ Practice Reviews
- ✦ Administrative & Financial Management
- ✦ Billing
- ✦ Hardware/Software

Our objective is to make you a more successful professional.
Call us for more information.

Why buy an office automation system that doesn't offer a long-term solution?

ACCLAIM™ from Sentient is the total system solution.

A lot of medical practices are planning to invest in an office automation system. But a lot of the systems out there just don't offer the comprehensive functions and long-term expandability that your practice may need.

IBM® and compatible hardware.

The ACCLAIM system operates on IBM and compatible hardware, so you know you're getting the quality standard of the industry. And it's completely expandable, so it can grow as your practice grows.

Long-term support.

ACCLAIM is the system solution that fits your needs today. And Sentient's software engineers, customer trainers, and telephone support people are always there to make sure your system fits your needs over the years to come.

Easy to operate.

Even if your staff has no previous computer experience, ACCLAIM is simple to operate effectively and efficiently. Complete training is included in the purchase.

When you're thinking about office automation, call Sentient first, and find out what ACCLAIM can do for you.

MEDIGRAM

OSHA BLOODBORNE PATHOGEN REGS BECOME EFFECTIVE: The final regulations on occupational exposure to bloodborne pathogens, released by the Occupational Safety and Health Administration (OSHA) in December, became effective March 6. The regulations apply to occupational exposure to blood or other potentially infectious materials in all medical settings and are critical for physicians. The State Society is offering programs in April to help physicians meet the OSHA requirements. For additional information, call the Society's Department of Physician Services at 1-800-228-7823. The AMA has also prepared a package of materials to help physicians with implementation. For information, call 1-800-AMA-3211.

HCFA FURTHER EXTENDS E/M CODE GRACE PERIOD: The Health Care Financing Administration (HCFA) has announced a further extension of the grace period for the new Medicare evaluation and management (E/M) codes which went into effect January 1. Physicians may use either the old or the new E/M codes for Medicare services rendered on or before February 29, 1992, providing claims are received by Medicare on or before April 30. The previous grace period required that claims be processed by March 31.

STATE SOCIETY AND HAP SHOW SUPPORT FOR WORKERS' COMPENSATION REFORM: On March 9, a large contingent of representatives from the Pennsylvania Medical Society and the Hospital Association of Pennsylvania (HAP) visited with legislators in Harrisburg in support of reasonable workers' compensation reform. The Society and HAP oppose linking the state workers' compensation system to the confusing new Medicare system and cooperatively developed an alternative based on an established federal workers' compensation schedule. The intent of the visits was to solicit support of that plan. Consideration was expected by the Senate Labor and Industry Committee.

CLIA REGS RELEASED: The Clinical Laboratory Improvement Amendments of 1988 (CLIA-88) were released on February 28 in three parts: the complexity model or laboratory standards, the compliance or sanctions requirements, and the fee schedule or user fees. The regulations are expected to become effective in early fall and be phased in over a period of two to three years.

FDA PANEL RECOMMENDS IMPLANTS REMAIN ON MARKET: After three days of hearings in February, an advisory panel of the Food and Drug Administration (FDA) unanimously recommended that silicone breast implants remain on the market with substantial new restrictions on their use, the AMA reported. Only women enrolled in experimental trials would be eligible for implants. However, the panel stressed that all women needing reconstruction after cancer surgery would be eligible, as would women with serious breast deformities. FDA Commissioner David Kessler, MD, has promised to act on the panel's recommendation before the end of April.

ACTING STATE INSURANCE COMMISSIONER NAMED: On February 28, the state Insurance Department named Ronald Chronister acting commissioner to replace Constance Foster, who left her position to enter private law practice. Mr. Chronister has been with the department for 22 years, most recently as deputy commissioner for regulation.

AMA TO HOST RBRVS TELECONFERENCE: On March 27, the AMA will host a nationwide teleconference, "Medicare Physician Payment Reform: A New System of Rules and Codes." The program, airing from 2:30-4:00 p.m., will address issues and questions on the new payment system and the new CPT codes. For additional information on telecast sites, call 1-800-228-7823.

WILENSKY APPOINTED TO WHITE HOUSE: Gail Wilensky, PhD, has been appointed to the White House as deputy assistant to the president for policy development. No word is yet available about who will replace her as HCFA administrator, but Lou Hayes will serve as acting administrator.

One-touch, computer access to Pennsylvania Blue Shield is easier than ever. But for the doctors who file claims electronically, "easy" isn't the only thing worth talking about.

Easy come. Easy go. 2.6 million times every month.

"I like the control." With Electronic Claims Submission (ECS), you control the accuracy and the timing of your claims.

What you submit is exactly what goes into the system. Time-consuming clerical errors are virtually eliminated.

You control the timing. Because the instant your claims are sent is the instant they arrive at Blue Shield for processing – 24 hours a day, 7 days a week.

Need a paper record? It's easy. Just print a copy of each transaction for your files.

With ECS, it's never been easier to stay in touch and in complete control.

"Faster claims turnaround means faster payment." With ECS, you bypass a week or more of handling and administrative work. And that gets you from zero to payment in record time.

ECS makes it easy to go with the flow – your cash flow.

"I always know where I stand." Want to check the status of the claims you submit? With ECS, your staff can access and print Reconciliation Reports that provide claims detail on patients, services, payments and claims still pending in our system.

"ECS reduces my administration costs. And my equipment costs were less than I expected." Technology has never been faster, easier to use or more affordable.

If you have an IBM-compatible PC, DOS 3.3 or greater, a modem and a printer, we'll make our user-friendly, Paperless Claims Express software available to you free of charge. We'll even provide expert systems support.

One-touch, computer access to Pennsylvania Blue Shield has never been easier – or more productive.

For more information, call Pennsylvania Blue Shield: **717.975.7130**.

Law and Medicine: Where the Similarity Ends

John W. Mills, MD
Medical Editor

A recent lead article in my local newspaper highlighted a law firm which is experiencing solid growth by focusing on the expanding market in personal injury litigation. The article noted that this firm refers all other legal matters to consulting colleagues and concentrates exclusively on "slip and fall" accidents, product liability, and auto accident injuries. They liken themselves to medical professionals who concentrate their practice in a certain area of medicine to attain a greater degree of proficiency in that area. The attorneys say they have "successfully combined modern marketing techniques with traditional legal professionalism to create a law firm of significant status and integrity."

There is little doubt that limiting practice to a specific area will allow greater proficiency in that area, but that's about where the similarity between medicine and law ends. Both *are* considered professions, but I take issue with what was once called "ambulance chasing," i.e; modern market techniques. The Supreme Court's assertion that it is ethical and legal for professions to advertise does not make it "right" or a standard to be followed.

My other concerns relative to this article are two-fold: the ever-increasing liability issues coupled with ever-increasing restraints when treating the elderly.

Briefly, the liability issue continues unabated in the U.S. With better than 30 percent of the judgment going to attorneys, it is easy to see how one can build a lucrative law practice. Another 20-30 percent goes for "costs," so the plaintiff frequently realizes 25 percent or less of the settlement. Because the settlement is usually tax free, this encourages people to sue, as do attorneys' advertisements, television spots, letters, and phone calls to auto accident unfortunates. We are suit-happy and have promulgated a "someone has to pay" mentality. We have five percent of the world's population in this country and 90 percent of the world's lawyers—that should speak for itself.

Secondly, while our legal brethren continue to proliferate their practices at everyone's expense, we in the health care professions have just been saddled with the RBRVS payment system for Medicare. RBRVS further restricts the way we treat patients and ratchets down the money available to health care professionals. Yes, the system is better than expenditure targets, and it may level off the "paying field" between medical and surgical types. But the net result is more restrictive medical practice to an ever-growing Medicare age group with less money to cover this practice.

Finally, the specter of dissatisfied patients looms as a result of our practice restrictions and cutbacks. Who gets blamed and ultimately sued? Not HCFA, not Congress, not Blue Cross/Blue Shield—but health care providers.

Follow this line of thought: preventative medicine is not paid for by Medicare, thus illness in elderly patients frequently costs more because it wasn't diagnosed early. Medicare recipients are increasing in number, and with a fixed allotment of funds by Congress or HCFA, there will be less for each patient. Elderly patients generally consume more time per office visit because of special problems in communicating with them. Yet Medicare specifically doesn't cover this unless it is more than 50 percent of the visit.

We are urged to be more efficient, yet we hear the complaints: "He's/she's too busy to talk to me," or "He/she rushes me in and out like an assembly line." Thus risk management takes a backseat when we don't have the time to talk with patients, and the unhappy patient is more prone to consider litigation.

So we've come full circle. The legal profession grows at our expense; Medicare restricts our practice via mandated rules and monetary restraints; we are urged to be more efficient at the expense of good communication and risk management; and the legal profession again grows at our expense. This *must* end, or this county will ultimately have a *real* health care crisis.

MIIX℠ will offer free income protection coverage for doctors who become HIV positive.

Because we understand.

"We are addressing a problem which can have a potentially devastating impact on those few doctors who may be affected. We are here to serve doctors with responsive and innovative programs, and I believe that we are doing our part to deal straightforwardly and candidly with this dilemma for doctors and patients alike."

— Daniel Goldberg
MIIX President

The Medical Inter-Insurance Exchange is pleased to announce, effective January 1, 1992, its Human Immunodeficiency Virus (HIV) Insurance Endorsement as a no cost addition to its professional liability insurance policies for Pennsylvania doctors. Should you be diagnosed as HIV positive, the endorsement will provide you with a benefit of $500,000, payable monthly over 5 years at $100,000 per year.

For more information, please call one of our licensed agents.

Working Together To Build Our Ranks

Robert N. Moyers, MD

The Pennsylvania Medical Society was founded in 1848 to serve its members' interests. I'm sure our colleagues who have gone before us understood very well the political realities of their day. They knew how and where to apply their efforts to clean up public water systems, to vaccinate children, and to establish standards for the medical profession.

They serve as an example to us of what physicians, working together, can accomplish. Strength doesn't lie only in numbers, but strength *begins* in numbers.

Since I assumed the role of president, my energies have been spread over a wide range of issues—from RBRVS to workers' comp to auto insurance. And no matter how busy I have been, how many legislators I have spoken to, or how many phone conferences I attended, I have never lost sight of the importance of membership recruitment.

In fact, as I become deeply involved in all of these issues, I'm even more aware of how important it is for those of us within organized medicine to reach out to our colleagues within the profession.

The time has passed when each physician could go his or her own way and still be able to practice medicine the way we think it should be practiced. That is why one of my primary goals this year is membership retention and growth.

There are two sides to this issue of recruitment.

The first side—and this is the one we tend to emphasize most—is that physicians need a strong organization to function effectively in the public arena. Sometimes, our colleagues interpret this to mean that we want their money to strengthen our organization for its own sake, or for our own sake.

This is where we perhaps have not been as effective as we should be. Because the second side, the flip side of recruitment, is the more important one.

The fact is, we know something that our non-member colleagues do not know. We in organized medicine are the ones who testify at hearings. We are the ones who get inside the legislative process and see how it is or is not working.

Our colleagues do not see what we see. And so they can continue to believe that they can do nothing and that nothing bad will happen. We know better. And we've learned it the hard way.

I think we actually have an obligation to our colleagues, not to allow them to sit back and become the victims of systems and procedures they know little about. We must put our experience—our successes and our failures—at the service of our fellow physicians.

I am convinced that if we tell them forthrightly what we have learned and what we need to accomplish on their behalf, they will join us.

I am asking you personally to reach out to your colleagues. The simplest way to do this is to invite them to your meetings, so they can learn first-hand about the efforts of physicians working on their behalf.

I have also asked each county medical society to make a commitment to the following activities: a phone-a-thon in connection with our annual spring member retention activities, and a peer-to-peer recruitment effort with non-members before the end of the year.

To be effective in peer-to-peer contact, a physician must be convinced of the value of organized medicine. I'd like you to think about the information you have received through your Society that you would not have received otherwise. I'd like you to recall the times you called the Society to ask a question, to order a special publication, or to sign up for a seminar or workshop. I'd like you to place a value on the comradeship you enjoy at the local, state, and national levels.

Then I'd ask that you spread the word. The stronger we are, the more effective we can be in protecting the practice of medicine.

ALTERNATIVE OFFERED TO RECORDS MANDATES

Through the pages of your widely read journal, I would like to bring before your readers an important subject pertaining to doctors who relocate or retire from practice in Pennsylvania.

As we all know, it is expected that doctors terminating their practices will retain all original records of their patients for a period of 7-12 years. Copies of these records are expected to be made by the relocating doctor to be given to patients seeking other doctors.

This rule is more easily made and written than carried out for all doctors, but especially for solo practitioners leaving Pennsylvania for a distant state to take up a salaried or other position. This law could be most inconvenient and well-nigh impossible to follow. How is the doctor expected to keep in his or her guarded security thousands of pages of patient records, let alone carry them wherever he or she goes or pay for their storage?

I strongly urge liability attorneys, insurance companies, and the Pennsylvania Medical Society to reconsider this quixotic law and change it.

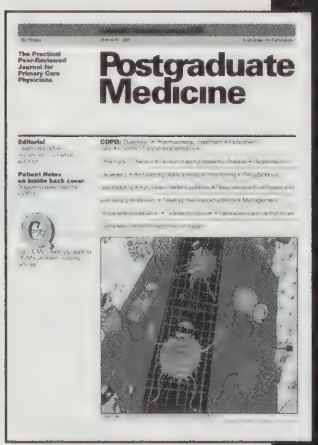
My proposal is for doctors to leave the responsibility of secure keeping of the records to individual patients who can take them anywhere, keep them in their homes, or destroy them.

In case of litigation, it would be the responsibility of the individual patient to make his or her records available to the attorney, and the right of the defending attorney also to obtain this record in preparing the case.

I would be most interested in knowing the opinions and reactions to my proposal from all parties, including patients, if they would read this letter. Thank you.

B. Viswanathan, MD, FACP
Gettysburg

Medical Editor's Note: Our legal council is attempting to get some factual evidence on this, and at the same time, the State Society has considered and is still considering the possibility of providing some type of a service for physicians who have retired and wish to have their medical records microfilmed or kept on file.



Letting patients keep their records is not a good idea, since the records are legal documents and are your property. Copies may be given to patients if a physician wishes to do so or if the patient requests them, but the originals are your only defense in a suit.

The editors of PENNSYLVANIA MEDICINE encourage comments about the magazine and its contents, as well as viewpoints on current medical issues. Please send letters to: Editor, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820. Letters are published at the discretion of the managing editor and are subject to editing.

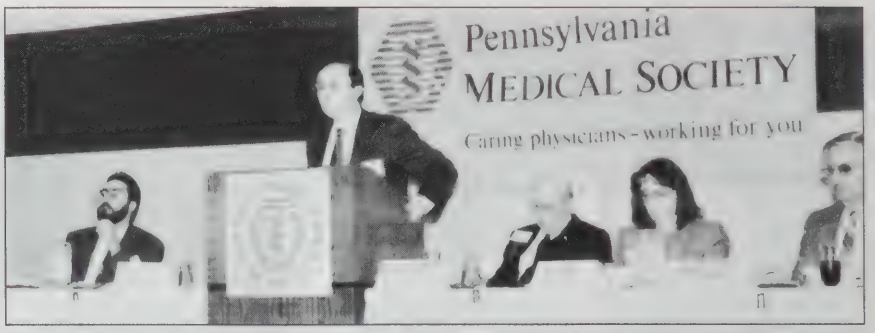
REGIONAL RBRVS MEETINGS WELL-ATTENDED

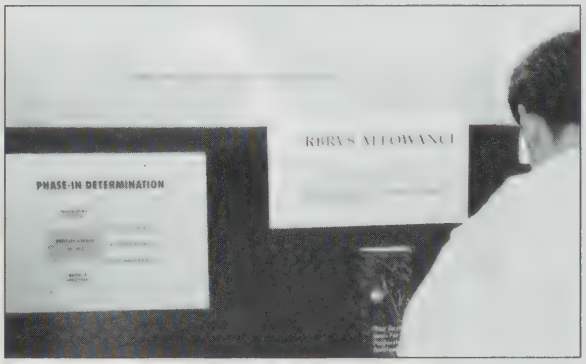


More than 2,560 physicians attended eight regional State Society meetings held in January which alerted them to changes in the Medicare program as a result of Medicare Physician Payment Reform. Initial evaluations from attendees indicate that the presentations were well-received.

The meetings were held in Pittsburgh, Harrisburg, Allentown, Philadelphia, Erie, and State College. State Society leaders and staff members, and Pennsylvania Blue Shield representatives, addressed the rationale and mechanics of the new reimbursement process implemented on January 1, as well as the new visit codes and payment policy changes. An update on the status of the Commonwealth's attempts to reform workers' compensation was also presented. Following formal presentations, the speakers joined together as a panel to answer attendees' questions.

Comments from physicians attending the meetings around the state are favorable, saying they believe the information was understandable, the dialog between speakers worked well, and the Blue Shield information was useful. Seventy-six percent of attendees who completed initial evaluations rated the meetings as "excellent" or "good."

The American Medical Association (AMA) also held a series of seminars across the country to promote understanding of the new RBRVS payment mechanism. On February 11, a number of physicians gathered at the AMA meeting in Pittsburgh. The program featured an overview of the payment system, a discussion of the new CPT visit codes, a presentation by Health Care Financing Administration officials of major Medicare program directives, and a look ahead to expected regulatory and legislative changes. The AMA also scheduled an extensive question-and-answer panel to conclude the program.

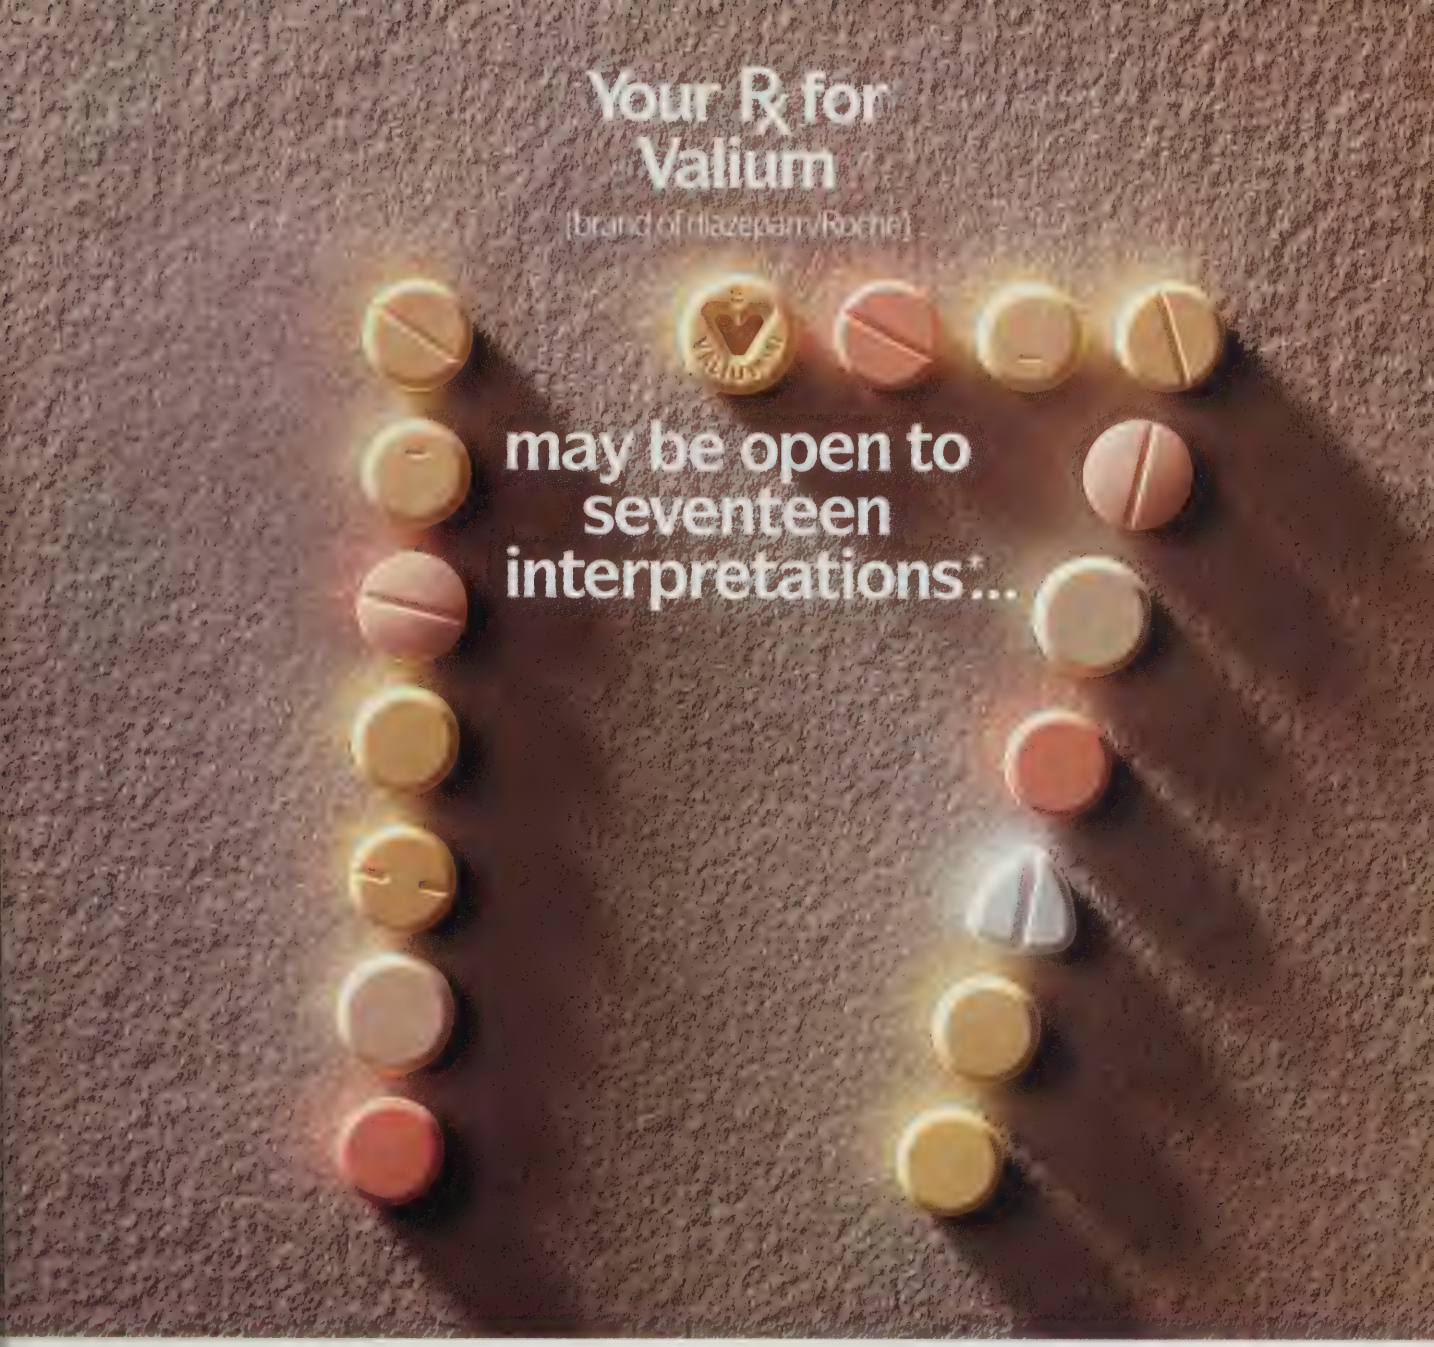


Follow-up meetings sponsored by the State Society were scheduled in late January and early February for physicians' office staffs to learn how to use the new CPT codes.

Thomas H. Malin, MD (at podium), spoke on the State Society's behalf at the Harrisburg meeting, attended by 248 physicians.

Meeting attendees asked specific questions of State Society and Pennsylvania Blue Shield panelists during an extensive question and answer session in Philadelphia.

The Society's RBRVS display was set up throughout the state to show attendees how the new system works and provide them with additional materials about the system and the Society.



PUBLICATIONS AVAILABLE

The State Society has developed several publications to assist physicians in converting to the new RBRVS method of Medicare payment. For additional information or to order the following materials, send name, address, phone number, and check to Department of Physician Services, State Society headquarters, Harrisburg (Pennsylvania residents: please add 6 percent sales tax to your order); or call 1-800-228-7823.

- *Visit Code Information Kit* (includes analysis of E/M coding system)—complimentary to members, not available to non-members.
- *Medicare Evaluation and Management Codes: A Pocket Reference for Physicians*—first copy complimentary to members/ additional copies $2.00 each, $5.00 per copy for non-members.
- *Medicare Physician Payment: Before and After RBRVS*—first copy complimentary to members/ additional copies $2.00 each, $5.00 per copy for non-members.
- *Practice Management Consulting Network*—first copy complimentary to members/additional copies $2.00 each, $5.00 per copy for non-members.

AMA OFFERING *CPT 1992*

CPT 1992, the annual publication listing AMA 1992 Current Procedural Terminology (CPT) codes, is now available from the national association. Prices are: $27 for AMA members and $34 for non-members. To order, call 1-800-621-8335.

Medicare Monitoring of Payment Reform

Dennis L. Olmstead

Medicare payment reform became effective January 1, 1992. One aspect is monitoring by Medicare carriers of payment reform initiatives and physician compliance with these initiatives.

Carrier monitoring of payment reform will assist Medicare in identifying changes in coding practices and utilization patterns on a national and regional basis. It will also provide educational feedback to physicians about their utilization and coding of services.

Extensive monitoring will initially focus on use of the new evaluation and management (E/M) services by physicians. Pennsylvania Blue Shield, as the Medicare carrier, will conduct that monitoring through an Early Claims Review Program and Visit Code Comparative Performance Reports. Other payment initiatives being implemented include Global Surgical Modifier Monitoring, Average Anesthesia Time Monitoring, and the Medicare Current Beneficiary Survey.

Early Claims Review Program

The Early Claims Review Program is intended to provide the Health Care Financing Administration (HCFA) and the physician community with information about the appropriate use of the new codes. Carriers will review medical records to assess code usage. Beginning in February 1992, and continuing through June 1992, the program will operate as follows:

1) Blue Shield will select a random sample of up to 25 claims per week containing the new E/M codes and consultations.

2) Blue Shield staff will telephone each physician whose claim was selected, and, after explaining the program, request medical records to support the level of service billed on the claim. The telephone contact will be followed by a letter identifying the claim selected for review. Note: no physician will be contacted to provide documentation on more than one claim.

3) Blue Shield staff will review the documentation to determine if the claim code submitted accurately describes the service provided.

4) If the documentation supports the level of E/M service billed, Blue Shield will send a letter to the physician confirming that the correct codes were used.

5) If the documentation fails to support the level of E/M service billed, Blue Shield will inform the physician which code should have been used.

This process is intended to be educational, with no use of punitive measures such as overpayments or sanctions. The program's results will be shared with the State Society on an ongoing basis. This information will be used to further educate members about code usage. E/M codes to be reviewed under the Early Claims Review process are: office visits—99213, 99214, 99215, 99204, 99205; hospital visits—99222, 99223, 99232, 99233; consultations—99244, 99245, 99263, 99255; emergency room visits—99283, 99284, 99285.

Comparative Performance Reports

The second monitoring activity involves Comparative Performance Reports (CPRs). In the past CPRs were used to inform physicians about their individual Medicare practice patterns, compared to those of their specialty and locality peers when their utilization was significantly higher than the norm. The same methodology will be used this year, but only E/M and consultation services will be reviewed. Like Early Claims Review, this program is informational for physicians; however, it does not prohibit Blue Shield from placing a physician on a Provider Audit List. Physicians are encouraged to respond to audits to discuss findings with Blue Shield (see "Monitoring audit tips" on page 17).

Twice in 1992, Blue Shield will profile physicians and send CPRs to those who bill in the top five percent for E/M codes reviewed under the Early Claims Review process. CPRs will contain information about the number of Medicare beneficiaries that the physician treated during the period analyzed, the number of E/M services billed per beneficiary who received an E/M service, and the average number of E/M services provided for all beneficiaries that the physician treated. Similar information will also be provided for the physician's peer group. The information obtained from the CPR program will be

Dennis L. Olmstead is the State Society's director of medical economics.

shared with the Society, the CPT Editorial Panel, and HCFA regarding coding policies that may require clarification.

Global Surgical Modifier Monitoring

In addition to the Resource Based Relative Value System (RBRVS), Medicare has developed new policies regarding global surgical packages, which include payment for pre-operative and post-operative care. Services rendered during periods unrelated to the surgical diagnosis can be reimbursed separately from the global surgical payment.

Physicians have been instructed to use modifiers 24, 25, and 79 to denote that the service rendered should *not* be considered part of global surgical package. Blue Shield will conduct pre-payment medical reviews on claims using modifier 24, which denotes that an unrelated E/M service was rendered by the same physician who performed the procedure during the post-operative period. Blue Shield will be reviewing the required medical record documentation that must be submitted with Modifier 24.

Post-payment review will be conducted on the utilization of modifiers 25 and 79 to identify physicians who use them more frequently then their peers. Modifier 25 denotes that a significant, separately identifiable E/M service was rendered by the same physician on the day he/she performed a procedure. Modifier 79 denotes that an unrelated procedure or service was rendered by the same physician who performed the original procedure during the post-operative period.

Average Anesthesia Time Monitoring

Average Anesthesia Time Monitoring will be conducted by Blue Shield to determine the average amount of time units billed per anesthesia procedure by anesthesiologists under their jurisdiction. Results will be compared to a national average provided by HCFA. Blue Shield will inform anesthesiologists if they bill at a significantly greater level than the national average.

Medicare Current Beneficiary Survey

HCFA has developed an on-going, multipurpose survey to be used by all its components concerned with Medicare policy. The survey is conducted to compile information on Medicare use, costs, and beneficiary characteristics. It will also be used to monitor and evaluate the impact of legislation, such as Physician Payment Reform, on beneficiaries—both financially and in terms of access to physician care. The survey is not intended to monitor physician behavior.

At the core of the survey concept is a series of interviews of a representative sample of the Medicare population. Questions will seek to identify patterns of use and cost over time, sources of coverage and payment, assets and income, demographic characteristics, health and functional status, health and work history, and family supports. The first round of the survey occurred between September and December 1991 from a sample of 12,700 beneficiaries nationwide. Pennsylvania's sample totaled 907 beneficiaries in 15 counties. The Society will continue to monitor the survey and HCFA's conclusions.

Monitoring audit tips

The following are tips for physicians' offices in reducing the chances of being audited and in handling audits from third-party payors:

- Respond to Comparative Performance Reports by explaining why your practice utilization patterns may be higher than the norm.
- Make sure the physician specialty you are enrolled under is correct. Also inform the carrier of any subspecialty under which you practice.
- Do not discuss anything with the auditor during the visit to review medical records. The physician/patient privilege does not apply to services paid by the third-party payor. Have the auditor put any questions in writing, and consult an attorney.
- Require the auditor's identification and a business card. Determine the type of audit to be conducted (e.g., licensing department, fraud unit, routine, etc.).
- If the third-party payor wishes to "offset" future payments based on the amount supposedly overpaid during an appeal, negotiate with the payor to "offset" as little as possible until the appeal is finalized. Ideally, "offsets" are not recommended since they can create an accounting nightmare. While the appeal is pending, attempt to pay back a portion of what is due to avoid offsets.
- Do not use the words "routine" and "screening" in medical record documentation since many insurance carriers do not pay for such services.
- Challenge third-party payors' statistical methodology used to make projections for overpayments from their audit sample. Underpayments should also be projected, as well as the overpayments.
- Obtain relevant manual provisions or other communications from insurance carriers to keep track of the dates policies became applicable. This is important in requests for retroactive payments.
- Document medical records thoroughly. Follow up phone conversations with carrier representatives in writing, requesting written confirmation of the phone call. Maintain all carrier communications.
- Become familiar with all of your rights to appeal audit findings.

RESOLVING UMWA FUNDING PROBLEMS

The United Mine Workers of America (UMWA) Health and Benefit Fund has experienced funding problems, which has resulted in reduced payments to physicians for services rendered to UMWA beneficiaries. Since July 1990, UMWA has only paid the Medicare Part B portion of physicians' bills and not the Fund's portion (e.g., coinsurance and deductibles).

As a result of the Fund's financial problems, UMWA solicited physicians to sign an agreement accepting a discount on the Fund's payment obligation. Physicians who signed the agreement were paid at the discounted rate, but those who did not received only the Medicare portion and were left with balances owed by UMWA.

A February 10, 1992, decision by representatives of the UMWA Fund will temporarily ameliorate the problem of reimbursing physicians for the Fund's share prospectively and retroactively for unpaid services. Nationally, payments are expected to total tens of millions of dollars.

The money to repay the outstanding balances did not come as a result of any resolution between mine owners and the UMWA Fund regarding contributions, but rather it was an internal decision by the Fund to slow down payments for other medical care benefits that are not covered under the Medicare program (e.g., prescription drugs and vision care). Pressure exerted by physicians and organized medicine influenced to a degree the Fund's decision.

As a result of the February 10 decision, the Fund's share will begin to be paid on claims processed after February 17, 1992. Retroactive payments will also begin on or around that time. Physicians are not required to resubmit previously submitted claims, but rather automatic adjustments will be made on balances due. Payments will be made on the basis of the oldest claims first, and UMWA expects the process to take several months.

Physicians who agreed to the original discount will not receive retroactive payments on claims processed before the agreement was signed, but will receive additional reimbursement from the agreement date forward. Physicians who did *not* sign a discount agreement will receive the Fund's share for claims processed from July 1990 forward.

The State Society and the American Medical Association will continue to monitor the issue and seek a permanent solution to the UMWA Fund problem.

UPDATE: NEW PHYSICIAN REDUCTIONS UNDER MEDICARE

As reported in the February 1992 issue of PENNSYLVANIA MEDICINE, physicians rendering services to Medicare Part B beneficiaries during their first through fourth years of practice will have their payment rates reduced, with limited exceptions. The following updated information supplements that article.

Medicare Part B services

Under Medicare payment reform, Part B services must be rendered to beneficiaries during a certain time frame for physicians to qualify their years of practice. The Health Care Financing Administration (HCFA) has clarified that not only do the services have to be rendered, but *they must also be billed to Medicare Part B.*

Billings for such services do not necessarily have to be submitted by the rendering physician, but instead can be billed by the entity employing the physician. For example, a physician compensated by a salary from a hospital where services are rendered would not bill directly for the services; the hospital would bill Medicare Part B using its own provider number. Also, billing is not required during the month in which services were rendered, but rather within the required time frame established by regulation.

Moonlighting

The State Society recommends that residents moonlight so their resident years count toward their new physician years. Under the Commonwealth's Medical Practices Act, guidelines are established for resident moonlighting:

- If the resident graduated from a medical school accredited by the Liaison Committee for Medical Education (LCME), a second-year resident is permitted to moonlight if the residency director approves; the resident would be issued an interim limited license number.
- If the resident did not graduate from an LCME-accredited medical school, moonlighting is only possible during the third year of residency.
- An unlimited license is issued to a resident after completion of the second year for residents who graduated from an LCME-accredited medical school. Although residency director approval is not required by law to moonlight with an unlimited license, some residency programs do prohibit moonlighting even if the resident has an unlimited license. An unlimited license would be issued to a resident after completion of the third year for those who did not graduate from an LCME-accredited medical school.
- A resident participating in a moonlighting program under an interim limited license is permitted to obtain a provider number from Medicare. The provider number is only valid for the period of time for which the license has been issued. Once the license expires and an unlimited license is obtained, the resident must then reapply for a provider number from Medicare.

Challenging Medicare's determination

Physicians who believe the Medicare carrier has incorrectly determined their year of medical practice can request correction by writing to: Pennsylvania Blue Shield, Medicare Provider Reimbursement Inquiry and Monitoring, P.O. Box 890316, Camp Hill, PA 17089-0316, ATTN: Connie Sweigart, Manager.

The letter should include all of the applicable information, including where and when the delivery of services occurred, a provider number, the employer's name and address if applicable, records of Medicare Part B payments (Form 1099) if available, and any other information to substantiate the claim. Note: moonlighting and other Medicare Part B services billed under another physician's provider number do not qualify as part of the new physician reduction criteria.

Dennis L. Olmstead, the State Society's director of medical economics, contributed to this page.

With Princeton, you're in good company.

More than 19,000 medical and health care professionals have chosen Princeton Insurance Company for their professional liability insurance coverage. Here are some reasons why:

• **A solid track record.** Princeton has nearly a decade of experience providing professional liability coverage to physicians, and A.M. Best has ranked us (with our parent company) among the 20 largest medical malpractice insurers nationwide since 1983.

• **Financial strength.** Our loss reserves are carried at full value, not discounted in the hope of earning sufficient interest income to pay claims. We maintain a high quality/low risk investment portfolio, with no junk bonds, no common stock and no real estate speculation. And Standard & Poor's has given us a claims-paying ability rating of "A."

• **Coverage options.** Tail coverage is included in the purchase price of our innovative *Occurrence Plus* policy. A standard claims-made policy is also available, and we offer excess liability coverage (limits up to $5 million) to Pennsylvania physicians regardless of which company writes the primary coverage.

• **Strong defense against claims.** Of the Princeton-managed cases disposed of by the courts in 1990, more than 90 percent were resolved in the policyholder's favor.

It may be easier than you think to change insurance companies. Call today to find out more or return the coupon to receive a copy of the video program, "It's Princeton's Specialty."

Helping Hospitals Cope with the Impaired Physician

Maria T. Montesano
Assistant Managing Editor

With the addition of the new hospital physician health committees program and the expansion of already existing programs, the Physicians' Health Programs (PHP) of the Society's Educational and Scientific Trust continues to promote the professional and personal well-being of Pennsylvania's physicians.

Hospitals are a major source of support for the Physicians' Health Programs (PHP), a service of the Pennsylvania Medical Society's Educational and Scientific Trust. In return for financial support, PHP is developing a new program to help hospitals identify, credential, and monitor the alcohol- and drug-impaired, or neuropsychiatrically impaired physician.

For years, many of Pennsylvania's hospitals have offered employee-assistance programs for staff members. However, since physicians are not usually paid directly by hospitals, such programs may not be available to them; and if available, they are often not utilized by physicians. The development of the hospital physician health committees program is an effort to address the need for assistance programs for physicians in the Commonwealth.

"What we want to do is help hospitals revise their organizational culture and formal policies about impairment and physician health issues so they can develop an effective impairment program for the medical staff," says Penelope Ziegler, MD, PHP medical director. Currently, PHP is developing a pilot program to be tested at several Pennsylvania hospitals. PHP also intends to solicit input from the Joint Commission on Accreditation of Health Care Organizations (JCAHCO) and other state agencies which are interested in hospitals developing effective impairment programs.

The long-term goal of the program is to provide a package of suggested guidelines, policies, and procedures for hospitals to use in developing such policies. The program is in its earliest stages: "The policy for identifying the impaired physician is still in draft form," according to Dr. Ziegler. However, PHP does have a flow chart of the guidelines it is using for internal development, and it will begin to meet with medical staff and hospital representatives during 1992.

The program also strives to teach hospitals how to respond to a recovering physician applying for privileges. The availability of the National Practitioner Data Bank (NPDB) in the past two years has led to confusion among employer hospitals. NPDB makes information about physicians available to hospitals, including information about any impairment problems physicians may have had and any recovery programs in which they participate. But Dr. Ziegler says, "Now that the hospitals are getting that information before they hire physicians, they aren't quite sure what to do with it."

Not hiring a physician because such information is known is increasingly hard to defend. She adds, "One major ethical and moral question immediately arises in such situations: is it fair to a practicing physician who is rehabilitated to be denied privileges because the hospital does not know how to monitor the physician? Also, the new Americans with Disabilities Act offers protection to people in recovery, so such actions by hospitals could be construed as discrimination."

Identifying and dealing with impaired physicians will remain a concern for Pennsylvania's 300-plus hospitals. While PHP will continue to work with impaired

physicians on an individual basis, hospitals need to establish a program that encourages early identification and referral, and recognizes and supports the recovering physician. Through the hospital physician health committees program, PHP will offer help in that endeavor.

Expansion of current programs

Apart from impairment programs, PHP offers a variety of programs to help physicians cope with professional and personal stress. In 1992 PHP hopes to expand its services to reach even more physicians in need of support.

The Litigation Stress Program was originally developed to provide emotional support to physicians involved in lawsuits. The program primarily encourages the development of local support networks, the linkage of defendant physicians with supportive colleagues, and the education needed to cope with stress. This year PHP will expand the program to address stress-related problems "as a whole," including stress caused by working with new regulations or within a managed care setting, as well as that caused by medical "hassle factors."

PHP has also taken an active role in helping physicians retire gracefully. Dr. Ziegler says being a physician is "part of your identity" and explains that it is often difficult for physicians to retire. But when aging or medical problems exist which detract a physician's effectiveness, retirement may be necessary. In the past, the State Board of Medicine has had to take legal action against such physicians to revoke their licenses, often leading to local scandal, according to Dr. Ziegler. Now, however, a cooperative effort between PHP and the Board of Medicine has led to a retirement affidavit which allows physicians to retire their licenses without public prosecution.

Finally, PHP provides specific groups, such as medical students and disabled/handicapped physicians, with educational and referral information. According to Dr. Ziegler, "Physicians can contact us for support or information related to *any* area of their personal and professional well-being, and we will do our best to help."

For the future, PHP recognizes that there will be a need to provide support and assistance to physicians who become infected with HIV. Dr. Ziegler says, "PHP is currently exploring what type of program we might be able to develop." For 1992, though, she and her staff will continue to expand existing programs as well as the physician support network, and to develop the hospital physician health committees program.

A

New Era in Gynecology at The Graduate Hospital

Providing expertise in tertiary and routine gynecological care, gynecologic oncology evaluation and treatment, and the most advanced techniques in gynecologic surgery including colposcopy, laparoscopy, endoscopy, hysteroscopy, and laser and loop procedures.

For more information, please call 215-893-5477.

The Graduate Hospital is pleased to announce the appointment of **Thomas V. Sedlacek, M.D.**, as chairman of the department of Gynecology/Gynecologic Oncology. Dr. Sedlacek is joined by an exceptional staff of gynecologic specialists.

- Michael J. Campion, M.D.
  Director, Clinical Research & Endoscopy
- Francis L. Hutchins, M.D.
  Director, Women's Center
- Harry Reich, M.D.
  Director, Gynecologic Surgery
- Vincent M. Vaccaro, M.D.
  Director, Benign Gynecology

DIAGNOSING VIRAL HEPATITIS

For persons with viral hepatitis, it is very important to identify the specific type of hepatitis since recommendations for control measures depend on it. Despite the bewildering array of laboratory tests available today, specific diagnosis is actually much simpler than it might seem.

The first step in diagnosing a patient with hepatitis is to rule out by history: 1) chemical or drug-induced (particularly alcohol) hepatitis, or 2) systemic infections, such as Epstein-Barr virus or cytomegelovirus, which secondarily affect the liver. Since the various types of viral hepatitis are virtually identical with regard to acute symptoms, laboratory tests are required to make a specific diagnosis.

The most important types of hepatitis to consider are hepatitis A and hepatitis B. Hepatitis A is easily diagnosed by the detection of antibody against hepatitis A (anti-HAV) of the IgM class, which denotes acute infection and is present at symptom onset. Anti-HAV of the IgG class may represent past-resolved infection and have no bearing on the current illness. Hepatitis A is an acute and generally self-limited illness which tends to persist for a few weeks. There is no chronic carrier state associated with it.

Hepatitis B is diagnosed by the presence of the hepatitis B surface antigen (HBsAg), which represents either acute illness or the chronic carrier state. In the presence of symptoms of acute viral hepatitis and in the absence of anti-HAV IgM, the presence of HBsAg suffices for a diagnosis of acute hepatitis B. Approximately 10 percent of these cases will become chronic carriers of hepatitis B and remain so for the rest of their lives. This is an ominous situation. Persistence of the virus often results in persistent and progressive liver damage over several years' time, possibly leading to progressive cirrhosis and less frequently to liver cancer. Also of importance is that infected individuals can transmit the virus to sexual contacts, those with whom they share parenteral exposures, and other close contacts.

Another hepatitis virus was recently discovered called hepatitis C. In the United States, hepatitis C has been found to cause approximately 80 percent of non-A, non-B hepatitis (the five percent of reported viral hepatitis in Pennsylvania that cannot be diagnosed as hepatitis A or hepatitis B). The epidemiology and clinical course of hepatitis C is similar to hepatitis B, and the chronic carrier state is even more ominous than that of hepatitis B. Currently antibody tests are available for hepatitis C, but they are not very sensitive or specific. Also, they do not differentiate between acute infection, the chronic carrier state, and past-resolved infection.

Because control measures against hepatitis C have not been worked out and problems exist in diagnosis, the Department of Health does not have any protocols for the control of hepatitis C and does not take any action against it. This may change as better diagnostic methods and preventative measures become available—at that time, hepatitis C is likely to become a reportable disease.

Pennsylvania Department of Health

TASK FORCE PLANNING CONCENSUS CONFERENCE

The Child Abuse Task Force of the State Society and the Pennsylvania Bar Association is planning a concensus conference on April 27 in Harrisburg. A series of experts will be invited to relay their experiences with the child abuse reporting process and exchange ideas about systematic problems.

For example, physicians are required by law to report any possible cases of child abuse, and follow-up is completed by the Child and Youth Services Agency. However, after filing an initial report, physicians do not receive feedback from the case and are not given the opportunity to close any medical holes which may exist. Many physicians want to change that.

The task force will invite judges, prosecutors, defending attorneys, Child and Youth Services agents, and others involved in the process of child abuse detection and follow-up to participate in the conference. Each will tell "their side of the story," and all will work together to design improvements to the system. The topic of religious exemptions of child abuse is also a concern of the task force. The ideal outcome of these efforts and others by the task force will be educational programs and legislation addressing the issue and the process.

COALITION TO ADDRESS SCHOOL HEALTH PROGRAMS

The State Society is helping to formalize a coalition, in existance informally for several years, which seeks to mandate stronger school health education programs throughout Pennsylvania. Current law directs that each school district design its own curriculum.

After initial organizational meetings, the coalition will use guidelines for health education, such as those published by the Centers for Disease Control, to address what education is necessary to help students live a healthy lifestyle and protect themselves from pregnancy, disease, etc. The coalition will also seek support and sponsorship of legislation from state policymakers, and lobby for passage of legislation mandating details for such programs.

The group's steering committee, which met in February to begin the formalization process, includes representatives of several health care and education groups, and intends to broaden that base of support.

CRISIS TEAMS RESPOND TO ADOLESCENT PROBLEMS

In recent years, the number of children aged 10-19 who have committed suicide has led schools to take a more active role in prevention, intervention, and tragically, post-vention. Many schools across the country have addressed suicide and other crises facing youth and educators by using crisis response teams.

The response teams consist of school staff trained to handle student crises and usually include representatives from administration, counseling, social work, and teaching and support staffs. Psychiatrists from the community may also serve as outside consultants. The teams are used to handle events that impact the entire school population and crises affecting single students. The goal of intervention is to prevent and replace self-defeating or self-destructive behaviors with effective coping skills which can reduce anxiety and enhance students' ability to manage in the future.

Tuberculosis of the 1990s: The Quiet Public Health Threat

Richard T. Bell, MD

Therapeutic advances over the last four decades have led to a significant reduction of new cases of *Mycobacterium tuberculosis* (TB) and allowed nearly 600 sanatoria to close in America. The number of active cases of TB in 1984 decreased to nearly 25 percent of those reported in 1953. It appeared that the U.S. was headed toward a utopian state of total control or even elimination of TB. However, geopolitical, socioeconomical, and medical factors contributed to an increased TB incidence altering this lofty hope.

The emerging problem for the 1990s is the resurgence of tuberculosis (TB) and its rising mortality rate. More ominously, the number of difficult-to-treat patients and infections by multiple drug-resistant TB organisms is increasing. These problems are avoidable since TB has been treatable and preventable for nearly 40 years.

The introduction of isoniazid (INH) in 1952 and rifampin in 1971 provided the modern, combined intracellular and extracellular bactericidal anti-tuberculous therapy which covered all phases of a TB infection. Pyrazinamide (PZA) is bactericidal only in the intracellular phase, while the rarely used streptomycin and kanamycin are bactericidal in the extracellular environment. The remainder of the second-line medications are bacteriostatic and less therapeutically effective.

The development of organism resistance is an independent event for each TB drug occurring spontaneously at a rate of one in 10^5 to 10^6 bacilli. In the U.S., only seven percent of TB organisms are resistant to one or more of the drugs. Because large TB cavities involve approximately 10^8 to 10^9 organisms, statistically there are many drug-resistant mutants in a severe infection. Thus, there is a small therapeutic cushion for the spontaneous development of resistance to two TB drugs which has an occurrence probability of $10^6 \times 10^6$ or 10^{12}.

Even if these odds are beaten, the Darwinian drug-resistant organisms still can be controlled and eradicated with careful treatment monitoring. TB bacteria may be eliminated by alveolar macrophages before a lesion is produced. Despite optimum TB therapy and compliance, there is still a small chance of the development of a drug-resistant TB infection.

During the '60s and '70s, the U.S. experienced an influx of refugees from Asia, Africa, and Latin America. Because of casual INH use and poor medical care in their homeland, these high TB-prevalence peoples may have a 20 percent incidence of primary INH resistance TB. A low socio-economic status is associated with a higher-than-expected TB mortality. Crowded living conditions are a major etiology in TB communicability.

Since most of these new American citizens became urbanized poor, living at poverty levels in high-density housing units, multiple factors create a significant TB risk. In fact, 22 percent of the reported TB patients in 1988 were foreign born, with over half having arrived within the previous five years. Furthermore, many immigrants had language barriers which limited their access to quality health care.

Complicating effective TB control programs are the indigent and medically underserved, including the increasing numbers of individuals who are homeless or substance abusers or HIV positive. These individuals are generally less compliant with the treatments provided. Nationwide, more than 17 percent of patients do not take their TB medication continuously, and 25 percent do not complete the recommended course of therapy. With unmonitored stops and starts of TB therapy, progressively more resistant organisms develop. Patients will become lost to follow-up if their treatment is not carefully supervised.

Governmental economics compound the problem with diminished funding for surveillance and treatment of TB. With the demise of the sanatoria, there is a lack

"Governmental economics compound the problem with diminished funding for surveillance and treatment of TB."

Dr. Bell is president of the Pennsylvania Society for Pulmonary Medicine.

of designated facilities to care for the difficult-to-treat TB patients.

In 1950 a concerted effort by the pharmaceutical industry to develop effective anti-tuberculosis medication led to the release of INH within two years. Since concern for TB was diminishing until recently, there has been little aggressive pharmacological research to develop new TB chemotherapy. This research is felt by some not to be cost effective or a high priority.

Active TB may go undetected for years, because its symptomatic presentation may be subtle. Nearly five percent of the TB cases are first reported at time of death. Thus, the most important element in TB control is the detection with PPD testing of high-risk patients and treatment of infected patients with INH before significant disease emerges. With the declining incidence, there are new generations of physicians who have not diagnosed many TB cases. This unfamiliarity contributes to a decreased clinical suspicion and delayed detection, producing more advanced and contagious cases.

The changes in TB chemotherapy over the past decade have left many physicians less proficient in TB management. Treatment errors, such as adding only one new drug at a time to a failing treatment, could lead to the rapid development of a drug resistance.

With medical advances, critically ill and chronically moribund patients are surviving longer and developing immune impairment which produces more susceptible hosts. Stable granuloma may reactivate a TB infection by breaking down during a prolonged illness and releasing previously dormant TB organisms. Individuals who had inadequate TB therapy have experienced a yearly reactivation rate of one percent and represent about 90 percent of the newly active cases in the U.S.

The HIV epidemic is contributing to a dramatic increase in TB. The primary immune defect (T-cell lymphocyte depletion) in HIV infection makes the host unable to effectively combat a mycobacterium infection. Because of the large numbers of uncontrolled TB organisms, there is an increased infection risk for the caregivers who have prolonged close contact with the infected patient.

There is no natural immunity or consistently effective mass immunization against TB. This places the burden on the doctor to be vigilant for the presence of TB in a diverse group of high-risk patients. If a practitioner is unfamiliar with recent TB treatment guidelines, it is prudent to involve an experienced physician in the patient management. State Health Department offices can provide assistance with advice and possibly defray some or all treatment costs.

A recent report of 13 people dying of drug-resistant TB in New York may represent only a minor outbreak compared to potential problems in the future. Even though the index case emanated within the penal system, this occurrence is not an aberration. In Pennsylvania, difficult-to-treat patients with documented drug-resistant TB have infected others. Unfortunately, there have been problems in adequately caring for these patients, despite efforts of the American Lung Association of Pennsylvania and concerned physicians.

Physicians should review the latest TB surveillance and treatment recommendations, which have changed dramatically over the past 10 years. To facilitate this, county and hospital CME programs could present an update of TB as a timely topic. New bactericidal TB medications need to be developed to effectively treat drug-resistant infections. Patients must be effectively isolated during the communicable period of their disease until they are no longer a hazard to society. Furthermore, there must be increased cooperation with the Pennsylvania Department of Health to provide adequate care of potentially serious communicable cases. We cannot afford a return to the state of ineffective, but well-meaning, TB treatment prior to the introduction of INH.

New Guidance Expands Documentation Requirements

Donald E. Harrop, MD

Like the real estate salesman who evaluates property on the basis of three factors—location, location, and location—representatives of the Keystone Peer Review Organization (KePRO) preach *documentation, documentation, documentation.*

Legislation and directives from the Health Care Financing Administration (HCFA) have led to two situations in which proper documentation of patient records can save physicians time and effort required to research and draft a response to a question from the Keystone Peer Review Organization (KePRO).

In the first situation, the actual responsibility lies with the hospital. The legislative initiative known as the Federal Patient Self Determination Act became law on December 1, 1991. The Act requires hospitals during admission to ask patients, or their representatives, whether any advance directives are to be followed in the event of terminal illness, permanent unconciousness, or another situation in which the patient is unable to communicate his or her wishes. As you can well understand, *the existence of these advance directives could have an important bearing on KePRO review decisions in certain cases*.

Documentation of such directives can be extremely helpful to KePRO reviewers in understanding the level of care established for and provided to terminally ill or unconscious patients. Although the mandate of this law applies to hospitals, it behooves physicians to be sure that appropriate documentation of a patient's wishes, or those of his or her representatives, is contained in the medical record in order to avoid having to subsequently clarify the reasons for certain clinical decisions and actions.

In the second situation, a HCFA directive applies to Medicare patients and directly involves PROs. PROs must monitor the existence of patient consent forms, which are to be properly executed prior to the performance of invasive procedures. HCFA has directed PROs to verify the existence of these forms in cases involving such procedures. It is now a HCFA requirement *that the absence of either a form, or a reference indicating that a consent form had been completed, is considered a quality problem*.

In compliance with the HCFA directive, KePRO has included verification of appropriate documentation of patients' or their authorized representatives' consent forms for invasive procedures as part of the standard review process. Physicians should keep in mind that when the absence of properly executed consent forms is discovered as part of the review process, both the hospital and the operating physician must be held accountable for the quality problem.

Even without these additional requirements, there are clearly sufficient reasons for physicians to be aware of the contents of patient medical records and assure their completeness. Like the proverbial "apple a day" which "keeps the doctor away," proper and adequate documentation will usually obviate the need for KePRO to request additional information.

Dr. Harrop is president of the Keystone Peer Review Organization.

MEDICAL EDUCATION DAY

APRIL 2, 1992
8 a.m.-4:30 p.m.

The Problems of Water Pollution: An Overview

George Lumb, MD, MRCP, FRCPath
Anthony S. Clare, PhD, MS

Most potentially toxic chemicals eventually find their way into waterways. The most common source of this pollution is from the air. More than 50 percent of the chemical pollution of the Great Lakes is believed to come from airborne pollutants, and the main sources of this pollution are smokestacks (energy plants, nuclear or conventional; trash-to-steam incinerators; industrial factories, chemical and wood pulp) and road traffic exhaust. Chemicals may reach waterways directly through partially filtered or untreated sewage and waterway traffic, both industrial and pleasure; or they may be deposited into the soil and reach rivers and estuaries through leakage (PCBs on cables, landfills, and regular or low-level nuclear waste) or locally from fields (fertilizers, herbicides, phosphates, and other chemicals).

The variety and number of potentially toxic substances are enormous, including such obvious ones as heavy metals and their compounds (i.e. nickel, chromium, mercury, cadmium, copper, and lead); sulfur dioxide (acid rain); dioxins; and complex organics (fertilizers, herbicides, and phosphates).

It is unrealistic to suggest eliminating all these substances entirely. However, techniques for reducing their quantities to the lowest possible levels compatible with industrial requirements and human and ecological safety must continue to be improved.

The problem of waterway pollution poses dangers not only directly to people swimming or drinking the water, but also to the ecology, especially fish, crustaceans, water fowl, birds, trees, and plants. Pollution affects not only living organisms, but also, indirectly, humans who need fish and crustaceans for food. Of equal importance are industries such as fishing, housing and industrial development, and farming. Farmers are pressured to diminish the amount of fertilizers and herbicides they use to develop crops, but are not given any specific safety levels. This causes great frustration, particularly among large development farmers whose land is adjacent to rivers or estuaries. In the past few years, many such farmers have sold their lands to industrialists or developers, which increases the problem by introducing factories—particularly wood pulp and paper factories—and houses, hotels, and other potential sources of pollution.

Measuring chemical levels and other parameters such as water temperatures and pH levels, estimating fish kills, and studying gross abnormalities in fish and crustaceans under reasonably well-controlled conditions are valuable but not accurate enough to establish no-effect levels (NOELS) or safe levels for complex mixtures. Attempting to apply toxicity or carcinogenicity results obtained in mammals (mostly rats and mice) to fish and crustaceans is quite unsatisfactory. Most classic toxicology and carcinogenicity studies in rats and mice are being severely criticized in terms of their value of application to humans.[1]

It is generally recognized that alternate models to these tradional ones are urgently required. Many scientific problems must be overcome in order to provide meaningful information on danger levels of extraneous substances in water systems. However, regulatory anomalies exist with regard to water contamination control which confuse communications between authorities. To the scientist, the interrelationships between air, groundwork, rivers, estuaries, and oceans seem evident. Yet, regulatory groups control each of these parameters, and communication between them is minimal or in many cases non-existent. The observations and regulations provided by various authorities are sometimes even contradictory. Influence from political and in-

Dr. Lumb is a scholar in residence at the Department of Pathology, Integrated Toxicology Program, of Duke University, and professor of pathology emeritus at Hahnemann University. Dr. Clare is research assistant professor at Duke University Marine Laboratory.

dustrial needs plays a large part in the decision making, rather than accurate scientific safety levels.

Of particular importance are human and animal health problems related to the use of herbicides and pesticides, because of agricultural development. Information is conflicting, and procedural recommendations cannot be made without much more research.

The most frequently used herbicides worldwide are the phenoxyacetic acids and chlorophenols. The two most frequently discussed are 2,4-dichlorphenoxy-acetic acid (2,4-D) and 2,4,5-trichlorophenoxyacetic acid (2,4,5-T). The chemical 2,4-D is generally regarded as free from toxic or malignant potential for humans. A recent report from Canada confirms this view.[2]

The chemical 2,4,5-T contains a contaminant known as 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD), commonly called dioxin. It is both an air and water pollutant, produced by combustion from all sources. It emerges from all smokestacks, including those of electrical and nuclear power stations, as well as the so-called trash-to-steam incinerators. It is therefore deposited in groundwater and all water sources, from lakes and rivers to the ocean. It is considered by the Environmental Protection Agency (EPA) as the most serious air and water contaminant.[3]

Dioxin came into prominence when scientists realized that one of the components of the ill-famed "Agent Orange" used as a defoliant in the "Ranch Hand Exercise" during the Vietnamese War was 2,4,5-T with the associated dioxin as contaminant. Dioxin is important not only as a potential hazard but also as an example of the need for more adequate models for the study of ecologic (including human) dangers. It is extremely toxic in rats and lethal at extremely low doses, so that "maximum tolerated doses" (MTDs) cannot be achieved. The only reasonably meaningful carcinogenicity study showed malignant tumors at a dose of 0.1 ug/kg in rats. However, at that dose level, toxic manifestations were numerous,[4] making assessment of validity difficult.

Follow-up of workers exposed to high levels of contamination at the time of industrial explosions shows that human tolerance is quite high. One of the few well-documented lesions is an unpleasant chronic dermatitis known as chloracne.[5,6] The toxicology of TCDD (dioxin) has been reviewed in detail elsewhere.[7]

Experimental studies of agricultural workers exposed to herbicides and pesticides over long periods have shown evidence of an increased incidence of Non-Hodgkin's lymphoma (NHL).[8,9,10,11] However, it is very difficult to assign a specific chemical as the causative toxic substance, as all of the workers were exposed to a number of different chemicals, including, in some cases, chlordane. (It should be noted that chlordane and 2,4,5-T are no longer marketed in the United States.) A recent, excellent, and long-term follow-up review of cancer mortality among workers exposed to dioxin (TCDD) shows only equivocal relationship.[12] An editorial on the same subject reaches similar conclusions.[13]

Dumping in oceans and estuaries

Using the oceans as depositories has been considered by many scientists as a reasonable solution for waste disposal, with the idea that dilution would reduce the impact of pollutants below a dangerous level.[14,15,16,17]

In recent years, the volume of garbage dumped, overfishing, oil spillage, and leaks from underwater drilling have shown clearly that this natural resistance can be overcome. Twelve miles offshore into New York Bight, which was a "permitted area" for dumping, is now heavily polluted, and a new area was identified 106 miles offshore in 1987.[18] This is distant from coastal fisheries and recreational areas, but water and sediment dynamics must be studied in much greater detail before giving a blessing to this new area. The alarming appearance of garbage along the New Jersey shoreline further shows that all is not well.

The problems in estuaries are similar to those in oceans. In such areas, industrial facilities, farmland, housing developments, and marinas are the principal pollution sources. The dangers are increased by the fact that many marine creatures enter estuaries to join the natural inhabitants during reproduction periods. The study of these matters is in its infancy, and research programs must be set up to establish mod-

els to deal with ecologic toxicology for its own sake and for its impact on humans.

The alternative to dumping waste material in the oceans is to develop satisfactory methods of disposal on land. Household refuse and material from industrial sites and other areas contain a large variety of waste products. Many of these, and in particular human and animal excreta, could be transformed into valuable manure and fertilizer. The problems of handling waste material can, to a large extent, be diminished by careful separation of components and recognition of the feasibility and value of recycling.

To make such a system successful, it is essential that waste be handled carefully at its source, whether household trash, sewage, or trash from large institutions, particularly hospitals and laboratories. Waste must be separated into obvious categories such as paper, bottles, and known toxic substances, especially by certain factories, hospitals, and laboratories. Materials must be clearly labeled for the collection agencies.

Once this separation has been achieved, the recycling methodologies are well understood. It is encouraging to see this method of handling waste products beginning in many parts of the country. As people become accustomed to doing relatively simple separation procedures, the problems of pollution will be enormously influenced. However, this done alone can never entirely cure the problem, as some of its advocates maintain, anymore than it is a useless procedure, as the advocates of other methods of dealing with waste material such as "trash-to-steam" incinerators, would recommend.[19]

Test procedures

State-of-the-art toxicity testing of chemicals that either directly or indirectly impact humans relies to a large extent on the use of animals. These have, as already stated, been applied to the ecology of rivers and estuaries somewhat unsuccessfully. In recent years there have been attempts to develop alternative toxicity testing procedures. Most of these new techniques permit screening studies to be performed and, as a consequence, contribute to a reduction in the number of animals in use. The new techniques and those under development are to a large extent variations of the methodology of *in vitro* toxicity testing. Exceptions are the newer microbial toxicity assays where the whole organism is used.[20]

In vitro toxicity testing affords the advantage of relatively low cost coupled to speed, but suffers the drawback of difficulty in extrapolating to effects in the complex whole organism. A new model must be representative of the ecosystem and must provide dose levels of the toxic effects, in addition to NOELS for substances which can be tolerated. If a NOEL cannot be established, such a substance or chemical must be prohibited from the ecosystem.

Tumor formation, mostly liver malignancies, have been documented in a number of fish (winter flounder, rainbow trout) which have been exposed to pollutants. These have been suggested as biomarkers. The disadvantages of using tumor formation as a biomarker are that only one parameter of toxicity is studied, experiments are lengthy, and most of the problems of interpretation already encountered with mammalian tumor models can be anticipated. A more general model type would, therefore, be an advantage.

Researchers at Duke University Marine Laboratories are investigating an invertebrate model, using the ability for limb regeneration following autotomy in the megalope stage of the juvenile mud crab (Rhithropanopeus harrisii). The reasons for this are several-fold: 1) the mud crab is a common estuarine organism and has a wide distribution; 2) the biology of R. harrisii and related crabs has been studied extensively; 3) the adult crabs are easily maintained in the laboratory, and optimal conditions for complete larval development have been established; 4) although a seasonal breeder in the field, reproduction and development can be manipulated in the laboratory so that animals are available throughout the year; 5) they can be maintained in artificial sea water, making them available to land-locked research facilities; 6) tissues/organs are readily accessible, and in the larval stages, observations of internal organs can be made through the transparent exoskeleton; 7) many of the organs have counterparts in vertebrates in terms of structure and/or function (for example, the midgut gland is related to the liver, the gills to the lung, and the central ganglia to the brain); 8) the small size, especially of the larval and juvenile forms, enables large numbers of known parentage to be maintained (thousands may be kept in a small environmental cabinet) allowing critical statistical analyses; 9) the cost is low; and 10) development is rapid, especially of the larval stages (development of the egg to the adult takes weeks rather than the months/years for vertebrates; thus, complete life-cycle and multi-generation studies are practicable).

A sublethal bioassay has been developed.[21] The first step in the procedure is

to induce megalopae to autotomize a cheliped. Autotomy is a defensive mechanism whereby an appendage is shed, with little or no loss of body fluid, and occurs invariably in response to seizure by a predator. Subsequent regeneration of the limb is then monitored in the presence of toxicants at the gross morphological level. Thus far, the bioassay has been used to test a number of pesticides and a herbicide. Certain chemicals, notably carbamate insecticides, have been found to be teratogenic in this assay, in that they either inhibit regeneration, or the regenerate that forms is abnormal in terms of size and/or morphology. It may be of significance that carbamate insecticides are also teratogenic to vertebrates. In fact, there is a general correlation between chemicals that are teratogenic to aquatic animals and those that are teratogenic to humans.[22] Carbamates and organophosphate insecticides are teratogenic to humans. Carbamates and organophosphate insecticides are teratogenic in vertebrates by virtue of their ability to lower levels of NAD. ATP and energy levels of cells are also reduced. Administration of NAD counteracts the teratogenic effects.[23]

Possible mechanisms of teratogenesis in crabs include abnormal cell or tissue differentiation, inadequate cell migration, improper cellular communication, and disrupted metabolism. As a first step in resolving this issue, we have studied the normal process of cheliped regeneration at the ultrastructual level.[24] We propose to continue further studies with tissue culture and immunohistochemical procedures with certain cells and structures appearing in the normal regenerative process. At the same time, we will proceed to toxicologic assays to establish dose-effect levels on the regenerative process and to investigate NOELS which can be translated to *in vivo* experiments in the ecosystem.

The mud crab regeneration assay is perceived as being just one component of a potential battery of such assays. The assays, which ideally should be disparate in their sensitivity of different effects of pollutants, may be used as *in situ* assays.

The current state-of-the-art techniques for the placement of such assays rely to a large extent on intuition. For example, in the placement of assays at a site of sediment contamination, the data available will invariably have been obtained from chemical analyses of sediment cores. But what is the rationale behind the choice of core locations?

A common assumption (which may be reasonable in some instances) is that sediment contamination is associated with point sources, and the design of core sampling sites reflects an assumed gradient of decreasing contamination away from the point source. This design is clearly unsatisfactory in a dynamic situation, such as an estuary, where sediment transport is an

YOCON®
YOHIMBINE HCl

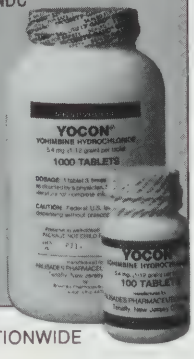
Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatic. It may have activity as an aphrodisiac.



Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

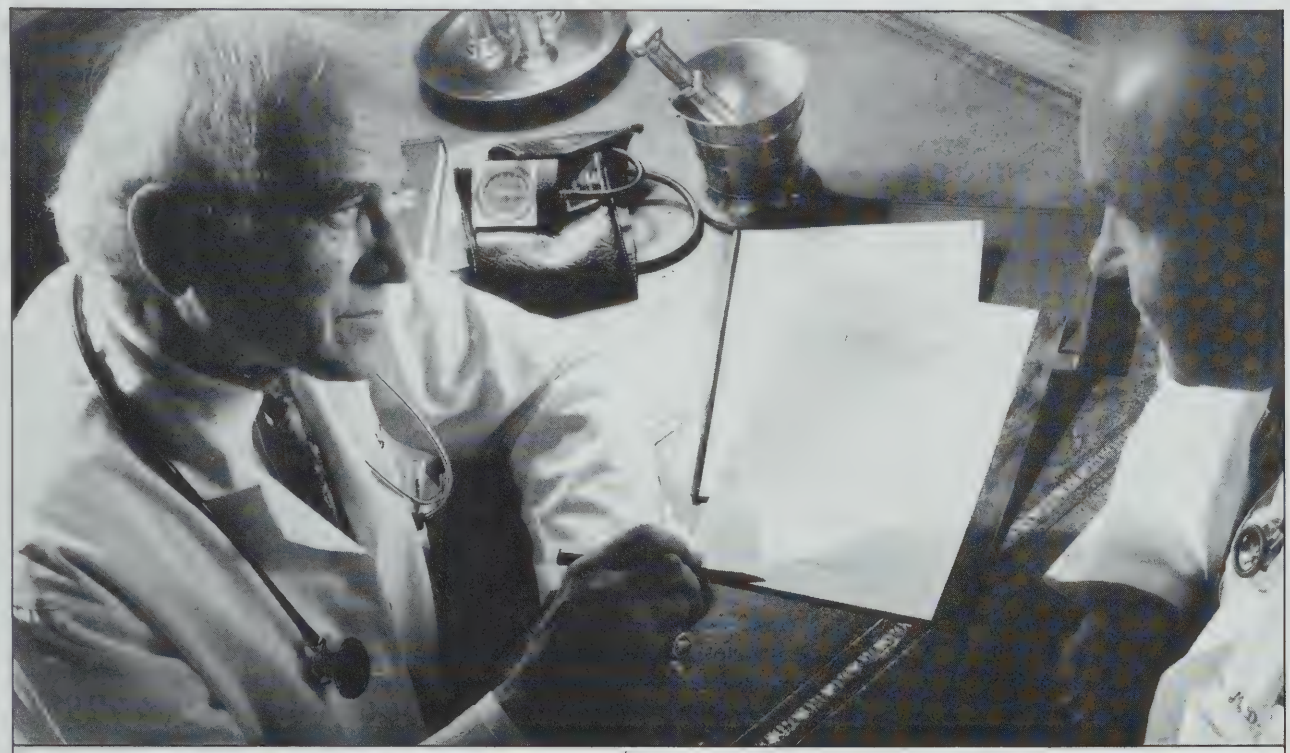
obvious influencing factor. Another factor to be considered is that sediment toxicity displays considerable spatial variability. This factor is of importance when biological effects are to be considered. Sediment that displays toxicity at one point may not be toxic at a point only a few meters away. The poor resolution obtained from a typical core sampling survey is thus a limiting factor in siting *in situ* biological assays.



In collaboration with colleagues at University of Georgia and East Carolina University, researchers at Duke have evaluated a technology developed for mineral exploration on the continental shelf.[25] We have tested one component, the "gamma sled," of a two-component system. The gamma sled is essentially a gamma detector housed in a towable sled. The signal from four NaI detectors is amplified and fed on board ship via a coaxial cable. Under field conditions, this technology has proven applicable to estuarine sediment surveys, providing real-time data on sediment contaminants.[26] The researchers are also evaluating biological assays that are capable of providing rapid data on sediment toxicity, the aim being to fine-tune the placement of the batteries of biological assays. Taken together, it is believed that this technology has the potential to revolutionize the way that estuarine sediment surveys are performed.

Most scientific investigations about the complex problem of water pollution are in the developmental stage. Until these are established, separating identified toxicants and recycling effectively can help diminish these serious problems for today.

UPDATE YOUR MEDICINE

Update Your Medicine Eighteenth Annual practical CME Course with Hands-on Workshops. Sponsored by the New York City Cornell University Medical College and the Association of Practicing Physicians of the New York Hospital. Category I credit. Information: Lila A. Wallis, MD, Director, and Debora A. Laan, Coordinator/445 East 69th Street, Olin 328, New York, NY 10021. Telephone: 212-746-4752.

JUNE 8-12TH, 1992

"When you compare malpractice insurers, there is no comparison."

"What do you look for first? Rates, naturally. So that was the first item that attracted me to Physicians Insurance Company. They're stable, well run—and their rates have *decreased continuously* since 1986; while at the same time they have continued to broaden their coverage.

Additionally, the Company's performance seems to have forced other insurers to lower their rates.

Still, no one matches Physicians Insurance Company, on rates *or* support;

- they won't settle a case without your consent,
- when they fight your case, it's with confidence and intelligence, as shown by their 98% success rate at trial,
- you receive 40 hours of *free* legal representation for disciplinary proceedings, including staff privilege disputes and service on peer review committees,
- you receive legal counsel if you are called for a deposition in a medical malpractice case in which you are not named in the suit.

And Physicians Insurance Company doesn't automatically increase your rate for individual loss experience, or for corporate or partnership coverage.

I had good reasons for originally changing to Physicians Insurance Company. Those reasons are even truer today — the rates, the service, the support. It's an easy choice."

Plymouth Meeting, PA 19462

"We've tried other or exist—without

"The business of medicine has gotten so complicated, there's no way we could have continued to manage the practice without the right kind of automation. Now, with our Keystone system, the staff can respond to all our requests — patient requests, too — in no time flat. And KMS is what you'd call user friendly... everyone's happy with it." **Charles W. Kinzer, M.D., P.A.**

The KMS practice management system enables you to streamline office operations quickly and realiz dramatic increases in efficiency. Time spent shuffling papers can be devoted to patient care — and growing your practice.

"We're using their Intelligent Payment Posting module. It's saved us 16% in staff hours at one office, 25% at another. That part of the reason we selected Keystone: efficiency. We also chose them for their flexibility, support and long-term commitment. **Benjamin L. Levin**

systems and realize we can't grow— our computer from Keystone."

Carol Matthews, President
Lebanon Medical Management, Inc.
Lebanon, PA

"We've been with Keystone for over eight years. They've always provided us with options as we've grown and done whatever it takes to keep the system up and running. Their support is worth every penny." **Carol Matthews**

Keystone has designed a system that allows you to start with the basics (Accounts Receivable, Billing, Practice Analysis and Electronic Claims) and add on other capabilities as you need them. KMS gives you a total picture of your involvement with the patient — and provides you with all pertinent information easily and instantaneously. Among the KMS modules receiving praise from the industry and our clients are Patient Scheduling, Intelligent Payment Posting, and Credit and Collections.

"We were searching for a company sophisticated enough to support the growing demands of our company, and we found that in Keystone. The KMS Credit and Collections module allowed us to convert from a manual collections system that took forever to a computerized system that saves us 25% in manhours — without having to change our collections style one bit." **Cindy Groux**

"Their system ties all of our offices together, letting us keep track of everything that goes on — every facet of the practice — electronically. We feel secure that the business end is running expertly and efficiently. When I think how inaccurate we might have been before KMS, I know we couldn't survive now without it." **Paul J. Killian, M.D.**

New Trustees Discuss Health Care Reform

Maria T. Montesano
Assistant Managing Editor

This second of three articles profiling the State Society's newly elected trustees features James R. Regan, MD, Interspecialty Section, and William R. Beltz, MD, Seventh District.

The upcoming presidential campaign will assuredly interest physicians across the nation as candidates present their views about national health care reform. This series of interviews with newly elected State Society trustees has provided a similar forum for these physicians' views on not only the reform issue, but also many others facing medicine today.

The professional

James R. Regan, MD, has been involved in organized medicine for more than 22 years, first through the Pennsylvania Society of Internal Medicine and then through the Pennsylvania Medical Society. As the newest trustee representing the State Society's Interspecialty Section, he hopes to guide the Society into added public health efforts and increased professionalism.

Dr. Regan

Dr. Regan graduated in 1956 from Jefferson Medical College of Thomas Jefferson University and completed his internship at Geisinger Medical Center. He then served four years in the U.S. Air Force in Oklahoma before returning to Jefferson for four years of resident training. A specialist in internal medicine, he has been in private practice in Bethlehem since 1964.

"I enjoyed my time at Jefferson, especially the last two years in the academic training program. I had a lot of fun," he says. He speaks fondly of his early years in each new career area he pursued: "The first year of my experience in the Air Force was a nice change. I had never had any outpatient experience, and that was an interesting challenge...and I particularly enjoyed my first few years in private practice...I saw interesting patients, they were challenging, and I enjoyed it immensely." He admits that medicine has now "lost a little of its lustre" for him, but says he still enjoys being a physician.

Dr. Regan was initially reluctant to become involved in organized medicine, but was impressed with the orderly proceedings and attendance of prominent physicians at his first House of Delegates meeting. He gradually became more involved, by serving as a member of Society committees and of the Interspecialty Section for several years, eventually as chairman. Today, he describes the development of professional relationships through organized medicine as a "personally enriching experience" and the knowledge he acquired as "educational and informative."

He pursued the trustee position because "there are some things I would like to see done for the Society that I thought I might be able to achieve...my thrust will be to try to regain some of the lost professionalism and respect that physicians had many years ago." To achieve that would help solve the most important issue facing physicians today, he says: the intrusiveness of outside parties upon the practice of medicine. "I practice a good deal of geriatric medicine, and I now am directed by federal legislation, through OBRA, very specifically about how I should treat patients in nursing homes concerning certain drugs. I consider that a terrible intrusion, and I view it as something that is just beginning."

As chairman of the State Society Board of Trustee's Committee on Long-Range Assessment, Dr. Regan is also closely involved with defining Society policy on health care reform. "The committee is in

the process of formulating those thoughts...I don't have concise answers," he says, "but I can tell you that reform *is* essential...We may have common payors, we may have managed care, we may have many new styles of practice, but what we must not have is a government-administered health care system." He adds, "The government is a player and should be...but it must not be *the* player."

The emigrant

William R. Beltz, MD, the Society's new Seventh District Trustee, is an Illinois native who chose to live in the Keystone State "on one of those bright, clear days in mid-October when red and gold leaves were everywhere." Now a resident of Pennsylvania for 12 years, he is a general surgeon who also performs vascular surgery. The ABC Wide World of Sports slogan, "the thrill of victory, the agony of defeat," invokes images of the practice of medicine in Dr. Beltz's mind: while there are "tough problems" in medicine, he feels a sense of satisfaction from his work.

Dr. Beltz

Dr. Beltz graduated from the University of Missouri and decided to go to medical school "fairly late" in his college career. He received his medical degree from the University of Illinois in 1970 and completed his residency at Duke University Medical Center in Durham, North Carolina. He then served for three years on the faculty at The Milton S. Hershey Medical Center.

Dr. Beltz joined the State Society in 1978 but admits that he was "never really involved in organized medicine until about 1983 or 1984, when I became a delegate to the House." He enjoyed that involvement so much that he became a member of two councils: those on medical economics and governmental relations. "Several people encouraged me to run for the trustee position," he says, and he did so believing organized medicine "is the only place where the voice of a physician, practicing day-to-day in a community, can be heard."

"I think the most important issue facing physicians today is the loss of autonomy in making clinical decisions about their patients," Dr. Beltz says. He cites pre-admission certification and upcoming practice parameters as examples of changes affecting loss of autonomy, and he urges organized medicine to become involved in developing practice parameters: "Whether they will be intelligently done—or how intelligently done—remains to be seen."

During this election year, heated debate about national health care has already begun. When asked to comment, Dr. Beltz says: "I don't know the answer to the problem. I *do know* that when you talk to a family of three—all healthy and he's out of work—and to continue their health insurance, they have to pay $425 a month, that's probably not acceptable."

He hopes policy makers don't do something "hasty" without working through the issue: "I think it's going to take a lot longer than people expect to hammer out the issue, because people are just now seriously considering all the options rather than just saying they are *for* national health insurance. That's not enough."

In the future, Dr. Beltz would "like to see the Society develop into the primary source for accurate health care information in the state...the source that everybody goes to." Society actions are instrumental to the future of medicine in Pennsylvania, he says: "What we do in the next five years will plot the course for the next 15."

"What we do in the next five years will plot the course for the next 15."

ONLY ONE H_2-ANTAGONIST HEALS REFLUX ESOPHAGITIS AT DUODENAL ULCER DOSAGE. ONLY ONE.

Of all the H_2-receptor antagonists, only Axid heals and relieves reflux esophagitis at its standard duodenal ulcer dosage. Axid, **150** mg b.i.d., relieves heartburn in **86%** of patients after one day and **93%** after one week.[1]

AXID®
nizatidine
150 mg b.i.d.

ACID TESTED. PATIENT PROVEN.

1. Data on file, Lilly Research Laboratories. *See accompanying page for prescribing information.* © 1991, ELI LILLY AND COMPANY NZ-2947-B-249304

AXID®

nizatidine capsules

Brief Summary. Consult the package insert for complete prescribing information.

Indications and Usage: 1. *Active duodenal ulcer*—for up to 8 weeks of treatment at a dosage of 300 mg h.s. or 150 mg b.i.d. Most patients heal within 4 weeks.

2. *Maintenance therapy*—for healed duodenal ulcer patients at a dosage of 150 mg h.s. at bedtime. The consequences of therapy with Axid for longer than 1 year are not known.

3. *Gastroesophageal reflux disease (GERD)*—for up to 12 weeks of treatment of endoscopically diagnosed esophagitis, including erosive and ulcerative esophagitis, and associated heartburn at a dosage of 150 mg b.i.d.

Contraindication: Known hypersensitivity to the drug. Because cross sensitivity in this class of compounds has been observed, H_2-receptor antagonists, including Axid, should not be administered to patients with a history of hypersensitivity to other H_2-receptor antagonists.

Precautions: *General*—1. Symptomatic response to nizatidine therapy does not preclude the presence of gastric malignancy.

2. Dosage should be reduced in patients with moderate to severe renal insufficiency.

3. In patients with normal renal function and uncomplicated hepatic dysfunction, the disposition of nizatidine is similar to that in normal subjects.

Laboratory Tests—False-positive tests for urobilinogen with Multistix® may occur during therapy.

Drug Interactions—No interactions have been observed with theophylline, chlordiazepoxide, lorazepam, lidocaine, phenytoin, and warfarin. Axid does not inhibit the cytochrome P-450 enzyme system; therefore, drug interactions mediated by inhibition of hepatic metabolism are not expected to occur. In patients given very high doses (3,900 mg) of aspirin daily, increased serum salicylate levels were seen when nizatidine, 150 mg b.i.d., was administered concurrently.

Carcinogenesis, Mutagenesis, Impairment of Fertility—A 2-year oral carcinogenicity study in rats with doses as high as 500 mg/kg/day (about 80 times the recommended daily therapeutic dose) showed no evidence of a carcinogenic effect. There was a dose-related increase in the density of enterochromaffin-like (ECL) cells in the gastric oxyntic mucosa. In a 2-year study in mice, there was no evidence of a carcinogenic effect in male mice, although hyperplastic nodules of the liver were increased in the high-dose males as compared with placebo. Female mice given the high dose of Axid (2,000 mg/kg/day, about 330 times the human dose) showed marginally statistically significant increases in hepatic carcinoma and hepatic nodular hyperplasia with no numerical increase seen in any of the other dose groups.The rate of hepatic carcinoma in the high-dose animals was within the historical control limits seen for the strain of mice used. The female mice were given a dose larger than the maximum tolerated dose, as indicated by excessive (30%) weight decrement as compared with concurrent controls and evidence of mild liver injury (transaminase elevations). The occurrence of a marginal finding at high dose only in animals given an excessive and somewhat hepatotoxic dose, with no evidence of a carcinogenic effect in rats, male mice, and female mice (given up to 360 mg/kg/day, about 60 times the human dose), and a negative mutagenicity battery are not considered evidence of a carcinogenic potential for Axid.

Axid was not mutagenic in a battery of tests performed to evaluate its potential genetic toxicity, including bacterial mutation tests, unscheduled DNA synthesis, sister chromatid exchange, mouse lymphoma assay, chromosome aberration tests, and a micronucleus test.

In a 2-generation, perinatal and postnatal fertility study in rats, doses of nizatidine up to 650 mg/kg/day produced no adverse effects on the reproductive performance of parental animals or their progeny.

Pregnancy—Teratogenic Effects—Pregnancy Category C—Oral reproduction studies in rats at doses up to 300 times the human dose and in Dutch Belted rabbits at doses up to 55 times the human dose revealed no evidence of impaired fertility or teratogenic effect; but, at a dose equivalent to 300 times the human dose, treated rabbits had abortions, decreased number of live fetuses, and depressed fetal weights. On intravenous administration to pregnant New Zealand White rabbits, nizatidine at 20 mg/kg produced cardiac enlargement, coarctation of the aortic arch, and cutaneous edema in 1 fetus, and at 50 mg/kg, it produced ventricular anomaly, distended abdomen, spina bifida, hydrocephaly, and enlarged heart in 1 fetus. There are, however, no adequate and well-controlled studies in pregnant women. It is also not known whether nizatidine can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity. Nizatidine should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus.

Nursing Mothers—Studies in lactating women have shown that 0.1% of an oral dose is secreted in human milk in proportion to plasma concentrations. Because of growth depression in pups reared by treated lactating rats, a decision should be made whether to discontinue nursing or the drug, taking into account the importance of the drug to the mother.

Pediatric Use—Safety and effectiveness in children have not been established.

Use in Elderly Patients—Healing rates in elderly patients were similar to those in younger age groups as were the rates of adverse events and laboratory test abnormalities. Age alone may not be an important factor in the disposition of nizatidine. Elderly patients may have reduced renal function.

Adverse Reactions: Worldwide, controlled clinical trials included over 6,000 patients given nizatidine in studies of varying durations. Placebo-controlled trials in the United States and Canada included over 2,600 patients given nizatidine and over 1,700 given placebo. Among the adverse events in these placebo-controlled trials, only anemia (0.2% vs 0%) and urticaria (0.5% vs 0.1%) were significantly more common in the nizatidine group. Of the adverse events that occurred at a frequency of 1% or more, there was no statistically significant difference between Axid and placebo in the incidence of any of these events (see package insert for complete information).

A variety of less common events were also reported; it was not possible to determine whether these were caused by nizatidine.

Hepatic—Hepatocellular injury (elevated liver enzyme tests or alkaline phosphatase) possibly or probably related to nizatidine occurred in some patients. In some cases, there was marked elevation (>500 IU/L) in SGOT or SGPT and, in a single instance, SGPT was >2,000 IU/L. The incidence of elevated liver enzymes overall and elevations of up to 3 times the upper limit of normal, however, did not significantly differ from that in placebo patients. All abnormalities were reversible after discontinuation of Axid. Since market introduction, hepatitis and jaundice have been reported. Rare cases of cholestatic or mixed hepatocellular and cholestatic injury with jaundice have been reported with reversal of the abnormalities after discontinuation of Axid.

Cardiovascular—In clinical pharmacology studies, short episodes of asymptomatic ventricular tachycardia occurred in 2 individuals administered Axid and in 3 untreated subjects.

CNS—Rare cases of reversible mental confusion have been reported.

Endocrine—Clinical pharmacology studies and controlled clinical trials showed no evidence of anti-androgenic activity due to nizatidine. Impotence and decreased libido were reported with similar frequency by patients on nizatidine and those on placebo. Gynecomastia has been reported rarely.

Hematologic—Anemia was reported significantly more frequently in nizatidine than in placebo-treated patients. Fatal thrombocytopenia was reported in a patient treated with nizatidine and another H_2-receptor antagonist. This patient had previously experienced thrombocytopenia while taking other drugs. Rare cases of thrombocytopenic purpura have been reported.

Integumental—Urticaria was reported significantly more frequently in nizatidine- than in placebo-treated patients. Rash and exfoliative dermatitis were also reported.

Hypersensitivity—As with other H_2-receptor antagonists, rare cases of anaphylaxis following nizatidine administration have been reported. Rare episodes of hypersensitivity reactions (eg, bronchospasm, laryngeal edema, rash, and eosinophilia) have been reported.

Other—Hyperuricemia unassociated with gout or nephrolithiasis was reported. Eosinophilia, fever, and nausea related to nizatidine have been reported.

Overdosage: Overdoses of Axid have been reported rarely. If overdosage occurs, activated charcoal, emesis, or lavage should be considered along with clinical monitoring and supportive therapy. The ability of hemodialysis to remove nizatidine from the body has not been conclusively demonstrated; however, due to its large volume of distribution, nizatidine is not expected to be efficiently removed from the body by this method.

26th Annual Main Line Conference

Thursday, Friday and Saturday

April 9, 10 and 11, 1992

THE AMERICAN COLLEGE
BRYN MAWR, PA

Sponsored by
THE BRYN MAWR HOSPITAL
In affiliation with Jefferson Medical College

GUEST SPEAKERS

Donald O. Castell, MD
Professor of Medicine and
Director, Division of
Gastroenterology and
Hepatology
Jefferson Medical College

Suzanne D. Fields, MD
Chief, Geriatric Section
St. Vincent's Hospital
New York

H. Howard Goldstein, MD
Lecturer in Medicine
Harvard Medical School

Marc C. Hockberg, MD
Professor of Medicine
Epidemiology and
Preventative Medicine
University of Maryland
School of Medicine

Lawrence J. Mellon, MD
Clinical Assistant Professor
of Preventative Medicine
(Adjunct)
Jefferson Medical College

Joel L. Schwartz, MD
Assistant Medical Director
and Director of Child and
Adolescent Services
Northwestern Institute

PROGRAM INCLUDES:

- Arthritis Management
- Colon Cancer
- Diabetes
- Environmental Hazards
- Gastroenterology
- Geriatric Management
- Inflammatory and Infectious Diseases
- Neurologic Problems
- Prostatic Disease
- Skin Lesions
- Surgical Office Procedures
- Syncope
- Plus 24 Concurrent Clinics

REGISTRATION FEE: $275.00
(includes 3 luncheons and 1 dinner with cocktails)

FOR INFORMATION WRITE:
Harold J. Robinson, MD
Director, Main Line Conference
The Bryn Mawr Hospital
Bryn Mawr, PA 19010

ACCREDITATION:

AMA
As an organization accredited by the Accreditation Council for Medical Education (ACCME) for its continuing medical education program, Jefferson Medical College designates this activity as meeting the criteria for 21 credit hours in Category 1 of the Physician's Recognition Award of the American Medical Association.

AAFP
This program has been reviewed and is acceptable for 21 Prescribed hours by the American Academy of Family Physicians.

GOVERNOR PROPOSES $9.9 BILLION DPW BUDGET

Governor Robert Casey has proposed a $9.9 billion budget for fiscal year 1992-93 for the Department of Public Welfare (DPW). State funds total $4.8 billion, a nearly five percent increase from 1991-92; and $5.1 billion comes from federal and augmentation dollars.

Medical Assistance

Total state funding for Medical Assistance (MA) programs will increase by 11 percent to a total of $2.1 billion in 1992-93, according to the proposed budget. DPW is expecting a 6.8 percent growth in the number of individuals qualifying for and using MA services.

Funding is also included to provide for the outpatient fee increases approved during the current fiscal year. Approximately $19.8 million in state dollars is budgeted for new programs, including non-hospital drug and alcohol services, special drugs for people with AIDS or schizophrenia, and early childhood immunizations.

Several cost-cutting measures have been proposed to preserve the MA program "without making wholesale cuts in services," according to DPW. These include:

- providing basic health coverage for the general assistance population;
- developing additional capitation programs similar to the HealthPass program used in Philadelphia;
- controlling allowable nursing home costs;
- employing better management techniques for existing programs; and
- expanding the prior authorization requirement for various medical techniques.

DPW anticipates that such cost-containment measures will save the state more than $87.7 million in the coming year.

Healthy Beginnings

The Department's proposed budget includes $7.2 million in state funds to expand eligibility for the Healthy Beginnings program, initiated in 1988. The program provides prenatal and preventative health care to low-income pregnant women and their children who otherwise would have no health insurance. DPW says an expansion will extend benefits to an additional 12,600 pregnant women and 12,100 infants in 1992-93.

DOH BUDGET INCLUDES MAJOR PROGRAM REVISIONS

The governor has included several major program revisions in his 1992-93 proposed budget for the Department of Health (DOH). The revisions strive to improve access to care problems and funding for HIV/AIDS initiatives.

Five million dollars has been budgeted through a Family Practice Incentive program to aid in access to care problems created by a decline in family practice physicians. According to DOH, the proposed program "is designed to encourage medical schools to train family practice physicians and to offer students training rotations in underserved areas." Under the program, state funds will be made available to medical schools to develop and promote programs to meet that objective.

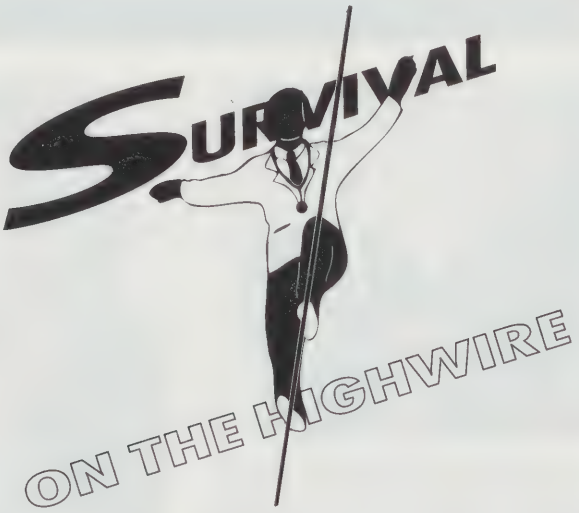
Also, more than $1 million has been suggested to expand HIV/AIDS services. The governor proposes $925,000 in state monies and $100,000 in federal monies to fund DOH's four-part program revision. The monies would be dispersed as follows: $360,000 for foundation building; $400,000 for CD4 (white blood cell) testing at selected sites; $165,000 for training and clinical help for health care workers; and $100,000 for HIV prevention and early intervention services for women and children.

In an effort to warn against linking the state workers' compensation system to the federal Medicare system, the State Society held a press conference on January 28 in the Capitol in Harrisburg. Society President Robert N. Moyers, MD (at podium), called upon the Senate to reject the Medicare tie-in and consider an alternative developed by the Society in cooperation with the Hospital Association of Pennsylvania.

CHILDREN'S INSURANCE PROGRAM PROPOSED

During a February 5 joint session of the state Senate and House of Representatives, Governor Robert Casey proposed the creation of a comprehensive health insurance program for children up to age 6. Coverage would include preventive care and immunizations, normal doctor visits, in-patient hospitalization, prescription drugs, and dental and vision coverage.

Private, non-profit insurance companies would administer the program, to be overseen by the state Insurance Dpartment. Funding would come from recently imposed taxes on cigarettes, as well as from premiums imposed on families according to a sliding fee scale.



FIRST PHASE OF ADA IN EFFECT

The first phase of the Americans with Disabilities Act (ADA) went into effect in January 1992. This phase of the act, which was written into law in July 1990, requires that places open to the public provide access to facilities for disabled individuals, including people in wheelchairs and on crutches, as well as those with hearing, visual, and mental impairments. It also sets forth guidelines for public transit and vehicle accessibility.

For medical practices, the ADA requires physicians to offer disabled patients access to facilities and services equal to that of non-disabled patients. Later phases will mandate employment provisions, including non-discrimination of the disabled in hiring and accomodation of disabled workers.

For detailed information about ADA accessibility provisions, see "The Disabilities Act: How to Comply" in the December 1991 issue of PENNSYLVANIA MEDICINE; more specific information about employment provisions will be included in a future issue of the magazine. Direct any questions to: Susan M. Weber, Esq., State Society assistant general counsel, 1-800-228-7823.

Quality, cost, access — a delicate balance.

Pennsylvania Medical Society

Leadership Conference

April 14-15, 1992
Hershey Lodge and Convention Center, Hershey

- **Eleanor Clift**, *Newsweek* correspondent, and **Fred Barnes**, *The New Republic* writer, will present a point-counterpoint discussion on "Health Care: Election '92."
- **Robert W. McAfee, MD**, vice chairman of the AMA Board of Trustees, will speak on "Practice Parameters."
- **Alice Gosfield, Esq.**, health care law specialist from Philadelphia, will moderate "Can Quality Medicine Survive in a Managed Care Environment?" Panelists will include:
  - **Neil Schlackman, MD**, medical director, U.S. Healthcare, Blue Bell;
  - **Michael A. Hatwick, MD**, practicing physician, Annandale, Virginia; and
  - **David B. Nash, MD**, director of health policy and clinical outcomes at Thomas Jefferson University Hospital and Jefferson Medical College, Philadelphia.
- **Lucian Leape, MD**, lecturer at the Harvard School of Public Health and Tufts University School of Medicine, will speak on "Liability Reform."
- **Feature Workshop**

  Diversity: A Workshop for the Future Leaders of Medicine

  A panel of two young physicians and two experienced leaders of organized medicine will discuss the barriers facing specially challenged physician groups, such as women, blacks, and IMGs.
- **Other workshop topics will include:**
  - Practical Political Involvement for Physicians
  - Coping with KePRO
  - Stress Management
  - Presentation Skills and Image Building
  - The Future of Health Care

Fred Barnes

Eleanor Clift

Alice Gosfield, Esq.

For more information, call 1-800-228-7823 — ask for Leadership Conference Registration.

Deadline for Registration: March 20, 1992

The Pennsylvania Medical Society is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians.

The Pennsylvania Medical Society designates this continuing medical education activity for 7.5 credit hours in Category 1 of the Physicians Recognition Award of the American Medical Association and the Pennsylvania Medical Society membership requirement.

Martin A. Murcek, MD (l), State Society vice president, received a special plaque from the Society's Interspecialty Section in recognition of his years of service and dedication to interspecialty activities. Thomas H. Malin, MD (r), section chairman, in presenting the plaque said, "Dr. Murcek, in his role as the Society's first Interspecialty Trustee, displayed exemplary leadership...and extraordinarily represented his interspecialty constituents."

Milton J. Klein, DO, vice president of Western Pennsylvania Rehabilitation Association of Sewickley, was awarded membership in the American College of Physician Executives.

A. Julio Martinez, MD, professor of neuropathology at the University of Pittsburgh School of Medicine, was chosen by the magazine, *Hispanic Business*, as one of the 100 most influential Hispanic-Americans in the United States.

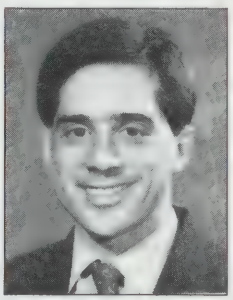
Jay B. Fisher, MD, general vascular surgeon and co-director of the Non-Invasive Vascular Laboratory at Easton Hospital, was appointed director of the hospital's Surgical Residency Program.

William M. Swartz, MD, and **Joseph C. Banis, MD,** authored the recently published book, *Head and Neck Microsurgery*.

Pittsburgh neurologist **Neil A. Busis, MD,** was named chairman of the Professional Practice Committee of the American Association of Electrodiagnostic Medicine (AAEM) and liaison from the AAEM to the AMA's CPT Advisory Panel.

Donald O. Castell, MD, was appointed Kimbel Professor and chairman of the Department of Medicine at The Graduate Hospital.

Gloria Watkins, MD, a pathologist at Frick Community Health Center, was named president of the Westmoreland County Medical Society.



Stuart Heydt, MD, was named president and chief executive officer of the Geisinger Foundation, parent company of the Geisinger health care system. Dr. Heydt most recently served as president of Geisinger Medical Center.

H. Robert Davis, MD, a family practitioner from Boiling Springs, was honored with a proclamation from the state House of Representatives for his distinguished service to fellow citizens. Representative Jerry L. Nailor (R—Monroe) presented the proclamation to Dr. Davis.

Robert B. Greer III, MD, associate dean for medical education and professor and chief of orthopedic surgery at Penn State's Milton S. Hershey Medical Center, retired on December 31, 1991.

Eugene N. Myers, MD, FACS, professor and chairman of the Department of Otolaryngology at the University of Pittsburgh School of Medicine, was recently elected honorary president of the Israeli Section of Head and Neck Surgery and Oncology.

David J. Shulkin, MD, was appointed director of clinical outcomes assessment and quality management at the Hospital of the University of Pennsylvania.

Dr. Shulkin

David P. Connolly, MD, president of the medical staff and director of surgical education at St. Margaret Memorial Hospital, was named president-elect of the Pittsburgh Surgical Society.

Barry L. Reimer, MD, director of orthopedic trauma at Allegheny General Hospital, has been named to the editorial board of *Orthopedics*.

Robert M. Hamaty, MD, a member of the Department of Obstetrics and Gynecology at Lee Hospital, Johnstown, was elected president of Lee's medical staff.

David C. Martin, MD, was appointed chief of geriatric medicine at West Penn Hospital.

L. Matthew Schwartz, MD, physiatrist at the Center for Rehabilitation Sciences at the Philadelphia College of Osteopathic Medicine, has joined the Department of Physical Medicine and Rehabilitation at Osteopathic Medical Center—City Avenue Campus.

Henry D. Berkowitz, MD, associate professor of surgery at the University of Pennsylvania School of Medicine and university associate at Children's Hospital in Philadelphia, was appointed chief of the Division of Vascular Surgery at Presbyterian Medical Center.

Dr. Berkowitz

Daniel A. Deutschman, MD, was named medical director of the Center for Psychiatric Medicine at St. Francis Medical Center.

Barry B. Goldberg, MD, director of the Division of Diagnostic Ultrasound and professor of radiology at Thomas Jefferson University, was named president-elect of the World Federation for Ultrasound in Medicine and Biology.

Freddie Fu, MD, vice chairman of the Department of Orthopedic Surgery and medical director of the Sports Medicine Institute at the University of Pittsburgh Medical Center, was honored by the Pennsylvania State Association for Health, Physical Education, Recreation, and Dance for his outstanding service and contributions.

Joseph C. Flanagan, MD, a plastic surgeon at Lankenau Medical Center, spoke at three Wills Eye Hospital

CORRECTION

On the Newsmakers page of the January 1992 issue of PENNSYLVANIA MEDICINE, Bernard J. Ostrum, MD, is incorrectly identified as a radiologist at Nazareth Hospital. Dr. Ostrum is a radiologist at Albert Einstein Medical College. His father, Herman W. Ostrum, MD, is employed by Nazareth Hospital.

programs on the subjects of orbital fractures, eyelid reconstruction, and entropion/ectropion.

Marvin E. Steinberg, MD, director of the Joint Reconstruction Center at the Hospital of the University of Pennsylvania and professor of orthopedic surgery at the University of Pennsylvania Medical School, presented four papers and a poster at the 59th annual meeting of the American Academy of Orthopedic Surgeons in February in Washington, DC.

A. Michael Pirone, MD, orthopedic surgeon, and **Thomas E. Hargest Jr., MD, PhD,** family practitioner, have joined the medical/dental staff of Andrew Kaul Memorial Hospital, St. Marys.

Harvey W. Scholl Jr., MD, was appointed chairman of the Department of Radiology at Grand View Hospital, Sellersville. Also, **Rijni B. Patel, MD,** pediatrician, and **Yung Sup Kim, MD,** internal medicine specialist, were named to Grand View's medical staff.

Reed Haag, MD, of Waverly, has joined Guthrie Clinic and Robert Packer Hospital as an associate in internal medicine.

Robert B. Edmiston, MD, senior vice president of professional affairs for Pennsylvania Blue Shield, and Bonnie Tabor, managed care specialist, presented a special "Key Issues Forum" on BlueChoice at the December meeting of the Allegheny County Medical Society's Board of Directors.

Louis Catalano, MD, and **Carolos J. Marerro, MD,** have joined the consulting medical staff at Frick Community Health Center, Mount Pleasant, with privileges in neurology.

Robert G. Bowman, MD, medical director of the mental health units at Highlands Hospital and Highlands Health Center, has become certified by the American Board of Psychiatry and Neurology in the subspecialty of geriatric psychiatry.

Eugene Y. Kim, MD, radiology specialist, has joined the medical staff at Brownsville Medical Hospital.

John L. Turner, MD, an endocrinologist at The Graduate Hospital, was honored by the assistant secretary of health for his outstanding volunteer efforts in the care and treatment of people with AIDS.

Raymond E. Adams, MD, director of cataract and primary care service at Wills Eye Hospital, has been elected president of the Section of Ophthalmology of the College of Physicians of Philadelphia.

6th Annual Symposium in Clinical Medicine
June 22-25, 1992
Hilton Head Island, SC

Please check each specific flyer as it arrives for starting time, location, number of credit hours, and types of credit. Programs may be cancelled due to insufficient registration. If not pre-registered, please call to confirm the program.

Geisinger

As an organization accredited by the Pennsylvania Medical Society for its continuing medical education program, the Geisinger Clinic designates these activities as meeting the criteria for Category I credit for the American Medical Association's Physician's Recognition Award and the Pennsylvania Medical Society membership requirement. Please refer to each individual program flyer for registration fees, starting times, and number of credit hours. For further information or for copies of individual programs, call Sharon Hanley, RMP, collect, at 717-271-6692. There is a 24-hour answering service available. You may also write to her at North Academy Avenue, Danville, PA 17822-1350.

LEADERSHIP CONFERENCE TO INCLUDE DIVERSITY WORKSHOP

"Diversity: A Workshop for the Future Leaders of Medicine" has been added to the agenda of the State Society's 1992 Leadership Conference, "Survival on the High Wire." The conference is scheduled for April 14-15, 1992, at the Hershey Lodge and Convention Center. Registrations are due no later than March 20.

The "diversity" workshop, sponsored by the Leadership Institute of the Society's Educational and Scientific Trust, will feature a panel of two young physicians and two experienced leaders of organized medicine to candidly discuss the barriers facing three specially challenged physician groups: women, blacks, and international medical graduates. While the young physicians will describe the obstacles they are facing, the physician leaders will offer their experiences and advice on how they broke through the barriers to attain the positions they now hold.

Leading this year's "Stress Management" workshop is Robert S. Eliot, MD, FACC, director of the Institute of Stress Medicine International in Denver, Colorado. Dr. Eliot is a professor of cardiology, has authored several publications and serves as a medical consultant for several major national corporations and foreign governments.

Dr. Eliot

In 1989, he was awarded the Science and Art of Health Award by the Rockefeller Foundation's Institute for the Advancement of Health in New York City. The previous year's recipient was Dr. Jonas Salk. Dr. Eliot's interest in stress and its effect on health derives from more than two decades of study, research, and care of patients around the world.

Recognizing a need for physicians to become more involved in politics at a grassroots level, the State Society has designed a workshop on "Practical Political Involvement for Physicians." Experts will present practical information to physicians to help them speak effectively with legislators about medical issues. Tentative speakers include members of AMPAC, the American Medical Political Action Committee, as well as legislative staff members from Harrisburg and/or Washington.

Alice Gosfield, Esq., of Philadelphia, will moderate a panel discussion entitled, "Can Quality Medicine Survive in a Managed Care Environment?" during the Society's 1992 Leadership Conference.

Several other practical topics will also be addressed. Robert E. McAfee, MD, vice chairman of the AMA Board of Trustees, will keynote the conference with a presentation on practice parameters. Eleanor Clift, *Newsweek* correspondent, and Fred Barnes, *The New Republic* writer, will offer a political point-counterpoint discussion, "Health Care: Election '92."

The conference registration fee is $60 for Society members and $80 for non-members. This includes workshops, handout materials, Tuesday reception and dinner, Wednesday breakfast, and refreshment breaks both days. Attendees may receive 7.5 hours of Category 1 continuing medical education (CME) credit. For registration materials and information, call 1-800-228-7823.

MEMBERSHIP NUMBERS REACH RECORD HIGH

Recruitment efforts of the Pennsylvania Medical Society have proven successful in reaching a record-high total for membership. Figures from 1991 show total Society membership at 21,111, a 2.9 percent increase from the 1990 figure of 20,513. The breakdown of new members in 1991 is: 323 full active, 90 residents, 200 students, 12 military, 10 disability, 34 associates, and 28 affiliates.

The Council on Membership is relying on its 1992 Recruitment Plan to increase membership even further and strengthen the Society's position on a national level. The plan focuses on recruitment on a county level and through direct-mail efforts. At the direction of the Society's Board of Trustees, the Council on Membership is also investigating the feasibilty of offering group membership rates in the future.

STATE SOCIETY LEADERS VYING FOR AMA OFFICES

As a unified state with the AMA, Pennsylvania is concerned with increasing member involvement and strength on the national level of organized medicine. The State Society's Board of Trustees is endorsing several candidates for AMA positions: Robert N. Moyers, MD, State Society president, for a position on the Council on Medical Education; Lee H. McCormick, MD, for chairman of the AMA Hospital Medical Staff Section; Ronald J. Clearfield, MD, for a position on the Council of Constitution and Bylaws; and John J. Whyte for student trustee.

DOCTORS' DAY SET

The Pennsylvania Medical Society has set aside March 30 as "Doctors' Day" to recognize physicians for their dedication, leadership, and contributions to the Society. Doctors' Day was first celebrated in 1933 in Georgia, and today is recognized nationally. In Pennsylvania, county medical society auxiliaries are planning a variety of events in honor of physicians.

TRUST LOANS UP 2.1 PERCENT FROM 1990

In 1991 The Educational and Scientific Trust of the Pennsylvania Medical Society provided to needy students $479,828 in regular loans, up 2.1 percent from the $469,850 provided in 1990. Of the 1991 total, medical students and children of deceased or disabled physicians received $425,500, and allied health students received $54,328.

Last year, for the first time, the

Trust also offered Residency Relocation Loans, which were developed to provide medical school graduates with a less expensive loan alternative to cover moving and related expenses. The program—open to all fourth-year students who will receive MD or DO degrees in spring and who have received a Trust loan sometime during their medical education—offers individual loans up to $1,000. In 1991 the Trust loaned a total of $29,000 to graduating medical students through this new program.

Since 1948 when the first loan program was instituted by the State Society, 3,248 individuals received loans totaling in excess of $9 million. The program was moved under the Society's Trust in 1964. Today, applications are considered on a yearly basis. The Society's Trust will begin accepting applications for the 1992-93 school year on April 1. For additional information about available programs, or to receive application materials, call the Trust at 1-800-228-7823.

REFERRAL NETWORK INTRODUCED IN PITTSBURGH

Prologue, a national health care information source, was introduced in the Pittsburgh area in mid-January. The network, designed to provide consumers with information to make an informed choice when selecting a physician, is a database system that matches consumers with physicians by medical needs and personal health care preferences. It was first introduced in 1983; currently serves 10 major U.S. markets, including Pittsburgh and Philadelphia; and networks 8,500 physicians.

PITT ANNOUNCES PharmD PROGRAM

The University of Pittsburgh School of Pharmacy announced in January a new doctoral program, awarding a two-year Doctor of Pharmacy (PharmD) degree. The PharmD is a post-graduate degree students may pursue after completing a five-year undergraduate pharmacy degree.

The program will consist of two parts: 1) advanced course work in the classroom, and 2) experiential services in areas such as transplantation or cardiology as part of a health care team. The new doctoral program will begin this fall with the admission of six students.

PHYSICIANS TOP JOB RESPECT LIST

Physicians/surgeons are most respected in the workplace, according to a survey conducted by the National Opinion Research Center at the University of Chicago. In the survey, 1,166 adults nationwide rated the status of 740 occupational titles.

"The top ranking doesn't surprise me," said James S. Todd, executive vice president of the American Medical Association. "When people stop and think about this profession, they realize that the work of physicians in general is beneficial." He added that as a physician, "you really influence the course of disease; you're actually there doing something that makes a difference."

The survey was conducted "to measure social consistency and social change and to develop models to explain why society has changed and why it has not," according to survey director Tom W. Smith. The survey was first conducted in 1964. At that time, physicians were rated second to college presidents.

SEMINARS TO ADDRESS PUBLIC HEALTH POLICY

The Leonard Davis Institute (LDI) of Health Economics at the University of Pennsylvania has scheduled the following seminars as part of the series, "The Role of the Private Sector in Setting Public Health Care Policy":

March 19, 1992
Turning up the Volume: A Journalist's Perspective on Health Care Reform
Ron Winslow, Health Care Report, *Wall Street Journal*

April 2, 1992
National Health Reform: The UAW Perspective
William S. Hoffman, PhD, Director of Social Security, United Auto Workers

April 9, 1992
Lobbying is Not a Dirty Word: Professional Societies, Health Reform, and the Public Interest
John R. Ball, MD, JD, Executive Vice President, American College of Physicians

All seminars will be held in the Colonial Penn Center Auditorium, 3641 Locust Walk, Philadelphia, from 4:30-6:00 p.m. For additional information, call (215) 573-3043.

NEW PATHOLOGY JOURNAL PUBLISHED

The first issue of *Cardiovascular Pathology* was published by Elsevier Science Publishing Company, Inc.,as the official journal of the Society for Cardiovascular Pathology. Stephen M. Factor, MD, of the Albert Einstein College of Medicine in Bronx, New York, will serve as editor of the international journal.

The primary object of *Cardiovascular Pathology* is to publish articles on disease-oriented morphology and pathobiology from pathologists and non-pathologist investigators in the cardiovascular field. The journal will also publish reviews and case reports.

CENTRAL PA EMPLOYERS FAVOR NATIONAL HEALTH INSURANCE

With health care reform increasingly in the national political spotlight, Central Pennsylvania employers say they favor some form of national health insurance, according to the findings of a random survey, sponsored by HealthAmerica Central Pennsylvania, of benefits managers at 100 Central Pennsylvania companies.

Sixty-four percent of respondents favor government-established national health insurance that would cover everyone in the country. Thirty percent opposed the idea, and six percent weren't sure. Those results closely parallel Pennsylvania's Senate race, in which Senator Harris Wofford received 66 percent of the vote after making national health insurance the central issue in his campaign. Despite the support voiced for national health insurance, many respondents expressed doubt that such a program would either save money or improve the quality of care.

In other findings, 73 percent of respondents agree that the right of patients to sue physicians and hospitals should be limited by law, and 52 percent agree that the government should require all businesses to provide some form of health insurance to their employees. Asked to identify where "a great deal" of the blame should go for rising medical costs, the respondents listed physicians third, below malpractice lawsuits and lawyers.

QUARTERLY REPORTS FROM KEPRO OVERSEERS

The House of Delegates, through Resolution 86-44 (Amended), has mandated the Society to provide regular reports on Keystone Peer Review Organization (KePRO) findings. The following report from the Ad Hoc Committee on KePRO Oversight covers the period October 1 through December 31, 1991. It shows the number of Medicare discharges, cases reviewed by KePRO physician reviewers, pending denials issued, final denials issued, and DRG changes made by KePRO.

KePRO Data for All Pennsylvania Hospitals 10/01/91 - 12/31/91

Medicare Discharges	*180,411
Cases Reviewed	36,723
Admission Denials	550
Administrative Denials	265
Total Denials	815
DRG Changes	949
PPS Hospitals Under IR	**4
Generic Screen Failures	28,874
Pending Quality Problems	4,884
Confirmed Quality Problems	340

* Reflects total discharges received by KePRO for the reporting quarter.

**Reflects total PPS hospitals proposed to begin IR as a result of initial analysis of fourth-quarter review results.

SOCIETY COUNCILS DISCUSS 1992 PRIORITIES

Five councils serve the State Society in the areas of education and science, government relations, medical economics, medical practice, and membership. Each council monitors specific issues affecting the medical community, reports and makes recommendations to the Board of Trustees about its activities, and prepares an annual report for the House of Delegates. Council members are appointed annually by the incoming Society president, subject to the approval of the Board.

In early February, council chairmen met with the Board's Executive Committee to discuss priorities for 1992. The following is a list of chairmen, priorities, and staff contacts for each council:

Council on Education and Science

Chairman: Gilbert A. Friday Jr., MD

Priorities:

- Construct a public health plan to address national disease prevention and health promotion
- Push for legislation on issues related to maternal and child health
- Monitor the status of establishing toxic waste incineration sites in Pennsylvania and develop a position statement for the Society
- Continue involvement in addressing AIDS-related issues
- Monitor prioritization of care issues

Staff Contact: Jeffrey C. Greenawalt

Council on Governmental Relations

Chairman: Andre C. Blanzaco, MD

Priorities:

- Promote the Society's legislative priorities: workers' compensation reform, care for the medically uninsured and underinsured, and medical liability tort reform
- Coordinate a grassroots lobbying effort to promote Society positions on issues
- Seek legislative action to amend the AIDS Confidentiality of HIV-Related Information Act (Act 148 of 1990)
- Seek increases in the Medicaid outpatient line of the state's general fund budget
- Monitor state and federal regulations, and coordinate an organized response mechanism for use by various sectors of the Society

Staff Contact: Jerry L. Rothenberger

Council on Medical Economics

Chairman: John J. McAndrew, MD

Priorities:

- Develop and monitor Society activities related to Medicare payment reform and the RBRVS payment system
- Work with the Department of Public Welfare to develop educational and training programs for physicians, and to improve communication between the Department and providers
- Continue to monitor and respond to changes in reimbursement policies of third-party insurers
- Develop and implement a Society ombudsman program to address problems associated with third-party payor reimbursement

Staff Contact: Dennis L. Olmstead

Council on Medical Practice

Chairman: Michael J. Prendergast, MD

Priorities:

- Develop products and services designed to meet member needs
- Manage endorsed insurance and seminar programs
- Produce and distribute publications focusing on RBRVS and other reimbursement issues
- Publish comprehensive manuals on laws and regulations affecting medical practice, and guidelines for physicians to purchase insurance
- Establish a legal service plan for physicians involved in disputes with third parties
- Expand the Medical Staff Legal Service Plan pilot program into a statewide program
- Study the feasibility of establishing a medical records storage and retrieval service for physicians

Staff Contact: Sharon R. Orlowski

Council on Membership

Chairman: O. Fred Miller III, MD

Priorities:

- Increase principal dues-paying physician members by 400
- Increase resident physician members by 350 and student members by 160
- Target selected segments—medical groups, women physicians, and international medical graduates—for recruitment
- Implement peer-to-peer recruitment activity through county medical societies and the Hospital Medical Staff Section (HMSS)
- Develop and implement improved retention activities at the state and county levels

Staff Contact: L. Reigel Haas

NO AX TO GRIND.

Our occurrence policy has been the industry standard for nearly a century. But some doctors want a claims-made policy. So we have it available. At the Medical Protective Company, we have no ax to grind. You can choose from a variety of programs, both occurrence and claims-made, that offer greater flexibility and savings. The choice is yours. Call us today.

Temple University, 1932; age 89, died December 22,1991. Dr. Spillman was a general practitioner.•

"I have never gotten used to people dying. And I don't want to get used to it."

Dr. Aliza Lifshitz, Internist, Los Angeles, California,
Member, American Medical Association

Patients come to physicians for many reasons. Beyond relief from pain, they seek compassion, empathy and support. AIDS patients receive all of these and more from Dr. Aliza Lifshitz.

Born and raised in Mexico and educated at one of Mexico City's finest medical schools, Dr. Lifshitz now serves the Hispanic community in Southern California. Over a third of her patients have tested HIV positive. Most live below the poverty level. Many are illegal aliens.

"I never forget what it means to be a doctor, and what it means is embodied in the Principles of Medical Ethics of the American Medical Association (AMA)," states Dr. Lifshitz.

You are invited to join Dr. Lifshitz and to join with her in her efforts to bring quality health care to those in need. Become a member of the AMA today.

Members of the AMA are encouraged to join their state, county and specialty societies.

American Medical Association

Physicians dedicated to the health of America

Frank V. Thompson, MD, *Nazareth*
University of Pennsylvania, 1936; age 79, died December 17, 1991. Dr. Thompson was a general practitioner.•

Reduce Your Taxes While Helping Medicine

You can reduce your federal income tax and at the same time help physicians of tomorrow by making a life-income gift to The Educational and Scientific Trust of the Pennsylvania Medical Society. Here's how:

When you secure a charitable gift annuity from The Educational and Scientific Trust, for as little as $5,000, you receive the following benefits:

- An immediate income tax deduction;
- A lifetime income to you and your beneficiary at competitive rates, some of it tax free; and
- No capital gains taxes if funded with appreciated assets.

At the death of the final beneficiary, the remaining principal helps the Trust increase the number of loans to deserving medical students. The Trust, the charitable arm of the Pennsylvania Medical Society, is qualified to receive tax-deductible contributions.

Rates: $38 per insertion ($25 for PMS members) for the first 30 words or part thereof; $1.30 for each additional word; $6 per insertion for a box number. Payment should be in advance. No agency commission is paid on classified advertising.

Submissions: Copy must be submitted in writing to PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820. For more information, call (717) 558-7750.

Box Numbers: Advertisers using box numbers forbid disclosure of their identity. Written inquiries are forwarded to such advertisers, but no information can be revealed by the publisher.

Word Count: Count as one word all single words, two initials of a name, single numbers or groups of numbers, hyphenated words, and abbreviations.

1991 Annual Report

To Our Friends:

1991 has been a year of tremendous growth for The Educational and Scientific Trust. In the past year, we have moved steadily toward accomplishing our simply stated purpose, "Research to build the future; Education to protect it."

During 1991, the Trust awarded nearly $500,000 in student loans, renewed its commitment to addressing public health issues, and offered seminars through The Institute for Physician Leadership. In its third year of operation under the Trust, the Physicians' Health Programs (PHP) continued to aggressively pursue its mission of addressing the problems surrounding physician impairment.

In June 1991, the Trustees and staff held a planning retreat to determine what programs will best serve the needs of the public and the medical profession. We identified the following future challenges for the Trust.

- *Recognizing and addressing emerging public health needs.*
- *Equipping physicians to adopt a leadership role in responding to current and future health concerns through The Institute for Physician Leadership.*
- *Expanding PHP services to hospitals including development of model policies for hospital impairment programs.*
- *Supporting the Pennsylvania Medical Society's priorities through projects, research, and loan programs.*

As Chairman of the Board of Trustees, I am proud to share with you the Trust's most notable achievements during 1991. And I can promise you that we will continue to affirm our commitment to Pennsylvania's physicians, and above all, to the public we serve. I look forward to and thank you for your continued support of the Trust in 1992.

Sincerely,

Abram M. Hostetter, MD
Chairman, Board of Trustees

THE EDUCATIONAL & SCIENTIFIC TRUST
of the Pennsylvania Medical Society
777 East Park Drive
P.O. Box 8820 • Harrrsiburg, PA 17105-8820
717-558-7750

Loan Programs

During the 1990-91 school year, the Trust continued to support Pennsylvania residents pursuing health careers. We provided 157 medical students and 40 allied health students with low-interest loans totalling $479,828.

In 1991, the Trust introduced the Residency Relocation Loan. This new loan provides financial support for Trust borrowers entering residency training programs. Recipients can receive up to $1,000 to help with relocation and living expenses. Twenty-nine students took advantage of this loan in 1991.

To help the Pennsylvania Medical Society give members the option of paying their dues in installments, we again offered an installment dues loan. The Trust paid the annual unified dues for 16 Society members and they repaid the Trust in quarterly payments.

The Trust continues to enhance its relationship with future physicians. In 1991, we again offered to pay our loan beneficiaries' student membership dues in the Pennsylvania Medical Society. We also initiated a new way to interact with medical student borrowers - medical student luncheons. The Trust visited six of Pennsylvania's eight medical schools and invited borrowers to a special "Get to Know the Trust" luncheon. Representatives from the Trust's loan department distributed information and answered questions about student loans. The attendees also had a chance to thank those who help make their loans possible by signing thank-you cards that were then mailed to Trust contributors.

For the 18th consecutive year, the Trust sponsored a one-day workshop for the financial aid officers of Pennsylvania's medical schools. The meeting provides a much-needed forum for financial aid personnel and government loan officials to exchange information. At this year's workshop, the Pennsylvania Medical Society Auxiliary presented more than $99,000 in American Medical Association Education and Research Foundation (AMA-ERF) funds to the state's eight medical schools.

Physicians' Health Programs

The Physicians' Health Programs underwent many changes during 1991. Under the leadership of a new medical director, Penelope Ziegler, MD, the PHP began to develop stronger cooperative relationships with hospitals and treatment centers across the state. Dr. Ziegler and staff members visited hospitals and county medical societies to discuss impairment issues and explain the PHP's services.

In 1991, the number of physicians enrolled in the program grew. The majority of the 307 active program participants are male physicians suffering from drug, alcohol, or a combination of drug and alcohol dependence. However, a sizable percentage present neuropsychiatric illnesses, physical disabilities, and problems related to aging. To help handle its increasing case load, the PHP hired two additional case managers in 1991. Both are registered nurses who have extensive experience in the impairment field.

In 1989, the PHP initiated a program to address an important need of program participants. Physicians enrolled in the PHP and ready to re-enter medicine can apply to receive up to $1,000 a month for living expenses through the Trust's Re-entry of Practice Loan. Over $45,000 was loaned to five recovering physicians in 1991.

Special Projects and Management Support

In addition to conducting numerous projects in 1991, the Trust provided various research and management services to health-related organizations. Continuing in its tradition of using a marketing approach to conduct studies, the Trust completed the following projects during the past year.

- **Aging Resource Directory** - This comprehensive directory of resources for senior citizens was completed for the Pennsylvania Medical Society's Task Force on Aging.
- **AIDS: Information for Physicians Update** - The Trust updated the original AIDS booklet prepared for the Society in 1988.
- **Auto Insurance Reform Research** - The Trust provided assistance to the Society's Legal Department in identifying the ramifications of the state's new automobile insurance law on rural practitioners.
- **Diabetes Product Testing** - The Trust test-marketed prototypes of professional educational materials for the Pennsylvania Diabetes Academy.
- **Drug Decriminalization** - At the request of the Society's Task Force on Drug Abuse, the Trust prepared a white paper on the decriminalization of drugs.
- **Elder Abuse Training and Public Awareness Campaign** - The Trust and the Pennsylvania Department of Aging co-sponsored a campaign to increase awareness of elder abuse among professionals and the public.
- **Family Practice Study** - The Trust conducted this study for the Society's Task Force on the Medically Underserved to determine why medical students choose or do not choose to specialize in family practice.

• **KePRO Medicare Rights Video** - The Pew Foundation awarded the Trust a grant to produce a video on the rights of older Pennsylvanians under Medicare review. This was a joint effort with the Keystone Peer Review Organization (KePRO).

• **Leadership Conference** - The Trust assisted the Society in obtaining speakers and planning its annual Leadership Conference.

• **Medicaid Participation Survey** - For the Society, the Trust coordinated the surveying of physicians specializing in family practice and obstetrics/gynecology to determine participation levels in the state's Medicaid program.

• **Medical School Faculty Study** - This study identified the perceptions medical school faculty have of organized medicine and recommended how the Society could address this group's unique needs.

• **Medicare Pilot Study** - The Trust conducted this study for the Society's Task Force on the Medically Underserved to determine the effects of the state's balance billing legislation on physicians' practices.

• **MedisGroups Study** - The Trust helped develop a written survey conducted with the Hospital Association of Pennsylvania. The survey was designed to evaluate the hospital community's feelings on the MedisGroups system and the Pennsylvania Health Care Cost Containment Council. The Trust conducted a follow-up telephone survey to gain more detailed information from survey respondents.

• **Membership/Leadership Poll** - The Trust surveyed Society members and leaders to determine their views on critical health-related issues. The results were then compared to a Gallup public opinion poll.

• **Pennsylvania Public Health Association Membership Study** - The results of this membership survey led to recommendations for increasing PPHA membership and member satisfaction.

• **Policy Compendium** - At the request of the Society, the Trust developed a data base of Society policies dating back to 1965 and edited the raw data into a published compendium mirroring the appearance of the American Medical Association's.

• **Presidential Remarks** - The Trust prepared remarks for the Society's president on several occasions, including his presentation at the Health Care Forum.

• **Readership Surveys** - The Trust designed studies to measure the effectiveness of the Society's primary communications tools: EXECUTIVE REPORT and PENNSYLVANIA MEDICINE.

• **Trust Newsletter** - The Trust introduced "Connections: News from The Educational and Scientific Trust" in the fall of 1991. This newsletter is designed to keep contributors and other interested parties up-to-date on current Trust activities.

During 1991, the Trustees also reaffirmed the Trust's commitment to addressing public health issues. As a step in this direction, the Trust is publishing and distributing a report entitled, "Healthy Pennsylvania 2000." This report is part of a nationwide initiative to address public health issues. The Trust plans to hold a statewide conference during 1992 to determine public education needs and prepare a grant application outlining a strategy to help public health agencies achieve the report's objectives.

In addition, the Trust continued to help medical specialty societies and related groups run efficient, cost-effective organizations by providing accounting services, marketing and communications consultation, literature searches, editing services, and administrative support. The Trust has 15 organizations as clients for these services. The Trust also began offering assistance with writing, editing, and designing specialty society newsletters in 1991. Four specialty societies used the Trust's newsletter services in 1991.

Medical Legacy Fund

As the support base of the Trust continues to grow, we have added planned giving to our fund-raising program. Planned gifts offer contributors income tax, capital gains tax, and inheritance tax advantages and enable them to include the Trust in their estate plans.

To accept planned gifts, the Trust formed the Medical Legacy Fund in 1991. This fund offers contributors the opportunity to create charitable gift annuities, charitable remainder unitrusts, and charitable remainder annuity trusts. Gifts to the Medical Legacy Fund can be used to support existing programs of the Trust such as student loans or to establish new programs which meet our mission. In either case, contributors create a lasting legacy to medicine.

The Institute for Physician Leadership

In its first full year of operation, The Institute for Physician Leadership proved to be a valuable resource for leaders of the Pennsylvania Medical Society, county and specialty societies, hospital medical staffs, and physician executives. The purpose of the Institute is to better equip physician leaders to: guide organized medicine; deal with the complexities of today's health care environment; and become recognized leaders in community and civic organizations.

During 1991, the Institute:

- Conducted a full-day workshop for the Board of Directors of the Pennsylvania Academy of Family Physicians;
- Introduced leadership theory to the senior staff of the Pennsylvania Medical Society, the Pennsylvania Medical Society Liability Insurance Company, and the Keystone Peer Review Organization;
- Presented a half-day workshop for county and specialty society executives;
- Provided two physician leadership workshops at the Pennsylvania Medical Society's Leadership Conference;
- Presented a workshop on the Myers-Briggs Personality Type Indicator for staff of the Society and its affiliates;
- Presented a half-day workshop for the Society's Hospital Medical Staff Section;
- Presented an introduction to leadership training for the Society's Young Physician's Section; and
- Participated with Jefferson Medical College in a joint application for foundation funding of leadership training for residents.

The Institute has been financed by four partners: Jefferson Medical College, the Pennsylvania Academy of Family Physicians, the Pennsylvania Medical Society, and The Educational and Scientific Trust.

THE INSTITUTE FOR PHYSICIAN LEADERSHIP

Contributors

The Trust is pleased to recognize those individuals and groups whose support made the past year a success. Their contributions demonstrate their commitment to The Educational and Scientific Trust.

The Trust once again thanks the Pfahler Foundation, administered by the Philadelphia County Medical Society, for its 1982 student loans receivable. The Trust has now collected more than $133,000 in principal and interest. Only four loans remain outstanding representing $4,500 in principal. Over the years, these funds have been added to the Medical Student (Educational) Fund to help support new student loans.

The Trustees and staff of the Trust extend their heartfelt thanks to all those who supported the Trust in 1991.

The College

Members of the Trust's most distinguished group of benefactors contribute $1,000 or more each year.

Memorial and Honorary Gifts

Memorial and honorary gifts create a lasting remembrance of special individuals while serving others. Making a memorial or honorary contribution is a rewarding way to acknowledge a friend or relative's accomplishments and successes. The following individuals have been memorialized through contributions to the Trust.

Agnes Barr
Harry S. Beitel, DDS
David M. Bell, MD
Luella R. Bellanca
John V. Blady, MD
Ralph S. Blasiole, MD
Dr. and Mrs. William R. A. Boben, Sr.
Rose Brand
Thomas M. Braun, MD
James L. Buchanan, MD
Frances M. Bussoletti
Alice Butler
Eleanor Cafaro
George Robert Campbell, MD
Fred Charley
Clyde Collins, MD
James A. Collins, Jr., MD
Harold Cooper, MD
A. Harry Coren
Dorothy Courtney
Frederick Curcio, III, MD
John D'Amore
Thomas F. Dowd, MD
Elaine Early
Edna B. Eichler
Virginia S. Fear
James J. Finnegan
Glenn Funkhouser
Frances V. Gaylor
Joseph Gerdes, Jr., MD
Felix Glauser, MD
Walter M. Greissinger, MD
Joseph Gustaitis, MD
Angele B. Hancock
Letitia R. Harer
Vera Hokholt
Helen I. Horton
Esther Hottenstein, MD
Hannah Jangian
Edith Jones
Benjamin Kaufman, MD
Ann Kempa
William W. Kirsch
Norma Lender
Charles R. Leone, MD
Herbert J. Levin, MD
Eva Schneider Liska
Virginia L. Mayers
Philip McAllister
John K. McCarrell, MD
Rhea Marguerite McClure
Cecelia Wehrle McCreary
Irene McLenahan
Michael J. Mitchell, MD
Alice Moskowitz
Edward M. Mullin
Teresa Anne Mullin
Mathilda and John Nader
Sally Nevin
John Newman, MD

Joyce West

Please Note

The Trust has made every effort to give proper recognition to all individuals and organizations supporting the Trust in 1991. If we made an error, we apologize. Please contact the Trust so we may correct our records.

Physicians' Health Programs

The Trust gratefully acknowledges the individuals, organizations, and hospital medical staffs and administrations who supported the Physicians' Health Programs in 1991. Key Supporters, designated by bold type, are hospitals which made a founding gift of $10 per medical staff member to the PHP.

Notes to Financial Statements

Note 1: The financial statements shown in this report are unaudited. Audited statements are currently being prepared and will be available upon request in April.

Note 2 - Funds: Current unrestricted funds are those funds used to maintain the normal operations of the Trust, and do not require prior approval for their use. Current restricted funds are funds held in reserve by the Trust which are not designated for specific purposes, but cannot be used without permission of the Board of Trustees (or others for whom the funds are maintained). Endowment funds are gifts to the Trust to use revenue generated from that gift for a specific purpose.

Note 3 - Investments: Investments in 1991 are recorded at cost - market value is $660,552. In 1990, investments were recorded at market value.

Note 4 - Office Equipment: Office equipment is listed net of accumulated depreciation of $8,392 in 1991, and $13,072 in 1990. Equipment consists largely of computer equipment owned by the Trust.

Note 5 - Revenue from Outstanding Loans: Loan interest is substantially higher in 1991 because of an accounting adjustment which added school and residency interest to a borrower's principal balance. This provides a more accurate description of a borrower's outstanding balance.

Note 6 - Prior Period Adjustments: Some of the addition of school and residency interest had an effect on the student loan interest revenue prior to 1991. Therefore, it is necessary to make an adjustment to the fund balance in prior periods, so the 1991 revenue is not overinflated.

Note 7 - Interfund Transfers: Interfund transfers are transfers of funds within the Trust which have no effect on the revenue and expense of the organization (total balance within all funds is zero). However, these transfers must be noted on the financial statements.

The New House Officer and the Dying Patient

William M. Cooper, MD, JD

Somewhere along the line in medical education, house officers and even teaching physicians have developed the erroneous idea that they are fighting death. This idea, I think, comes from the dramatization of physicians and their activities in literature, movies, radio programs, and especially in television soap operas. Some physicians entering practice think this is the real world, since such glimpses have been their only view of the practice of medicine.

House officers sometimes become very depressed on services where death is a frequent occurrence (i.e., oncology, hematology, and geriatric services). This is in part because these individuals have not been made aware that their function is to treat a person with illness and not to fight death. Indeed, in my opinion, part of a physician's function is to prepare people for death—not only the patients but their families as well.

"In the teaching of house staff, it is important to delineate between 'fighting death' and treating patients with disease."

In the teaching of house staff, it is important, first of all, to delineate between "fighting death" and treating patients with disease. We cannot fight death indefinitely since, to date, death is an inevitable result of living. If we can get this across to our students, then perhaps they can accept death more graciously and more supportively in those they treat.

Dr. Aring, years ago, in the *Journal of the American Medical Association*, wrote a beautiful article on the difference between sympathy and empathy in the management of patients with terminal disease states. He says that in "empathy," one feels and relates but is able to maintain objective judgment regarding the problems of the patient, whereas in "sympathy"—where one places himself and feels as the patient would feel—objectivity is sometimes lost in the management of the patient. This is an extremely important point, not only for the patient's benefit but also for the benefit of the physician who must handle this sort of problem frequently in his life's practice.

A second point to impress upon anyone in attendance of a terminally ill patient is the effect a change in tone of voice or empathy may have upon the patient. Interviewing a dying patient is much different from caring for the patient day-in and day-out. The slightest change in attitude or activity has a great bearing on that patient's reaction to his or her situation. This creates marked stresses on the physician, as well as the patient, as they watch each other for sign language, body language, and changes in attitudes. It is extremely difficult to teach this to house officers. Perhaps it can be learned only from observation and assimilation rather than by lecture. House officers must observe this relationship and activity as a daily part of their training. One problem with the current structure of our training programs is that there is no time for house officers to observe someone who has had extensive experience in this area. Their relationship is usually with an immediate superior in the hierarchy who generally is also just beginning to experience this phenomenon.

Indeed, it appears to me that death is a scene which most house staff and junior physicians avoid wherever possible; it makes them quite uncomfortable. If they cannot avoid it, they often launch into some degree of heroic activity, such as resuscitation or other maneuver, that provides an emotional escape for them and those around the patient. This activity usually does little for the terminally ill patient other than prolong a segment of unsatisfactory life for hours or days.

A third lesson for young physicians is that someone has to say, "We must allow this patient to die in a dignified manner; we have done as much as we can do to alter the disease process and have been unable to do so." Many physicians lack the emotional strength to accept this medical futility because they, too, have accepted mistakenly the idea they are to fight death and not disease. Many patients have exercised this responsibility as manifested by the growing popularity of advance directives. A great deal of agony and money

Dr. Cooper is past chairman of the Department of Medicine at Shadyside Hospital and past associate dean of the University of Pittsburgh Medical School.

might be saved if this concept of acceptance of inevitable death could be communicated to house staff.

A fourth point for house staff is that in most instances the patient is much better off knowing exactly what is wrong and what the outlook may be, rather than not knowing and feeling uncertain as to the outcome. With a few exceptions, the anxiety attendant upon the latter situation far exceeds that of knowing that one's life is soon to end.

Some people are emotionally unable to handle the knowledge of impending death despite the support from family, religious advisers, and physicians. If one can be sure of this, then the patient should not be told. On the other hand, if the patient indicates to you that he or she really wants to know exactly what is wrong and what the outlook is, the patient's questions should be answered with the utmost honesty throughout the course of the disease, despite the requests of other family members who feel that they may be "saving the patient from the knowledge."

This approach allows for the development of an excellent patient/attendant relationship and permits patient and family participation in decisions regarding potential therapy and its risks. This is the patient's right as an individual and is the basis of our concept of informed consent. We should see that the patient is allowed to exercise it.

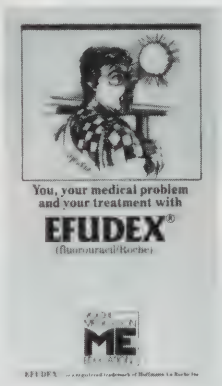
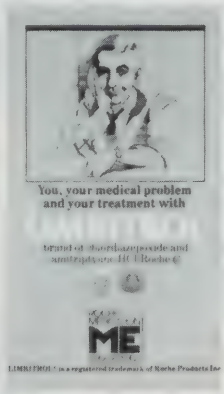
COMMITTED TO TOTAL HEALTH CARE

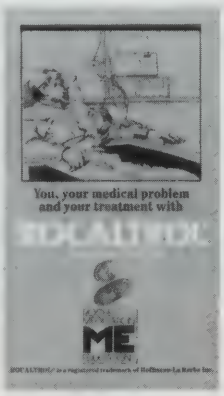


Roche Laboratories presents the Resource Library for patient information

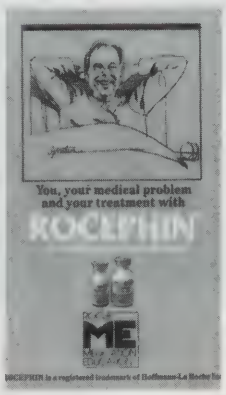
ROCHE ME MEDICATION EDUCATION



Your Roche representative offers you access – without expense or obligation – to a comprehensive library of patient information booklets designed to supplement rather than supplant your rapport with your patients.



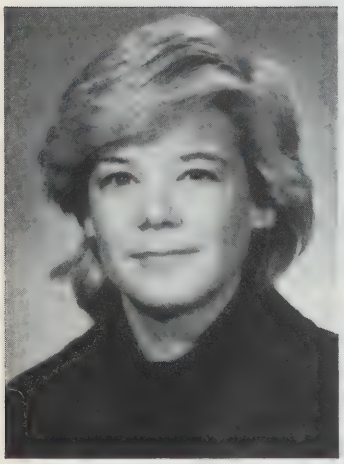
Each booklet helps you provide...



- Reinforcement of your instructions
- Enhancement of compliance
- Satisfaction with office visits

Your Roche representative will be happy to provide a complete catalog of available booklets and complimentary supplies of those that are applicable to your practice.

COMMITTED TO EXCELLENCE



Roche Laboratories presents the winners of the 1991

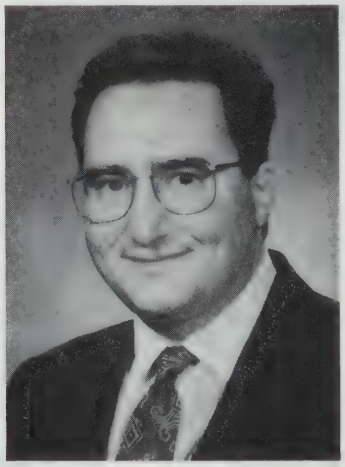
ROCHE

PRESIDENT'S ACHIEVEMENT AWARD

Please join us in honoring these outstanding Roche sales representatives who have distinguished themselves by a truly exceptional level of professionalism, performance and dedication to quality health care.

Throughout the year, each of these award-winning individuals has consistently exemplified the Roche Commitment to Excellence, and we're proud to invite you to share in congratulating them on their achievement.

Suzanne D. Chesloski



David F. Greener

Anthony J. La Grutta

Robert B. Scholl

David P. Tori, Jr.

Michael Weiss

Turn to the preceeding page to see one of the many ways your award-winning Roche representative can assist you and your patients.

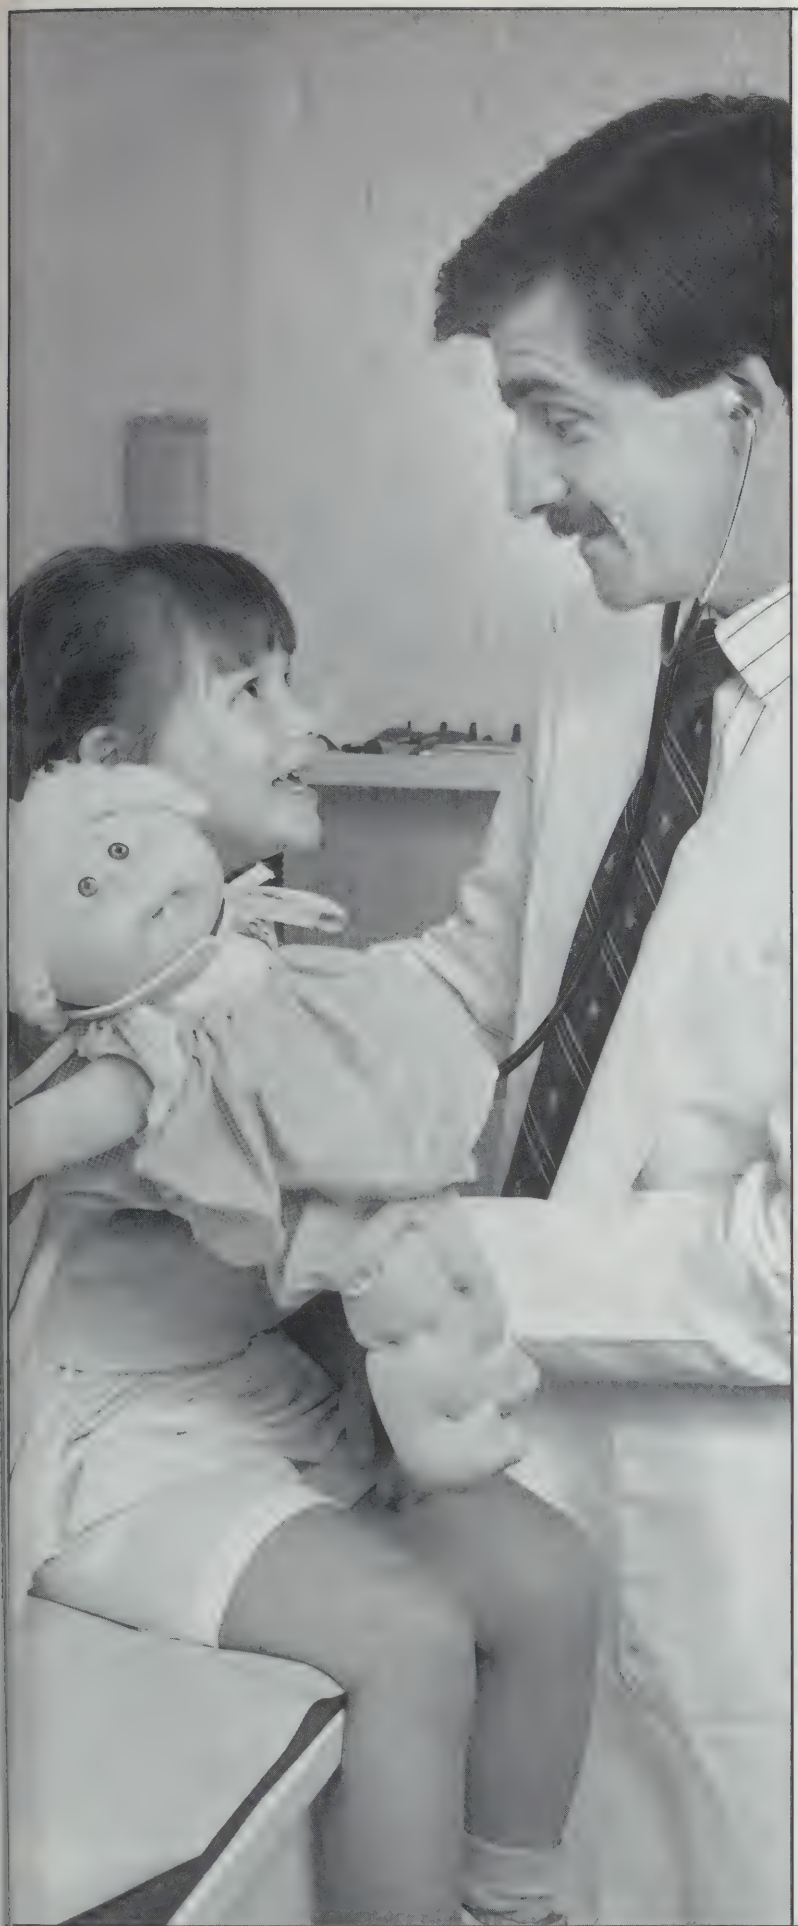
YOU CAN IMPROVE TECHNOLOGY AND STILL BE STUCK IN THE SAME JAM

Technology is supposed to make your people more productive, your practice more competitive. We anticipate how technology will affect not only processes, but the structure of your practice as well. The Valley Medical Management concept revolves around a team of reimbursement specialists, managers, systems analysis and CPA's. This is the formula for our success. Our approach is scientific, comprehensive, and informative. Services provided include:



- ✦ Practice Reviews
- ✦ Administrative & Financial Management
- ✦ Billing
- ✦ Hardware/Software

Our objective is to make you a more successful professional.
Call us for more information.

SPECIALISTS IN MEDICAL PRACTICE MANAGEMENT

Will your next decision be based on good medicine or good law?

No doctor should ever have to choose between what's best for the patient and what's legally expedient. That's why there's PMSLIC. We're a professional liability insurance company owned and operated by doctors. Doctors who understand how carefully you weigh each professional decision. Because we do, too.

Doctor Owned, Doctor Run.

12 *New Employment Discrimination Law: Finally, Protection for Physicians!*

The State Society's assistant general counsel presents startling new information for physicians about their responsibilities as employers and their rights as disabled individuals under state and federal law.

Created by SpectraComp, Mechanicsburg (1-800-666-2662), on a Macintosh™ FX using Fractal, Inc.'s *Painter*™ and *ColorStudio*™ software, Adobe *Illustrator*™, and *QuarkXpress*™.

18 *Health Care Workers Rally for Compensation Reform*

Health care workers united in Harrisburg in March to support an alternative to the governor's workers' compensation reform plan.

20 *Let's Practice Malpractice Prophylaxis*

Physicians may prevent malpractice accusations by following the advice in this article by a physician-consultant.

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

MEDIGRAM

SOCIETY PERSUADES SENATE COMMITTEE TO CUT WORKERS' COMP LINK WITH MEDICARE: On April 6, the state Senate Labor and Industry Committee by a 9-2 vote amended House Bill 2140 to remove the proposed link of workers' compensation fees to the Medicare system. Contained in the amended bill are many provisions initiated by the State Society, including: use of the federal workers' compensation fee schedule, establishment of an annual inflation adjustment, and provision of procedural and peer review safeguards. However, the federal fee schedule was discounted more deeply than anticipated (to 80 percent). The Society is currently analyzing the impact of the discount. The Senate is in recess until early May. At that time the Society expects that attempts will be made to further amend the bill to restore Medicare language. Continued support of the Society's efforts is needed to achieve fair workers' compensation reform.

OSHA TO TEMPORARILY HALT ENFORCEMENT OF BLOODBORNE PATHOGEN STANDARDS: After a recent meeting with the AMA, the Occupational Safety and Health Administration (OSHA) agreed to temporarily halt enforcement activities under the "general duty clause" of new regulations on occupational exposure to bloodborne pathogens. Although the rule is not yet final, according to the AMA, OSHA had begun enforcement through such activities as inspections and audits of physicians' offices, and on an advisory basis had cited physicians for non-compliance. In its meeting with OSHA officials, the AMA requested several items. OSHA has agreed that until the new standard becomes final: 1) it will not cite physicians for violations; instead, initial enforcement efforts will be educational; and 2) it will refrain from performing any audits unless a complaint is received. The AMA will continue to pursue additional corrective actions.

INSERT DESIGNED TO HELP PHYSICIANS WITH OSHA IMPLEMENTATION: Included in this issue of PENNSYLVANIA MEDICINE is a pull-out insert designed to help physicians comply in a timely and effective manner with OSHA's new regulations on occupational exposure to bloodborne pathogens. The insert, "The New OSHA Regulations" (pages 28A1-4), discusses when requirements take effect, who's affected, what physicians must do to comply with the regulations, and what compliance will cost. An order form is provided at the end of the insert for a complete compliance kit, offered exclusively to Society members.

HCFA TO BILL LABS UNDER CLIA '88: On or about May 1, the Health Care Financing Administration (HCFA) will begin billing physicians for registration of office laboratories in accordance with new regulations under the Clinical Laboratory Improvement Act of 1988 (CLIA '88). Initial fees will range from $100-$600 depending on the type and quantity of testing accomplished. This information should have been reported to HCFA in a survey completed by affected physicians last January. While HCFA has established three complexity levels of testing, most office labs will fall into one of the first two. "Waived tests" include dipstick/tablet urinalysis, ovulation tests, urine pregnancy tests, nonautomated erythrocyte sedimentation rate, hemoglobin (copper sulfate), fecaloccult blood, spun microhematocrit, and blood glucose-monitoring devices cleared by the Food and Drug Administration specifically for home use. "Tests of moderate complexity" comprise about 75 percent of the remaining 10,000 testing procedures. HCFA has not yet published regulations detailing procedures for exempting state licensure programs, such as the one currently operated by the Pennsylvania Department of Health's Bureau of Laboratories. Physicians may, therefore, be required to follow both federal and state procedures in the interim. Look for comprehensive analyses of CLIA '88 in future issues of PENNSYLVANIA MEDICINE.

RBRVS VIDEO AVAILABLE: The State Society has developed and produced a videotape about Medicare payment reform and the resource based relative value scale (RBRVS). The 37-minute video is available from the Society for $19.95 plus tax, shipping, and handling. For information, call 1-800-228-7823.

We value creativity. For individuals with neurological and orthopedic disabilities, the road to independence can be a long one. That's why Bryn Mawr Rehab is committed to leading patients down innovative pathways to recovery.

Bryn Mawr Rehab puts a premium on creativity—for both patient and staff. With this approach, the possibilities for positive results are greater. Specialized treatments and services complement traditional therapies. Our 92-degree therapeutic pool helps relieve a patient's pain and restores confidence. Equestrian therapy builds cognitive skills and improves balance. Support groups chaired by former patients offer individuals and families strength, hope and a "yes I can" attitude.

It is beautiful to witness a patient's life unfold—and to watch that person come "back" as far as possible. So everyone in the family can spread their wings a little further.

If you would like to receive a copy of the comprehensive Bryn Mawr Rehab brochure, please call (215) 251-5401.

Giving Thought to Hazardous Waste Incineration

John W. Mills, MD
Medical Editor

Due to the short time between the Forum on Hazardous Waste Incineration sponsored by the Pennsylvania Medical Society and the deadline for this editorial, I haven't had time to review and digest all of the material presented at the forum. However, I feel compelled to let our readership know the gist of the forum and reaffirm the Society's position on hazardous waste incineration.

Essentially, hazardous wastes include toxic, flammable, explosive, and corrosive substances and *exclude* infectious, radioactive, and most solid wastes. The Society's policy statement, adopted by the Board of Trustees on January 30, 1991, recognizes that as Pennsylvanians produce such waste, we are also obligated to dispose of it in a safe and efficient manner. While the Society does not officially oppose development of hazardous waste incinerator facilities, its members agree that our job is to safeguard the health and well-being of persons working at and living near a facility: fumes, noise, dust, traffic, and emergencies have to be considered, as well as the impact on local property values and local emergency services.

"Nobody has the answers, so we'll most likely fumble along and learn as we go."

I was under the misconception that the federal Environmental Protection Agency (EPA) and the Pennsylvania Department of Environmental Resources (DER) had all the answers about the operation of hazardous waste incinerators and the health hazards of such facilities. But, *they don't!* While there is some data, it is in very general form and cannot be assumed for every possible incinerator site. The agencies have some very complex formulas to figure out almost anything concerning effects on rats and mice, but little to apply to humans. Additionally, *no* Pennsylvania-specific studies have been conducted at all.

Obviously, we're learning as we go—not exactly a safe way to do this. As one of the speakers at the forum, George Lumb, MD, an environmental researcher from Duke University, put it: "We are *crisis-oriented* in this country when it comes to waste disposal of all types;" and we are trying to solve issues overnight that we should have been dealing with since before World War II. Since that time, there has been an explosion of "disposable" and bubble-pack packaging materials—as well as throw-away cans and bottles—all in the name of efficiency.

This has spawned whole new industries and increased our waste immeasurably. It probably goes without saying that it has also increased the cost of materials we use packaged in such containers. There is no doubt that disposable items have made it much easier for the medical profession and health care facilities where laborious cleaning and sterilization processes have been replaced by disposables. And in light of the HIV problem, this is probably good. However, we do have a problem disposing of this "stuff," and we aren't doing a very good job of it in Pennsylvania. Dr. Lumb presented an interesting proposal: that generators of waste (e.g., industry) should come forth with a recycling plan to begin eliminating part of our problem.

There are no complete answers relative to hazardous waste incineration. Since we've never had such a unit in Pennsylvania, we don't have any experience. Other states have some experiences, but many are clouded in anecdotal stories by those who live near the facilities. And, scientific data speaks only to each specific facility and cannot be assumed as accurate for a Pennsylvania unit with different climatic conditions and terrain. Human data relative to the incinerators would be moderately accurate for plant workers, but not totally reliable for citizens living in proximity to a facility.

Nobody really has the answers, so we'll most likely fumble along and learn as we go. Perhaps the federal government should be more concerned about such serious issues instead of spending our money trying to determine what lab tests doctors do in their offices and whether physicians have invested in a medical facility in an effort to have one readily available for the convenience of patients and doctors.

MIIX℠ will offer free income protection coverage for doctors who become HIV positive.

Because we understand.

"We are addressing a problem which can have a potentially devastating impact on those few doctors who may be affected. We are here to serve doctors with responsive and innovative programs, and I believe that we are doing our part to deal straightforwardly and candidly with this dilemma for doctors and patients alike."

— Daniel Goldberg
MIIX President

The Medical Inter-Insurance Exchange is pleased to announce, effective January 1, 1992, its Human Immunodeficiency Virus (HIV) Insurance Endorsement as a no cost addition to its professional liability insurance policies for Pennsylvania doctors. Should you be diagnosed as HIV positive, the endorsement will provide you with a benefit of $500,000, payable monthly over 5 years at $100,000 per year.

For more information, please call one of our licensed agents.

Our Obligation to the Future

Robert N. Moyers, MD

"What we put into the (health care)system now will determine the effectiveness and strength of our profession in the future, as well as the health and well-being of the next generation of patients."

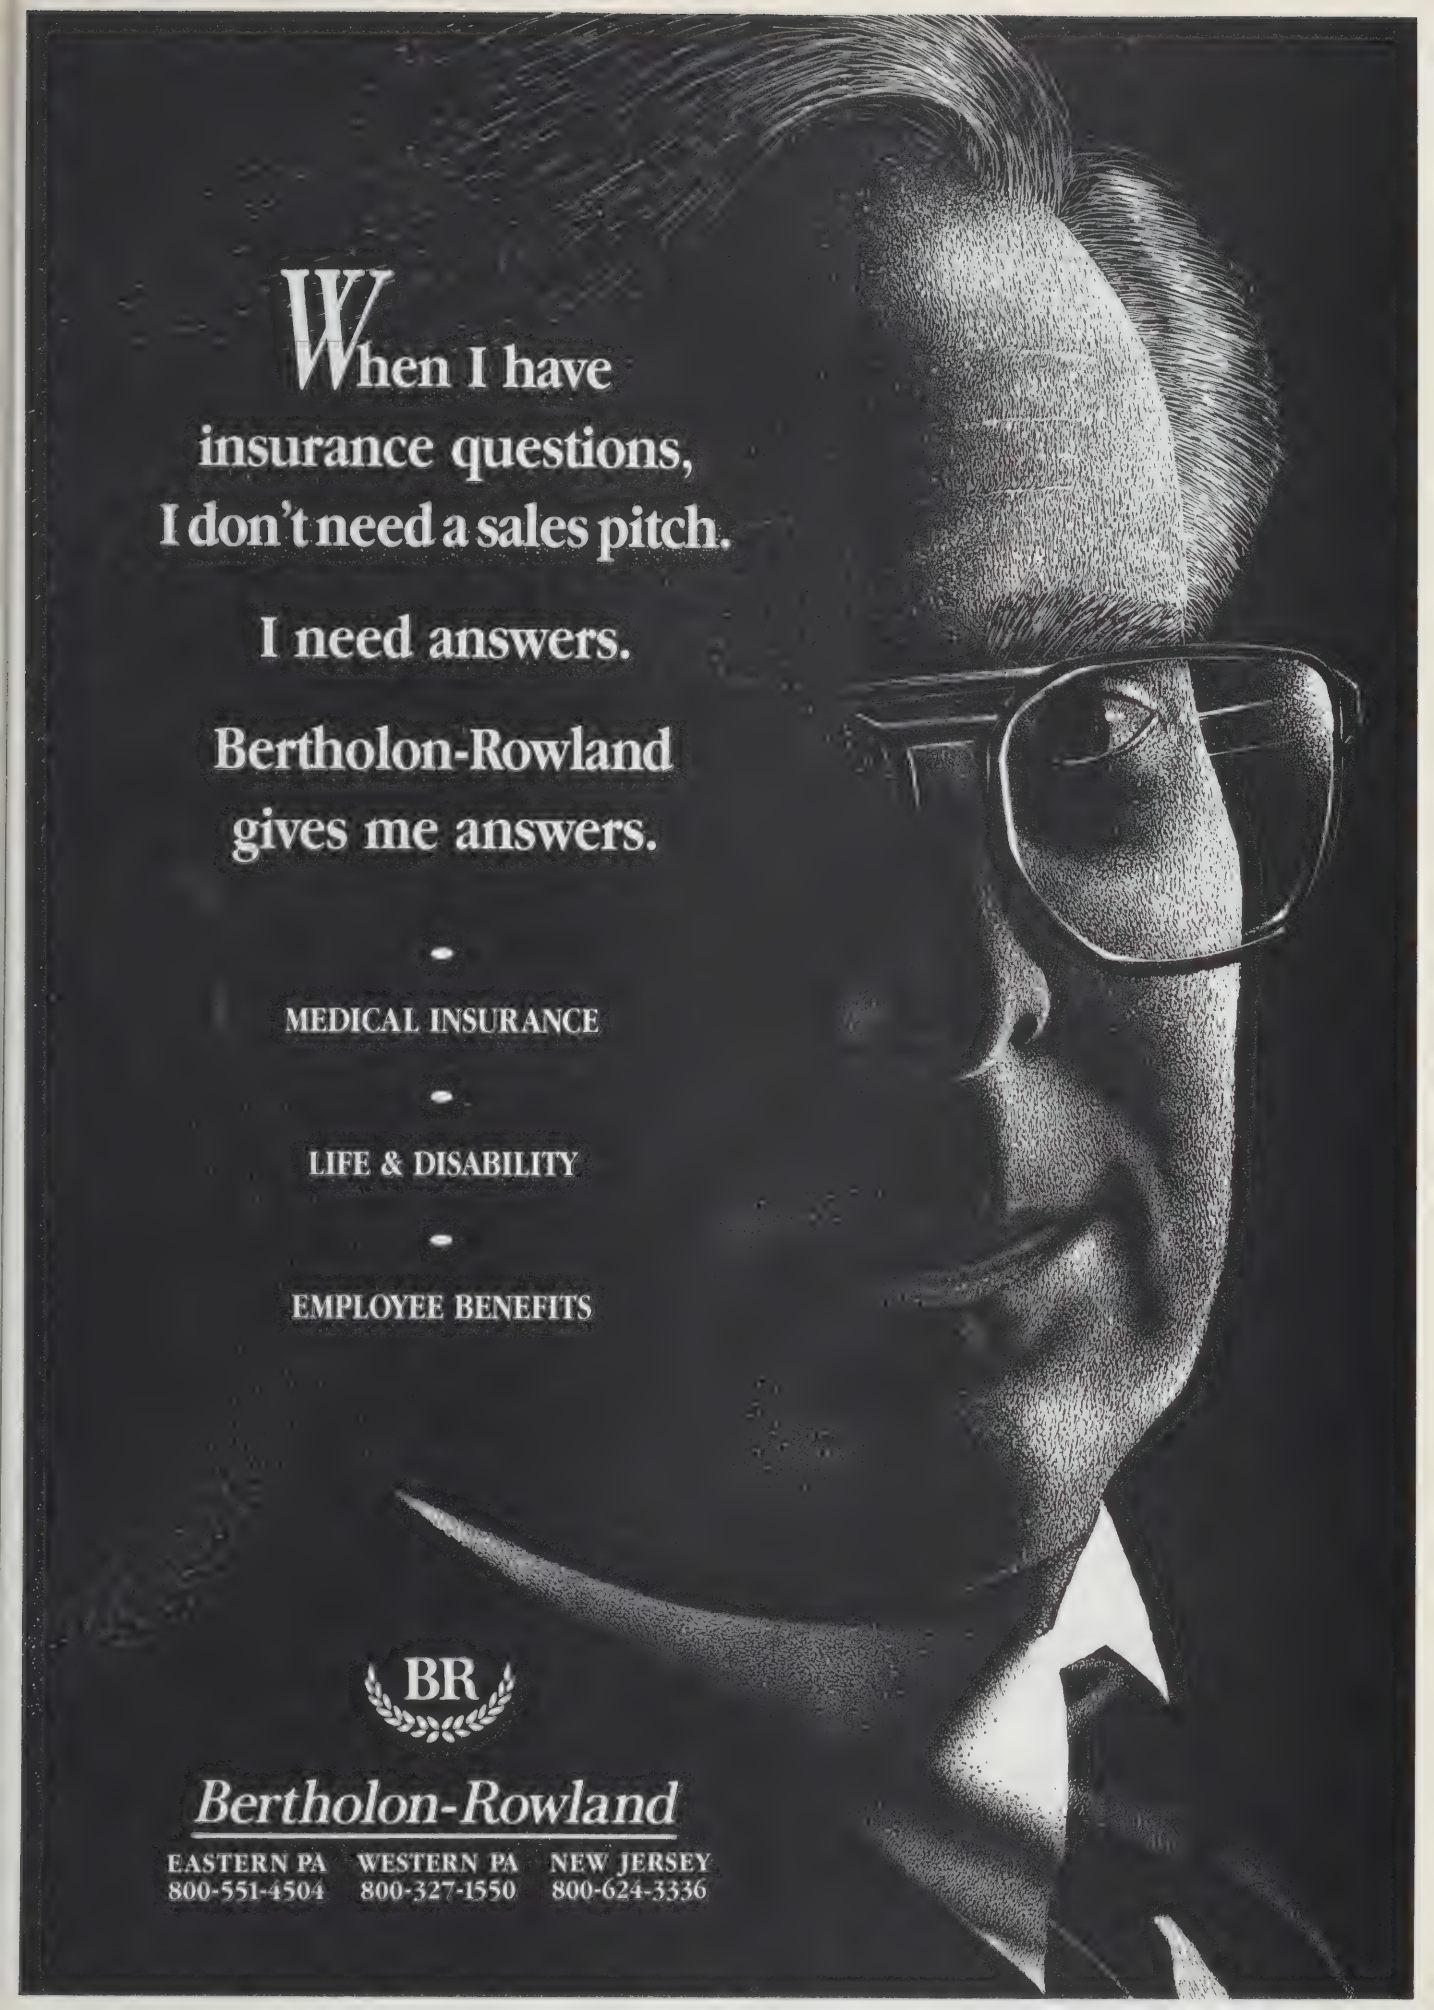
We often describe our concern for the health care system as one of balance: between cost, quality, and access. We have another concern of balance, as well: between the present and the future. No matter how great our concern for the matters of the moment, we in the Pennsylvania Medical Society are always mindful that we are also obligated to lay a sturdy foundation for the physicians and patients of the future.

There are signs that warrant our concern. Between 1986 and 1991, a 19 percent drop occurred overall in the number of medical students entering the specialties of internal medicine, family practice, and pediatrics. Similarly dramatic drops occurred in those entering and leaving medical school. Fewer incoming students express interest in primary care, and fewer graduates are planning careers in primary care fields.

Meanwhile, in parts of the country such as the rural areas of Pennsylvania, there is a shortage of primary care physicians. This undermines the effectiveness of our network of care. Our health care system serves our patients best when each patient has access to preventive care, as well as appropriate referrals to other practitioners in our community of caregivers.

For example, a family practitioner monitoring a patient's cholesterol levels may be a far more appropriate level of care than a cardiologist serving the same function. Yet, access may be the determining factor in the patient's selection of a physician. Thus, the cardiologist's time and skills are diverted from patients requiring more specialized care, and our physician network is not being used to the best advantage of all. The inappropriate selection by patients of certain specialists to provide basic health services leads to fragmentation of care and creates further disincentives for new physicians to seriously consider primary care.

Some might argue that, in a free society, the choice of medical specialty properly belongs to the individual, and attempts to influence that choice lead us down a road we do not wish to go: toward control of our profession, rationing of specialty positions, and loss of autonomy.



Without question, we respect the personal freedom of the individual practitioner and the academic freedom of our medical colleges and universities. We also must emphasize that no one makes decisions in a vacuum. We are influenced by many factors, including the availability of specific kinds of resources and the strength of our role models.

A recent survey shows that the medical schools with the greatest number of graduates entering primary care are those medical schools with departments of family medicine. The climate of our institutions and the quality of the options presented to the future physician cannot help but influence his or her selection of specialty.

When we look at the problems in today's health care system, we must see that they did not occur simply because of governmental interference or the proliferation of third-party payors, though these are certainly important contributors. We must also look at the make-up of our profession and how we, ourselves, have contributed to the problems of lack of access to primary care and growing health care costs.

In health care, as in the human body, everything is related. What we put into the system now will determine the effectiveness and strength of our profession in the future, as well as the health and well-being of the next generation of patients.

We must look at how we can encourage young people to consider dedicating their professional lives to those areas of medical practice where the need is great. We must look at how students pay for their medical education and how we can help. We must look at the resources available to our medical students and foster development in those areas where we see shortages of opportunity. And we must provide strong role models, advisors, and mentors for those who are asking the questions that only our experience can answer.

LETTERS TO THE EDITOR

OPPOSING PHARMACISTS' USE OF DEA NUMBERS

A matter of considerable concern to me has not been resolved by the usual methods through the State Society. It is apparent that certain pre-paid prescription plans identify the prescribing physician by his or her DEA number. I became aware of this because I have been getting frequent calls from pharmacists requesting my DEA number, when in fact the prescription written was not for a narcotic. I have routinely refused to give that information and explained that there are many other ways to identify the ordering physician, not the least of which is using his or her license number which is on the written prescription. Apparently the pre-paid plans continue to request DEA numbers.

It occurred to me that none of my colleagues were complaining about similar requests from pharmacists, and I have concluded that since I, an ophthalmologist, rarely order narcotic prescriptions, my DEA number is not on file in many pharmacies. When I asked about similar calls with orthopedists, general surgeons, or other specialists, they said they are not bothered by such inquiries. On the other hand, narcotic prescriptions are somewhat commonplace from their offices.

I seriously question the wisdom of using DEA numbers as identification numbers for the purpose stated above.

It would seem that the State Society should act as a liaison with the pre-paid prescription plans in remedying this situation. I have discussed this with a local delegate who directed me to one of the administrative members of the Society staff, but obviously nothing has been accomplished. This recently came to a head when an irate pharmacist violently hung up the telephone while I was extending my reasoning to her.

I would be curious to hear how many other physicians in the state are getting similar requests from pharmacies. This practice is wrong and should be remedied.

Robert L. Shindler, MD
Camp Hill

Response: Thank you for bringing this matter to our attention. I agree that this is inappropriate. State Society staff have recently made inquiries about the use of DEA numbers by prescription plans. It was stated that pharmacists need a number universal from state to state for all physicians. Since medical license numbers are state specific, they are not sufficient. However, DEA numbers are not state specific. The prescription plan has agreed to consider alternatives to the use of the DEA number, such as Medicare's Unique Physician Identification Number (UPIN). Currently, Society staff members are pursuing that avenue.

John W. Mills, MD
Medical Editor

EDITOR'S NOTE

The Discharge Summary, "Family Unity: A Point of View," in the February 1992 issue of PENNSYLVANIA MEDICINE states:

We know that 65 percent of all children born in the United States are born of unwed mothers between the ages of 15 and 19. In Pennsylvania that figure is 78.5 percent.

The state Department of Health has requested further clarification of that paragraph as follows:

We know that in 1988, 67.4 percent of children born in the United States to women between the ages of 15 and 19 were, in fact, born to unmarried women. In Pennsylvania in 1989 that figure was 78.5 percent.

DEBATING "DISCIPLINE"

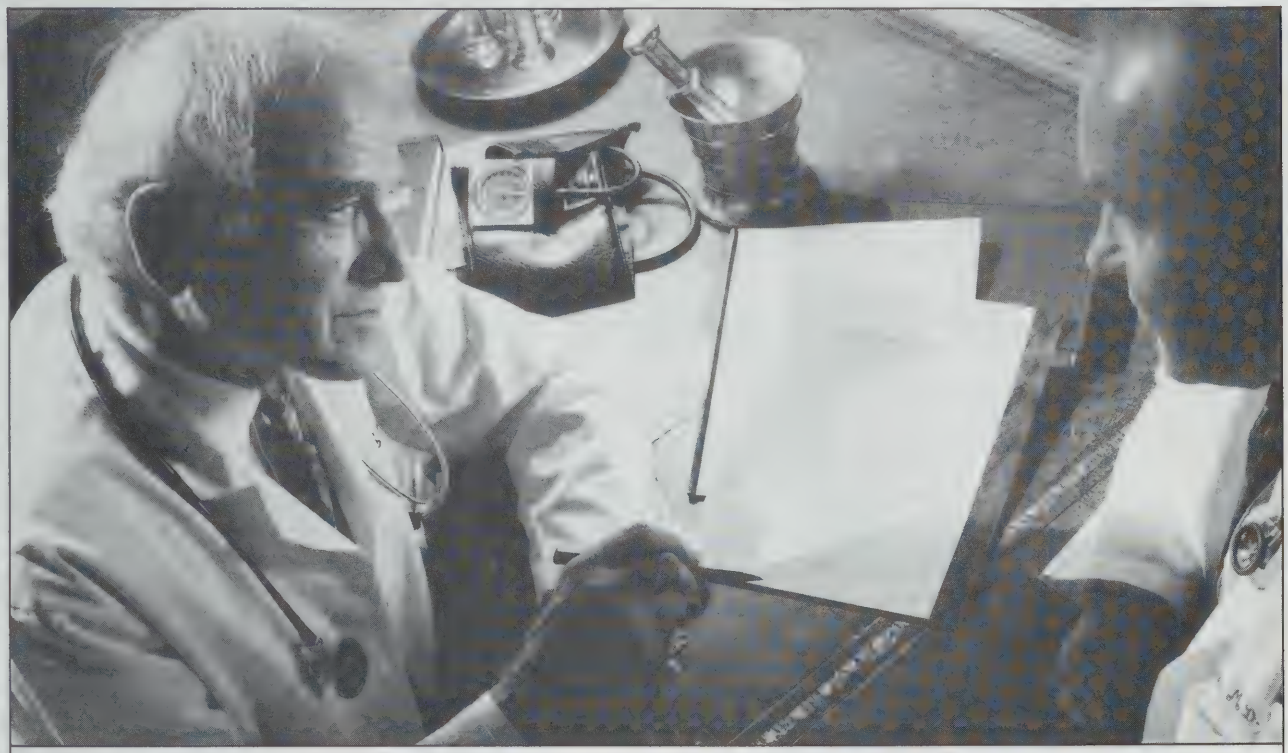
I write to object to the article entitled, "The Discipline of Destiny," by J. Mostyn Davis, MD, in the December issue of PENNSYLVANIA MEDICINE. Why was it written; who is to blame for its publication; and what, dear Lord, does it say?! PENNSYLVANIA MEDICINE owes its readers an answer to these simple questions: "What does it say? What does it mean?" If the answer is "nothing," the page should be left out. Let's save paper and the trees.

Daniel G. Lareau, MD
Warren

Editor's Note: The preceeding was excerpted from a lengthy, detailed letter. The following response, submitted by Dr. Davis, refers to the original letter in its entirety: "Every author cherishes the hope that the material they pen will be read by someone. I was pleased to note the article cited was read. In fact, 'The Discipline of Destiny' was read by Dr. Lareau rather carefully. Most authors do not appreciate critics who point out their deficiencies. However, I received three notes from doctors who reported they read the article with pleasure, versus one who was unhappy with it."

LIPID DISORDER TRAINING AVAILABLE

I completed a great training program this year, and through your publication I want to tell other physicians so they also can take advantage of it.



The small number of lipid specialists in the country, localized to university medical centers and large cities, cannot meet the growing demand for consultative services from primary care physicians when they encounter patients with complex lipoprotein disorders.

The Lipid Disorder Training Course, sponsored by the American Heart Association and a large pharmaceutical company, intensively trains intermediate-level clinical lipid specialists over a three-day period in six centers. These physicians then provide consultation and establish standards of practice for the treatment of these disorders at a local level.

I hope all physicians who have a bent in this direction can take advantage of this unusual opportunity for the benefit of themselves, as well as all of the patients who urgently need diagnosis and therapy of their lipid disorders. The course has expanded my practice in that area dramatically.

Harold V. Werner, MD
West Plains, Missouri

Editor's Note: The Lipid Disorders Training Course is held in six regional locations nationwide: Washington University, St. Louis, Missouri; Johns Hopkins School of Medicine, Baltimore, Maryland; University of Iowa, Iowa City, Iowa; University of Washington, Seattle, Washington; University of California, San Francisco and Berkeley, California; and Baylor University, Houston, Texas. For additional information, physicians in Eastern Pennsylvania should call Mary Anne Palmer at Johns Hopkins University, (410) 614-0485; and physicians in Western Pennsylvania should call Martha Stegmaier at Washington University, (314) 362-4442.

"When you compare malpractice insurers, there is no comparison."

"What do you look for first? Rates, naturally. So that was the first item that attracted me to Physicians Insurance Company. They're stable, well run—and their rates have *decreased continuously* since 1986; while at the same time they have continued to broaden their coverage.

Additionally, the Company's performance seems to have forced other insurers to lower their rates.

Still, no one matches Physicians Insurance Company, on rates *or* support;

- they won't settle a case without your consent,
- when they fight your case, it's with confidence and intelligence, as shown by their 98% success rate at trial,
- you receive 40 hours of *free* legal representation for disciplinary proceedings, including staff privilege disputes and service on peer review committees,
- you receive legal counsel if you are called for a deposition in a medical malpractice case in which you are not named in the suit.

And Physicians Insurance Company doesn't automatically increase your rate for individual loss experience, or for corporate or partnership coverage.

I had good reasons for originally changing to Physicians Insurance Company. Those reasons are even truer today — the rates, the service, the support. It's an easy choice."

New Employment Discrimination Law: Finally, Protection for Physicians!

Susan M. Weber, Esq.

The federal Americans with Disabilities Act provides employment discrimination protection for handicapped or disabled people. However, a Pennsylvania statute amended in 1991 provides startling new protection for physicians. This article is intended to address only the responsibilities of physicians as employers and their rights as disabled individuals under state and federal law; it is not intended to discuss patients' rights.

The Americans with Disabilities Act (ADA) provides comprehensive civil rights protections to individuals with handicaps or disabilities in employment, access to public accommodations, state and local government services, and telecommunications (see "The Disabilities Act: How to Comply" in the December 1991 issue of PENNSYLVANIA MEDICINE). However, the Pennsylvania Human Relations Act (PHRA) and the regulations promulgated pursuant to the act, which generally mirror the ADA, afford much broader protections in many ways.

For purposes of this article, unless otherwise noted, discussion of the provisions of the PHRA includes those of the ADA. Physicians should be aware of the mandates of these statutes because they affect physicians in three very distinct ways. Physicians have many roles in society, including those of employer, of physicians conducting preemployment physical examinations for other employers, and of independent practitioners of the healing arts.

Role as employer

The employment provisions of the ADA take effect July 26, 1992, for employers with 25 or more employees, and July 26, 1994, for employers with 15 to 24 employees. Thus, the ADA employment provisions will not affect employers with less than 15 employees. The PHRA, on the other hand, currently applies to employers with four or more employees, including those who work on a part-time basis.

The PHRA prohibits discrimination against individuals with non-job-related disabilities in any employment decision. Such decisions include advertising for applicants, hiring, firing, contracting with independent contractors, payment of compensation, tenure decisions, or decisions concerning any other terms or conditions of employment. The PHRA contains several exceptions. Its provisions do not apply to operation or terms of a bona fide retirement/pension plan or bona fide group/employee insurance plan, or to age limitations in apprenticeship programs. The PHRA affirmatively states, however, that uninsurability or the potential for increased insurance costs is not a basis for considering a disability job-related. In addition, employers may provide information to insurers for bona fide insurance purposes, and the act also permits religious associations or corporations to hire on the basis of sex where religious beliefs or practices require.

Similarly, the ADA permits religious groups to preferentially employ on the basis of religious affiliation. An employer may not, however, discriminate on the basis of disability provided the applicant meets the required religious criteria. The ADA further permits employers who establish, sponsor, observe, or administer insurance benefit plans to comply with "accepted principles of risk assessment," but they may not deny employment because of the possibility of increased insurance costs or potential for future complete disability.

While insurance policies may exclude pre-existing conditions, they may not be utilized as a basis for discrimination against a disabled employee. And finally, health insurance policies may limit coverage for treatment, even though such clauses may affect disabled employees.

Employers may not discriminate

Ms. Weber is assistant general counsel for the Pennsylvania Medical Society.

One-touch, computer access to Pennsylvania Blue Shield is easier than ever. But for the doctors who file claims electronically, "easy" isn't the only thing worth talking about.

Easy come. Easy go. 2.6 million times every month.

"I like the control." With Electronic Claims Submission (ECS), you control the accuracy and the timing of your claims.

What you submit is exactly what goes into the system. Time-consuming clerical errors are virtually eliminated.

You control the timing. Because the instant your claims are sent is the instant they arrive at Blue Shield for processing – 24 hours a day, 7 days a week.

Need a paper record? It's easy. Just print a copy of each transaction for your files.

With ECS, it's never been easier to stay in touch and in complete control.

"Faster claims turnaround means faster payment." With ECS, you bypass a week or more of handling and administrative work. And that gets you from zero to payment in record time.

ECS makes it easy to go with the flow – your cash flow.

"I always know where I stand." Want to check the status of the claims you submit? With ECS, your staff can access and print Reconciliation Reports that provide claims detail on patients, services, payments and claims still pending in our system.

"ECS reduces my administration costs. And my equipment costs were less than I expected." Technology has never been faster, easier to use or more affordable.

If you have an IBM-compatible PC, DOS 3.3 or greater, a modem and a printer, we'll make our user-friendly, Paperless Claims Express software available to you free of charge. We'll even provide expert systems support.

One-touch, computer access to Pennsylvania Blue Shield has never been easier – or more productive.

For more information, call Pennsylvania Blue Shield: **717.975.7130**.

Pennsylvania Blue Shield

ELECTRONIC SERVICES

In addition to individuals with disabilities, the PHRA provides protections to individuals on the basis of race, color, age (over 40), sex, national origin, ancestry, use of guide animals (either because the person is disabled in some manner or because the person is a trainer of such animals), and in some instances, familial status.

against qualified individuals with disabilities in employment decisions. The ADA defines a "qualified individual with a disability" as "an individual with a disability who satisfies the requisite skill, experience, education, and other job-related requirements" of the position and who, "with or without reasonable accommodation, can perform the essential functions of such position."

Essential functions include fundamental or critical functions, but not marginal ones. Also, functions may be considered essential to certain positions because of staffing considerations or because of the skill and training required for completion of the functions. Employers should review and revamp job descriptions so that essential functions can be easily discerned and marginal functions reassigned if need be.

While the PHRA does not define "qualified individual," both acts require an employer to provide "reasonable accommodation" to employees or potential employees. Reasonable accommodation may include: altering the application or interview process; modifying time schedules to accommodate rest requirements or physician visits; providing braille equipment, qualified readers, or reading machines for vision-impaired employees; providing interpreters or telephones specially equipped for hearing-impaired employees; or reassigning employees to vacant positions if necessary.

Reassignment need be an option only if vacant positions are available; an employer is not required to create a new position if a disabled employee is unable to perform the essential functions of his or her current position. The employer is required to consult with the employee or applicant in determining which accommodations would be most appropriate. The employer must not force an applicant or employee to accept accommodations, as the acts permit a disabled person to refuse such aid. However, should the applicant or employee refuse and because of the refusal is unable to perform the essential functions of the position, he or she will no longer be considered a "qualified individual with a disability."

An employer may require that an applicant's or employee's disability not pose a "direct threat" to the health or safety of himself, herself, or others and is required to offer reasonable accommodation if doing so would eliminate or reduce the risk to acceptable levels. However, the risk of harm must be "substantial" and not "speculative or remote." The magnitude of this risk is determined individually based on

Who is protected under the ADA?

The Americans with Disabilities Act (ADA) protects several classes of individuals:

- those who have "a physical or mental impairment that substantially limits one or more of the major life activities,"
- those who have a record of such an impairment, and
- those who are regarded as having such an impairment.

The phrase "physical or mental impairment" encompasses a wide variety of physiologic conditions, disorders, and chronic diseases; anatomic losses; psychological disorders; intellectual deficiencies and learning disabilities; HIV disease, either asymptomatic or symptomatic; drug addiction; and alcoholism. "Major life activities" include "caring for ones 's self, performing manual tasks, walking, seeing, hearing, speaking, breathing, learning, and working."

In protecting people who have a record of an impairment, the Act includes not only those who have a history of such an impairment and have recovered, but also those who have been misclassified as having such an impairment. The third category of protected individuals, those who are regarded as having an impairment, has several components: people who have impairments which do not substantially limit major life activities but are treated by private entities as if they do, those who have impairments which result from the attitudes of others, and those who have no impairments but are treated by private entities as if they were impaired.

The Act further protects those who have a relationship or association to an impaired person, including entities as well as individuals. Therefore, a physician could not lose his/her lease for treating patients with mental disorders for HIV, and an entity which provides an assisted-living facility for mentally retarded people could not be evicted for doing so. The Act provides a cause of action for this individual or entity independent from that of the person(s) with impairments.

Congress excluded the following from coverage under the ADA: behavioral disorders such as compulsive gambling, kleptomania, and pyromania; sexual disorders such as transvestism, pedophilia, exhibitionism, voyeurism, and gender identity disorders; transsexualism; homosexuality or bisexuality; and "psychoactive substance abuse disorders resulting from current illegal use of drugs." Thus, while homosexuality is not protected, homosexuals who are HIV positive, or who are perceived as being HIV positive are protected. Similarly, people who are addicted to drugs or who have a history of drug addiction are protected while those who currently use illegal drugs are not.

objective, factual evidence regarding: the nature and severity of the potential harm, its duration, the likelihood that the harm will occur, and the imminence of the potential harm.

The acts do not require reasonable accommodation that would cause "undue hardship" to the employer. The ADA defines undue hardship as "significant difficulty or expense." While the PHRA does not specifically define the term, both acts provide non-inclusive examples of factors which should be taken into consideration when making a determination of undue hardship. Such factors include, but are not limited to: overall financial resources; impact on the employer's business and other employees; and the extent, nature, and cost of the accommodation.

Employers' actions may be suspect at all phases of employment decisions. Prior to an employment offer, both statutes prohibit any inquiry as to whether an applicant has a disability or handicap, or as to the extent of such disability. Employers may ask whether an applicant can perform the essential functions of a position, with or without reasonable accommodation. Employers may even request a demonstration of this ability, but only if an obvious or known disability is present which may hinder performance of job functions, or if employers make the same request of all applicants. In addition, pre-employment testing may not discriminate against or screen out applicants with disabilities.

Pre-employment medical examinations are prohibited unless and until the employer has extended a job offer. Final approval for the employment of the applicant may be contingent upon the results of the examination provided that all applicants in the same job category are subject to the same contingency. The examination need not be job-related, but employment decisions must be based only on job-related necessity. Any information obtained through such medical examination must be treated as a confidential medical record, and the record must be segregated from other employment records. The information must not be shared with anyone, except that: first aid and safety personnel may be notified for potential emergency treatment purposes, supervisors may be notified regarding the extent of work restrictions or accommodations required, and government investigators may be provided information upon request.

The medical examination prohibitions apply equally to treatment of employees. Employers may only require job-related medical examinations which demonstrate whether, with or without reasonable accommodation, an employee can perform the essential functions of a position. Employers are required to segregate medical records and may only disclose confidential medical information as described above. Employers may, however, offer voluntary medical examinations as part of an employee health program, provided that employment decisions are not based on non-job-related information, and the medical records are segregated and treated in a confidential manner.

Drug testing of employees for illegal drug usage screening is not considered a medical examination and is specifically permitted. Further, employers may institute drug- and alcohol-free workplace policies. It must be noted, however, that while the ADA protects those who have successfully completed or who are enrolled in a drug rehabilitation program, as well as those with alcoholism, employers may hold these employees to the same performance and testing standards as other employees.

The PHRA specifically excludes "current, illegal use of or *addiction to* a controlled substance" (emphasis added) from the definition of "handicap or disability." Since this exclusion appears in the December 1991 amendments, regulations promulgated thereunder have not yet been published. Even though the amendments appear to exclude those who are addicted but under treatment or who have successfully completed a rehabilitation program, Elisabeth S. Shuster, Esq., chief counsel for the Pennsylvania Human Relations Commission, has stated that the commission intended that PHRA amendments track the ADA's nonprotection of only current, illegal use of drugs and that forthcoming regulations will be explanatory.

Physicians should review their hiring, advancement and record-keeping policies and practices for consistency with the ADA and PHRA in order to minimize liability exposure.

The PHRA essentially tracks the ADA accessibility provisions (see "The Disabilities Act: How to Comply" in the December 1991 issue of PENNSYLVANIA MEDICINE). Physicians are reminded that the PHRA applies to all employers with four or more employees; they should review their policies, practices, and procedures for consistency with both the ADA and the PHRA.

Role in conducting pre-employment physical examinations

Physicians are often retained by other employers to conduct pre-employment physical examinations. As described above, employers may only require a pre-employment physical if a job offer has been tendered and if all applicants for the job category are treated equally. The physician's responsibilities in conducting such exams are limited to whether the appli-

cant can perform the essential functions required by the position, with or without reasonable accommodation.

While it may be necessary to elicit medical history information from an applicant in order to conduct a thorough examination, the physician must base the decision whether the applicant can currently perform the essential functions of the position only upon job-related information. A prudent approach would dictate that, for pre-employment purposes, the physician conduct a limited examination based on the responsibilities of the position so that any opinion with respect to fitness for duty would be based solely on whether the candidate could currently perform the essential functions of the position. Therefore, the physician's opinion would be based solely upon untainted information. A second, more thorough examination, which could include medical history information, could be conducted after the candidate's employment has been confirmed. Such an approach protects both the physician and the employer from future allegations that the physician's opinion as to whether the candidate was fit for duty was based upon information proscribed under either the ADA or the PHRA.

"... hospitals may not refuse, suspend, revoke, or even limit privileges based on a physician's HIV status."

Role of independent contractor

It is likely that physicians who are employed by hospitals or other employers are protected by the provisions of both the ADA and the PHRA. However, the PHRA amendments, which the General Assembly enacted in December 1991, go beyond the ADA and protect those physicians who are engaged independently in the practice of medicine. The amendments define "independent contractor" as "any person who is subject to the provisions governing any of the professions and occupations regulated by State licensing laws enforced by the Bureau of Professional and Occupational Affairs...." The provisions of the PHRA which protect the employment status of employees also protect the independent contractor status of the physician.

Therefore, hospital medical staffs to which a physician seeks privileges cannot refuse to contract with, bar, or discharge (if privileges have previously been granted) from the staff or otherwise discriminate against a physician who has a handicap or disability, if that physician is the most competent person to fill the available position. Because the PHRA has, since 1986, recognized a positive HIV status as a handicap or disability, an HIV-positive physician is protected from discrimination in medical staff relationships.

Hospitals may not advertise their preferences or limitations with respect to HIV status or other disabilities when they seek to fill medical staff positions. In addition, they may neither inquire nor utilize application forms which request information concerning an applicant's HIV status or other disabilities. They may not ask, at any point in the application or credentialing process, whether or not a physician is HIV-positive. Hospitals may only ask whether a physician can perform the essential functions required, with or without reasonable accommodation.

Furthermore, hospitals may not refuse, suspend, revoke, or even *limit* privileges based on a physician's HIV status. Current regulations prohibit the termination, alteration, or limitation of employment, and therefore, in the context of physician-independent contractors, privileges, because a non-job-related condition may progress and become job-related at some point in the future. Pennsylvania federal courts have held that any decisions as to job-relatedness must be based upon "objective, individualized, and medically valid evidence." Regulations further provide that a "handicap or disability may be job-related if placing the...applicant in the job would pose a *demonstrable* threat of harm to the health and safety of others" (emphasis added). *No physician, to this date, has communicated the HIV virus to any patient.*

In addition, neither the Centers for Disease Control nor any research team has stated unequivocally that an HIV-positive physician, who appropriately utilizes universal precaution techniques, is likely to infect patients. Unless and until such time, an HIV-positive status cannot be considered, by any medically valid evidence, a demonstrable threat of harm and therefore a job-related disability for which a physician can be denied privileges or have privileges limited in scope. Under Pennsylvania law, this analysis applies to all physicians, including surgeons.

The PHRA states that its provisions do not apply when a bona fide occupational qualification requires otherwise. While some would argue that a surgeon must be HIV-negative as a bona fide occupational qualification, regulations prohibit this analysis. In order to demonstrate a bona fide occupational qualification which would permit discrimination against a physician who is HIV-positive, a hospital must "prove a *factual* basis for believing that all or substantially all members of a class covered by the act would be unable to perform safely and efficiently the du-

ties of the job involved" (emphasis added). Based on current factual medical knowledge, it is unlikely that hospitals would be able to meet this requirement.

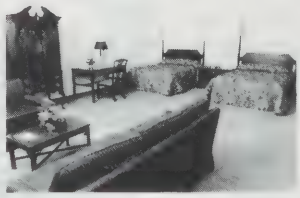
While the PHRA provisions and its interpretive regulations could be challenged in the Pennsylvania courts based on public policy reasons, until such a challenge is successful, hospitals must conform to the language of the act.

Finally, hospitals may not deny any physician a position on a medical staff because of a past handicap or disability. Therefore, hospitals may not deny privileges because of previous treatment for a mental disorder if the applicant can presently perform the essential functions required. In fact, hospitals are required to provide reasonable accommodation, should the need arise, unless to do so would cause undue hardship.

With the exception of the PHRA's protection of physicians who practice medicine as independent contractors, a physician or an employee who believes he or she has been subject to discrimination based on a handicap or disability could file a complaint under either the PHRA or the ADA. Based on the facts of individual cases, relief allowed under the acts differ, as do administrative requirements. Therefore, someone in this position should seek the advice of counsel as soon as possible.

Assuring Accessibility

Physicians are required under the ADA and the PHRA to assure that their offices are accessible to the handicapped and to offer "reasonable accommodations" to their patients who are disabled. Beware of groups claiming to be "ADA certified" who offer consulting services for a fee. No such certification exists.

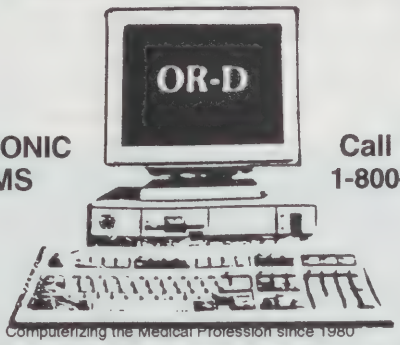


Utilize community resources, such as local branches of disability groups, for office evaluations. Ask patients with disabilities for their input with regard to accessibility of your office. But if you do so, remember to ask several with different disabilities, so that your office is accessible to patients with all types of disabilities.

When Excellence Becomes Tradition

. . . meetings become masterful . . . vacations become magic

Penn State's newly enlarged Nittany Lion Inn offers superb meeting space and beautiful guest rooms. Your group will enjoy the finest amenities and the warmth that has made "The Inn" a legend — and it's all just steps from the University's state-of-the-art Keller Conference Center that offers 25 additional meeting rooms and full conference programing services.



10,000 sq.ft. of New Meeting Space • 260 Guest Rooms • 500-Person Ballroom • 3500 sq.ft. Board Room
Several Small Conference Rooms • Private Dining Rooms • Pavilion Lounge • Health Club • Gift Shop

WORKERS RALLY FOR COMPENSATION REFORM

"Healthy Worksite/Healthy Workers" was just one of several slogans floating around the Capitol in Harrisburg on March 9, when more than 550 physicians and hospital workers rallied for workers' compensation reform.

The effort began at the Hilton Hotel and Towers in downtown Harrisburg, where representatives of the Pennsylvania Medical Society, the Pennsylvania Osteopathic Medical Association (POMA), and the Hospital Association of Pennsylvania (HAP) convened. The crowd was welcomed by Robert N. Moyers, MD, president of the State Society, and John A. Russell, president of HAP. Jerry Rothenberger of the Society and Jim Redmond of HAP briefed the group on the day's activities and goals.

At 12:30 p.m., the physicians and hospital representatives marched through downtown Harrisburg and up the Capitol steps, and assembled inside the rotunda for a press conference. Dr. Moyers and Mr. Russell cited opposition to efforts to link medical reimbursement under workers' compensation to the Medicare payment system and presented the Society's and HAP's proposal for workers' compensation reform. The proposal would provide the following:

- a fee schedule for health care providers other than hospitals, based on the federal workers' compensation fee schedule with appropriate updates (known as OWCP or FECA);
- a payment system for hospital services calculated on the basis of a cost-to-charge ratio;
- a coordinated care organization option affording the opportunity for negotiation of rates and services between employers and groups of health care providers; and
- a streamlined claims submission and adjudication process, utilizing uniform claim form(s), uniform coding of services, clear requirements for supporting documentation of services, etc.

After the 20-minute press conference, the physicians and hospital representatives dispersed to meet with their state senators and representatives to further promote the alternative proposal. Although the event attracted media attention, no specifics about the impact of the day's activities are available as of this printing.

CASEY PROPOSES ABOLISHING HCCCC

The governor has proposed, through the budget process, to abolish the state's Health Care Cost Containment Council (HCCCC) as an independent agency and shift some of its duties to the Insurance Department. Such legislation, now being drafted by the Casey administration, is consistent with State Society policy, which opposes re-enactment of the HCCCC law and supports allowing it to "sunset."

Should the legislation pass, only the "core" duties of the council would be transferred to the Insurance Department, according to Insurance Commissioner Constance B. Foster. Topping that list would be development of an annual report on the cost and quality of hospital medical procedures around the state. Agency duties, such as reviewing mandated benefits and issuing new categories of reports on medical costs in Pennsylvania, would not be transferred and thus would be dropped altogether.

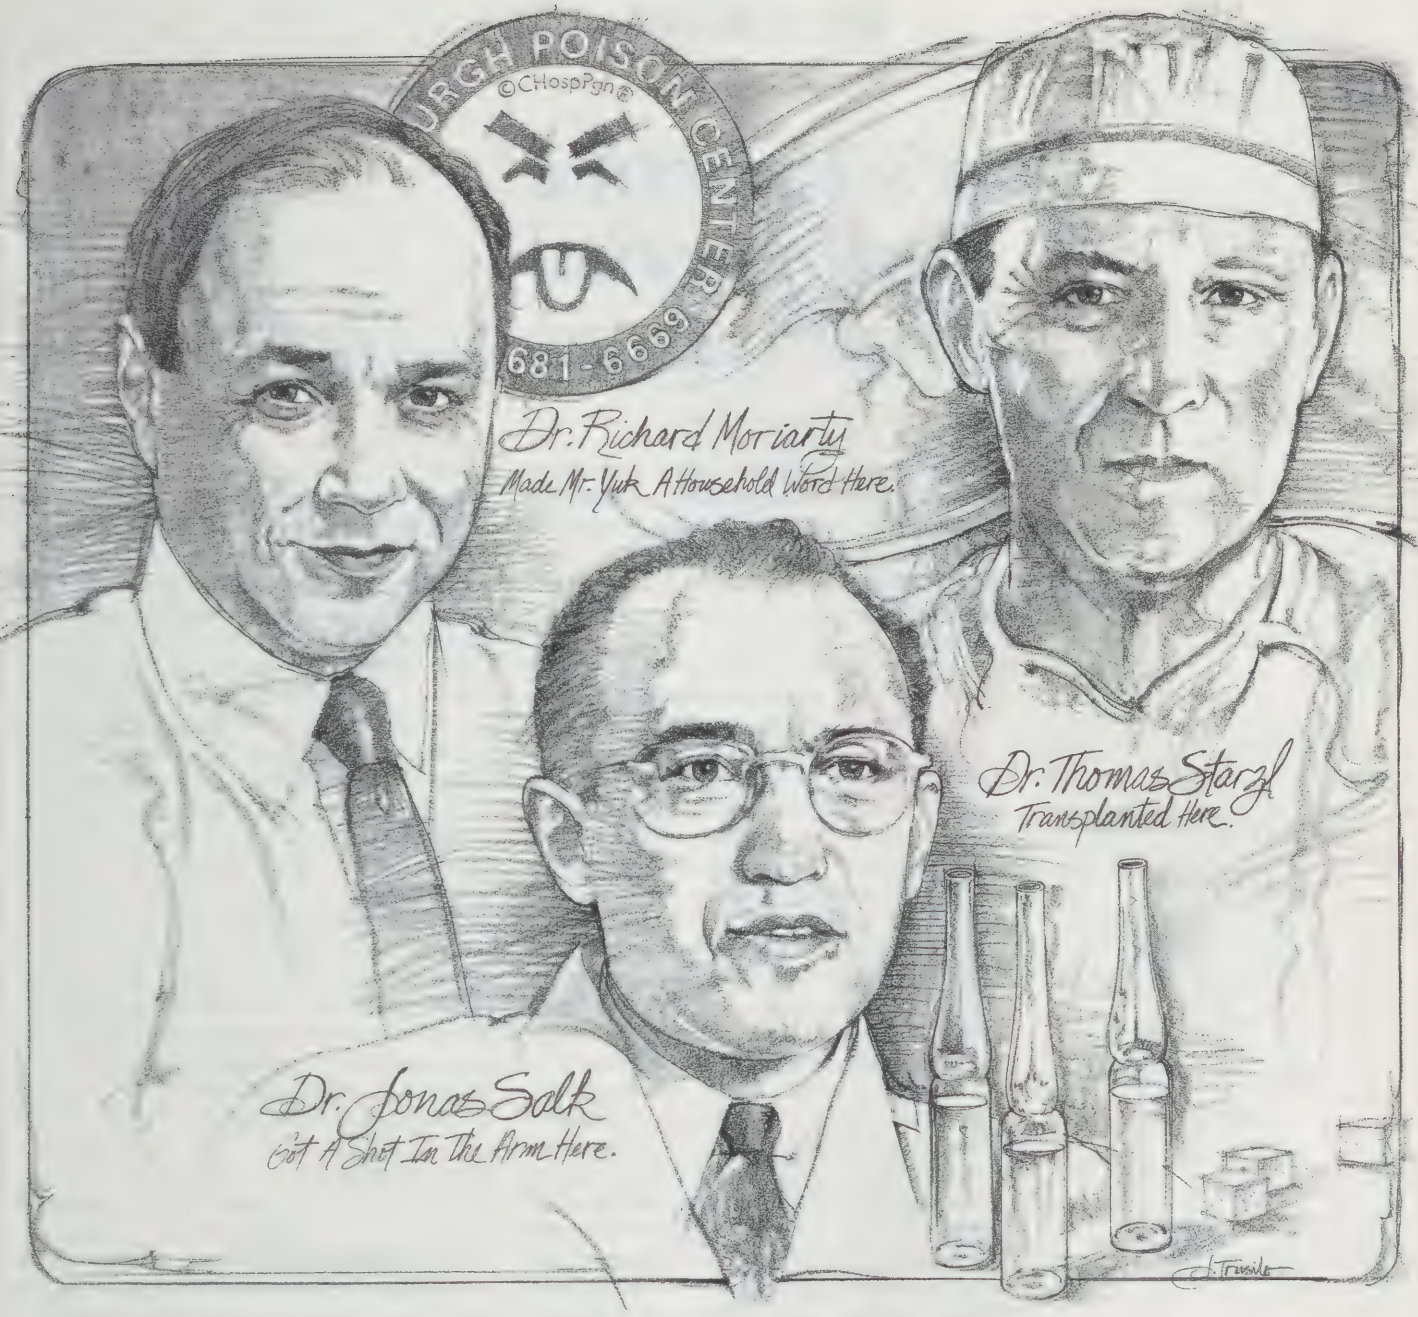
Should the governor's proposed legislation not move or pass, funding for the council will remain a budget issue for the next fiscal year.

COMMITTEE BEGINS REFORM DISCUSSIONS

Just three days after President George Bush unveiled his plan for comprehensive health care reform for the nation, the State Society's Committee on Long Range Assessment began its discussions about this national issue. The committee was charged last November with developing the Society's response to both state and federal health care reform movements.

During the meeting, John Gaffney, PhD, director of the AMA's Office of Strategies, Policy Planning, and Analysis, outlined the many reform models under consideration on state and federal levels. Committee members agreed the Society must move quickly to formulate an official response. Two meetings were held earlier this month to begin defining that response.

SENATE BILL AFFECTS MEDICAL STUDENT LOANS



A bill to reauthorize the Higher Education Act passed the U.S. Senate in February on a vote of 93-1. Senate Bill 1150, based on a Labor and Human Resources Committee package of amendments, includes provisions to eliminate resident physician student loan deferments available under current law.

The amendments allow medical residents who have already taken out student loans to use the current two-year deferment option. But, elimination of automatic deferment would occur for new borrowers as of July 1, 1993; and after that date, deferment would be limited.

The U.S. House of Representatives was expected to consider House Bill 3553, its version of the Higher Education Act reauthorization bill, before April 11.

Following a march through downtown Harrisburg, more than 550 physicians and hospital workers gathered in the Capitol rotunda to support an alternative to the governor's proposed workers' compensation reform plan.

Pittsburgh Has Some Positive Side Effects On Doctors.

The kind of side effects that occur when doctors spend some time in Pittsburgh can be really positive. They start developing ideas that lead to the kind of innovations that make medical history. That's one reason why so many medical societies, groups and associations meet here. And the next time you hold a meeting, symposium or convention in Pittsburgh, you'll experience those benefits for yourself.

You'll find first-rate meeting facilities and world-class accommodations at affordable prices. Combined with great ethnic cuisine and activities like exciting performances at Heinz Hall, it leads to astounding results.

To learn more about the positive side effects that we can help make happen during your next event, write to us at Four Gateway Center, Dept. MCP6, Pittsburgh, PA 15222. Or call us toll-free at 1-800-366-0093.

We'll Have An Effect On You.

Let's Practice Malpractice Prophylaxis

George J. Paul, MD

There are some subjects which cannot be reviewed often enough; and malpractice prophylaxis is one such subject. In spite of numerous articles which appear in our professional literature, the problem still haunts us.

What can be done about medical liability? Why is it still an on-going, major problem? Who is to blame for the current crisis? The doctors? The patients? The lawyers? Obviously all three are at the heart of this insidious dilemma.

Since we have no control over the legal profession and can affect the patient element only peripherally by behavioral persuasion, the answers must come from us, the physicians. And make no mistake about it—we can prevent, easily enough, the vast majority of malpractice cases!

Because of my 35 years of surgical involvement, including 15 years as chief of surgery and clinical professor of surgery, I currently act as surgical consultant to the law firm which handles malpractice defense for the Pennsylvania Medical Society Liability Insurance Company. I review records, charts, data, and other pertinent sources of information; analyze them; and make recommendations to either settle the case out of court or proceed with preparations for defense at a trial.

From my years of experience, it is obvious to me that the vast majority of malpractice cases brought against physicians can absolutely be prevented if doctors pay attention to nine specific areas. Malpractice prophylaxis consists of giving careful attention to: handwriting, progress notes, orders, daily visits to hospitalized patients, consultations, informed consent, complications, family and patient relations, and communication.

Handwriting

There is nothing more detrimental to the defense of a physician in a malpractice action than poor, illegible handwriting in hospital or office records. Of the thousands of records I have examined over the years, minimally 90-95 percent of them contain at least one or more entries that *cannot be clearly read or understood*. There are also many charts in which every handwritten entry is illegible: no order, progress note, or consultant's report can be deciphered or clearly understood.

There is no doubt in my mind that illegible charts pose the greatest challenge in the preparation of a malpractice defense effort. And the sad part of the story is that the physician who wrote the entry, when shown the chart in the defense attorney's office, often cannot read his own handwriting!

Illegible records open the door for the plaintiff to misinterpret or misrepresent the meaning or intent of an entry. Illegible handwriting most often presents an unsurmountable obstacle to the proper preparation of an adequate defense on behalf of the physician, should a patient or family choose to bring suit.

Progress notes

In order to have any validity at all, progress notes must be legible, timely, reflect the status of the patient, and convey real information to the reader. The sad fact is that most progress notes are absolutely worthless. They are illegible, undated, and do not note the time they were written; do not significantly review the patient's status; do not reflect any treatment plans; make no reference to data supplied by nurses, consultants, or a laboratory; and, if signed, are so illegible that no one can tell who wrote them.

All notes must be dated and timed as to when they were written, and they must convey information. I recently found the following series of progress notes in a hospital chart:

1/21—Surgery successful
1/22—Doing O.K.
1/23—Status quo
1/24—Status quo
1/25—To I.C.U.
1/26—In I.C.U.—unchanged
1/27—Notified family of death

Dr. Paul, retired from active practice, is emeritus chief of surgery at St. Luke's Hospital in Bethlehem and emeritus clinical professor of surgery at Temple University School of Medicine. He currently resides in Allentown.

Needless to say, after the family filed "an unnecessary and negligent death" action for alleged incompetent post-operative care, it was impossible to prepare an adequate defense, and I recommended settlement rather than trial.

Orders

Orders, like progress notes, are key elements in reflecting proper care of the patient. Orders should also be legible, dated and timed as to when written, and clearly state the dosage, mode, and frequency of administration. Medication errors can often be disastrous, but well-written and pertinent orders can protect the physician.

A recent case hinged upon the exact time a physician recognized a patient's status change and how long it took the physician to order proper medication to correct the situation. The plaintiff charged the physician with an inordinate delay of more than four hours, thereby leading to irreversible damage to the patient. The physician claimed the order was promptly and correctly written, and any delay was caused by failure of the charge nurse to pick up the order in a timely fashion. The trouble was that the time was not noted on the order, and the nurse claimed she promptly picked up the order after it was written by the physician. Who was telling the truth? It will now be up to a jury to decide. To make matters worse, there is no timed progress note entry to help the physician in his claim.

Daily visits to hospitalized patients

Hospitalized patients have a right to expect to be seen at least daily, and even more often if their condition or status so warrants. Nothing makes a patient feel more helpless or vulnerable, or gives them a greater sense of abandonment, than the failure of a physician to make *meaningful* daily rounds. The patient must be seen, examined, talked to, reassured, and convinced that the physician truly cares about him or her and has the situation well in hand. And remember, these daily visits must be backed up with adequate and meaningful progress notes. As far as insurance companies, governmental agencies, and lay juries are concerned, no progress notes means no visits were made; and no visits means no caring by the physician!

Consultations

In this day and age, with the public's high expectations about the quality of health care, it behooves all physicians to make adequate, proper, and judicious use of consultants. The public expects it, and the practice of modern medicine and surgery demands it. The surgeon who operates on a patient with a history of a recent myocardial infarction ought to arrange for a cardiologic consult before surgery and continued follow-up afterwards; the internist who admits a massive G.I. bleeder ought to set up an immediate surgical consultation for the patient; surgical patients with C.O.P.D. may well need the services of a pulmonologist; and a nephrologist may be useful in the care of a septic patient with partial or total renal shutdown, and this same septic patient should also be seen by the infectious disease specialist.

Medical practice today is really "team practice." We must put ego feelings aside, and obtain any and all necessary help we deem proper for the competent care of each and every patient. The public is very aware and sophisticated concerning the kinds of help available from subspecialists. They expect the help to be rendered. If it is not, they tend to agree with the plaintiff's claim that damage was done due to "failure to provide proper available consultative and specialist care."

Informed consent

Many physicians still fail to understand the potential malpractice exposure inherent in failure to personally obtain an informed consent from the patient (and often from the family). Regardless of hospital rules, I have made it a long-standing practice to obtain an informed consent for every invasive or out-of-the-ordinary procedure I perform on a patient. Please note that I say "personally obtain" the consent—not by the nurse or the resident or the desk clerk. When I personally obtain the consent, it gives me an opportunity to talk about and explain the situation to the patient. It helps foster goodwill, trust, and confidence between the patient and the doctor, and it ensures that the patient really does know what's happening.

I reviewed a litigation case where the consent for major surgery was obtained from the patient by the charge nurse. Post-operatively, the patient was devastated to find that a permanent ileostomy had been performed on him. In court, the patient stated he would never have consented to the surgery had he been told of the ileostomy. The defendant surgeon ad-

"Medication errors can often be disastrous, but well-written and pertinent orders can protect the physician."

mitted that he had not personally obtained the surgical consent, but had ordered the nurse to do so. The nurse was not fully aware of the extensiveness of the patient's ulcerative colitis, nor of the premalignant changes already present in the patient's bowel. The surgeon stated he assumed all patients with long-standing, extensively treated colon disease would know that kind of colon pathology would require a total colectomy and permanent ileostomy. Needless to say, the jury found for the plaintiff.

As stated before, the physician should obtain consent for any and all procedures, even those considered "routine." You never know when a sigmoidoscopy or colonscopy will lead to a colon perforation, or a subclavin vein catheter insertion will lead to a massive pneumothorax requiring placement of a thoracostomy tube or resulting in a brachial plexus injury. When the physician personally talks and explains the situation to the patient and the family, the physician is performing the best kind of malpractice suit prophylaxis there is in case something does go wrong.

"When the physician personally talks and explains the situation to the patient and the family, the physician is performing the best kind of malpractice suit prophylaxis there is . . ."

Complications

The occurrence of complications is inevitable. They happen all the time, but are usually successfully handled and resolved. The patient and family should always be notified of all complications. The physician should explain what happened, why it probably happened, what was done to correct the situation, and how the complication might affect the patient's prognosis.

Usually a frank discussion with the patient will allay the usual concerns and will serve as a reassurance to all. Even if the physician tries to get away without telling the patient, the grapevine at hospitals is such that sooner or later the patient and family discover the truth. They then may well develop a mistrust of their physician, which can effectively destroy all goodwill and rapport, and make them view all future untoward incidents with apprehension and suspicion.

Family and patient relations

It is important that a cordial, forthright, caring, trusting, and thoroughly professional relationship be established and maintained between physician and family. The better the relationship, the more tolerant the family will be in the event untoward or unfavorable results occur. Malpractice suits are often instigated by disgruntled patients and families who are convinced that "the doctor didn't give a damn about what happened."

The physician can be thought of as both a friend and a highly regarded professional by the family. They both truly go hand-in-hand. The physician's caring attitude helps cement the bonds of a cordial and correct relationship, and leads to trust and cooperativeness by patient and family.

Communication

Basically, at the heart of these "prophylaxis pointers" is *communication* between all parties concerned. By the written and spoken word, body language, gestures, and all other means and modalities, the physician must convey to the patient and family a caring attitude, and I mean one that clearly and truly shows he or she cares about the patient; knows what's going on; will do the very best to competently care for and treat the patient; will respect the wishes, beliefs, and feelings of the patient; and will openly and truthfully discuss anything and everything with them. Too often, the patient and family are "the last to know." Therefore, the physician must talk to them frequently, telling them the current status of the patient personally, rather than through an intermediary. We must always be aware of how stressful and frightening an illness can be, and how important and comforting it is when the physician communicates and empathizes with the patient and family.

Conclusion

Will the above nine prophylactic points prevent malpractice suits? Of course not! But they will stop many of the small and petty actions taken by patients as a means of "getting even with the doctor" for perceived (or actual) slights and mishaps.

The physician, through these actions, can help make the patient more understanding and aware of the fact that the practice of medicine is a blend of both art and science, and all sorts of things—complications, untoward and unexpected reactions, failure to respond to treatment, even death—can and do happen! The bottom line to this whole essay is to tell you a simple truth: it is much harder to sue a sympathetic, caring, and trusted physician-friend than an uncaring stranger.

Let us all be the friend, not the stranger!

With Princeton, you're in good company.

More than 19,000 medical and health care professionals have chosen Princeton Insurance Company for their professional liability insurance coverage. Here are some reasons why:

- **A solid track record.** Princeton has a decade of experience providing professional liability insurance coverage to physicians, and A.M. Best has ranked us (with our parent company) among the 20 largest medical malpractice insurers nationwide since 1983.

- **Financial strength.** Our loss reserves are carried at full value, not discounted in the hope of earning sufficient interest income to pay claims. We maintain a high quality/low risk investment portfolio, with no junk bonds, no common stock and no real estate speculation. And we've earned a claims-paying ability rating of "A" from Standard & Poor's.

- **Coverage options.** Tail coverage is included in the purchase price of Princeton's innovative *Occurrence Plus* policy. A standard claims-made policy is also available, and we offer excess liability coverage (limits up to $5 million) to Pennsylvania physicians regardless of which company writes their primary coverage.

- **Strong defense against claims.** In a typical year, more than 90 percent of the Princeton-managed cases disposed of by the courts are resolved in the policyholder's favor.

It may be easier than you think to change insurance companies. Call today to find out more or return the coupon to receive a copy of our brochure, "It's Princeton's Specialty."

Medical Practice Consult: Coding

This is the first installment of a continuing column designed to answer physicians' questions about specific third-party reimbursement and other timely practice management issues physicians face daily in medical practice. State Society members are encouraged to submit questions, typed on letterhead, to: Medical Practice Consult, Department of Physician Services, Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820. Answers will be solicited from the Society's Practice Management Consulting Network, a group of eight consulting firms in various areas of health care expertise. Answers to the following questions were submitted by the Health Care Group, Plymouth Meeting, (215) 828-3888.

Should terms such as "rule out," "probable," and "suspected" be used when coding for diagnoses?

Physicians must often wait for test results in order to confirm a suspected diagnosis and will usually indicate suspicions by use of such terms. While these unconfirmed diagnoses are acceptable in chart documentation, they should be ignored when coding diagnoses. Until a definitive diagnosis has been determined, the patient's signs and symptoms should be coded.

When a patient presents to the office with a cough, fever, and rales, several diagnoses may be applicable. Until a diagnosis had been confirmed, the appropriate codes to use are 780.6 for fever, 786.2 for cough, and 786.7 for rales.

All information provided to carriers becomes a part of the patient's record. An unconfirmed diagnosis that is eventually ruled out will remain on a patient's record and may create a problem in the future, e.g., when the patient applies for life insurance or has medical benefits denied because of a "pre-existing condition."

Please explain the proper use of "V" and "E" codes.

ICD-9-CM "V" and "E" codes are supplementary classifications of the factors influencing health status and contact with health services, as well as external causes of injury and poisoning. "V" codes address circumstances, other than a disease or injury classifiable to codes 001-999, recorded as "diagnoses" or "problems." These codes are used in the following three circumstances:

1) When a person who is currently not sick requires health services for a specific purpose (e.g., V07.2, prophylactic immunotherapy, is used when a person has been exposed to hepatitis and requires inoculation).

2) When a person with a known disease or injury is receiving a specific treatment for that disease (e.g., V67.0 is a follow-up examination after surgery).

3) When some circumstance or problem is present which influences a person's health status, but is not a current illness or problem (e.g., V17.3 is used for family history of Ischemic heart disease).

The third circumstance requires the use of the "V" code and the diagnosis code for health services provided. While these codes are accepted by most third-party payors, they do not guarantee payment for services. In order to receive reimbursement from payers like Medicare, Medical Assistance, and Blue Shield, "V" codes should generally be used as the secondary diagnosis with a numeric code as primary.

"E" codes identify the environmental events, circumstances, and conditions that surround a specific illness or injury, and may not be used alone. If a person fractures the fibula as a passenger in a car involved in an accident, E813.1 would be coded along with the fracture diagnosis. These codes are often required for workers' compensation and liability claims.

Can I bill for holiday service in addition to basic service?

Code 99054, for services requested on Sundays and holidays in addition to the basic service, is available in the Special Services and Reports section of the *CPT* book. This code allows the physician to bill for the aggravation of having a holiday interrupted in addition to the basic service provided. For example, if a patient requests an office visit on Christmas Day for a sore throat, the physician would bill for the appropriate visit level for office services and code 99054 for seeing the patient on a holiday. Be aware that few third-party payors allow reimbursement for these codes; therefore, the patient will usually pay out-of-pocket for the service. Also, Medicare and Medical Assistance patients should *not* be charged for these services.

Please specify when "critical care" and "prolonged care" should be used in coding for services.

As a result of the changes in evaluation and management codes, new critical care codes now exist: 99291 critical care, first hour; and 99292 critical care, each additional 30 minutes. Critical care follow-up visits have been deleted from the *CPT*. When billing critical care, remember the patient's condition must be of a critical nature, requiring the physician's bedside attendance to perform a service only he or she can perform.

Three hours of critical care (whether continuous or throughout the day) would be billed as follows:

99291—Critical care, first hour
99292 x 4—Each additional 30 minutes

This format applies to all visits of a critical (life-threatening) nature, even if the patient is not in a hospital critical care unit. All other visits (even when the patient *is* in the critical care unit) are billed using hospital visit codes.

These critical care codes are for global services, and all procedures performed to stabilize the patient are included in the service. However, other procedures—such as suturing a laceration; setting fractures; and reducing joint dislocations, lumbar punctures, and peritoneal lavage not directly related to critical care management—are reimbursed separately.

Another option for billing these services is to use the prolonged physician attendance codes: 99150, attendance for 30 minutes to one hour; and 99151, attendance for more than one hour. Since prolonged attendance is not billed as a global service, any procedures performed may be billed separately. When billing for prolonged attendance, bill only for the time spent in patient monitoring. Do not lump the time spent performing procedures into charges for prolonged attendance.

While this method of billing has been the Health Care Group's recommendation in the past, *a word of caution regarding use of prolonged attendance codes is necessary—no relative value units have been established for these codes, and no payment will be made by Medicare*. Private payors may continue to reimburse for these codes, but we expect the use of these codes to initiate much scrutiny.

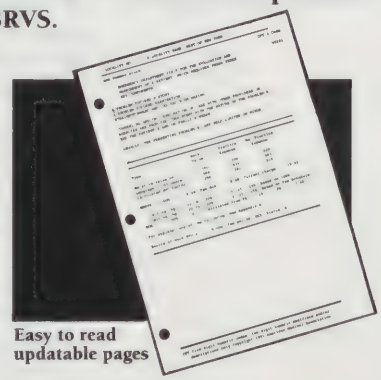
Note: information in this column should not be interpreted as a substitute for legal or other expert advice. For a listing of Practice Management Consulting Network participants, call the Society's Department of Physician Services at 1-800-228-7823.

WAKE UP!

IT'S TIME FOR YOU TO MAXIMIZE YOUR RBRVS BILLING PROFITABILITY.

The Ritter-Palmer Physician's RBRVS Resource Guide is customized for your practice and provides the information you need to bill properly.

This guide is all you need to comply with rules and regulations and recapture revenues you might overlook.



The new, complex Medicare **Resource Based Relative Value Scale (RBRVS)** payment system is here. Indications are that RBRVS can be expected to reduce various physician fee levels by a minimum of 16%*. You can minimize the impact on your own practice with the **Physician's RBRVS Resource Guide.**

Published by **The Ritter-Palmer Group, Ltd.**, the reimbursement experts who have helped recapture millions of dollars in Medicare billings for hundreds of clients, this invaluable book is a comprehensive RBRVS guide licensed by the AMA[1].

To bill Medicare under the RBRVS guidelines without the **Physician's RBRVS Resource Guide**, you're faced with five complicated steps that include multiplication, computation, calculations and conversion factors. When you send us your carrier-provided fee schedule, Ritter-Palmer makes Medicare RBRVS billings a simple, one-step process: simply match the CPT-4 (HCPCS) coding to the procedure you've administered and determine your charge from the fee shown in the guide. It's that easy. Additional revenue opportunities are identified by including complete AMA nomenclature so that your fee reflects the specific services you've performed—services you might overlook. And by sending **The Ritter-Palmer Group** a copy of your fee schedule, your current reimbursements can be displayed and compared on the same page. You'll save time, money and maximize your billing potential. Five volumes are available to meet the needs of every practice. Your one-year subscription brings you periodic updates to RBRVS guideline revisions.

Call **(607) 733-8486** or write **The Ritter-Palmer Group** today for important information about the **Physician's RBRVS Resource Guide** and don't give a second thought to the new RBRVS changes.

You know the benefit of a specialist. Now it's time to contact the specialists on RBRVS.

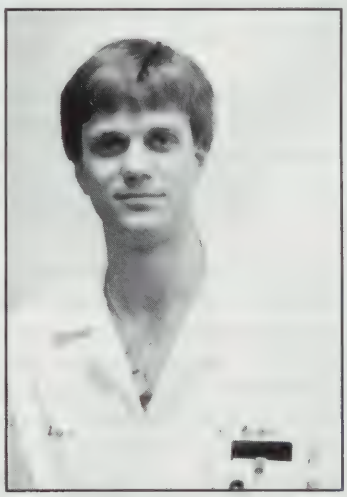
Trustees Represent Future of Medicine

Maria T. Montesano
Assistant Managing Editor



This final of three articles profiling the State Society's newly elected trustees features Daniel S. Henriksen, MD, Resident Physician Section, and Mark V. Caliendo, Student Section.

"I don't like to see legislative rules and solutions to medical education problems."
— Daniel Henriksen, MD

The future of medicine lies in the hands of residents and medical students throughout the world. Recognizing the immediate need to encourage residents and medical students to become involved in organized medicine early in their careers, the State Society within the last eight years has allotted two positions on the Board of Trustees to such future leaders.

The resident

Juggling resident work hours and the responsibilities of being a State Society trustee can be difficult. For Daniel S. Henriksen, MD, however, the support of his program advisors at York Hospital has allowed him time to do both.

Dr. Henriksen

Dr. Henriksen, the Society's new Resident Physician Section Trustee, was born in Philadelphia, but spent 15 years growing up in Colombia, South America. His mother was a nurse, and he credits her work and his own fascination with science as his incentive for becoming a doctor. He received his bachelor's degree from Eastern College in St. Davids and his medical degree from the Medical College of Pennsylvania. Dr. Henriksen is currently in his second year of residency in general surgery, which he chose as a specialty "because it caught my eye and my interest," he says. "I always wanted to do something that was general in nature, and I liked the hands-on of surgery."

His association with organized medicine did not come quite so naturally, but has grown with familiarity. He first glimpsed local organizations during his resident orientation in 1990: "We were exposed to the York County Medical Society and the Pennsylvania Medical Society, and the surgical residents were encouraged to join...I had never been involved in any kind of political, governmental, or organizational structure—not in college, not in medical school, not at all—until I came here."

He ran uncontested for the trustee position because he was one of the few residents remaining in state for several more years. His interest in the issues continues to grow as he realizes their effect on him as a physician. "The major issues now are how to change the medical system and how to pay for the medical care we know how to deliver."

Control of residency work hours is another issue on the top of his list. He says his own residency "has been monumental in opening my eyes to what 'resident work hours' really means." The AMA, struggling with this issue for almost five years, may now have a compromise in the works which Dr. Henriksen believes "is a step in the right direction." This year, while learning the broad scope of issues affecting American medicine, he will work for the Resident Physician Section on the resident work hours issue. "I don't like to see legislative rules and solutions to medical education problems," he says. "I'd like to see physicians make rules for their programs, and I'd like to communicate my own ideas."

Dr. Henriksen is interested in staying involved in organized medicine even after his two-year trustee term ends. He says he doesn't yet have "a complete grasp of how the Society works," but he is enjoying his experiences. "The trustee position is an opportunity for me more than anything," he says. "So far, I have benefited more

from my involvement in organized medicine than the Society has, but that will change...and I'm really looking forward to what I can give back."

The medical student

Several characteristics and experiences can lead people into medical professions. Mark V. Caliendo, the Society's newest student trustee, credits an acute childhood illness, human nature, and an interest in science for his decision.

Caliendo was just six years old when his appendix ruptured. He explains his experience as follows: "I was very young and scared at the time, and very uncertain about what was going to happen...when I got to the hospital, I layed there for three days, not knowing if I was going to live or die, not really understanding what illness and death were about. During that time, the doctors took me in, and it was just a matter of following human nature to look up to them and admire and respect what they were doing."

A native of Bucks County, Caliendo received his bachelor's degree from the University of North Carolina at Chapel Hill. He is a third-year medical student at Hahnemann University, where he was a member of the Medical Student Institute (MSI), Hahnemann's student government. As a trustee of the Society, he serves on the Publications Committee and the Council on Membership, and he is also a member of the Board of Directors of the Philadelphia County Medical Society and involved on a national level with the AMA's Student Section.

Mark Caliendo

When asked why he ran for the trustee position, Caliendo says, "I wanted to speak out, on behalf of medical students, to let the leaders in our profession know how changes that occur affect us." However, he says since becoming a trustee in October, he often sees his role as primarily learning from the Board and medicine's leaders, and bringing that information back to the students. "We're the ones who will have to work within the future medical system...and concerning the rapidly changing face of medicine, it's important to know where you came from to understand where you're going."

Caliendo credits Charles Bailey, MD, a Hahnemann graduate and a pioneer in open heart surgery, for teaching him "an important lesson about life." During a lecture at Hahnemann, Dr. Bailey spoke about his experience of working his way through college as a girdle saleman. Many years later, when thinking about how the heart valve works, he made an analogy between the mitral valve and the strings of a girdle. Caliendo says, "As it turns out, that was one of the ideas that led him to pioneer open heart, mitral valve surgery...he was very encouraging about being open to *all* of life's experiences, because they all contribute to your profession and how effective you are in your career."

As for issues affecting students, he says they are basically the same as those facing physicians; loss of autonomy tops his list: "Today's students want to be able to enjoy the same freedoms in practicing medicine as physicians traditionally have." Other important issues, according to Caliendo, are loan repayment schedules, resident work hours, and liability coverage. He says, "All these contribute to students' decisions regarding specialties, locations, and how well we're able to practice medicine in the managed-care environment of the next century. For future students, these are important because they have to decide *if* they want to go into medicine at all." And like other trustees in this series of profiles, Caliendo cautions against hurried reform to the nation's health care system. "Medicine is best handled by physicians," he adds, "and should not be left in the hands of insurance companies, lawyers, and 'big' government."

He is considering a specialty in neurosurgery or plastic and reconstructive surgery. As for his future involvement in organized medicine after his one-year term expires, Caliendo is not sure what will happen. He says he realizes great advantages to staying involved and hopes to do so: "It's hard to commit to anything with plans to do a surgical residency...but I think organized medicine is important, and I will make every effort to stay involved."

"I wanted to speak out, on behalf of medical students, to let the leaders in our profession know how changes that occur affect us."

— Mark Caliendo

SELECT MEDICAID FEES INCREASED

This month, Pennsylvania physicians should begin receiving increased Medical Assistance (MA) payments as a result of changes to the Medicaid fee schedule for selected maternity, pediatric, and primary care services. Increases will occur for services rendered on or after February 1, 1992.

Physician-specific increases include:

- office visit—from $18 to $20;
- initial office visit—from $18 to $30;
- vaginal delivery—from $312.50 to $800;
- C-section—from $459 to $800;
- EPSDT—from $25/$35 to $65; and
- emergency visit in emergency room—from $13 to $20-$50, depending on level of care provided.

The increases are a result of the release of $17.4 million of Medicaid monies by the governor. However, the remainder of the $50 million authorized by the state legislature to expand outpatient primary access to MA patients remains frozen.

State Society President Robert N. Moyers, MD, in a January letter to the governor, urged the release of the remaining $32.6 million, as well as $60 million for state mental hospitals still being held in reserve. Dr. Moyers' letter was sent on behalf of the Society, the Pennsylvania Academy of Family Physicians, the Psychiatric Physicians of Pennsylvania, and the Pennsylvania Section of the American College of Obstetricians and Gynecologists.

BLUE SHIELD DEVELOPS NEW RADIOLOGY PROGRAM

Pennsylvania Blue Shield has developed a new preferred provider program for outpatient elective radiology services. The Radiology Preferred Provider Program was approved by the state Department of Health (DOH) and Insurance Department on March 10, and May 1 is the target start-up date for Blue Shield's pilot program in the Allentown area. In contrast to Blue Shield's participating physician programs, not all radiologists will be permitted to participate. Blue Shield plans to limit participation to a select network of providers.

The program works as follows: if the subscriber receives covered services from a radiologist preferred provider, Blue Shield pays the full program allowance, and the radiologist is required to accept that amount as payment-in-full. However, if the subscriber opts to receive services from a non-preferred provider, the program allowance is reduced, and the subscriber must pay out of his or her own pocket the difference between the radiologist's charge and the reduced allowance.

The Society raised several concerns in comments submitted to the departments when the program was initially proposed. First, the Society questioned if the number of program participants in each area would be sufficient. The Insurance Department and DOH required Blue Shield to submit its list of proposed participants, and the departments have indicated that the number "will be sufficient."

Second, the Society expressed concern about Blue Shield's initially proposed 50 percent penalty to subscribers not utilizing preferred providers. Following the Society's comments, the penalty was dropped to 20 percent. According to an Insurance Department representative, a 20 percent reduction conforms to both departments' guidelines.

The state departments are concerned about adequate release of program information to physicians to help them make referrals consistent with patients' health care benefit programs. The departments have mandated a four-week lapse from the date of program approval to implementation. During that time, physicians will receive educational materials about the Radiology Preferred Provider Program. In the Allentown area, those materials were expected to be mailed on or soon after April 1.

One final note from the Society: although Blue Shield's Allentown program has been deemed a pilot program, no provisions exist to prevent Blue Shield from expanding the program throughout the Commonwealth at any time. However, the Insurance Department and DOH have assured the Society that they will closely monitor the effect of program implementation and use on subscribers. Any complaints about the program from subscribers, particularly related to access, may result in revocation of approval by the Insurance Department.

For additional information on this issue, call the State Society's Council on Medical Economics staff at 1-800-228-7823.

SOCIETY'S PROJECT PA ACTION PLAN APPROVED

Access to health care remains a problem nationwide. According to information from the Associated Press in Washington, DC, more than 35 million people in the United States are underserved by the nation's medical system. The State Society continues to address Pennsylvania's access problem through several programs, including Project Pennsylvania.

Approved and funded for implementation by the Society's Board of Trustees in September 1990, Project Pennsylvania is defined by the Society as "a centralized registry/referral source of health care practitioners willing to volunteer their services in caring for the medically indigent of Pennsylvania." The basic objectives of the program are to assess the access problem in Pennsylvania, establish a network of physicians and institutions to serve the medically indigent, and provide support as needed.

To date, the registry consists of approximately 60 physicians willing to volunteer health care services. Eleven are actively providing care through community health centers and programs sponsored by the state Department of Health, and the remainder will be placed in programs to be developed throughout the state.

During a February 5 meeting, the Society's Commission on Access to Health Care approved an action plan for Project Pennsylvania, which authorizes:

- publication of a project manual, produced by the State Society with the support of the Pennsylvania Osteopathic Medical Association and the Hospital Association of Pennsylvania;
- announcement of the availability of the project to the news media; and
- advertisement of the program to retired physicians to seek increased physician involvement.

For additional information about Project Pennsylvania, call the State Society's Department of Hospital Relations at 1-800-228-7823.

The New OSHA Regulations

The Health Care Group

Recently released regulations of the Occupational Safety and Health Administration (OSHA) require prompt attention by medical and dental practices.

OSHA's final regulations on occupational exposure to bloodborne pathogens, released in December 1991, mandate changes in practice equipment, routines, and recordkeeping to protect health care workers from contact with blood and other bodily fluids which may be infected with HIV or HBV. The central focus of the regulations, "universal precautions," requires health care workers to assume all blood and other bodily fluid is contaminated.

When do the requirements take effect?

The new regulations require practices to comply within a short timeframe: the first deadline is May 5, 1992. Written exposure control plans must be adopted for each location by that date in any practice with employees. This includes any incorporated practice, even if there are no nonphysician staff, since physicians are considered employees of the corporation. The written plan must cover a broad range of mandated exposure control efforts, from work routines to employee vaccinations to employee training records. Thus, practices must document their planned efforts even though actual implementation deadlines are later. Employee exposure control training and various record keeping requirements must be met by June 4, 1992; and final implementation—including required use of personal protective equipment, biohazard labeling, and HBV vaccination requirements—are mandated by July 6, 1992.

Who's affected?

All employers *must* comply if their employees (including physicians) *might* come into "occupational exposure"—reasonably anticipated skin, eye, mucous membrane, or parenteral contact with blood or other potentially infectious materials. The regulations do not apply to solo practices or partnerships which: 1) are unincorporated, and 2) have no nonphysician staff. However, every other physician's office must move quickly to adopt the required work and recordkeeping routines.

It is not enough for practices, like hospital-based groups, to simply piggyback on their hospitals' compliance actions. While those practices might adopt much of their hospitals' plans, the regulations are, in part, employer-specific enough that separate compliance is needed.

OSHA has a long history of tough enforcement, assessing arguably disproportionate fines for trivial violations of its requirements. Given the publicity about HIV and hepatitis B virus (HBV) infection, it's likely that OSHA will wage a tough (and well-publicized) campaign to assure that physicians' offices take the regulations seriously. And even without the threat of OSHA fines, the health risk to staff is serious enough that physicians will want to assure aggressive adoption and enforcement of required standards.

What's to be done?

Broadly, the regulations require physicians to:

1) Identify and document the potential risks of practice—in terms of staff positions which may involve exposure to infectious materials, as well as medical procedures requiring special precautions and waste materials requiring special handling;

2) Provide resources—handwashing facilities, personal protective equipment, appropriate waste disposal containers, and HBV vaccinations—to help staff members avoid contact with contaminated materials;

3) Adopt work routines to minimize the chances of infection;

4) Advise staff members of the office's "exposure control plan," train them in practice requirements, and label or color-code waste containers;

5) Establish recordkeeping routines to document staff training programs, HBV vaccination status, and steps taken if an

employee is exposed to potential infection; and

6) Establish a committee to keep the exposure control plan current and to enforce its requirements.

The best way to proceed is to appoint an "OSHA Compliance Committee" immediately. Then set aside time at least weekly to begin tackling the requirements in a logical order. At the committee's first session, appoint one member to keep notes and compile them into the written exposure control plan. As assignments are given to each member, be sure to assign completion dates so nothing important gets put aside in the face of day-to-day practice demands.

Identifying risks

The regulations require identifying job classifications in which some or all employees may be exposed to infectious materials. The exposure control plan described above must document these job titles along with procedures and work tasks in which exposure may occur. In assessing these job classifications and tasks as having potential for exposure, physicians must assume that no personal protective equipment is in use and that all human blood, fluids, and other potentially infected materials are, in fact, infected.

Start to identify the affected job classifications by reviewing job descriptions. Then interview each and every staff member whether they might, even occasionally, come in contact with blood/fluids or sharps, equipment, or work surfaces which could be contaminated with blood or bodily fluids. Don't overlook the less-obvious incidents which may involve non-clinical staff. For example, if a patient should vomit in a reception area, the receptionist who cleans up would be exposed and thus must be listed. As an alternative, physicians could modify non-clinical personnel job descriptions to prohibit even occasional contact with potentially infectious fluids and materials.

Provide resources and develop routines

Detailed regulations require physicians to address work routines and mandate staff compliance. The theme of the routines developed should be "universal precautions:" in all circumstances blood, bodily fluids, and potentially contaminated materials or equipment are handled as if known to actually be infected. To comply with some of the requirements, a practice may need to order special equipment, labels, and containers.

First, *handwashing facilities* must be readily available. Where they are not, feasible antiseptic towelettes must be available and handwashing must be required as soon as possible. Physicians must absolutely require handwashing after contact with potentially infectious materials, as well as after gloves or other protective equipment are removed.

Second, except in rare circumstances, contaminated needles may not be bent, recapped, sheared, or broken. Pending decontamination, all reusable sharps must be placed in containers that are closable, puncture resistant, leakproof, labeled with a fluorescent orange biohazard symbol, and which do not require employees to reach into the container. Broken glass must not be picked up by hand, but instead cleaned up with brush and pan.

Specimens must be placed in containers meeting the same requirements as for reusable sharps to prevent leakage during collection, handling, processing, storage, and shipping. If the primary container is contaminated on the outside, or if there is a chance that the specimen could puncture the container, the primary container must be placed in a secondary container. Individual containers of blood or other specimens need not be individually labeled so long as they are placed in a properly labeled container during storage, transport, shipment, and/or disposal.

Third, for all procedures and tasks during which exposure may occur, physicians must give employees non-permeable personal protective equipment including, as appropriate, gloves, gowns, lab coats, face shields, mouthpieces, and ventilation devices. And they *must* use them. Any time they do not use the equipment, the physician will have to investigate and document the circumstances, with the goal of preventing future reoccurrences. The regulations require, too, that protective equipment be made available in appropriate sizes and cleaned, repaired, or replaced at no cost to the employee. Requiring use of protective equipment seems obvious. It's certainly reasonable to wear gloves when hand contact with blood/fluids or with contaminated equipment, laundry, or work surfaces may occur. Face shields protecting against spray or splashes of blood also make sense. And workers should wear gowns/hoods when gross contamination or other exposure may occur.

Fourth, physicians must also develop and follow a written schedule for cleaning/decontamination, and include it in the exposure control plan. Specifics will

depend on the surface/area to be cleaned, type of contamination likely, and the procedures performed in the area. Equipment, protective covers, and work surfaces must be disinfected *immediately* after completing a procedure or if an overt contamination (e.g., spilled blood) occurs. All reusable pails, cans, and similar receptacles must be inspected and decontaminated on a regularly scheduled basis; if visible contamination occurs, cleaning must occur as soon as possible.

Finally, contaminated laundry must be bagged in color-coded (fluorescent orange), labeled ("biohazard" with symbol) in containers which prevent leakage or soak-through. Laundry should not be sorted or rinsed on site. Staff handling laundry must use protective equipment, as in every other instance where exposure may occur.

Employee information and training

Each practice must provide training to all staff with any occupational exposure during working hours. Training must be provided before June 4, 1992, for current staff and immediately upon assignment to tasks with exposure risks for new employees or those undertaking new assignments. Training must recur for all employees with exposure risk within 12 months of the first training session. If the practice's routines change and expose employees to new or different risks, supplemental training must be provided at the time of change. Training sessions must meet minimum requirements, including providing staff with:

- A copy of the full OSHA regulations;
- A general explanation of the frequency, distribution, and symptoms of bloodborne diseases;
- An explanation of how bloodborne diseases are transmitted;
- An explanation of the practice's exposure control plan (and how to obtain a copy of the plan), including how to recognize activities that may involve exposure, and the benefits and limitations of the exposure control plan requirements that help prevent or reduce exposure;
- Information on the types, selection, proper use, location, handling, decontamination, and disposal of personal protective equipment;
- An explanation of the color-coding and labeling requirements;
- Information on HBV vaccinations, including efficiency, safety, administration, and availability from the practice free-of-charge; and
- An explanation of the procedures to be followed when an exposure incident occurs and in an emergency involving potentially infectious materials (including reporting requirements and the availability of evaluation and medical follow-up after the incident).

Obviously, training sessions must be interactive and conducted by a qualified individual who understands the exposure control plan. Most practices will find it desirable to develop a training manual, including the exposure control plan, to assure that all requirements are met and to save development of new training materials each time training must occur.

Vaccinations

Practices are required to make available, within 10 days of assignment (or by July 6, 1992, for current staff) and free-of-charge, the HBV vaccination series to all employees who have occupational exposure. Employees may decline vaccination by signing a statement that reads:

> *I understand that due to my occupational exposure to blood or other potentially infectious materials, I may be at risk of acquiring hepatitis B virus (HBV) infection. I have been given the opportunity to be vaccinated with hepatitis B vaccine at no charge to myself. However, I decline hepatitis B vaccination at this time. I understand that by declining this vaccine, I continue to be at risk of acquiring hepatitis B, a serious disease. If in the future I continue to have occupational exposure to blood or other potentially infectious materials and I want to be vaccinated with hepatitis B vaccine, I can receive the vaccination series at no charge to me.*

If someone declines vaccination, but later changes his or her mind, the vaccination must be made available to them.

After an exposure incident

Following a report of possible exposure, practices must immediately offer a confidential medical evaluation and follow-up. The procedure involved includes:

1) Documenting the circumstances and "route of exposure";

2) Identifying and documenting the human source of the potentially infectious material, if permitted by state law:

3) Testing, after obtaining consent, the source's blood to determine if it is HIV/HBV infected, and informing the exposed staff member of the results (all subject to state laws);

4) Testing, after obtaining consent, the exposed employee's blood; and

5) Making available counseling, evaluation of reported illnesses, and post-exposure medical precautions, as recommended by the U.S. Public Health Service.

The physician conducting the post-exposure evaluation must be provided with a copy of OSHA's regulations, a description of the employee's duties, the circumstances of the incident, results of the blood testing, and any relevant medical records, including HBV vaccination status. Within 15 days after the evaluation, the practice must give the employee a copy of the written evaluation.

Recordkeeping

Two types of recordkeeping are required—a medical record and a training record. A medical record for each employee with occupational exposure must be kept until 30 years after termination of employment. The record should contain the staff member's name and social security number, HBV vaccination status, and any related medical records including dates of all vaccinations. All records related to any exposure incident must also be kept including results of examinations, testing, the written post-exposure evaluation, and copies of the information provided to the evaluating physician. As with any medical record, the files must be kept confidential and should not be disclosed to anyone (including other practice employees) without the individual's written consent.

Training records need to include the dates of sessions, training materials, name and qualifications of the individual performing the training, and employees (including job titles) who attended. These records must be kept for three years following the date of training. They must also be available for inspection and copying by an employee, as well as by OSHA representatives; and even if a practice is closing its doors permanently, OSHA must be provided three months advance notice prior to destroying the records.

What will it cost?

Compliance with the regulations will necessitate two types of costs—out-of-pocket expenses and allocation of personnel time. These are not necessarily all new costs to a practice if physicians have already been following some of the above routines to protect employees.

Estimates of cost prepared by the U.S. General Accounting office are expressed as "annual cost per physician in a practice," as follows:

Waste disposal/ warning labels	$ 74
Protective equipment	562
Housekeeping	59
Training	285
Vaccination	121
Records	23
Total	$1,124

Individual practice costs will vary widely depending on specialty and patient mix.

Time allocation includes such activities as development of your exposure control plan, preparation of training materials, conduct of training, and record keeping. Use of staff time may be materially reduced by purchase of prepared materials on exposure control plans and employee training.

Complying with OSHA's regulations will be time-consuming and burdensome. Nonetheless, the requirements make good sense. Get behind the effort to develop the required routines and records to give practice personnel the best protection possible.

OSHA PUBLICATION ORDER FORM

(Photocopy this form to preserve the article on the reverse side)

The Pennsylvania Medical Society is offering an OSHA Information Kit, which includes all the necessary documentation to comply with the regulations, as an exclusive benefit of membership. The kit includes:

- OSHA Final Regulation Overview
- Model Exposure Control Plan
- Employee Training Manual
- Copy of Part 1910.1030, Title 29 Code of Federal OSHA Regulations

ORDERING INFORMATION: This OSHA Information Kit is available to members only for $10 per kit. For fastest delivery, mail a copy of this order form and payment to: Pennsylvania Medical Society, Department of Physician Services, 777 East Park Drive, Harrisburg, PA 17105-8820, 1-800-228-7823.

Please send me _____ OSHA Information Kits at $10 each, plus 6% sales tax*. *The kits are not available to nonmembers.*

Why buy an office automation system that doesn't offer a long-term solution?

ACCLAIM™ from Sentient is the total system solution.

A lot of medical practices are planning to invest in an office automation system. But a lot of the systems out there just don't offer the comprehensive functions and long-term expandability that your practice may need.

IBM® and compatible hardware.

The ACCLAIM system operates on IBM and compatible hardware, so you know you're getting the quality standard of the industry. And it's completely expandable, so it can grow as your practice grows.

Long-term support.

ACCLAIM is the system solution that fits your needs today. And Sentient's software engineers, customer trainers, and telephone support people are always there to make sure your system fits your needs over the years to come.

Easy to operate.

Even if your staff has no previous computer experience, ACCLAIM is simple to operate effectively and efficiently. Complete training is included in the purchase.

When you're thinking about office automation, call Sentient first, and find out what ACCLAIM can do for you.

Who Reviews the Reviewers?

Donald E. Harrop, MD

The preparation for performance assessments is a stressful experience for peer review organization (PRO) staff. So much depends upon achieving a good report from the Health Care Financing Administration (HCFA), and poor performance can jeopardize a PRO's federal contract for Medicare review. This year brought added stress because both assessments—SuperPRO and PROMPTS—occurred at approximately the same time.

There are several times during each peer review organization (PRO) contract period when Keystone Peer Review Organization (KePRO) staff personnel and physicians feel special empathy for physicians and providers subject to KePRO review. These are the times when the PRO is second-guessed by the Health Care Financing Administration (HCFA) through SuperPRO and PROMPTS (Peer Review Organization Monitoring Protocal and Tracking System) evaluations.

The SuperPRO assessment appears simple on the surface, especially at the start, when KePRO boxes up and sends to SuperPRO previously reviewed medical records. The assessment, however, is a little more involved than that. Between 200 and 300 specific records are selected by SuperPRO from random samples taken from all cases reviewed during a certain period of time. Additionally, some cases were approved on site at hospitals, which means KePRO must request the records from the hospitals.

After being submitted, the records are reviewed by SuperPRO, which agrees or disagrees with KePRO's review decisions. KePRO must then re-review the records involving disagreement and defend the rationale for decisions made. The process takes a lot of work, and just as physicians and providers often become aggravated with KePRO's decisions, KePRO also becomes irritated with select SuperPRO disagreements. When the process is finalized, disagreement percentages are tabulated and become one of the considerations used by HCFA to determine if a PRO's contract will be renewed without competition.

The PROMPTS review is much different and involves on-site evaluation at KePRO's office by representatives from the HCFA regional office. During this compliance audit, HCFA looks at all processes and procedures to assure KePRO is doing what is outlined in its technical contract proposal and exactly as outlined. The PROMPTS review involves everything from community outreach to the review process, again including review decisions.

PROMPTS is the most important evaluation for a PRO, since a poor score will trigger a competitive contract situation. The review is usually very stressful on a PRO's staff, not only because of the importance of the work involved, but also because of on-site visits by HCFA. For several weeks, between the preparation for the evaluation and the on-site visits, people are taken away from their routine duties—which they must still accomplish within specified timeframes—to help with the PROMPTS review.

Ordinarily, it takes several months before the PROMPTS evaluation is completed, and a report is compiled and sent to the PRO. KePRO has, however, already received the SuperPRO results and was pleased with them. Although comparisons are very difficult to make because of differing PRO funding cycles, KePRO had fewer disagreements than the national averages in many categories and compared favorably in all categories.

Donald E. Harrop, MD, is president of the Keystone Peer Review Organization.

NEW STRATEGY FOR ELIMINATING TRANSMISSION OF HEPATITIS B

Hepatitis B virus (HBV) causes an estimated 200,000 to 300,000 new infections annually in the U.S. Of these, approximately 10 percent will become chronic carriers of HBV, and a good proportion of the infections will progress to chronic liver disease and hepatic cancer. Consequently, approximately 4,000 to 5,000 persons in the U.S. die every year as a result of the late effects of chronic HBV infection.

Previous preventive efforts

Previous preventive efforts have been unsuccessful in significantly reducing hepatitis B incidence in the U.S. The best prevention against this disease is immunization with hepatitis B vaccine, which has been available for several years. Until now, the focus has been on vaccinating individuals at high risk for the infection, including IV drug users, male homosexuals, heterosexuals with multiple sexual contacts, and individuals who are occupationally exposed to blood or other body fluids.

This strategy has met with limited success, not because of lack of vaccine effectiveness (the vaccine is 80-95 percent effective), but because most people at high risk have not been vaccinated. This is due to lack of awareness and/or motivation among health care professionals and high-risk populations.

Rationale for universal childhood immunization

Largely because of the failure of current strategy, the Centers for Disease Control is now recommending universal immunization of infants. Since there is no reliable treatment to eradicate hepatitis B infection, and because several years of effort to publicize the need for those at high risk to utilize the vaccine have been unsuccessful, universal immunization of infants appears to be the only way to make a significant impact.

This strategy has been successful in reducing by 99 percent or greater incidence of several other previously common diseases, including poliomyelitis, diphtheria, pertussis, tetanus, measles, mumps, and rubella. The cost of vaccinating infants is far less than that of older children and adults, and clinic visits can be worked into routine pediatric health care visits. Also approximately one-third of new HBV cases in the U.S. do not occur in people at high risk and would therefore be missed by any strategy which only targets high-risk groups.

Schedule and dose

Three- or four-dose schedules may be used, although there is no evidence that the four-dose schedule provides any better protection. Because exact age of vaccination is not crucial, it may be worked in with other clinic visits.

The first dose may be given at birth or at the first immunization visit at two months, or sometime in between. The next dose must be given at least one month later, but two months may be more convenient and is perfectly acceptable. The third dose, which is a booster, is most effective if given at least five months following the second dose. It may, however, be given as soon as two months following the second dose. HBV vaccines do not interfere with other childhood vaccines, so they may be given during the same clinic visits.

Other considerations

Previous recommendations for prevention of hepatitis B remain in effect, including immunization of high-risk groups, universal screening of pregnant women, and post-exposure prophylaxis of exposed individuals. Newborns of women who test positive for hepatitis B surface antigen (HBsAg) should have more intensive prophylaxis, including the use of hepatitis B immune gobulin within 12 hours of birth and a series of hepatits B vaccines according to the schedule above.

Testing for hepatitis B surface antibody (HBsAb) is sometimes performed prior to immunizing adults because a positive test precludes the need for immunization. However, such a procedure is not useful for infants or children because of the very low rate of positivity. Nor is there any need for post-vaccination testing for antibody response to the vaccine, except in instances where a less-than-satisfactory response to the vaccine is anticipated.

Dale Tavris, MD, MPH
Pennsylvania Department of Health

IMPLEMENTING OSHA REGS ON BLOODBORNE DISEASES

Effective Dates

The U.S. Department of Labor, Occupational Safety and Health Administration (OSHA) regulations regarding infection control in the health care setting passed into law January 6, 1992, and became effective March 6. The new law requires all employers whose employees have occupational exposure to "blood or other potentially infectious materials" to:

- have in place a written exposure control plan by May 5, 1992;
- provide employees with comprehensive infection control training during work hours by June 4, 1992;
- have information and recordkeeping systems in place by June 4, 1992;
- have engineering, work practice controls, and housekeeping procedures in place by July 6, 1992;
- have employees vaccinated against hepatitis by July 6, 1992;
- have post-exposure programs in place by July 6, 1992; and
- have labels and sign systems activated by July 6, 1992.

For more detailed information about the plans and programs required by the regulations, see the February 1992 issue of PENNSYLVANIA MEDICINE (pages 38-39).

Also, the State Society is offering a program in April designed to help physicians meet the OSHA requirements. Dates and locations include: April 21—King of Prussia, April 22—Harrisburg, and April 23—Pittsburgh. For additional information, call the Society's Department of Physician Services at 1-800-228-7823. The AMA has also prepared a package of materials to help physicians with implementation. For a copy, call 1-800-AMA-3211.

Smaller businesses with especially hazardous operations may seek further help in meeting requirements through the OSHA Consultation Program. The free consultation service, funded largely by OSHA, is offered by Indiana University of Pennsylvania (IUP) and provides professional advice and help in maintaining continued, effective worker protection. Currently, the waiting period for the confidential service is four to nine months, but further information is available by calling (412) 357-2561 or 1-800-382-1241.

SOCIETY CO-SPONSORS AIDS PROGRAM FOR EDUCATORS

One out of every 100 cases of reported AIDS has been among teenagers, according to information from the Pittsburgh AIDS Center for Treatment at Presbyterian University Hospital. Recognizing a need for education at the secondary school level, the State Society, along with the state Department of Education and Penn State Harrisburg, sponsored a program for educators and administrators on AIDS education, February 25 at Penn State Harrisburg in Middletown.

John J. Dennehy, MD, a member of the medical staff at Geisinger Medical Center and chairman of the State Society's Commission on Public Health, opened the three-hour program, "HIV Disease/AIDS Education for Secondary Teachers, Administrators, and School Nurses," with an update on the infection and the disease. He discussed the epidemiology of AIDS in Pennsylvania, the nature of the disease, common misconceptions, and infection control policies and procedures. His series of slides included many interesting statistics and publication excerpts, including the first indication of the AIDS virus in a 1981 issue of "Morbidity and Mortality Weekly Report," published by the Centers for Disease Control in Atlanta, Georgia.

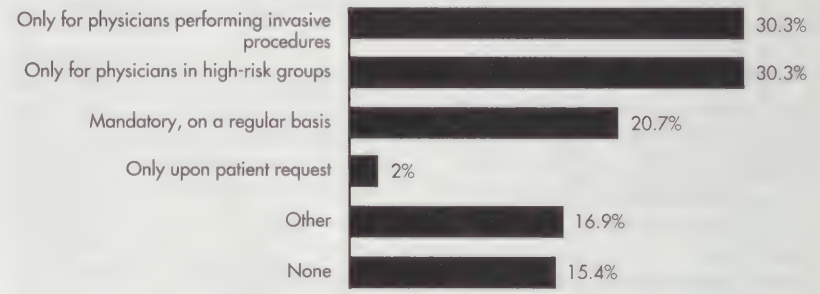
Marian Sutter, PhD, certified health education specialist from the Pennsylvania Department of Health, then offered a two-part presentation. In the first part, she discussed Pennsylvania-specific data related to the prevalance and distribution of the disease. She also talked about risk behaviors among Pennsylvania high school students. In the second part, Dr. Sutter tackled how to help students deal with the "it can't happen to me attitude" and how to teach prevention behaviors. Attendees participated in an exercise called "Shake and Sign."

Each participant received a folded piece of paper with lines for four signatures and was asked to walk around the room, shake hands with four people, and have them sign the paper. Then, participants opened their papers to find one of three symbols: a sunburst, symbolizing they had "used protection" when shaking hands; a star, symbolizing "no protection was used"; and a lightening bolt, symbolizing infection with the "z virus."

Attendees with lightening bolts were asked to stand, and anyone who had contact with them and did not use protection stood, and anyone who had contact with those standing and did not use protection stood, etc.

Participants discussed the similarities between the "z virus" and HIV. The exercise, recommended for grades eight and above, demonstrated the "pyramid of infection"—how the infection spreads. Additional classroom exercises were provided in a Department of Education resource guide.

Sam Monismith, DEd, a health education professor at Penn State Harrisburg, also dealt with the "it can't happen to me" attitude and presented a video targeting teen audiences. Extensive question-and-answer periods were included throughout the program, and several other educational handouts and guides were given to attendees.



Approximately 100 educators attended from throughout the Commonwealth, including 12 from the Pittsburgh area and eight from State College. Evaluations were positive, and the State Society and Penn State Harrisburg surveyed participants to learn about other public health issues of interest for future program topics.

Educators participate in "Shake and Sign" during an AIDS program co-sponsored by the State Society, Penn State Harrisburg, and the state Department of Health.

STATS

When asked, "What type of HIV testing should there be for physicians?," the membership/leadership of the Pennsylvania Medical Society responded:

Source: Pennsylvania Medical Society 1991 Membership/Leadership Poll conducted by the Society's Educational and Scientific Trust

HAZARDOUS WASTE FORUM ADDRESSES CONCERNS

Physicians, legislators, legislative aides, and other concerned citizens attended a Society-hosted forum on March 4 to learn more about safely disposing hazardous waste without jeopardizing public health. Robert N. Moyers, MD, State Society president, offered introductory remarks, and David L. Hawk, MD, MPH, director of the York Bureau of Health, moderated the half-day program.

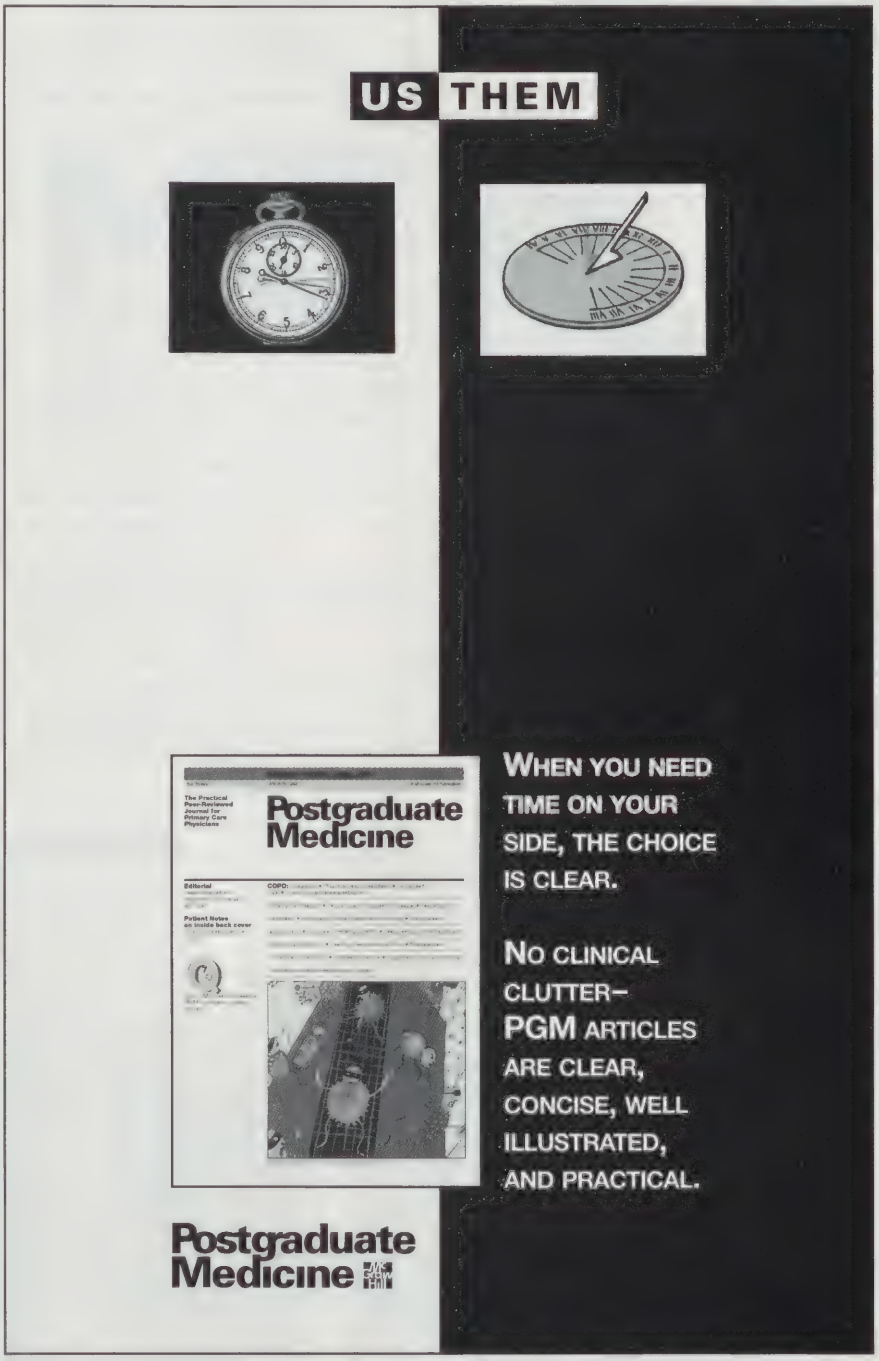
Several staff members from the state Department of Environmental Resources (DER) participated as part of the forum panel: Karl Shaeffer, hazardous waste siting team coordinator, discussed criteria used in determining hazardous waste landfill and incineration sites; James M. Salvaggio, special assistant of air and waste management, explained air quality permits and operating conditions at the sites; and Barbara L. Harper, PhD, public health toxicologist and chief of advanced science and research, explained DER's risk assessment guidelines for hazardous waste.

George Lumb, MD, a scholar in residence at Duke University, presented his views on the "difficult disposal" of hazardous waste incineration during the Society's recent forum.

George Lumb, MD, a scholar in residence in the Integrated Toxicology Program of the Pathology Department of Duke University, then presented his views on the "easy decisions, difficult implementation" of hazardous waste disposal. George C. Miller II, MD, a private practice obstetrics and gynecology specialist from Lewisburg, wrapped up the program with a special presentation of his research on the possible health risks of hazardous waste disposal and incineration.

COUNTY NEWS

BCMS SEMINARS TACKLE PHYSICIAN ISSUES



The Beaver County Medical Society (BCMS) held a series of three seminars in February and March tackling current issues affecting physicians and their office staff, including CPT coding, risk management, and Medical Assistance (MA) claims.

A February 10 seminar, "CPT Coding/Medicare Reimbursement for Office Personnel," presented by Josette P. Derricks, health care reimbursement consultant, drew 96 attendees. Codes discussed related to office/outpatient services, hospital/inpatient services, consultations, critical care, and modifiers and descriptors.

"Risk Management for Physicians and Office Managers," held on February 13 and presented by Jane L. Conley, vice president of risk management for the Pennsylvania Medical Society Liability Insurance Company (PMSLIC), drew 76 attendees and a number of positive evaluations. The one-hour program outlined the medical-legal ramifications of the activities of physician office personnel, and the importance of physician-patient and staff-patient relationships in patient satisfaction and malpractice litigation prevention.

The third program in the series, "Medical Assistance Claims Seminar," held on March 25, featured Richard L. Henry, MA program specialist for the state Department of Public Welfare (DPW). He presented the basics of MA claims and how to avoid claims rejections. The seminar was BCMS's first step in implementing a Medicaid Ombudsman Program to provide assistance to members with claims concerns. The program is a cooperative effort between the State Society, BCMS, and DPW.

Among other activities, the county society sponsored a presentation by Edward J. Kabala, Esq., on

"Protecting Your Assets in a Liability Suit." BCMS is also co-sponsoring, with the Medical Center in Beaver, a grand rounds lecture on April 10, 1992, from 8:00-9:00 a.m. Jeff Greenawalt, the State Society's director of educational and scientific affairs, will speak. For additional information about the lecture or other BCMS activities, call (412) 775-7027.

SPECIALTY SOCIETY NEWS

ACADEMY SPONSORING ANNUAL MEETING IN MAY

The Pennsylvania Academy of Physical Medicine and Rehabilitation will sponsor its annual meeting on May 2, 1992, at the Sheraton Hotel at Station Square in Pittsburgh. State Senator Melissa Hart (R-Allegheny) will present the keynote lecture on the impact of recent legislation on the practice of medicine.

A panel discussion about psychiatric issues will also be featured, and panelists will include Donald McCoy, director of regulatory affairs and specialty legislation for the Pennsylvania Medical Society; Joseph Ricci, MD, vice president of medical affairs for Pennsylvania Blue Shield; and Francis Bonner, lobbyist for the Pennsylvania Academy.

For additional information, call the Academy at (215) 278-8460.

SPECIALTY SOCIETY NEWS

OTOLARYNGOLOGISTS TO MEET IN HERSHEY

The Pennsylvania Academy of Otolaryngology-Head and Neck Surgery (PAO-HNS) will hold its annual meeting June 18-20, 1992, at the Hotel Hershey. The program will include the presentation of scientific papers, symposia, and special lectures on topics of interest to physicians, nurses, and technicians.

Fred Owens, MD, neuro-otologist at Baylor University Medical Center in Dallas, Texas, will keynote the meeting, speaking on cochlear implants and presenting the closing session. Other program topics include: The Role of Radical Mastoidectomy in Contemporary Otologic Surgery, Nasal Pharyngeal Malignancies in Children, and DNA Flow Cytometry in Acoustic Neuromas.

PAO-HNS is accredited by the State Society to sponsor continuing medical education for physicians. For additional information,call Al Walter at (215) 375-4311.

AMA CALLS FOR PAPERS ON PHYSICIAN HEALTH

The 1993 International Conference on Physician Health—co-sponsored by the AMA, the Federation of State Medical Boards, the Canadian Medical Association, and the Federation of Medical Licensing Authorities of Canada—is scheduled January 28-31, 1993, in Scottsdale, Arizona. The conference will provide a forum for practitioners and researchers to present recent findings and innovative treatment and educational programs in the area of physician health.

A range of issues relative to physicians will be addressed during the conference, including AIDS, the HIV-positive physician, problems related to aging, health promotion among physicians, mental illness, physical disability, and substanse abuse among physicians. Possible topics for presentation—through poster sessions, paper sessions, and workshops—include: incidence of health problems among physicians, the presentation of health problems by physicians, the impact of disorders on physicians' families and practices, the medical-legal implications of various disorders, and the impact of disorders on hospital administrators. Abstracts which address related topics are also welcome.

Submissions must be received by the AMA by June 15, 1992. For further information, call Patrick W. McGuffin, PhD, at (312) 464-4064.

OB-GYN UPDATE
FOR THE FAMILY PRACTITIONER

Saturday, May 9, 1992
8:30 a.m. - 5:00 p.m.

West Wing Auditorium, Shadyside Hospital, Pittsburgh, PA

PROGRAM DIRECTORS

AMIR H. ANSARI, M.D.

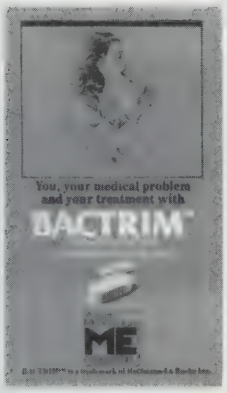
PRESENTED BY SHADYSIDE HOSPITAL

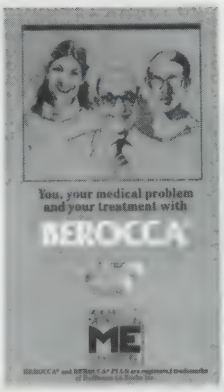
Departments of Obstetrics and Gynecology,
Family & Community Medicine
and Office of Continuing Medical Education

"Shadyside Hospital is accredited by the Pennsylvania Medical Society to sponsor continuing medical education for physicians. The Shadyside Hospital Office of Continuing Medical Education designates this continuing medical education activity for 7 credit hours in Category I of the Physician's Recognition Award and has been reviewed and is acceptable for 7 prescribed hours by the American Academy of Family Physicians."

PRELIMINARY CALL TO THE 1992 ANNUAL MEETING HOUSE OF DELEGATES



The House of Delegates of the Pennsylvania Medical Society will convene its annual meeting at the Adam's Mark Hotel, Philadelphia, Pennsylvania, on Friday, October 23, 1992. The second session will convene Saturday, October 24, 1992, and the third session Sunday, October 25, 1992. Details regarding the starting times of all three sessions will appear in the Official Call in the August 1992 issue of PENNSYLVANIA MEDICINE.

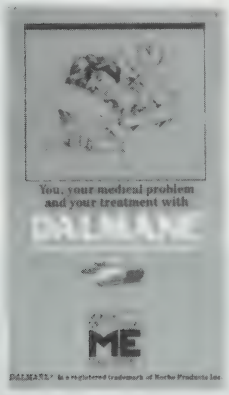


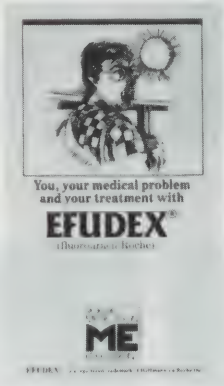
All proposed amendments to the Bylaws must be submitted to the office of the Secretary of this Society on or before June 23, 1992. Such amendments may be proposed upon the written petition of 15 active or associate members of the Society, or by the Committee on Bylaws. Resolutions to be considered by the House may be submitted in writing to the Secretary by a delegate acting in his/her own behalf or for the component medical society or specialty society he/she represents. If received prior to September 23, 1992, resolutions will be published in the *Official Reports Book*.

COMMITTED TO TOTAL HEALTH CARE

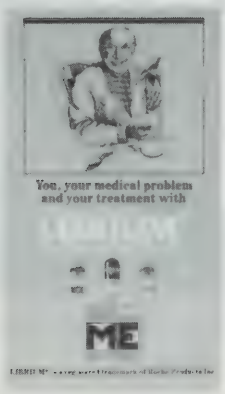
Roche Laboratories presents the Resource Library for patient information

ROCHE ME MEDICATION EDUCATION

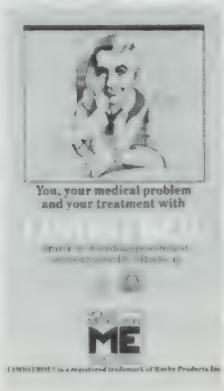




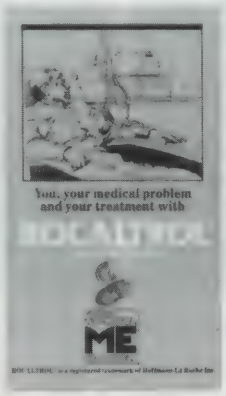
Your Roche representative offers you access – without expense or obligation – to a comprehensive library of patient information booklets designed to supplement rather than supplant your rapport with your patients.



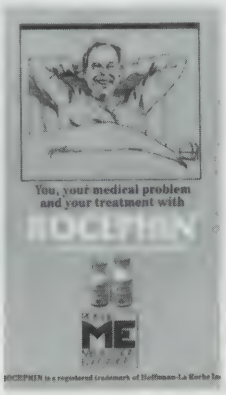
Each booklet helps you provide...

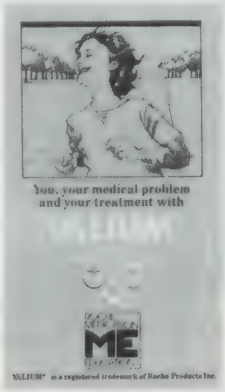


- Reinforcement of your instructions
- Enhancement of compliance
- Satisfaction with office visits

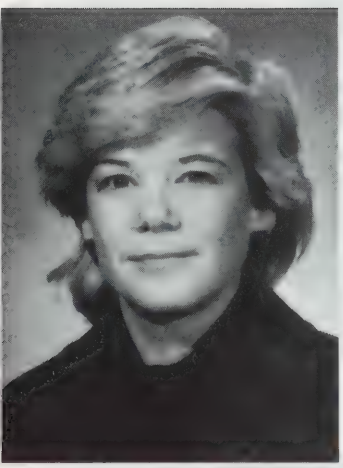


Your Roche representative will be happy to provide a complete catalog of available booklets and complimentary supplies of those that are applicable to your practice.





COMMITTED TO EXCELLENCE



Roche Laboratories presents the winners of the 1991

ROCHE

PRESIDENT'S ACHIEVEMENT AWARD

Please join us in honoring these outstanding Roche sales representatives who have distinguished themselves by a truly exceptional level of professionalism, performance and dedication to quality health care.

Throughout the year, each of these award-winning individuals has consistently exemplified the Roche Commitment to Excellence, and we're proud to invite you to share in congratulating them on their achievement.

ONLY ONE H_2-ANTAGONIST HEALS REFLUX ESOPHAGITIS AT DUODENAL ULCER DOSAGE. ONLY ONE.

Of all the H_2-receptor antagonists, only Axid heals and relieves reflux esophagitis at its standard duodenal ulcer dosage. Axid, **150** mg b.i.d., relieves heartburn in **86%** of patients after one day and **93%** after one week.[1]

AXID®
nizatidine
150 mg b.i.d.

ACID TESTED. PATIENT PROVEN.

1. Data on file, Lilly Research Laboratories. *See accompanying page for prescribing information.* ©1991, ELI LILLY AND COMPANY NZ-2947-B-249304

AXID®

nizatidine capsules

Brief Summary. Consult the package insert for complete prescribing information.

Indications and Usage: 1. *Active duodenal ulcer*– for up to 8 weeks of treatment at a dosage of 300 mg h.s. or 150 mg b.i.d. Most patients heal within 4 weeks.

2. *Maintenance therapy* – for healed duodenal ulcer patients at a dosage of 150 mg h.s. at bedtime. The consequences of therapy with Axid for longer than 1 year are not known.

3. *Gastroesophageal reflux disease (GERD)*–for up to 12 weeks of treatment of endoscopically diagnosed esophagitis, including erosive and ulcerative esophagitis, and associated heartburn at a dosage of 150 mg b.i.d.

Contraindication: Known hypersensitivity to the drug. Because cross sensitivity in this class of compounds has been observed, H_2-receptor antagonists, including Axid, should not be administered to patients with a history of hypersensitivity to other H_2-receptor antagonists.

Precautions: *General*–1. Symptomatic response to nizatidine therapy does not preclude the presence of gastric malignancy.

2. Dosage should be reduced in patients with moderate to severe renal insufficiency.

3. In patients with normal renal function and uncomplicated hepatic dysfunction, the disposition of nizatidine is similar to that in normal subjects.

Laboratory Tests–False-positive tests for urobilinogen with Multistix® may occur during therapy.

Drug Interactions–No interactions have been observed with theophylline, chlordiazepoxide, lorazepam, lidocaine, phenytoin, and warfarin. Axid does not inhibit the cytochrome P-450 enzyme system; therefore, drug interactions mediated by inhibition of hepatic metabolism are not expected to occur. In patients given very high doses (3,900 mg) of aspirin daily, increased serum salicylate levels were seen when nizatidine, 150 mg b.i.d., was administered concurrently.

Carcinogenesis, Mutagenesis, Impairment of Fertility–A 2-year oral carcinogenicity study in rats with doses as high as 500 mg/kg/day (about 80 times the recommended daily therapeutic dose) showed no evidence of a carcinogenic effect. There was a dose-related increase in the density of enterochromaffin-like (ECL) cells in the gastric oxyntic mucosa. In a 2-year study in mice, there was no evidence of a carcinogenic effect in male mice, although hyperplastic nodules of the liver were increased in the high-dose males as compared with placebo. Female mice given the high dose of Axid (2,000 mg/kg/day, about 330 times the human dose) showed marginally statistically significant increases in hepatic carcinoma and hepatic nodular hyperplasia with no numerical increase seen in any of the other dose groups.The rate of hepatic carcinoma in the high-dose animals was within the historical control limits seen for the strain of mice used. The female mice were given a dose larger than the maximum tolerated dose, as indicated by excessive (30%) weight decrement as compared with concurrent controls and evidence of mild liver injury (transaminase elevations). The occurrence of a marginal finding at high dose only in animals given an excessive and somewhat hepatotoxic dose, with no evidence of a carcinogenic effect in rats, male mice, and female mice (given up to 360 mg/kg/day, about 60 times the human dose), and a negative mutagenicity battery are not considered evidence of a carcinogenic potential for Axid.

Axid was not mutagenic in a battery of tests performed to evaluate its potential genetic toxicity, including bacterial mutation tests, unscheduled DNA synthesis, sister chromatid exchange, mouse lymphoma assay, chromosome aberration tests, and a micronucleus test.

In a 2-generation, perinatal and postnatal fertility study in rats, doses of nizatidine up to 650 mg/kg/day produced no adverse effects on the reproductive performance of parental animals or their progeny.

Pregnancy–Teratogenic Effects–Pregnancy Category C–Oral reproduction studies in rats at doses up to 300 times the human dose and in Dutch Belted rabbits at doses up to 55 times the human dose revealed no evidence of impaired fertility or teratogenic effect; but, at a dose equivalent to 300 times the human dose, treated rabbits had abortions, decreased number of live fetuses, and depressed fetal weights. On intravenous administration to pregnant New Zealand White rabbits, nizatidine at 20 mg/kg produced cardiac enlargement, coarctation of the aortic arch, and cutaneous edema in 1 fetus, and at 50 mg/kg, it produced ventricular anomaly, distended abdomen, spina bifida, hydrocephaly, and enlarged heart in 1 fetus. There are, however, no adequate and well-controlled studies in pregnant women. It is also not known whether nizatidine can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity. Nizatidine should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus.

Nursing Mothers–Studies in lactating women have shown that 0.1% of an oral dose is secreted in human milk in proportion to plasma concentrations. Because of growth depression in pups reared by treated lactating rats, a decision should be made whether to discontinue nursing or the drug, taking into account the importance of the drug to the mother.

Pediatric Use–Safety and effectiveness in children have not been established.

Use in Elderly Patients–Healing rates in elderly patients were similar to those in younger age groups as were the rates of adverse events and laboratory test abnormalities. Age alone may not be an important factor in the disposition of nizatidine. Elderly patients may have reduced renal function.

Adverse Reactions: Worldwide, controlled clinical trials included over 6,000 patients given nizatidine in studies of varying durations. Placebo-controlled trials in the United States and Canada included over 2,600 patients given nizatidine and over 1,700 given placebo. Among the adverse events in these placebo-controlled trials, only anemia (0.2% vs 0%) and urticaria (0.5% vs 0.1%) were significantly more common in the nizatidine group. Of the adverse events that occurred at a frequency of 1% or more, there was no statistically significant difference between Axid and placebo in the incidence of any of these events (see package insert for complete information).

A variety of less common events were also reported; it was not possible to determine whether these were caused by nizatidine.

Hepatic–Hepatocellular injury (elevated liver enzyme tests or alkaline phosphatase) possibly or probably related to nizatidine occurred in some patients. In some cases, there was marked elevation (>500 IU/L) in SGOT or SGPT and, in a single instance, SGPT was >2,000 IU/L. The incidence of elevated liver enzymes overall and elevations of up to 3 times the upper limit of normal, however, did not significantly differ from that in placebo patients. All abnormalities were reversible after discontinuation of Axid. Since market introduction, hepatitis and jaundice have been reported. Rare cases of cholestatic or mixed hepatocellular and cholestatic injury with jaundice have been reported with reversal of the abnormalities after discontinuation of Axid.

Cardiovascular–In clinical pharmacology studies, short episodes of asymptomatic ventricular tachycardia occurred in 2 individuals administered Axid and in 3 untreated subjects.

CNS–Rare cases of reversible mental confusion have been reported.

Endocrine–Clinical pharmacology studies and controlled clinical trials showed no evidence of anti-androgenic activity due to nizatidine. Impotence and decreased libido were reported with similar frequency by patients on nizatidine and those on placebo. Gynecomastia has been reported rarely.

Hematologic–Anemia was reported significantly more frequently in nizatidine than in placebo-treated patients. Fatal thrombocytopenia was reported in a patient treated with nizatidine and another H_2-receptor antagonist. This patient had previously experienced thrombocytopenia while taking other drugs. Rare cases of thrombocytopenic purpura have been reported.

Integumental–Urticaria was reported significantly more frequently in nizatidine- than in placebo-treated patients. Rash and exfoliative dermatitis were also reported.

Hypersensitivity–As with other H_2-receptor antagonists, rare cases of anaphylaxis following nizatidine administration have been reported. Rare episodes of hypersensitivity reactions (eg, bronchospasm, laryngeal edema, rash, and eosinophilia) have been reported.

Other–Hyperuricemia unassociated with gout or nephrolithiasis was reported. Eosinophilia, fever, and nausea related to nizatidine have been reported.

Overdosage: Overdoses of Axid have been reported rarely. If overdosage occurs, activated charcoal, emesis, or lavage should be considered along with clinical monitoring and supportive therapy. The ability of hemodialysis to remove nizatidine from the body has not been conclusively demonstrated; however, due to its large volume of distribution, nizatidine is not expected to be efficiently removed from the body by this method.

INCIDENCE OF CIGARETTE SMOKING AND SMOKELESS TOBACCO USE AMONG MIDDLE SCHOOL STUDENTS IN A PENNSYLVANIA COUNTY

Dean Hess, MEd, RRT; Barbara Swindler, BS, RRT; Mark Simmons, RRT; David Wilson, MEd; Lisa Marriott, BS; Krista Clark, RRT

OBJECTIVE: The use of tobacco among adolescents remains a concern internationally. This study was conducted to determine the rate of cigarette smoking and smokeless tobacco use among middle school students in one Pennsylvania county.

METHODS: Middle school students from one urban, one suburban, and one rural school completed a confidential survey about their attitudes and use of tobacco. Results were tabulated according to demographics, and conclusions were drawn.

RESULTS: Smoking was more prevalent among females than among males, and the percentage of smokers increased with grade level. There were significant differences between the percentages of smokers at the three schools, with the highest percentage in the suburban setting. Responses indicated that smoking by a student was significantly more prevalent when one or both of the parents smoked than when neither parent smoked. There were no significant differences between the percentages of tobacco usage by races, except in the case of smokeless tobacco, which was used mostly by white males.

CONCLUSION: Because a significant number of students smoke by the time they reach middle school, smoking prevention programs should begin at the elementary school level.

For additional information or a copy of the complete study, contact Dean Hess at the York Hospital Department of Research, (717) 771-2223.

THE USE OF DUAL THERAPY TO TREAT GONORRHEA AND CHLAMYDIA INFECTIONS

David H. Much, PhD; Johnson W. Martin, PhD

OBJECTIVE: Many local health departments find it increasingly difficult to keep up with the cost of locating, screening, and treating the increasing number of chlamydial cases, especially the majority of cases that are asymptomatic and/or co-infected with gonorrhea. This study was conducted to determine the effectiveness of treating all positive gonorrhea patients with two antibiotics in order to decrease the prevalence of chlamydia, as well as gonorrhea infections.

METHODS: Three health departments contributed data on the prevalence of gonorrhea and chlamydia during a five-year period. Single therapy regimen consisted of either ceftriaxone or ciprofloxacin to treat gonorrhea and doxycycline to treat chlamydia. Dual therapy consisted of the administration of both antibiotics to patients positive for gonorrhea. Two of the three health departments instituted dual therapy, and the third treated the two infections separately.

RESULTS: The number of patients positive for gonorrhea, chlamydia, or co-infected with both bacteria, decreased over a five-year period from 1985 to 1990 when dual therapy was used to treat positive gonorrhea patients, but increased when a single therapy regimen was employed.

CONCLUSION: The results suggest that dual therapy alone may have contributed to a significant reduction in diagnosed chlamydia, as well as gonorrhea cases. A control effort combining screening, contact notification and referral, and dual therapy might result in even greater reduction in chlamydia morbidity.

THE INTOXICATED DRIVER: SCOPE OF THE PROBLEM AND ITS LEGAL CONSEQUENCES

Steve Pandelidis, MD; Nikhileshwer Agarwal, MD; Katherine Pandelidis, BA

OBJECTIVE: This study was undertaken at York Hospital to analyze the problem of driving under the influence of alcohol among patients admitted to the hospital following a motor vehicle accident.

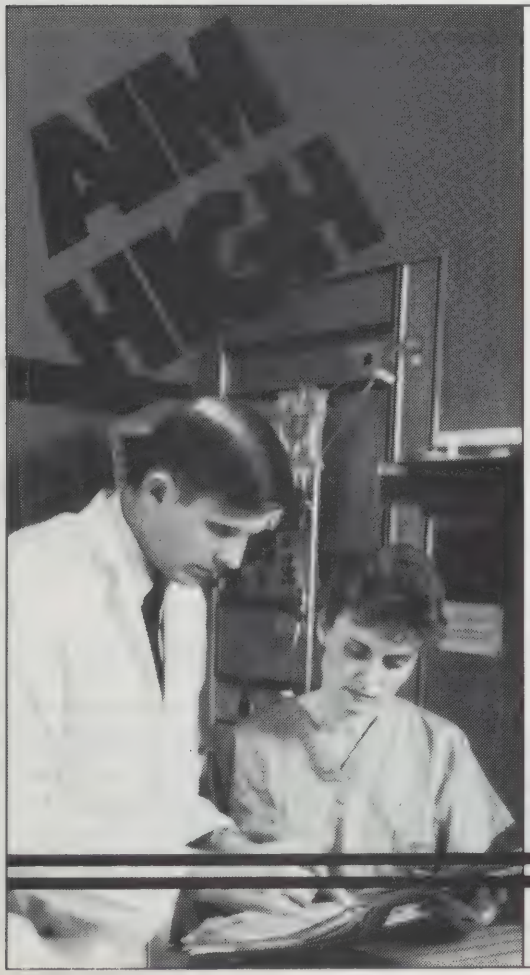
METHODS: Through cooperation with the York County District Attorney's office, the legal fate of those drivers with laboratory evidence of intoxication was examined. An analysis was undertaken to determine whether or not the time of the accident or the driver's injuries affected the frequency of legal prosecution.

RESULTS: In 1988, 240 drivers required admission to the trauma service. Among those drivers undergoing blood alcohol determination, 35 percent were legally intoxicated (ETOH 100 mg/dl). Sixty-one percent of the legally intoxicated drivers were either convicted of driving under the influence or placed in the Accelerated Rehabilitative Disposition Program.

CONCLUSION: Neither the time of the accident nor the severity of the driver's injury affected the frequency of legal prosecution of the driver. The conviction rate in this study was much greater than that reported in previous studies. Despite increased public awareness of the dangers of drunk driving, culpable individuals continue to escape legal prosecution.

For additional information or a copy of the complete study, contact Steve Pandelidis, MD, at the York Hospital Department of Surgery, (717) 771-2202.

The editors of PENNSYLVANIA MEDICINE encourage submission of scientific articles for publication consideration; however, abstracts of those articles not published in full are printed as a reference for readers. Please send submissions to: Medical Editor, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820. Full scientific articles are published at the discretion of the medical editor as consistent with the editorial schedule and are subject to editing.



NO DICE.

For some malpractice carriers, easy come meant easy go. But not The Medical Protective Company. Our financial stability is a legend in our industry. And has been since we invented professional liability coverage at the turn of the century. Ninety years in business and a continual A+ (Superior) rating from A.M. Best prove it. Don't gamble your premium dollars. Put your money on a sure thing and call our general agent today.

AIR FORCE

William J. Kelly, MD, past president of the State Society, and a founding and charter board member of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC), has retired from PMSLIC's Board of Trustees after 16 years of service. A celebration was held in March to honor his dedication, which included serving as chairman of PMSLIC's Underwriting Committee and as a member of its Executive, Finance, and Marketing committees. Dr. Kelly, an internist at St. Francis Hospital in Pittsburgh, received his medical degree from St. Louis University in Missouri.

Dr. Kelly

Hans Hamilton Liu, MD, was appointed chief of infectious diseases at Presbyterian Medical Center of Philadelphia.

Daniel Hyman, MD, pediatrician at Chestnut Hill Hospital, received the Governor's Highway Safety Award in the safety education category for establishing the Springfield Township Bicycle Helmet Safety Campaign. Dr. Hyman instituted the campaign in 1990 to increase awareness, support, and use of bicycle safety helmets.

Allan Robert Tunkel, MD, PhD, was appointed assistant professor of medicine in the Division of Infectious Diseases and assistant program director of the medical residency training program at the Medical College of Pennsylvania.

Leonard H. Finkelstein, DO, president and chairman of the Osteopathic Medical Center of Philadelphia, was instrumental in establishing the new Quality Assessment/Utilization Review Department at the Philadelphia College of Osteopathic Medicine (PCOM). **Toni Maria Casale, DO, FACURP, MPA,** a PCOM graduate, will chair the department.

Burton L. Eisenberg, MD, associate professor of surgery at Temple University Medical School and clinical associate professor of surgery at the Uniformed Services University of Health Sciences in Maryland, has been named chairman of the Department of Surgical Oncology at Fox Chase Cancer Center in Philadelphia.

Rosemary Rudolph Shy, MD, was appointed staff pediatrician at Children's Rehabilitation Hospital of Thomas Jefferson University.

Matthew Stern, MD, director of the Graduate Hospital's Parkinson's Disease and Movement Disorders Center, served as chairman of "Clinical and Therapeutic Aspects of Parkinsonism." The two-day symposium, held in Moscow, gathered experts on Parkinson's disease from the United States and the Soviet Union to share their knowledge and learn from others' experiences. Dr. Stern worked for four years to develop and organize the event.

James H. Gault, MD, FACC, chief of cardiology at Lancaster General Hospital, this month began an 18-month term as president of the Eastern Pennsylvania Chapter of the American College of Cardiology.

Dr. Gault

Robert C. Aber, MD, past associate dean for student and alumni affairs at Penn State's Milton S. Hershey Medical Center, was appointed associate dean for medical education. He also serves as assistant dean for external relations.

Leon S. Malmud, MD, Herbert M. Stauffer professor of diagnostic imaging and vice president for the Temple University Health Sciences Center, participated in a workshop on molecular nuclear medicine sponsored by Medical Applications and Environmental Research of the Department of Energy in Washington, DC.

Dr. Malmud

Norman M. Krause, MD, specialist in orthopedic surgery and sports medicine, was elected president of the medical staff at the Greater Pittsburgh Rehab Hospital.

Charles E. Mangan, MD, has been appointed chief of gynecologic oncology at Pennsylvania Hospital.

Andrew C. Krouskop, MD, was appointed senior vice president of medical affairs and a member of the board of trustees at Harmarville Rehabilitation Center, as well as chief operating officer of Harmarville's Community Outreach physician's practice plan. Also named to the Harmarville Board of Trustees was **James E. Hertzog, MD,** corporate medical director for Consol, Inc., and Remington Arms Company, Inc.

Joseph A. Marasco Jr., MD, chairman of radiology at St. Francis Medical Center, Forbes Health System, and Ohio Valley General Hospital, was elected treasurer of the International Society of Radiology.

Dorothy I. Lansing, MD, gynecologist, author, and medical historian from Paoli, received a Distinguished Alumna Service Award from Indiana University for her contributions to the school and her work in developing a lectureship for medical schools about sexually transmitted diseases.

Levi Stanform Downs Jr., a second-year medical student at the University of Pittsburgh School of Medicine, was awarded the Metropolitan Life Foundation Award for academic excellence in medicine.

Three physicians were honored with awards at the St. Francis Medical Center Department of Internal Medicine Residency Graduation Dinner: **Dominick Cannone, MD,** received the Subspecialty Attending of the Year Award; **Elmer J. Holzinger, MD,** received the Osler Clinical Medicine Award; and **John W. Hoyt, MD,** recieved the Professor of the Year Award.

Donald P. Atkinson, MD, FACS, general surgeon, received a three-year appointment as cancer liaison physician for the cancer program at Allegheny General Hospital.

Thomas A. Armstrong, MD, Hatboro, was elected president of the Inter-County Ophthalmological Society.

BELLEVUE HOSPITAL EMERGENCY SERVICES 12th ANNUAL EMERGENCY MEDICINE SEMINAR

MONDAY - FRIDAY JUNE 8-12, 1992

This seminar provides registrants with a rational and systematic approach to clinical decision making in the Emergency Department. It is designed for Emergency Medicine Practitioners and for those sub-specializing in Emergency Medicine. A comprehensive syllabus complements the course.

FEE: $650
ACCREDITATION: 28 Category I Credit hours AMA/PRA

CHAIRMAN
DEPARTMENT OF ORTHOPAEDICS

Our 297 bed community hospital, located in a residential area of South Philadelphia, has a position available for Chairman of the Department of Orthopaedics. We are a preferred affiliate of one of the major teaching institutions in Philadelphia with residents on rotation in Medicine, Obstetrics and Gynecology, ENT and Emergency Medicine.

Six modern operating rooms provide the physicians with adequate space to perform in excess of 6700 surgical procedures per year. Our active Emergency Department treats over 30,000 patients annually.

The Hospital is located in close proximity to the Philadelphia Sports Complex, Historic area, and Philadelphia International Airport.

Interested individuals should forward their curriculum vitae to:

Perry Weiner, D.O.
Chairman, Search Committee
Methodist Hospital
2301 South Broad Street
Philadelphia, PA 19148

Jeffrey L. Hassel, MD, specialist in internal medicine and director of the Transitional Level of Care Center at Community General Hospital in Reading, was installed as president of the Berks County Medical Society. Also installed were: **Gary M. Lattin, MD,** cardiologist, as president elect, and **Daniel B. Kimball Jr., MD,** director of medicine at Reading Hospital, as treasurer.

Paul S. Friedman, MD, Philadelphia, was elected fellow emeritus of the American College of Radiology.

Molakalmuru H. Murthy, MD, FACP, internal medicine and rheumatology specialist in Pittsburgh, and **Sushil K. Singhi, MD,** internal medicine and cardiology specialist at St. Francis Medical Center, have been elected to fellowship in the American College of Physicians.

Joel M. Lerman, MD, psychiatrist, was appointed assistant medical director of the Sanctuary at Northwestern in Fort Washington.

Thomas E. Starzl, MD, director of the University of Pittsburgh Transplantation Institute, was inducted into the National French Academy of Medicine. He was recognized for his pioneering work in organ transplantation.

Paul Angottis, DPM, North Wales, has been named chief of the Division of Podiatry at Abington Memorial Hospital.

John A. Power, MD, cardiologist at St. Francis Medical Center, served as principal investigator of a research team which recommended federal Food and Drug Administration approval of an excimer laser to open blocked cardiac bypass grafts.

Dr. Power

Kathleen Toomey, MD, JD, chief of medical genetics at St. Christopher's Hospital for Children in Philadelphia, has established a program which enables a newborn with problems to be diagnosed without being separated from his or her parents.

Francine L. Marcus, MD, Philadelphia psychiatrist, has been named director of the Adolescent Substance Abuse Program at the Institute of Pennsylvania Hospital.

Albert Einstein Medical Center Emergency Department physicians **Barry J. Burton, DO,** and **Brian A. Nester, DO,** received awards from the American Osteopathic Association: Dr. Burton received the Burroughs Wellcome Resident Leadership Award in recognition of community service, and Dr. Nester received the Fisons Pharmaceuticals Resident Award for his contribution to allergy/asthma education and research.

Jay Roberts, PhD, professor at the Medical College of Pennsylvania, and **Fred Lembeck, MD,** professor of medicine at the University of Graz, Austria, have developed an educational exchange in pharmacology. The program will allow select graduate students to study in Philadelphia and Graz for three months to one year.

E. Albert Reece, MD, Abraham Roth professor and chairman of the Temple University Department of Obstetrics, Gynecology, and Reproductive Services, was awarded an $80,000 grant from the American Diabetes Association to study why babies born to women with diabetes have an increased incidence of birth defects.

Diana Dickson-Witmer, MD, clinical assistant professor in surgery at Thomas Jefferson University Hospital's Medical College, received a statewide community service award from the American Medical Women's Association for her dedication to public health issues.

Dr. Dickson-Witmer

John Romano, MD, distinguished university professor emeritus of psychiatry at the University of Rochester School of Medicine and Dentistry, presented the Albert M. Biele, MD, Memorial Lecture at Jefferson Medical College on "The Battered Academician Syndrome."

Peter J. Savino, MD, director of neuro-ophthalmology service at Wills Eye Hospital, served as principal investigator of a national study on the treatment of optic neuritis. The results of the study were published in the February 27 issue of the *New England Journal of Medicine*.

Andrew K. Pollack, MD, Horsham, has been named physician in charge of dermatology at Chestnut Hill Hospital.

Sukh Dev Sharma, MD (r), Hamot Medical Center cardiologist, received the Mother India International Award during the third annual India-NRI (Non-Resident Indian) World Convention in New Dehli, India. The Honorable Shiv Raj Patil (l), speaker of India's national legislative assembly, presented the award.

We specialize in musculoskeletal tumors.

Many patients with primary and metastatic bone and soft tissue tumors are dying--unnecessarily. They're not all dying from disease, but because many physicians haven't recognized the sub-specialty of musculoskeletal tumor treatment that saves lives and limbs.

It's time you knew about The Schmidt Reconstruction Center at The Graduate Hospital in Philadelphia. Here, the thinking is advanced and the treatment is aggressive. Dr. Schmidt and his highly skilled team attack bone and soft tissue tumors with a comprehensive program. There's a complete diagnostic workup prior to biopsy. Biopsies are performed to permit limb salvage. Adjuvant therapy is utilized with chemotherapy and radiation therapy. New clinical trials are constantly being developed. And the quality of life is improved for adults and adolescents.

In our world of specialized medicine, patients deserve the finest treatment available. Now that you know about The Schmidt Reconstruction Center, shouldn't you share it?

THE SCHMIDT RECONSTRUCTION CENTER

Hearing Irons: The Questioning "Y"

J. Mostyn Davis, MD

It was a day still remembered—the day we medical students got our stethoscopes. They were carefully folded over just enough so the earpieces were easily visible to the world in our white coat pockets. This instrument is to the future doctor what the badge is to the policeman, the white scarf is to the pilot, and the reverse collar is to the clergyman...a symbol of arrival at a goal, long dreamed of and worked for: we now knew we were accepted into the fraternity of medicine. Yet, the story of how the stethoscope came to be is frequently unappreciated.

We live and practice in times when "technological miracles" are commonplace. As we attempt to peer at the internal workings of our patients through the intact integument, we employ a bewildering array of devices, appliances, and procedures. Of course, we use our own senses—sight, smell, touch, hearing—but in addition there are invisible rays of all kinds, radioactive substances, sound waves, chemical tests, mechanical and hemodynamic manipulations, and even electromagnetic procedures.

The great desire to learn how the internal ravages of disease come about was, at least in part, a result of renewed interest in the autopsy. Clinical tracking of the natural history and course of the disease was followed by observation of the pathology produced, noted at the autopsy table. The postmortem examination provided a, so-to-speak, retrospective look for answers. Nearly 200 years previously, William Harvey had described the heart sounds, but because of maidenly modesty, obesity, or dislike of direct patient contact, few ears had been applied to the chests of patients.

In 1816, Dr. Renee Laennec first rolled three sheets of stiff paper together and connected his ear to a patient's chest. His new device needed a name, and, after considering several alternatives, he chose the name "stethoscope," from the Greek words *stethos* (chest) and *scopos* (observer). During its early years, it was sometimes called simply "le cylinder," the baton, or a solometer. However, the original name stuck, and a stethoscope it became.

As with so many medical advances, this device proved too high-tech at the time and had to wait for slow acceptance. Many physicians refused to recognize its importance. Although more slowly than in Europe, the new instrument began changing diagnosis in the still-young nation of America. Still, it was a number of years before it came to occupy an important place in American medicine. Harvard Medical School, for example, did not have a stethoscope until 1869, some 50 years after its invention by Dr. Laennec.

This new instrument was not merely a method to transmit sounds from the patient's chest to the listener's ear. Until now, the patient's description of the symptoms, unreliable as they might be, remained the sine qua non of the diagnosis. The stethoscope would now teach the difference between objective evidence and evidence provided by the patient or biased observer. Since Dr. Laennec's discovery, objective criteria have gradually become the primary objective of the medical examination.

The story most widely accepted about how Dr. Laennec was led to his momentous discovery involves a children's game of the time which consisted of scratching one end of a wooden beam and listening to the sounds produced at the other end. Supposedly, this idea occurred to him while he was contemplating how to listen to the heart sounds of a very obese female patient.[1]

As has been true in many other medical advances, others have claimed the honor of the stethoscope's invention. However, there seems little doubt that the discovery of this most significant medical instrument belongs to Dr. Laennec. Next time you remove that shiny instrument from your white coat pocket, think (kindly) of Dr. Laennec.

Dr. Davis is a family physician at Geisinger Medical Center, Danville. He is a former Society trustee and currently serves as editor of **Keystone Physician,** *an official publication of the Pennsylvania Academy of Family Physicians.*

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

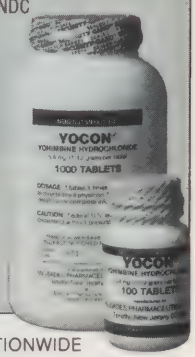
Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatic. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]



Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

PITTSBURGH!

Hospital-guaranteed and private practice opportunities for board certified/eligible physicians are available in Western Pennsylvania in the following specialties:

- **Cardiology**
  - *Invasive*
  - *Noninvasive*
- **Emergency Medicine**
- **Family Medicine**
- **Internal Medicine**
- **OB/GYN**
- **Surgery**
  - *General*
  - *Vascular*

Our search and business advisory services are paid by our sponsoring hospital and physician clients. We will provide:

- **Compensation planning**
- **Practice start-up planning and implementation**
- **Practice valuation and purchase assistance**
- **Fee schedule/profile development**
- **Partnership buy-in valuation and structuring**

If you would like additional information on current opportunities or assistance in the above areas before making your decision, please send your CV or call John Fenner for a confidential discussion:

FENNER & COSTELLO, INC.

Penn Center West One
Pittsburgh, PA 15276

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months or longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES**, as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

Medicare Can Learn From Playskool

John W. Mills, MD
Medical Editor

One of the first lessons we learn as children is the simple truth that a square object won't fit into a round hole. Playskool, Inc., has a model street-side postal box with various geometric openings and a similar number of geometric objects, each of which will only fit into the proper opening. The lesson, of course, is to teach us at an early age that square objects go into square holes and that trying to get a round object into a square hole doesn't work.

As we mature, we relate the lesson to our human experience and constantly modify our psycho-social milieu so that we can fit into a particular niche. If one is adept at modifications, one may fit into other niches. But in practical terms, a round object will not fit into a square hole.

As I've fumbled with the new Medicare evaluation codes for the past few months, my grandchildren's Playskool toy broke through my subconscious. Ergo, all patients entering my office *do not* fit into the 10 defined office codes; and try as I may, I cannot reshape these patients to fit the codes.

The truth of the matter is that the computer experts have tried to fit all patients—diverse human beings, none of whom is the same—into 10 evaluation codes. Obviously, they have never treated patients, and they probably never had a Playskool post office!

Look at another facet of the codes: the whole system is problem-oriented. If a patient has no complaints or simply wants a physical, but is *not* sick (e.g., "no definable problem"), then that patient won't fit into a code. Simply put, the physician won't get reimbursed for the office visit unless a definable problem is "manufactured." To put it another way, if not sick as defined by the codes, a patient has no business seeing a physician.

"Medicare's refusal to pay for preventive care is a retrograde stance."

This leads me to wonder what is *really* is at the core of the new Medicare system. There are those in our profession who firmly believe that an unidentified contigency of "federal staffers" have, for years, been doggedly working behind the scenes to bring about the complete federalization of the U.S. health care system. This premise seems to hold some truth because all Blue Cross/Blue Shield plans have or will soon adopt the new codes, and other insurance carriers will no doubt do the same very quickly. Thus, since the system won't reimburse for preventive medicine visits (e.g., "not sick" and "no problem"), we've got a system that won't pay physicians to keep patients well and will only pay for illnesses. Physicians are forced to be crisis-oriented.

It is an established fact that preventive care saves money in the long run. If I pick up an early *in situ* cancer of the cervix, the cost of treatment with most probable cure is far less expensive than if I diagnosed a Stage III cancer of the cervix. The same can be said of almost any catastrophic illness: preventive care may totally avoid many of these conditions; and certainly, early diagnosis in the preventive visit is far less costly than the advanced disease with its diagnosis and treatment. Also, it goes without saying that the quality of life is a plus when preventive care and early diagnosis are routine.

Perhaps I wandered a bit, but I think the whole new reimbursement system has taken medicine back 75 years. The only time one went to a doctor then was for illness. Preventive medicine wasn't considered, perhaps because we didn't have the tools to do a decent job. Medicare's refusal to pay for preventive care is a retrograde stance. All patients do *not* fit the 10 evaluation codes—round patients (no pun intended) do *not* fit into square codes.

Dr. Mills, State Society trustee from the Ninth District, specializes in gynecology in Indiana.

WHEN ACID REFLUX ERUPTS

Zantac® 150 Tablets
(ranitidine hydrochloride)

Zantac® 300 Tablets
(ranitidine hydrochloride)

Zantac® Syrup
(ranitidine hydrochloride)

BRIEF SUMMARY

The following is a brief summary only. Before prescribing, see complete prescribing information in Zantac® product labeling.

INDICATIONS AND USAGE: Zantac® is indicated in:
1. Short-term treatment of **active duodenal ulcer.** Most patients heal within 4 weeks.
2. **Maintenance therapy** for duodenal ulcer patients at reduced dosage after healing of acute ulcers.
3. The treatment of **pathological hypersecretory conditions** (e.g., Zollinger-Ellison syndrome and systemic mastocytosis).
4. Short-term treatment of **active, benign gastric ulcer.** Most patients heal within 6 weeks and the usefulness of further treatment has not been demonstrated.
5. Treatment of **gastroesophageal reflux disease (GERD).** Symptomatic relief commonly occurs within 1 or 2 weeks after starting therapy. Therapy for longer than 6 weeks has not been studied.

In active duodenal ulcer; active, benign gastric ulcer; hypersecretory states; and GERD, concomitant antacids should be given as needed for relief of pain.

CONTRAINDICATIONS: Zantac® is contraindicated for patients known to have hypersensitivity to the drug.

PRECAUTIONS:

General: 1. Symptomatic response to Zantac® therapy does not preclude the presence of gastric malignancy.
2. Since Zantac is excreted primarily by the kidney, dosage should be adjusted in patients with impaired renal function (see DOSAGE AND ADMINISTRATION). Caution should be observed in patients with hepatic dysfunction since Zantac is metabolized in the liver.

Laboratory Tests: False-positive tests for urine protein with Multistix® may occur during Zantac therapy, and therefore testing with sulfosalicylic acid is recommended.

Drug Interactions: Although Zantac has been reported to bind weakly to cytochrome P-450 *in vitro,* recommended doses of the drug do not inhibit the action of the cytochrome P-450-linked oxygenase enzymes in the liver. However, there have been isolated reports of drug interactions that suggest that Zantac may affect the bioavailability of certain drugs by some mechanism as yet unidentified (e.g., a pH-dependent effect on absorption or a change in volume of distribution).

Increased or decreased prothrombin times have been reported during concurrent use of ranitidine and warfarin. However, in human pharmacokinetic studies with dosages of ranitidine up to 400 mg per day, no interaction occurred; ranitidine had no effect on warfarin clearance or prothrombin time. The possibility of an interaction with warfarin at dosages of ranitidine higher than 400 mg per day has not been investigated.

Carcinogenesis, Mutagenesis, Impairment of Fertility: There was no indication of tumorigenic or carcinogenic effects in lifespan studies in mice and rats at dosages up to 2,000 mg/kg per day.

Ranitidine was not mutagenic in standard bacterial tests (*Salmonella, Escherichia coli*) for mutagenicity at concentrations up to the maximum recommended for these assays.

In a dominant lethal assay, a single oral dose of 1,000 mg/kg to male rats was without effect on the outcome of two matings per week for the next 9 weeks.

Pregnancy: ***Teratogenic Effects: Pregnancy Category B:*** Reproduction studies have been performed in rats and rabbits at doses up to 160 times the human dose and have revealed no evidence of impaired fertility or harm to the fetus due to Zantac. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

Nursing Mothers: Zantac is secreted in human milk. Caution should be exercised when Zantac is administered to a nursing mother.

Pediatric Use: Safety and effectiveness in children have not been established.

Use in Elderly Patients: Ulcer healing rates in elderly patients (65 to 82 years of age) were no different from those in younger age-groups. The incidence rates for adverse events and laboratory abnormalities were also not different from those seen in other age-groups.

ADVERSE REACTIONS: The following have been reported as events in clinical trials or in the routine management of patients treated with Zantac®. The relationship to Zantac therapy has been unclear in many cases. Headache, sometimes severe, seems to be related to Zantac administration.

Central Nervous System: Rarely, malaise, dizziness, somnolence, insomnia, and vertigo. Rare cases of reversible mental confusion, agitation, depression, and hallucinations have been reported, predominantly in severely ill elderly patients. Rare cases of reversible blurred vision suggestive of a change in accommodation have been reported.

Cardiovascular: As with other H_2-blockers, rare reports of arrhythmias such as tachycardia, bradycardia, atrioventricular block, and premature ventricular beats.

Gastrointestinal: Constipation, diarrhea, nausea/vomiting, abdominal discomfort/pain, and rare reports of pancreatitis.

Hepatic: In normal volunteers, SGPT values were increased to at least twice the pretreatment levels in 6 of 12 subjects receiving 100 mg q.i.d. intravenously for 7 days, and in 4 of 24 subjects receiving 50 mg q.i.d. intravenously for 5 days. There have been occasional reports of hepatitis, hepatocellular or hepatocanalicular or mixed, with or without jaundice. In such circumstances, ranitidine should be immediately discontinued. These events are usually reversible, but in exceedingly rare circumstances death has occurred.

Musculoskeletal: Rare reports of arthralgias.

Hematologic: Blood count changes (leukopenia, granulocytopenia, thrombocytopenia) have occurred in a few patients. These were usually reversible. Rare cases of agranulocytosis, pancytopenia, sometimes with marrow hypoplasia, and aplastic anemia and exceedingly rare cases of acquired immune hemolytic anemia have been reported.

Endocrine: Controlled studies in animals and man have shown no stimulation of any pituitary hormone by Zantac® (ranitidine HCl) and no antiandrogenic activity, and cimetidine-induced gynecomastia and impotence in hypersecretory patients have resolved when Zantac has been substituted. However, occasional cases of gynecomastia, impotence, and loss of libido have been reported in male patients receiving Zantac, but the incidence did not differ from that in the general population.

Integumentary: Rash, including rare cases suggestive of mild erythema multiforme, and, rarely, alopecia.

Other: Rare cases of hypersensitivity reactions (e.g., bronchospasm, fever, rash, eosinophilia), anaphylaxis, angioneurotic edema, and small increases in serum creatinine.

OVERDOSAGE: Information concerning possible overdosage and its treatment appears in the full prescribing information.

DOSAGE AND ADMINISTRATION: (See complete prescribing information in Zantac® product labeling.)

Active Duodenal Ulcer: The current recommended adult oral dosage is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice daily. An alternate dosage of 300 mg or 20 mL (4 teaspoonfuls equivalent to 300 mg of ranitidine) once daily at bedtime can be used for patients in whom dosing convenience is important. The advantages of one treatment regimen compared to the other in a particular patient population have yet to be demonstrated.

Maintenance Therapy: The current recommended adult oral dosage is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) at bedtime.

Pathological Hypersecretory Conditions (such as Zollinger-Ellison syndrome): The current recommended adult oral dosage is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice a day. In some patients it may be necessary to administer Zantac® 150-mg doses more frequently. Dosages should be adjusted to individual patient needs, and should continue as long as clinically indicated. Dosages up to 6 g per day have been employed in patients with severe disease.

Benign Gastric Ulcer: The current recommended adult oral dosage is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice a day.

GERD: The current recommended adult oral dosage is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice a day.

Dosage Adjustment for Patients with Impaired Renal Function: On the basis of experience with a group of subjects with severely impaired renal function treated with Zantac, the recommended dosage in patients with a creatinine clearance less than 50 mL/min is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) every 24 hours. Should the patient's condition require, the frequency of dosing may be increased to every 12 hours or even further with caution. Hemodialysis reduces the level of circulating ranitidine. Ideally, the dosing schedule should be adjusted so that the timing of a scheduled dose coincides with the end of hemodialysis.

HOW SUPPLIED: Zantac® 300 Tablets (ranitidine hydrochloride equivalent to 300 mg of ranitidine) are yellow, capsule-shaped tablets embossed with "ZANTAC 300" on one side and "Glaxo" on the other. They are available in bottles of 30 (NDC 0173-0393-40) tablets and unit dose packs of 100 (NDC 0173-0393-47) tablets.

Zantac® 150 Tablets (ranitidine hydrochloride equivalent to 150 mg of ranitidine) are white tablets embossed with "ZANTAC 150" on one side and "Glaxo" on the other. They are available in bottles of 60 (NDC 0173-0344-42) and 100 (NDC 0173-0344-09) tablets and unit dose packs of 100 (NDC 0173-0344-47) tablets.

Store between 15° and 30°C (59° and 86°F) in a dry place. Protect from light. Replace cap securely after each opening.

Zantac® Syrup, a clear, peppermint-flavored liquid, contains 16.8 mg of ranitidine hydrochloride equivalent to 15 mg of ranitidine per 1 mL in bottles of 16 fluid ounces (one pint) (NDC 0173-0383-54).

Store between 4° and 25°C (39° and 77°F). Dispense in tight, light-resistant containers as defined in the USP/NF.

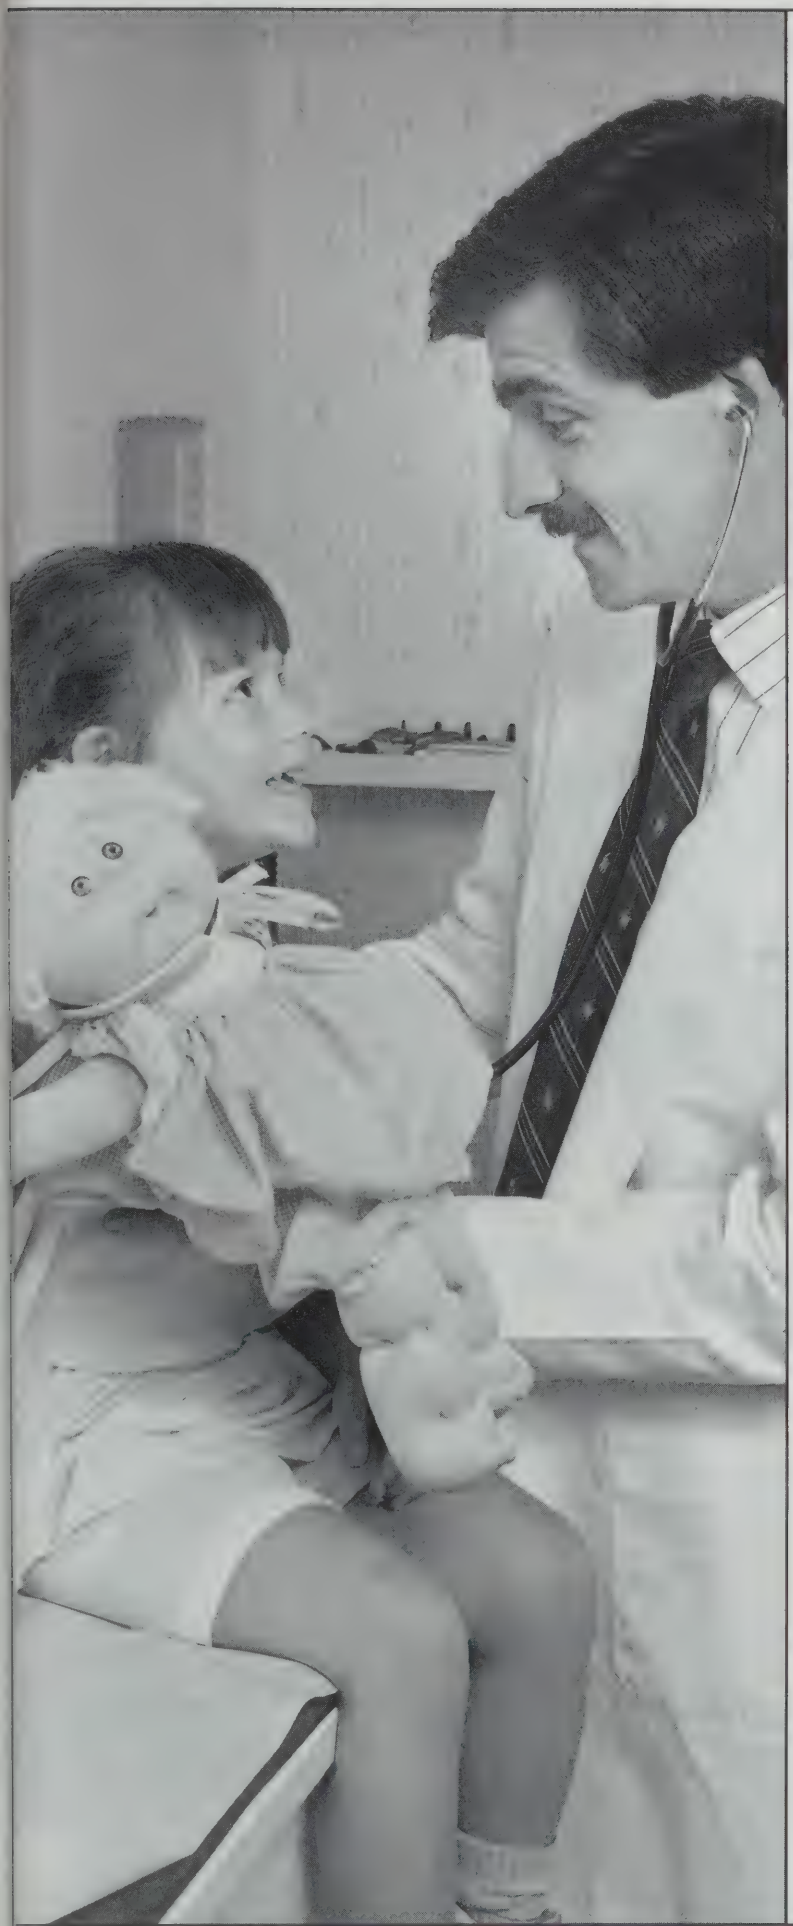
YOU CAN IMPROVE TECHNOLOGY AND STILL BE STUCK IN THE SAME JAM

Technology is supposed to make your people more productive, your practice more competitive. We anticipate how technology will affect not only processes, but the structure of your practice as well. The Valley Medical Management concept revolves around a team of reimbursement specialists, managers, systems analysis and CPA's. This is the formula for our success. Our approach is scientific, comprehensive, and informative. Services provided include:



- ✦ Practice Reviews
- ✦ Administrative & Financial Management
- ✦ Billing
- ✦ Hardware/Software

Our objective is to make you a more successful professional.
Call us for more information.

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

SOCIETY REVISES LIVING WILL BROCHURE: The State Society has revised its living will brochure to reflect the Commonwealth's new Advance Directive for Health Care Act. The brochure describes how to prepare a living will, answers related questions, and provides a wallet card. The card, when completed, serves as notification that a person has signed an advance directive and indicates where a copy can be obtained. State Society members may receive 25 copies of the brochure free-of-charge upon request; printing and shipping costs will be charged for quantities of 100 or more brochures. To place an order, request a brochure order form from county or specialty societies, or call the Society at 1-800-228-7823. The general public may obtain individual copies of the brochure free-of-charge by sending a stamped, self-addressed envelope to the Society with a note requesting one brochure. County, state, and other health organizations in need of large quantities of the brochure, will also be informed of the opportunity to purchase copies.

PHYSICIANS REMINDED OF OSHA DEADLINE: Physicians are reminded that May 5 was the deadline for the Exposure Control Plan required by the new bloodborne pathogens regulations released by OSHA. Although physicians may not be cited without employee complaint on other regulations not yet in effect, they may be cited for violations of the control plan provision. Other implementation deadlines: training and record-keeping provisions—June 4, 1992; all other provisions—July 6, 1992. After each implementation, physicians should be aware that OSHA may cite, without complaint, for violations of any provisions in effect. An information kit created by the Society is available to provide members with compliance materials. For ordering information, see the May issue of *Executive Report*.

HCFA REVISES GROUP SETTING DEFINITION OF "NEW PATIENT VISIT": HCFA revised in April the current definition of a "new patient visit" for a group practice or clinic where all physicians are billing under an assignment account. The existing definition considered a patient as "new" only if the patient had not been seen by any member of the group, regardless of specialty, in the previous three-year period. The revised policy considers a patient "new" to the physician if the patient was not seen in the previous three-year period by a physician of the same specialty in that group.

MEDICARE INCREASES TECHNICAL COMPONENT RVUs: Effective for services rendered on or after April 13, 1992, Medicare has increased the technical component relative value units (RVUs) for approximately 170 diagnostic procedure codes. Although no professional component increases will occur for these codes, as a result of technical component increases, global RVUs also will increase. Payment increases will range from pennies to several dollars, with some of the biggest increases occurring for cardiac catheterization codes 93524, 93526, and 93527. The changes are a result of a new methodology used by Medicare to calculate technical components and a misapplication of the transition rules for a number of 1992 payment amounts.

GOVERNOR NOMINATES INSURANCE COMMISSIONER: Governor Robert P. Casey has nominated Cynthia M. Maleski of Allegheny County for the position of state insurance commissioner. She has been general counsel for Mercy Hospital in Pittsburgh since 1981 and will begin serving as acting commissioner on May 11, pending Senate vote on confirmation.

INSURANCE DEPARTMENT APPROVES "SPECIAL CARE" PROGRAM: The state Insurance Department has approved the "Special Care" program, to be offered by Blue Cross and Blue Shield beginning this month, which targets individuals and families not currently covered by health insurance. It will cost about half the price of standard health insurance coverage for those who qualify.

One-touch, computer access to Pennsylvania Blue Shield is easier than ever. But for the doctors who file claims electronically, "easy" isn't the only thing worth talking about.

Easy come. Easy go. 2.6 million times every month.

"I like the control." With Electronic Claims Submission (ECS), you control the accuracy and the timing of your claims.

What you submit is exactly what goes into the system. Time-consuming clerical errors are virtually eliminated.

You control the timing. Because the instant your claims are sent is the instant they arrive at Blue Shield for processing – 24 hours a day, 7 days a week.

Need a paper record? It's easy. Just print a copy of each transaction for your files.

With ECS, it's never been easier to stay in touch and in complete control.

"Faster claims turnaround means faster payment." With ECS, you bypass a week or more of handling and administrative work. And that gets you from zero to payment in record time.

ECS makes it easy to go with the flow – your cash flow.

"I always know where I stand." Want to check the status of the claims you submit? With ECS, your staff can access and print Reconciliation Reports that provide claims detail on patients, services, payments and claims still pending in our system.

"ECS reduces my administration costs. And my equipment costs were less than I expected." Technology has never been faster, easier to use or more affordable.

If you have an IBM-compatible PC, DOS 3.3 or greater, a modem and a printer, we'll make our user-friendly, Paperless Claims Express software available to you free of charge. We'll even provide expert systems support.

One-touch, computer access to Pennsylvania Blue Shield has never been easier – or more productive.

New OSHA Rules Prompt Return to Crisis Mode

John W. Mills, MD
Medical Editor

Once again, the Pennsylvania Medical Society and the state's physicians are in a crisis mode. We had barely returned to normalcy after the adoption of the new RBRVS fee schedule mandated by Medicare, when OSHA (the Occupational Safety and Health Administration, U.S. Department of Labor) descended on us with the full force of their new regulations on occupational exposure to bloodborne pathogens. Originally published in final form on December 6, 1991, they are to be fully implemented by all health care facilities, including doctors' offices, by July 6, 1992.

"In a space of less than four months, we are dealing with another monumental change."

In a space of less than four months, we are dealing with another monumental change. Universal precautions have been around for some time, but perhaps most health care facilities have not incorporated them 100 percent into their daily routines. I wonder why we've been given only six months to implement the new OSHA regulations. What's the rush?

The HIV and HBV epidemic has been here for a while, and we know it's getting worse. Unfortunately, the whole subject has been treated like a political football instead of an infectious disease. The presidential election year may be the reason the Bush Administration is doing something on a significant health care issue.

Health care personnel—physicians in particular—don't have a problem with the new OSHA regulations. However, many of us feel the timetable is unreasonable and will serve to promote a myriad of entrepreneurs selling all kinds of "necessary equipment and supplies" to harried physicians.

The State Society has been deluged with calls from physicians desperate to attend one of the late April special seminars on the OSHA regulations. Fortunately, our Society has been able to gear up to meet the need; and staff, under Roger Mecum, executive vice president, have been quickly responsive.

In some respects, these regulations seem like "gilding the lily," if what we know of the communicability and transmission of HIV and HBV is true, and the Centers for Disease Control is not playing games with us. Why should it be necessary for an office secretary to wear an impervious gown, face mask, and protectice eye glasses to clean up a patient's vomitus in the waiting room, if the viruses are quickly inactivated by room temperature and clorox solution, and require a direct blood-entry portal?

First, we hear how difficult it is to acquire HIV or HBV unless from a contaminated blood transfusion, a significant need stick, or sexual involvement with an infected person. Now, it seems we are being required to bend over backwards—in unreasonable "jig-time"—to abide by OSHA regulations aimed at protecting health care professionals and our office staffs in the office setting, where transmission is unlikely with reasonable universal precautions. Couple the rush with OSHA's longstanding "KGB attitute/ power," and we have reason for our crisis mode.

The monetary fines for non-compliance are astronomical and could easily put a small practitioner out of business and into bankruptcy. Educational visits by OSHA may be the "order of the day" from the March 6 beginning until the final July 6 full implementation; but after that day, you can expect the "book to be thrown at you."

Is it all necessary? Are the fines within reason based on our medical knowledge of HIV and HBV? While I doubt it, as a good physician I am willing to comply if the regulations benefit society and our profession without unnecessary or unreasonable stress and cost. Time will tell.

MIIX℠ will offer free income protection coverage for doctors who become HIV positive.

Because we understand.

"We are addressing a problem which can have a potentially devastating impact on those few doctors who may be affected. We are here to serve doctors with responsive and innovative programs, and I believe that we are doing our part to deal straightforwardly and candidly with this dilemma for doctors and patients alike."

— Daniel Goldberg
MIIX President

The Medical Inter-Insurance Exchange is pleased to announce, effective January 1, 1992, its Human Immunodeficiency Virus (HIV) Insurance Endorsement as a no cost addition to its professional liability insurance policies for Pennsylvania doctors. Should you be diagnosed as HIV positive, the endorsement will provide you with a benefit of $500,000, payable monthly over 5 years at $100,000 per year.

For more information, please call one of our licensed agents.

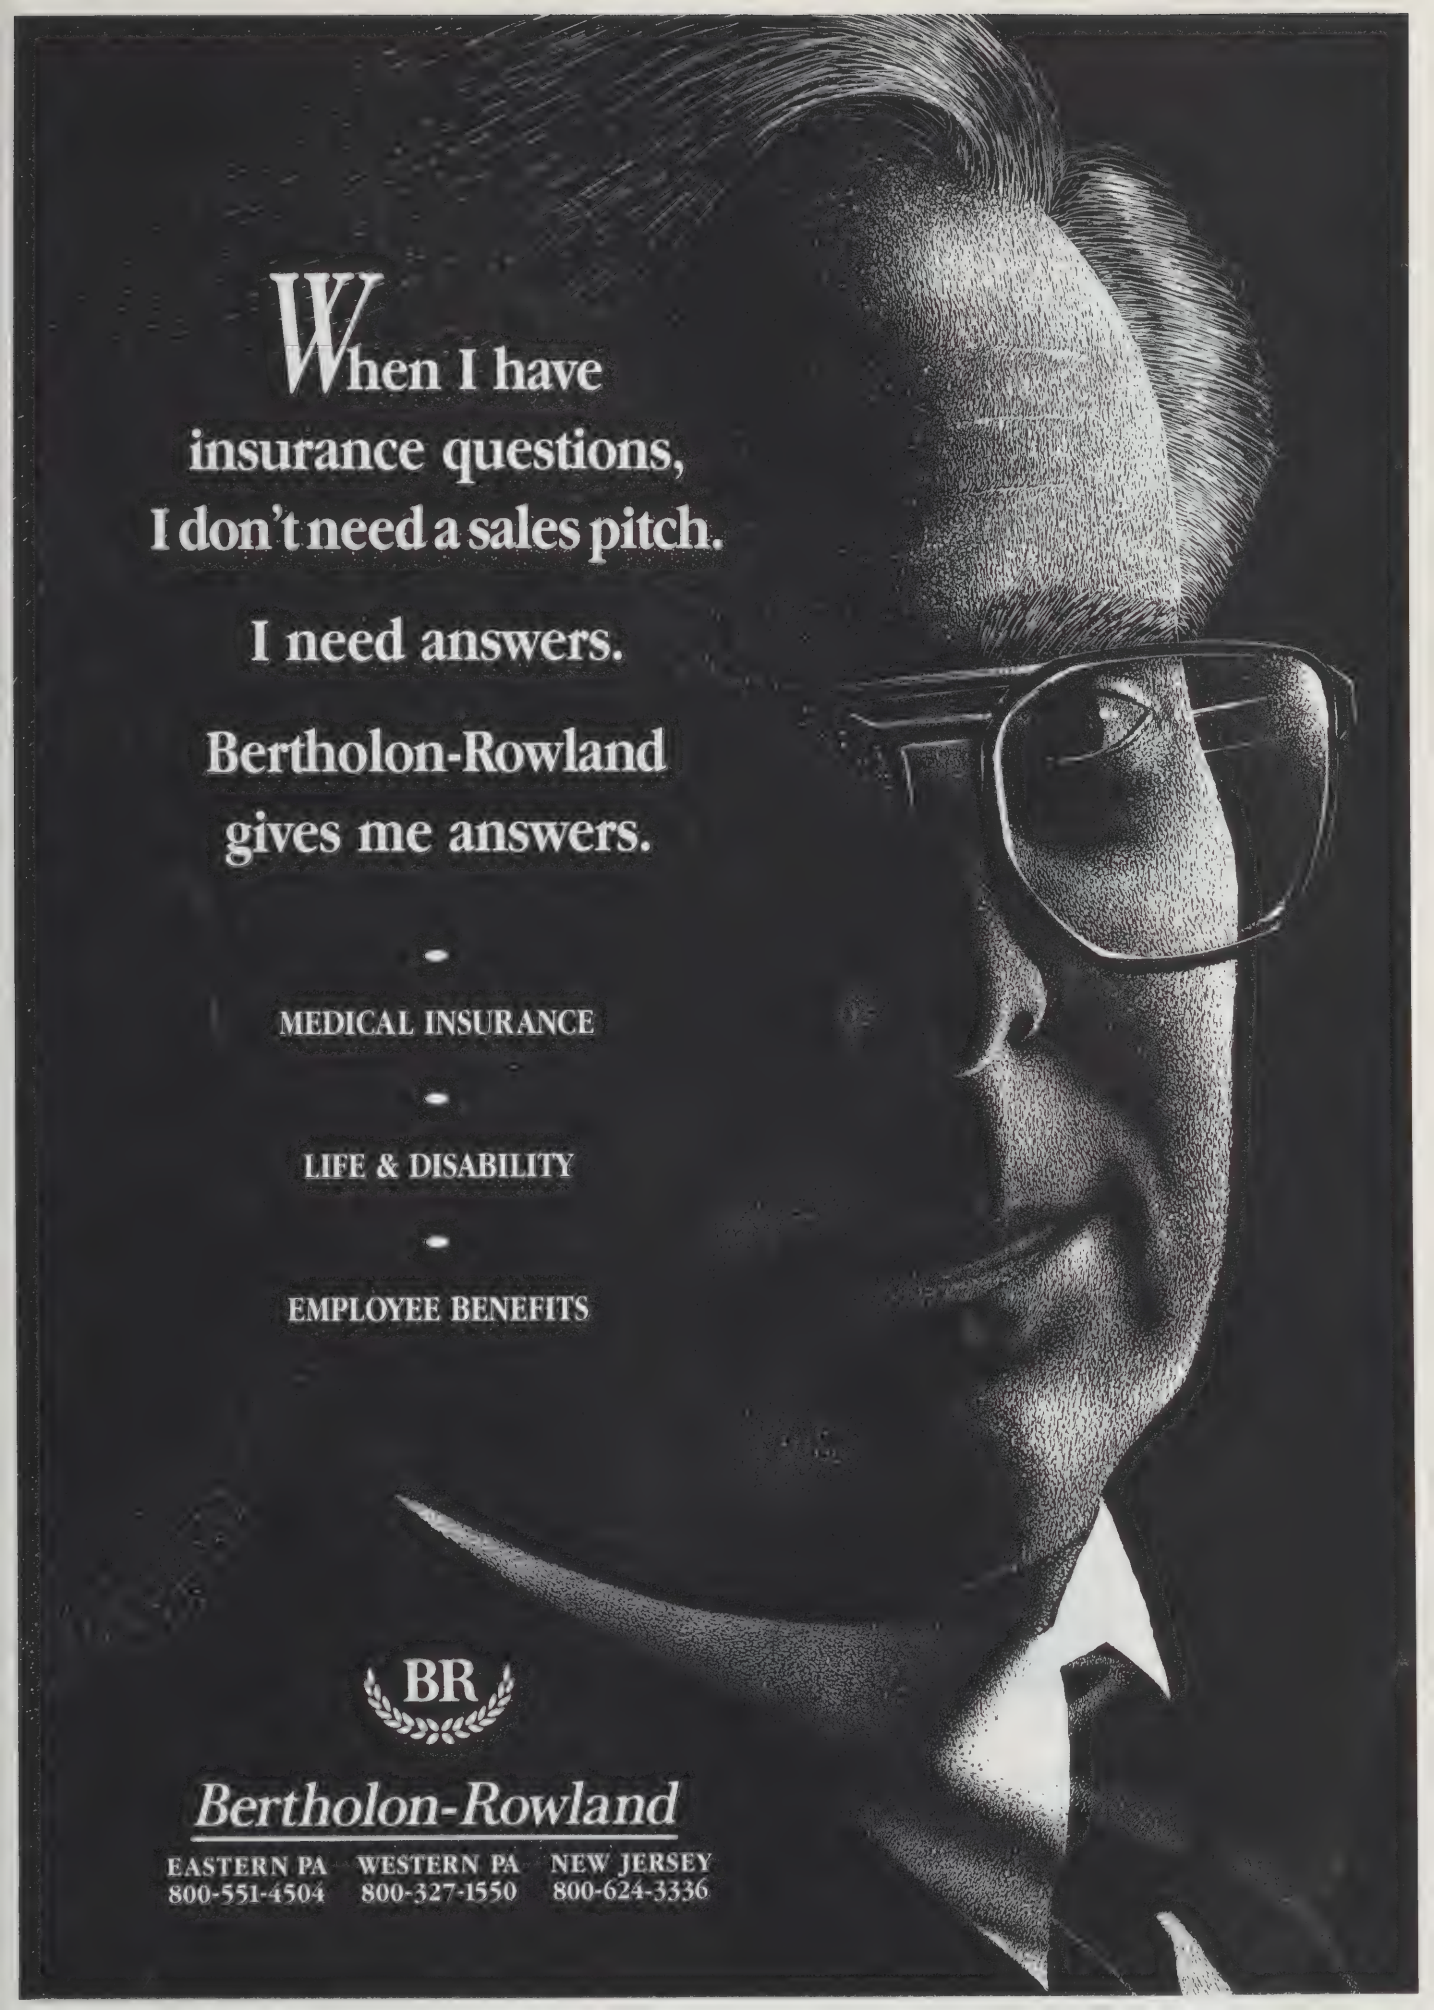
Facing Tough Political Realities

Robert N. Moyers, MD

When President George Bush saw the numbers for his opponent, Pat Buchanan, in the early primaries, he acknowledged that the voters were sending him a message and pledged to redouble his efforts to turn the economy around. "The real struggle," said one aide, "is not to overreact."

When Democratic candidate Bill Clinton heard the news of opponent Jerry Brown's win in Connecticut, he predicted many who voted against him in the primary would vote for him in the general election. "It's a long process," said an aide, "and I think people voted to keep the process going, keep it open, and learn more about the candidates. And that's all right."

What can physicians learn from these two incidents in this year's presidential campaign? We can learn how professional politicians react when the going is tough.



There are similarities in the ways both candidates, two very different men, handled these situations. First, they didn't deny the facts; they admitted that things did not go their way. Second, they looked carefully at what they might do differently. Third, they brought renewed energy to the task of turning things around. And last, they did not waste time blaming the process that led to their setbacks. As we look at our long and still-unresolved engagement in the state legislature over the issue of workers' compensation reform, we do well to keep these lessons before us.

We continue to devote enormous amounts of time and effort to carrying our position to Pennsylvania's administration and legislature. The Society's Quick Response Committee on workers' compensation meets frequently in person and through telephone conference calls. Members and staff devote many hours to doing research; drafting proposed language for legislation and amendments; and meeting with representatives of hospitals, business, insurance, and labor, as well as with key legislative contacts. The Society's governmental affairs staff have a combined total of more than 30 years' experience on the hill.

The Society's membership is fortunate to have in its ranks physicians who are willing to respond quickly and effectively at key moments to bring our case before the legislature. But also, we have experienced staff who are on call at the Capitol whenever the legislature is in session, who monitor all of the routine meetings of committees and other bodies, who read thousands of pages of regulations, who sift through hundreds of pieces of legislation, and who know the legislators themselves. In short, we benefit in many subtle ways from the day-to-day efforts of staff whose constant presence in the halls of government is critical to the success of our own efforts.

I don't have a crystal ball to see the final outcome of Pennsylvania's workers' compensation reform, though current signs are quite encouraging. Before the legislative recess for the primary, the Senate Labor and Industry Committee voted to replace the link to Medicare with modified use of the federal workers' compensation fee schedule. Our Quick Response Committee has been reviewing all the provisions of the amended bill in order to adjust our continuing efforts as needed. This legislation still faces more votes and possibly more revisions and amendments.

We in the Society's leadership are committed to engagement in each step of the political process, as we have been from the beginning. We cannot control the final outcome, but we can and will be untiring in our efforts to ensure that Pennsylvania's laws are working in the best interest of our patients.

LETTERS TO THE EDITOR

"FAMILY UNITY" VIEWS DIFFER

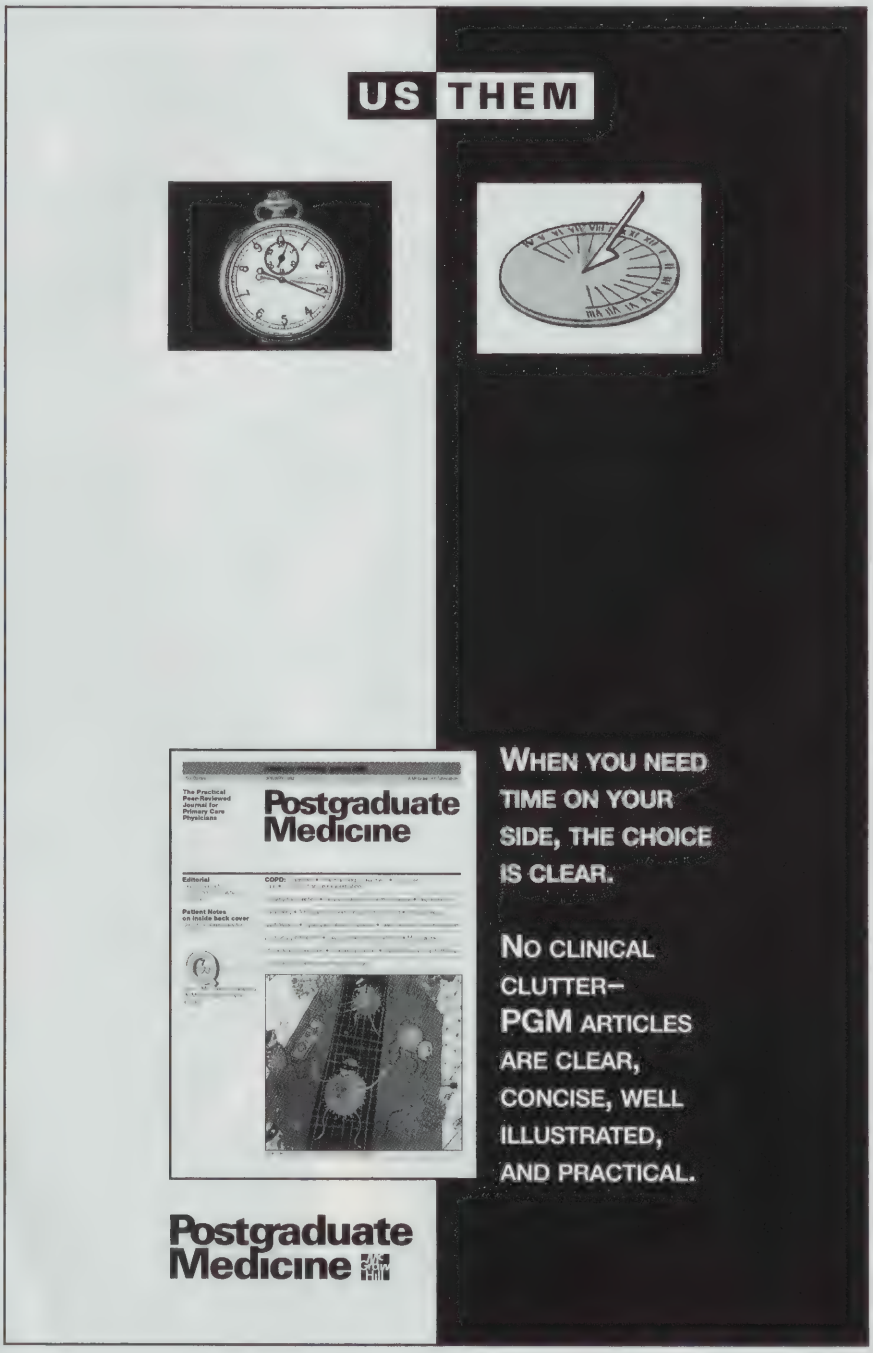
Congratulations to Dr. Victor Greco on his excellent discussion in his article, "Family Unity: A Point of View," which appeared in the February issue of PENNSYLVANIA MEDICINE.

John H. Hodges, MD
Wynnewood

This is a brief note to second the sentiments in Dr. Victor Greco's article on "Family Unity." Having tragically lost one of our family, our son Noah, we can appreciate the value of a strong and close family even more. My wife and I were unfortunately not well-appraised of the most devastating threat to family unity today—the destructive cult. I think that should be on the top of the list of social forces threatening family unity. Overall, I cannot agree more with Dr. Greco's sentiments.

Edward A. Lottick, MD
Kingston

I am writing about the editorial, "Family Unity: A Point of View," by Victor Greco, MD. I believe that its discussion of working women does a disservice to the reasons women have careers. I also believe that "organized medicine" cannot afford to publish this without comment or objection.



Dr. Greco's premise that family unity, strong parenting, and a resetting of priorities will positively affect society is good. However, he degrades women's careers as mere materialism, without asking for responsibility from all family members. He does not, as he says, show "due respect to the women of the country." He does not ask why men are not taking more responsibility for raising or co-parenting children. He asks us to go backwards to our grandparents' time, not forward to a better future. Strong principles of the next generation will be found looking forward, not back.

My deeper concern about this "Discharge Summary" is not Dr. Greco's opinion, but why the managing editor allowed this to be published. Articles which are slanted against women working have *no* place in our journals. If they are printed, it becomes the responsibility of the editor to find a balancing piece or to distance our medical society from this opinion. If another minority group was substituted into the paragraph about women, would PENNSYLVANIA MEDICINE have published the article?

Catherine Clarke, MD
Wynnewood

Response: Dr. Greco's "opinion piece" was published at my request, and placed on a page reserved strictly for opinions, however controversial. It is not necessary to always publish an opposing view, although we welcome such at any time. Dr. Clarke's equation of women to a minority group is surprising to me. Obviously, "Family Unity: A Point of View" was not a racial or ethnic slur; it transcends such and speaks of the loss of morality and discipline and good parenting role models. There has been a breakdown of morality in this country, and I do believe that it can be traced to the loss of the family unit. PENNSYLVANIA MEDICINE does appreciate Dr. Clarke's comments.

John W. Mills, MD

Why buy an office automation system that doesn't offer a long-term solution?

ACCLAIM™ from Sentient is the total system solution.

A lot of medical practices are planning to invest in an office automation system. But a lot of the systems out there just don't offer the comprehensive functions and long-term expandability that your practice may need.

IBM® and compatible hardware.

The ACCLAIM system operates on IBM and compatible hardware, so you know you're getting the quality standard of the industry. And it's completely expandable, so it can grow as your practice grows.

Long-term support.

ACCLAIM is the system solution that fits your needs today. And Sentient's software engineers, customer trainers, and telephone support people are always there to make sure your system fits your needs over the years to come.

Easy to operate.

Even if your staff has no previous computer experience, ACCLAIM is simple to operate effectively and efficiently. Complete training is included in the purchase.

When you're thinking about office automation, call Sentient first, and find out what ACCLAIM can do for you.

1-800-247-9419
(In the D.C. Metro area call 1-301-929-7600.)

We set the standard in medical computing.

First Public Report for Physicians Due This Summer

John A. Malcolm Jr., MD

Public reporting of physician-specific information by the Pennsylvania Health Care Cost Containment Council begins this summer with the release of a report of physician-specific surgical data. Physicians should be aware that the release of such information may have a significant impact on decisions made by patients or potential patients.

"The impact of the report on health care decisions made by patients or potential patients is likely to be significant . . ."

Dr. Malcolm, a pathologist from Sunbury, is chairman of the Society's Task Force on Health Care Cost Containment and a member of the Joint Committee on Health Care Data of the State Society, the Pennsylvania Osteopathic Medical Association, and the Hospital Association of Pennsylvania.

Culminating a decision announced in December 1991, the Pennsylvania Health Care Cost Containment Council (PHC4) will publish data on coronary artery bypass graft (CABG) surgery performed at hospitals and by physicians in Pennsylvania for the calendar year 1990. The report is expected early this summer, having been slightly delayed in part for modifications sought by the Joint Committee on Health Care Data of the State Society, the Pennsylvania Osteopathic Medical Association (POMA), and the Hospital Association of Pennsylvania (HAP), as well as the State Society's Task Force on Health Care Cost Containment.

The impact of the report on health care decisions made by patients or potential patients is likely to be significant if the experiences following similar releases in New York and New Jersey are repeated. In New York, the public misconstrued the meaning of the data when it was published by newspapers without adequate explanatory text.

In an effort to avert or diminish such deleterious consequences, PHC4 is trying to make the technical aspects of predictive outcome statistics (especially mortality) follow accepted practices in current medical literature. To do this, PHC4 statisticians reviewed the predictive factors utilized in the studies reported from New York, New Jersey, and the American Society of Thoracic Surgeons (ASTS).

Eight of the top-ten recognized major predictive factors of patient outcome (mortality) were selected—using multivariate analysis (chi square methodology)—and applied to develop statistical ranges of predicted mortality to be matched against each hospital's and physician group's actual mortality figures. Predicted rates of mortality will also be matched against those developed by the ASTS for several of the same hospitals and physician groups for the same year, 1990 (identical patient base). The two methodologies and their results will be compared by a third party, the Keystone Peer Review Organization (KePRO), who will publish the results of this limited comparison.

Largely because of the problems associated with statistics derived from or applied to small numbers, the PHC4 report will not include the predicted or actual mortality and morbidity figures for individual physicians performing CABG surgery, but will include them for each hospital and physician group. PHC4 stresses that, though this first-time report is far from perfect, they feel it represents 1) an advance over reports previously released by New York and New Jersey, and 2) a significant improvement over the initial December 1991 proposal.

In the interim, since December 1991, the physician community raised a number of serious concerns. Of major concern is the use of MedisGroups™ as the major determinant methodology to predict treatment risk (mortality and morbidity) for CABG surgery patients, especially since other methodologies, designed specifically to risk-stratify patients undergoing cardiac surgery, do exist.

PHC4 developed another methodology for mortality prediction to avoid this valid criticism previously noted. However, validation of the new PHC4 methodology against other validated methodologies

Most outpatient rehab facilities.

Bryn Mawr Rehab Outpatient Services.

Most outpatient rehabilitation facilities are single service providers, offering physical therapy to treat conditions such as sports injuries and back pain. At Bryn Mawr Rehab, we do this — and offer an array of individualized programs and specialized services.

A coordinated multi-service approach
Treatment might include a coordinated program of physical, occupational and aquatic therapies for a person with arthritis. Driver's evaluation and speech therapy for an individual who has sustained a stroke. A work hardening program to help someone get back on the job.

A collaborative process is the best process
Our focus is on maximizing outcome. Collaborating with you, your patient and, as needed, your patient's family, we are able to tailor a program to best suit the patient's individual needs.

Specialized services are a big part of our multifaceted approach
Unique, specialized services such as adapted driver education, aquatic therapy, equestrian therapy and rehab engineering assist patients in achieving the best possible outcome for their lifestyle.

- Call our Outpatient Services Department at **(215) 251-5503** to learn more about our multifaceted outpatient programs.

BRYN MAWR REHAB
OUTPATIENT SERVICES

414 Paoli Pike, Malvern, PA 19355
A Member of Main Line Health, Inc.

Besides our primary facility in Malvern, additional outpatient clinics are available in Devon and Lionville.
Our Outpatient Services Representative can assist you in selecting the location that is most appropriate for your patient.

must still be done. The morbidity criticism remains, and PHC4 is currently not planning to include predicted morbidity in reports for patients operated on after the third day of hospital admission. Further resolution of the problem is being sought.

CABG surgery involves a complex array and interplay of physicians, hospital services, and personnel such as anesthesia, operating room, cardiopulmonary bypass, recovery room, intensive/critical care, cardiology, pulmonary medicine, and cardiovascular surgery. Assigning patient outcomes solely to the operating surgeon, without review and assessment of the patient's hospitalization through the medical record, appears inappropriate. The operating surgeon does not control the direct performance of all interfacing personnel and services, and infrequently controls the critical post-operative care in the recovery room, intensive/critical care units, etc.

"We must express extreme caution to the public not to inappropriately attempt to extrapolate this first and single year's data."

Significant differences noted in previous PHC4 data, between outcomes of patients undergoing CABG surgery in different hospitals utilizing the same operating physicians, also support the contention that other significant factors beyond the skill of the surgeon affect patient outcomes. PHC4 still assigns patient outcomes to the "Captain of the Ship" physician whom it recognizes as the operating surgeon—the same as is done in New York and New Jersey in their public reports on CABG surgery.

Because of the MedisGroups™ weakness of inaccurately classifying CABG surgery patients' medical status on admission (severity scores) combined with lost specificity caused by averaging of admission severity scores, accurate correlation of hospital physician groups' and physicians' results with high/low risk patients is not achievable. Severity scores will not be published in the CABG surgery reports. Only outcome data (mortality and morbidity) will be published. Despite this change, the public still will not be able to accurately ascertain which hospitals, physician groups, and physicians treat preferentially referred higher-risk patients and handle them with superior results.

We must express extreme caution to the public not to inappropriately attempt to extrapolate this first and single year's data. Comparison with subsequent years' data will help clarify patient outcome patterns with hospitals and operating physicians. The data should primarily be used by patients in talking with their physicians about CABG surgery. The consumers' guide accompanying the published data is expected to include these viewpoints.

Operative technology is steadily evolving with greater use of balloon angioplasty, laser angioplasty, and other less-invasive interventional cardiovascular and radiological procedures. As such procedures cut into the database, the year-to-year comparability of the database is diminished unless corrective measures are applied to and reported for previous years.

PHC4 is fully aware of the concerns brought by the joint committee, the task force, and others, and has modified the report to meet some of the concerns where it could, without substantially delaying its publication schedule. Council members readily acknowledge that the report is far from perfect, but stress that they feel it will be the next logical evolutionary statewide report built upon previous experiences of other states' reports on CABG surgery.

PENNSYLVANIA MEDICINE will publish a follow-up article within the next few months to give physicians a glimpse of what the finalized report of PHC4 physician-specific data will look like. The article will also include suggestions to help physicians answer questions about the data.

SENATE PANEL AMENDS WORKERS' COMP BILL

On April 6, the state Senate Labor and Industry Committee by a 9-2 vote amended House Bill 2140 to remove the proposed link of workers' compensation fees to the Medicare system. Contained in the amended bill are many provisions initiated by the State Society, including use of the federal workers' compensation fee schedule, establishment of an annual inflation adjustment, and provision of procedural safeguards.

Introduced by Senators Robert D. Robbins (R-Mercer), James C. Greenwood (R-Bucks), and Noah W. Wenger (R-Chester/Lancaster), the amendment more specifically:

- limits reimbursement of non-hospital providers to the lesser of the provider's actual charge or 80 percent of the federal Office of Workers' Compensation Programs (OWCP) maximum allowance for 1992 when multiplied by the established geographic index value;
- establishes a floor for the geographic index values of 1.70 to aid areas adversely affected by the OWCP schedule;
- provides for an adjustment on January 1, 1993, and annually thereafter, equal to the percentage change in the annual statewide average weekly wage (the average increase in the past five years equals 4.7 percent);
- creates a cost-to-charge reimbursement formula for hospital inpatient/outpatient services with an annual increase;
- reimburses comprehensive rehabilitation service providers from a modified OWCP schedule;
- requires the Secretary of Labor and Industry to periodically verify the reasonableness of fees to assure adequate numbers of qualified health care providers;
- exempts care provided in trauma facilities and burn centers from the OWCP schedule;
- excludes services—such as peer review, expert testimony, depositions, and extra reports—not required by law from fee limitations;
- sets criteria for formation and operation of coordinated care (managed care) organizations to deliver care, and excludes employers and workers' compensation insurers from owning such care organizations;
- requires use of uniform claim forms and coding, and streamlines claims submission and adjudication processes; and
- establishes standards for peer review organizations and their review of the cost and medical necessity of medical services.

Prior to passing the amended bill, the committee discussed its implications in great detail, including potential for savings, estimated at 20-25 percent. Since the legislature recessed until early May, no floor action was taken.

Though pleased with the amendment overall, the State Society still has a few concerns, especially since the federal fee schedule was discounted more deeply than anticipated. The Society's Workers' Compensation Quick Response Committee is evaluating the impact of the changes in more detail. The committee will then determine a strategy for further Society action, which is needed to achieve fair workers' compensation reform.

GOVERNOR SIGNS LIVING WILL LAW

A living will bill, which would allow most Pennsylvanians to refuse life-sustaining treatments in advance, was amended and passed by the state House of Representatives on April 7 by a vote of 188-5. The Senate then passed the bill 47-1; and Governor Robert P. Casey signed the bill into law April 17.

The passage ends at least a decade of legislative debate on the issue. The legislative chambers drew praise for their decisions from various sources, including the state's secretary of aging, Linda Rhodes. The Society, also pleased with passage, will continue its efforts to help physicians and patients with the advanced directive process.

Before passage last month, Pennsylvania was only one of two states in the nation without living will legislation. The measure was originally passed by the Senate last year, but controversies over how to handle exclusions for pregnant women and several other issues stalled the bill in the House. Little debate occurred on the amended language, which significantly revises Pennsylvania's guardianship laws.

SOCIETY SEEKS HELP IN SECURING CO-SPONSORS

In late March, the State Society asked physicians serving as "federal key contacts" to request assistance in securing co-sponsors for two new bills, House Bill 4507 and Senate Bill 2362. These bills:

- act to repeal the Medicare payment differentials which currently exist for new physicians during their first four years of involvement in the Medicare program;
- contain budget neutrality language which conforms to the "pay-as-you-go" provisions in the 1990 budget agreement; and
- direct the Secretary of Health and Human Services to make reductions in the aggregate Medicare payments, pursuant to physicians' payment schedules, to offset increased spending.

The present law discriminates against young physicians and those new to the Medicare program by forcing them to be paid 5-20 percent less during their first four years of practice than established Medicare service-providing physicians, and violates the concept adopted by Congress against delivery of Medicare payment differentials on the basis of resource costs.

No data indicate that physicians new to the Medicare system experience lower resource costs than those in established practices. In fact, due to educational loans and start-up costs, the opposite may be true. In addition, the law may discourage new physicians from seeking training in lower-paying specialties with high Medicare patient populations. Both the AMA and the State Society strongly oppose discrimination in reimbursement practices based on age or years in practice.

CASEY OFFERS HEALTH CARE BILL OF RIGHTS

Governor Robert P. Casey has outlined legislation that would protect health insurance policyholders from unfair practices by insurance companies.

The proposed Health Care Consumer Bill of Rights, revealed March 30, would prohibit insurance companies from cancelling group or individual health policies unless the premium was not paid or if fraudulent information was given on the application. The bill also proposes several other provisions, including providing health insurance protection for employers who change group insurance policies and for individuals who change jobs.

NEW HCFA 1500 FORM IN USE

Physicians must now use the new 1500 (12-90) claim form of the Health Care Financing Administration (HCFA). The new form, effective for claims *received* by Medicare on or after May 1, 1992, replaces the HCFA 1500 (1-84) claim form and must be used for both assigned and non-assigned claims.

The new form is printed in red ink to accomodate optical character recognition. It is available in various forms (e.g., single copy, duplicate) and can be obtained from the U.S. Government Printing Office (202-783-3238) and the AMA (800-621-8335).

In the past few weeks, Medicare has held a number of "how-to" training seminars for office assistants throughout Pennsylvania on completing the form. The *Medicare Special Bulletin* mailed on March 6, 1992, also decribes in some detail how to complete the new HCFA 1500 form.

Blue Shield private business will accept the new form but will continue to accept the HCFA 1500 (1-84) edition as well as their own HCFA 1500A and HCFA 1500AC editions. However, since all Medicare changes—such as place of service codes—do *not* correspond to private business reporting requirements, physicians must use a special instruction sheet to correctly complete the form for Blue Shield. Note also that while Blue Shield will *not* provide either the new form or the 1500 (1-84) edition free-of-charge, the carrier will continue to provide the HCFA 1500A and 1500 AC forms free-of-charge.

In addition to requiring use of the new claim form, Medicare is prohibiting the use of "superbills," effective for claims *received* on or after May 1, 1992. Superbills have been defined as attachments which are used by physicians in lieu of entering required information in the appropriate areas of the HCFA 1500 (12-90) claim form. Non-standard claims received after April 30, 1992, will be returned for proper completion. Other attachments (i.e., certificates of medical neccessity) and medical records are not affected by this new policy, and Blue Shield will continue to accept superbills for private business.

HCFA CORRECTING PAYMENTS ON 40 CPT CODES

The Health Care Financing Administration (HCFA) has instructed its carriers to establish adjusted historical payment bases (AHPBs) for approximately 40 Current Procedural Technology (CPT) codes new in 1991 or 1992. They discovered the transition rules were incorrrectly applied when the 1992 payment amounts were calculated.

In general, because their AHPBs were set at zero, these codes went immediately to the full resource based relative value scale (RBRVS) payment schedule with no transition. HCFA is now providing "crosswalks" to old codes to be used by carriers in establishing AHPBs. This will often result in new 1992 payment amounts for these procedures.

In addition, relative value units for approximately 150 technical component codes and the related global codes will be changed as a result of a new methodology to calculate technical components. Carriers were expected to issue a bulletin notifying providers of the new payment amounts and charge limits by April 30, 1992.

Please note: Carriers have been instructed to *re-open* any claims for services submitted after December 31, 1991, *which are brought to their attention for correction*. This means carriers must not automatically make up for underpayments to physicians. Therefore, physicians should carefully review new payment amounts to see if any additional payments are due.

SELECT E/M CODES REVISED SIGNIFICANTLY

After release of resource based relative value scale (RBRVS) fee schedule amounts in early December 1991, the State Society received a number of calls from physicians questioning why their fee schedule amounts for evaluation and management (E/M) services were lower than anticipated. As a result of these inquiries, the Society obtained E/M code adjusted historial payment base (AHPB) data for all four localities of the state, as well as 1991 prevailing charge data for the five specialities which have the highest frequency billing of E/M codes.

Based upon a Society analysis of the compiled data, Pennsylvania Blue Shield, the state's Medicare carrier, advised the Society that a mistake had been made in the calculation of the confirmatory consultation code 99274. Payment increases resulting from the correction are significant and include:

Locality	Old Payment	New Payment
Area 1	$52.81	$100.39
Area 2	55.73	99.16
Area 3	62.53	94.07
Area 4	52.47	92.98

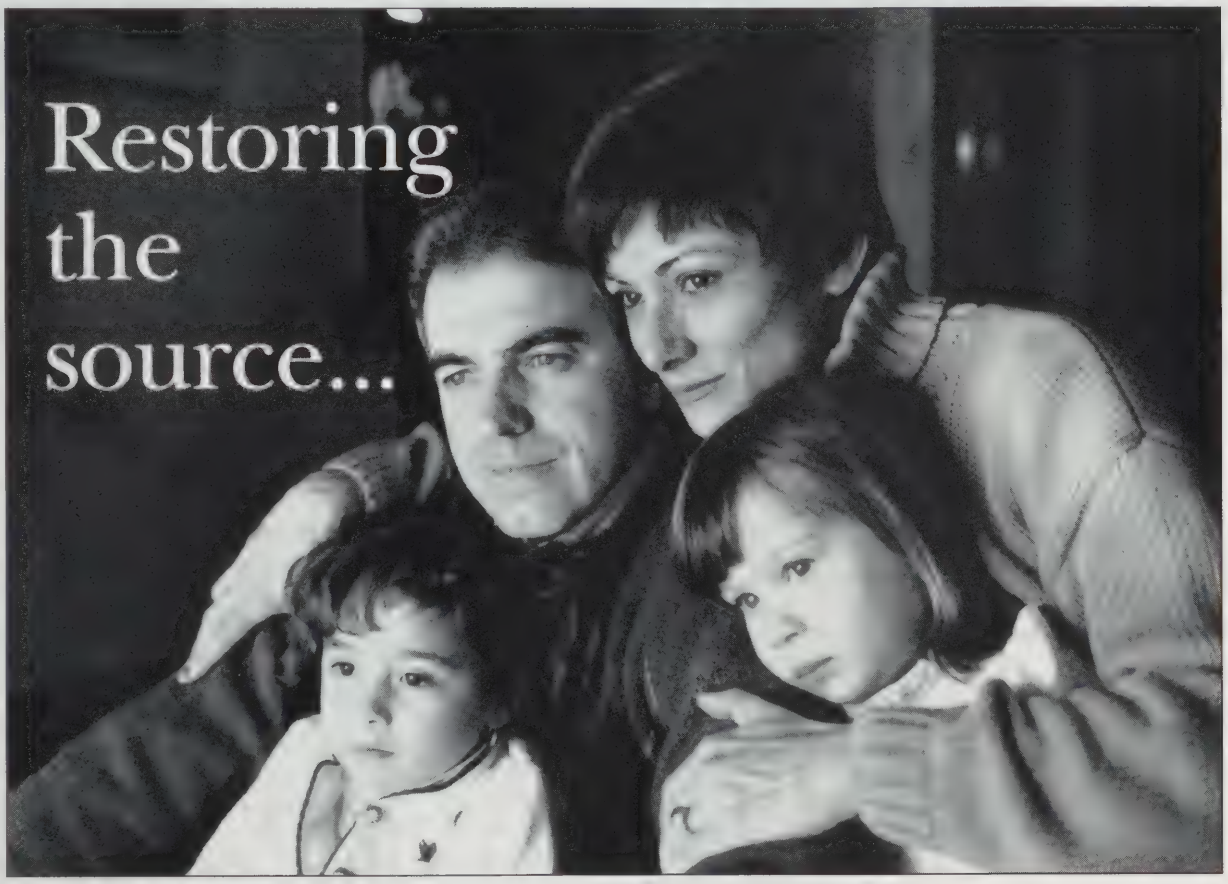
Pennsylvania Blue Shield will automatically reprocess all claims previously processed incorrectly and pay the difference between the old and new rates. The State Society will continue to review AHPB calculations to determine if other mistakes have been made.

PAYMENT ERROR FOUND TO NEW PHYSICIANS

Medicare has incorrectly paid, in some instances, physicians subject to new physician reductions. The payment problem was a result of a rounding error.

The fee schedule amounts for new physicians are calculated to the third decimal point. In those cases where the third decimal point is five or higher, Blue Shield is required to round up when calculating the payment due. However, Blue Shield initially failed to do so as required, resulting in underpayments of one cent.

The incorrect payments only occurred when a new physician was involved, the third digit past the decimal point was above five, and the service was reduced under the new physician rules. For example, a primary care service would not have been affected since such services are not reduced under the new physician rules.



After the Society brought the

problem to Blue Shield's attention in early March, the carrier immediately took steps to correct the problem for future payments. Since it is unlikely that any physician was affected by more than $1 in total underpayments, Blue Shield does *not* intend to automatically make retroactive payments for previous underpayments. However, it will do so upon the request of an individual physician.

Dennis L. Olmstead, the State Society's director of medical economics, contributed to this page.

Health Views from the Senate

Maria T. Montesano
Assistant Managing Editor

The state legislature is comprised of a mixture of personalities and viewpoints. In this first of a series of three interviews with members of the general assembly, Senators John Peterson and J. Doyle Corman talk about life in rural Pennsylvania, what physicians can do to be more involved in the political process, and a number of other issues.

Question: *Senator Peterson, as chairman of the Senate Public Health and Welfare Committee you have been interested in legislation to enhance rural health care. What are your views on that?*

Senator Peterson: While a national health care debate is going on about access and affordability, a serious access crisis is developing in rural Pennsylvania and in rural America...Medicaid was not a big factor in rural Pennsylvania 20 years ago, but today there are rural counties with large numbers of Medicaid patients, and most of rural America is aging...So, you have a population heavily loaded with Medicare, and with the growing Medicaid population, it's certainly not attractive to new, young doctors...Most of my rural hospitals are struggling to recruit primary care physicians, and certainly the areas that are thin on physicians overall will have a hard time attracting the family physician, the internist, the pediatrician, the OB/GYN...There are serious problems already out there and unless we change federal and state reimbursement policies, unless we go back to primary care as the major initiative, rural Pennsylvania will have serious access problems.

Question: *Senator Corman, you have an interesting situation in that you are from a generally rural area, but one that includes the populated main campus of The Pennsylvania State University. The Milton S. Hershey Medical Center is part of Penn State. Is there anything that a facility like the Medical Center can do, because of its tie, to help the rural areas?*

Senator Corman: They could help train physician assistants and nurse practitioners that might augment what doctors are doing. Geisinger Medical Center uses [physician assistants] in their facility. Unless you specifically ask for the doctor, many times you get a doctor's assistant. We are probably going to need—particularly in the more peripheral part of my district—more of those kinds of people, and Hershey could help train them.

Senator Peterson: Also, Hershey has a primary care initiative which should be duplicated at both Pitt and Temple...[All three] are state related and receive large amounts of state funding...There ought to be some strings attached [one of which would be] producing more primary care physicians.

Question: *To shift gears a little bit, two of the six Senate votes against the "MOM" bill [which prohibits physicians from charging a Medicare patient more than the Medicare reasonable charge] are sitting here. It must have been a difficult vote for both of you. What was the rationale behind your votes?*

Senator Corman: Mine was an angry vote...I had to leave the floor for something, came back after I knew the decision, and still voted no...I agree very much with John in our discussion of it...I felt it might *cost* rural people accessibility to the doctor's office if the doctors' fees were in fact going to be cut so harshly...maybe the availability of the doctors wouldn't be there. Also, I just didn't think it was fair...it seems to me that part of what makes America great is that we all pitch in, and those who could afford to pay the full fees certainly should have to, in my judgment.

Senator Peterson: I think the whole bill is predicated on a false assumption

This interview was conducted by Miss Montesano, in cooperation with the State Society's Department of Governmental Affairs Division of Legislative Affairs, Larry L. Light, director.

This advertisement is intended for Pennsylvania Medical Society members and auxiliary. PAMPAC is a separate segregated fund established by the Pennsylvania Medical Society. Voluntary political contributions by individuals to PAMPAC should be written on personal checks; corporate contributions can be used only for administrative purposes. Contributions are not limited to the suggested amount. Neither PAMPAC nor its AMA affiliate, AMPAC, will favor or disadvantage anyone based upon the amounts of, or the failure to make, PAC contributions. Voluntary political contributions are subject to the limitations of FEC Regulations, Section 110.1, 110.2 and 110.5 (Federal regulations require this notice). A portion of your contribution will be forwarded to AMPAC to support candidates in Federal elections. Contributions to PAMPAC and AMPAC are not deductible as charitable contributions for Federal income tax purposes.

SENATOR J. DOYLE CORMAN

Senator Corman is a Republican representing Pennsylvania's 34th District, including: Cameron, Center, Clinton, and Mifflin counties, as well as parts of Clearfield and Juniata counties. He is currently serving his fifth term in the Senate and is chairman of the Transportation Committee, vice chairman of the Banking and Insurance Committee, and a member of several other committees, including Public Health and Welfare, and Approriations.

that Medicare rates are fair and that Medicare is evenly distributed around the Commonwealth. [In reality,] from neighborhood to neighborhood, and urban to rural communities, there can be a 50-60 percent differential on what doctors receive under Medicare through the complicated formula that they [the federal Medicare program] use, and I don't know what's fair about that...You're not going to attract doctors to government when 70 or 80 percent of the business is [run by the] government: slow pay, difficult paperwork...It's already driving doctors out of rural areas...I just never felt it was fair that anyone, no matter what their value or worth, could get a Medicare fee that is a fair fee...In my view, the bill was inappropriate.

Question: *Senate Bill 1034, which is currently tabled, removes the requirement that the state secretary of health be a physician. Would you like to comment on the issue?*

Senator Peterson: That bill passed out of this committee [Public Health and Welfare] with my support last session and again this session. I know that the Medical Society is not excited about it, but it was interesting...The [Society's] one concern that I wasn't aware of at the beginning was that the secretary of health also sits on every medical licensing board at the Department of State. I understand that now. We have a physician general bill that we're going to be putting out very soon. The physician general will be more like the surgeon general, whose role will be to act as a health advocate for the state. We are considering putting an amendment in that bill that if the secretary of health *might not* be a doctor, then the physician general, if the bill became law, would serve on all of the licensing boards in lieu of the secretary of health...Also, it seems the problem is the [state's] inability to hire a highly qualified physician who has the administrative skills collectively and *wants* to be the secretary of health.

Senator Corman: In the past I pretty much felt the same way as John: though we've had some good ones, most of the secretaries of health have been pretty weak, and the idea of expecting a doctor to give up a good practice to come here to be secretary of health is something that probably wouldn't happen. That was my position until I have spoke to the Centre County Medical Society. They believe strongly that the secretary ought to be a doctor. They told me the Pennsylvania Medical Society offered their services to the governor to search out a doctor to be the secretary and their offers were not accepted. They said they could supply any number of doctors who may be willing to polish off their career and be the secretary of health, and be a good one. And so, I've somewhat slipped in my strong position that the person need not be a doctor...If there are doctors available who are administrators, I have no problem with that...In all practicality, maybe the law ought to say that the secretary should be a doctor *if possible*.

Question: *What do you think is the most significant medical issue facing Pennsylvania today?*

Senator Corman: It seems to be affordability and availability of medical insurance...[and I mean] affordability and availability so that an individual can afford to use the good practitioners who are out there...Medical insurance is becoming one of the biggest expenses businessmen have—providing group insurance for employees. And if the businessman decides insurance is not affordable, how do these people get insurance? I think there's a vast number of people that don't have it and maybe, even more than that, won't have it as it becomes more expensive... Many things have to happen, and medical liability reform is a part of that.

Senator Peterson: I think the greatest threat facing the medical community in this country and in Pennsylvania is that the media and a chorus of others are tearing down our system. Health care is on almost every news program, and I think journalists are, maybe successfully, convincing the public that we have an awful system. I'm here to tell the world, "We have the best health care system in the world." I'm not saying we don't have some real cost problems which need to be dealt with, but I don't think there's any place anybody would rather be if they're ill than in the United States.

Question: *What is your view on how physicians can best be involved in the political process?*

Senator Peterson: I represent a large, ten-county district, and I probably can count on one hand the doctors that play a real role in the election process...there are

not many. I understand they're practicing in very high-tech, skilled positions, but I tell them all pretty bluntly, "The squeaky wheel gets the grease. Don't expect us to understand all of your problems if you're not communicating them." I'm going to say this, and I say it to every group, "I always check with the folks back home." I don't just take the advice of the state or the national association as gospel, because I find out, no different than the state government, the urban influence on associations is great...[and] the perspective I represent is rural....

[Physicians] need to become a lot more involved in the process, and personally, I get my best advice from folks who are providing a service or running a business back home, who are dealing with the state and federal government and sometimes the monster that it can be. They give me the best evidence of why I should or shouldn't do something. Every county ought to have people who periodically, on an on-going basis, have a cup of coffee with their legislators. Not just when there's a problem, not just when there's a crisis, but on an on-going basis. I think doctors fail the test of being good participants in the electoral process.

Senator Corman: Since we're both from a rural area, our answers are probably going to be very similar...I found what John was just saying to be very true...there is a more urban flavor to most all of our organizations, so I too like to call back home and talk to the farmer, the doctor, the dentist and find out: "Do they agree with what their association is promoting in Harrisburg, and where should I be on this particular issue?" In fact, one of the individuals I speak to frequently is Dr. Larry Denney. He's been actively involved in my political fundraising. Dr. Ed Dench, too. He's someone I talk with about medical issues. But they are the exception, rather than the rule...I find that doctors seem to be very busy, and I understand that. I know when I'm calling my doctor...if she's not available, I get disappointed. So I understand they're busy; but *if* they want to have an impact in politics, they need to find time among them to sit down in a small meeting to discuss the issues... Thinking about all the physicians in my six counties, I have to say that their participation has been very small...Our job is to hear both sides of an issue and try to make a decision that's proper for *all* the people in Pennsylvania; and if your side isn't getting told, then it doesn't even get into the thinking process.

SENATOR JOHN E. PETERSON

Senator Peterson is a Republican representing Pennsylvania's 25th District, including: Elk, Forest, McKean, Potter, and Warren counties, as well as parts of Clarion, Erie, and Venango counties. He served two terms in the state House of Representatives, is currently serving his second term in the Senate, and is up for re-election this year. Senator Peterson is chairman of the Public Health and Welfare Committee, vice chairman of the Community and Economic Development Committee, and a member of several other committees, including Appropriations.

Lobbying: The Best Kind Can Be Self-Taught

Carol E. Rose, MD

The Pennsylvania Medical Society pays professional staff to lobby for its members, as do almost all specialty groups in each state and in Washington, DC. Paid lobbyists have specific legislative responsibilities, but their efforts cannot be the only ones put forth on behalf of physician interests.

For additional information about becoming a member of the Pennsylvania Medical Society's Legislative Action Team, call the Society's Department of Governmental Relations at 1-800-228-7823.

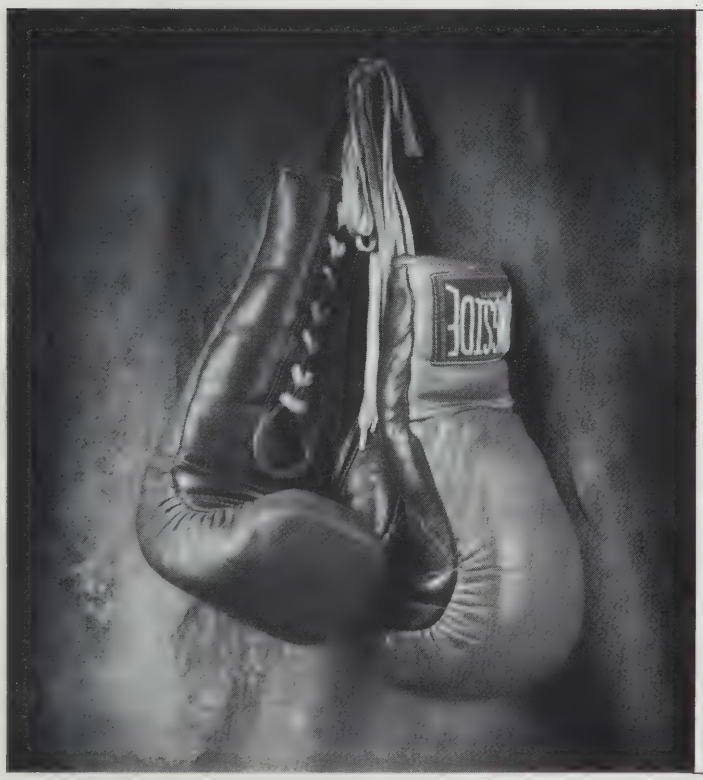
Not many years ago, if you had quoted me as saying, "I'm not a political person," you would have been accurate. So what am I doing now as an active member of governmental relations entities of the State Society? You might say that I'm a "volunteer lobbyist"—something all physicians should consider becoming.

The State Society represents 21,000 physicians of diverse specialties and opinions. I believe the Society's paid lobbyists do a good job, but they need the backup from physicians who live in legislators' districts. Legislators know that lobbyists are paid to express a "corporate" opinion, yet legislators depend upon constituents. They want your vote as well as your personal or political action committee (PAC) contribution to campaign funds. Quite frankly, you have much more "grassroots" political clout than our very knowledgeable lobbyists. In addition, with all the issues concerning medicine today, it is very difficult for a few lobbyists to cover all the issues with 50 state senators and 203 state representatives...and do it well enough to accomplish all our goals.

So now you are probably thinking, "But I don't know how to use my clout," and you may be just as adamant as I was that you are not a political person. Well, you really don't need to be political. Instead, you must admit to yourself that you are not pleased with all the happenings in the political arena, and you must be willing to "learn a few tricks" to become an effective volunteer lobbyist. Here are a few facts to help you:

- Legislators are plain people, like you and me, who want to be liked and admired by their constituents.
- Most legislators are not so overly impressed with themselves that they are aloof and unapproachable. In fact, it is rather easy to get an appointment. When the Pennsylvania legislature is in session, most legislators are in Harrisburg Monday through Wednesday and available in their home offices on Thursday and Friday. To make an appointment, call either the local or Harrisburg office and ask for the appointments secretary. If you wish to visit in Harrisburg, even if the legislature is in session, your senator or representative can frequently leave a meeting, caucus, or hearing to keep an appointment.
- If you have an opinion about an issue but don't know who to contact, call the State Society at 1-800-228-7823. Ask to speak to a Governmental Relations staff member who can tell you which legislator to contact and where. Don't feel uncomfortable if you don't know who your legislator is—it is a very common occurrence.
- Legislators are not experts on every piece of legislation in process. They have staff assistants who do a lot of background research for them, and both the legislators and their assistants are interested and open-minded about being educated on issues. Sometimes talking with the staff assistant is just as valuable as talking with the legislator. If you come across an interesting journal article or newspaper clipping that expresses your opinion on an issue, perhaps better than you could have, send a copy of the piece with a short personal note to the legislator.
- Letters are a genuine tool of volunteer lobbyists. You needn't be formal with your letter writing: a short, legible, handwritten note is perfectly acceptable. Also, remember that no elected official could possibly respond to each individual letter in detail; and though you may receive a form letter response which may not address the exact issues raised in your letter, be assured that your point is being considered.

Dr. Rose, Pittsburgh anesthesiologist, is a member of the State Society's Council on Governmental Relations and chairman of its Subcommittee on Legislative Action Teams.



• Many legislators send out surveys to their constituents. These surveys are read. Don't be afraid to sign your name to the survey and identify yourself as a physician if appropriate.

• When the State Society organizes a "rally" in Harrisburg, try to participate. These events are well-organized and often very interesting. All you have to do is find out the day's schedule from the Society announcement, call your legislators' Harrisburg offices for appointments, and explain that you will be at the Capitol for an organized purpose. Then, show up at the right time and place, and follow directions. Often you will be asked to attend a debriefing by Society staff before you return home, so they can evaluate the effectiveness of the rally. If you cannot attend the rally, consider calling your legislator to relay your opinion. Either in person or by phone, you may be surprised at the pleasant reception.

• Attend town meetings and speak up. These meetings, which are held in your home district, give your legislator the opportunity to field opinions on many issues. They are also frequently held in conjunction with the election cycle. Your legislator wants to make a positive impact on constituents—use that to your advantage. The more your legislator listens, the better he or she will look. Also, approach your legislator before or after the meeting to make sure your identity is perfectly clear.

• Join a Legislative Action Team (LAT) of the Society. As a LAT member, you will receive CALL TO ACTION letters requesting your lobbying efforts. Letters will include information about who to contact and what salient points should be emphasized.

Becoming an effective contact takes time. You won't become fully "certified" on your first attempt, but your comfort level will increase as time passes and as you see the positive results of your activities. Then, before you know it, you'll realize that you have gradually become a *volunteer lobbyist*.

NO QUITTERS.

We fight nonmeritorious claims. It would be easier to settle, and often less expensive for us. But we're not just insuring your financial future. We're guarding your professional reputation, an asset no amount of insurance could replace. So we put it in writing that we'll never settle without your consent. We hire the best lawyers, back them up with the nation's largest malpractice law department, and win. If we didn't, we couldn't call ourselves The Medical Protective Company. Put us in your corner and call our general agent today.

THE MEDICAL PROTECTIVE COMPANY

Understanding CLIA '88

Robert J. Lilley

New regulations under the Clinical Laboratory Improvement Act of 1988 have been finalized, but not without objection from the State Society. This article outlines the regulations, compares them to those originally proposed in May 1990, presents a compliance timeline, and touches upon Society concerns.

Regulations ultimately affecting some 130,000 physicians' office laboratories nationwide became final on February 28 this year when the Health Care Financing Administration (HCFA) published its rule implementing the Clinical Laboratory Improvement Act of 1988 (CLIA '88). HCFA will begin billing for initial registration in May.

While the regulations are improved over those first issued in 1990—in large part due to the avalanche of more than 60,000 comments from physicians and medical organizations—they may initially require Pennsylvania laboratories to operate under a "dual" system. In the Commonwealth, current law regulates all physician laboratories; while the new regulations allow for such state and nonprofit programs to be exempted, an indeterminate delay will occur in publishing procedures to request exemption from CLIA's rules. Pending resolution of this situation, both federal and state regulations may apply.

The Society has voiced its objection in a strongly worded letter to HCFA and requested at least a temporary exemption for Pennsylvania. Other comments from a task force of four Society physicians were also included in the letter.

Categories of laboratories

The new regulations establish three categories or levels of laboratories, generally distinguished by the complexity of the tests they conduct. These include waived tests, tests of moderate complexity, and tests of high complexity. There have been considerable changes *within* each level from the original regulations of May 1990.

Waived tests are simple laboratory examinations and procedures which: 1) are cleared by the Food and Drug Administration for home use, 2) employ methodologies that are so simple and accurate that they render the likelihood of erroneous results negligible, or 3) pose no reasonable risk of harm to the patient if the test is performed incorrectly. Laboratories which conduct waived tests must limit themselves to the following eight tests: dipstick/tablet urinalysis, ovulation tests, urine pregnancy tests, nonautomated erythrocyte sedimentation rates, hemoglobin (copper sulfate), fecal occult blood, spun microhematocrit, and blood glucose monitoring.

Such a limit represents a significant reduction in the number of tests previously proposed, as well as currently included, in the state's lowest category; and it may prompt involuntarily upgrading presently registered but unregulated physician office laboratories to the next level. However, the AMA believes this new approach is far more reasonable and more accurately reflects the reality of medical practice testing patterns in such laboratories.

The biennial fee for waived test labs is $100. The state currently imposes no charge for its lowest level laboratories. Laboratories which conduct only waived tests are essentially exempt from CLIA '88 requirements and need not participate in proficiency testing or meet personnel or quality control standards. They must, however, follow manufacturers' instructions for tests given and will be subject to unannounced inspections. Both the AMA and the State Society have vigorously protested unannounced inspections due to the potentially disruptive effect on the office operation and patient care.

The next level is for laboratories which conduct tests of moderate complexity. Approximately 75 percent of all test procedures will fall in this category, which has been considerably expanded. And the third and highest level is for laboratories which perform tests of high complexity—in other words, all other tests. The biennial registration fee for both moderate and high complexity laboratories depends upon the number of tests performed annually and the scope of tests involved. The fee could range from $100-$600, but the Society believes the vast majority of physician laboratories will be assessed the minimum $100 fee.

Mr. Lilley is the State Society's assistant director of educational and scientific affairs.

Standards

Unlike laboratories conducting waived tests, moderate and high complexity laboratories will be subject to several general standards as described below. In general, they will differ for each level only by degree.

Personnel: Personnel standards have been significantly relaxed from the original version, which almost required a pathologist to serve as a laboratory director. Now, any physician currently operating a laboratory should be able to serve as the laboratory director, technical consultant, and/or clinical consultant. For moderate complexity laboratories, testing personnel need a high school diploma and appropriate training. For high complexity laboratories, testing personnel will need to earn an associate's degree in an appropriate scientific discipline by September 1997.

Proficiency testing: All moderate and high complexity laboratories must participate in an approved proficiency testing program. They will have until January 1, 1994, to enroll in a proficiency testing program, but will not be penalized for unsuccessful participation until 1995. HCFA estimates that the annual cost of proficiency testing for physician office labs will be approximately $900.

Quality control: Each moderate and high complexity laboratory must have written quality control procedures for each analytic testing process. Laboratories must have a procedure manual, perform calibration at least every six months, and perform quality control each day the test system is used.

Patient test management: Each laboratory must employ and maintain a system that provides for proper patient preparation; proper specimen collection, identification, preservation, transportation, and processing; and accurate result reporting. This system must assure optimum patient specimen integrity and positive identification throughout, and records must be maintained for five years.

Quality assurance: Each laboratory must establish and follow written policies and procedures for a comprehensive quality assurance program, which is designed to monitor and evaluate the on-going and overall quality of the total testing process. The program must:

- evaluate the effectiveness of policies and procedures;
- identify and correct problems;
- assure accurate, reliable, and prompt reporting of test results; and
- assure the adequacy and competency of the staff.

As necessary, the laboratory must revise policies and procedures based upon the results of those evaluations. All quality assurance activities must be documented.

Inspections

Inspections of moderate and high complexity laboratories will occur once every two years. Inspection fees will vary with the scope and volume of testing, and range from $300 for laboratories doing fewer than 2,000 tests annually to over $3,000 for laboratories doing more than one million tests annually. Again, the Society expects most physician office laboratories to remain at the lower end of this scale.

Society staff will continue to monitor development of the laboratory regulations, including the status of state or third-party exemption which could modify outlined procedures. Look for updated information in the Society's publications.

"They may initially require Pennsylvania laboratories to operate under a 'dual' system."

Compliance timeline

The following are key dates and actions for compliance with the CLIA '88 regulations:

Date	Event
November 1991 to present	Survey forms returned to HCFA
May 1992	HCFA mails registration bills
July 1992	Initial registration fees due to HCFA
July 1992	Pennsylvania Department of Health mails its registration bills
July-August 1992	HCFA mails inspection bills
September 1992	CLIA standards must be in effect; inspections begin
January 1994	Proficiency testing begins
January 1995	Sanctions for failing proficiency testing implemented
September 1997	Technicians in high complexity laboratories must have completed associate's degree

SEASON FOR SALMONELLA PRECAUTIONS CONTINUES

With the Easter season just passed and summer in the air, Pennsylvania physicians must realize the health risks of Salmonella infections. These may manifest as various clinical entities, including gastroenteritis, enteric fevers, typhoid fever, bacteremia, and localized infections such as abscess and cellulitis. While the nomenclature of Salmonella is unsettled regarding speciation, there are over 2,000 recognizable serological types based on the organism's "O" somatic and "H" capsular antigens. In practice, Salmonella isolates are often serotyped and named based on a modified Kauffman-White scheme of serological identification using the "OH" and flagellar antigens.

While these facts have only tangential relevance for clinical practice, serotyping of Salmonella is important for the epidemiology and control of salmonellosis. In fact, all isolates of Salmonella should be sent to the State Laboratory for typing. Some laboratories, particularly those outside of Pennsylvania, do not forward isolates to the State Laboratory, making epidemiological follow-up of some cases more difficult.

Health departments and the Centers for Disease Control are concerned that most Salmonella gastroenteritis cases are not reported to health agencies. Those that are reported are more likely to be hospitalized or seriously ill cases, or cases sharing a recognized common source of illness (e.g. banquet, party). Adequate control of Salmonella infection is extremely difficult when only those cases representing the tip of the iceberg are recognized and reported. However, some control measures focused on specific modes of transmission can be effective.

Foodborne salmonellosis

Of 2,825 cases of salmonellosis reported in Pennsylvania during 1990, approximately 40 percent (1,184) were *Salmonella enteritidis*. Raw eggs or food products containing undercooked eggs are a common source of the disease and are frequently implicated in common source outbreaks of Salmonella gastroenteritis in a number of settings (e.g. private parties, restaurants, schools, and nursing homes).

Salmonella contamination of eggs was previously limited to cracked eggs. More recently, Salmonella have developed the ability to enter the egg while forming or through the intact shell. Therefore, refrigeration is a current requirement—colder temperatures retard the multiplication of Salmonella within the egg. Recent guidelines strongly recommend the use of pasteurized eggs in some settings. This use is important in nursing homes and hospitals where age or underlying medical conditions may predispose patients to severe outcomes from Salmonella infections. When controls fail and human disease is associated with eggs, a trace-back procedure exists that allows identification of the infected flock and appropriate control measures by the Department of Agriculture.

Not all *Salmonella enteritidis* gastroenteritis is egg associated. Other sources of this organism include raw or undercooked poultry and meat, as well as other food products. Additionally, infected food handlers with diarrhea and poor sanitation practices have been the source of some outbreaks.

Many other types of Salmonella can cause foodborne gastroenteritis. For instance, in 1990 *Salmonella typhimurium* accounted for approximately 20 percent of reported Pennsylvania cases. When foodborne gastroenteritis is caused by a less frequently isolated subtype of Salmonella, the epidemiological investigation is more likely to identify the source of the infection. Perhaps the most publicized example is the recent occurrence of *Salmonella poona* infections associated with contaminated cantaloupes.

Animal-to-human transmission

Salmonella gastroenteritis peaks during June to August. This peak is believed to be partially due to summer picnics and multiplication of Salmonella in unrefrigerated food in warm weather. Also, an unrelated, small, pre-season peak in April and May has recently been noted in Pennsylvania. This peak has been largely attributed to Salmonella infections related to infected Easter pets.

Salmonella-infected ducklings and chicks have the potential to transmit Salmonella to humans, particularly children who often have poor sanitation habits. During April 1-May 15, 1991, 22 cases of *Salmonella hadar* (group C2) infection in Pennsylvania, Maryland, and Connecticut were associated with pet ducklings hatched and sold by a Pennsylvania producer. Ages of cases ranged from three months to 42 years, with approximately 60 percent (13/22) of the cases in children under 10 years of age. The Department of Health discourages the purchase of chicks or ducks as household pets at any time of the year. These animals should never be allowed to be loose inside the home or handled unless the most stringent sanitation precautions are exercised.

However, the problem of salmonellosis associated with animal contact is not limited to Easter pets. Pet lizards, snakes, and turtles infected with Salmonella are potential sources of human infections. Though less-likely, dogs and cats are considered potential sources as well. Therefore, the clinical history of salmonellosis in children should include questions related to recent animal contact, and cases related to animal transmission should be expeditiously reported to the Department of Health.

COMMISSION SEEKING PHYSICIAN INVOLVEMENT

Now that the Commonwealth has increased funds to its Healthy Beginnings Program, the State Society's Commission on Public Health will seek to increase physician involvement in the program. This and other issues were addressed during the commission's recent meeting in Harrisburg.

The Healthy Beginnings Program is run by the state Department of Public Welfare (DPW) and was initiated in 1988. It provides prenatal and preventative health care to low-income pregnant women and their children who otherwise would have no health insurance. Though DPW has proposed $7.2 million in state funds to expand eligibility during the next fiscal year, program success also depends upon volunteerism of practicing and retired physicians from across the state. Commission members agreed that added effort

from the Commonwealth should be met with added effort by Pennsylvania physicians, and the commission will work for increased physician involvement.

In response to two 1991 House of Delegates' resolutions, the commission also investigated the availability of insurance and retraining programs for HIV-infected physicians. Findings indicate that two insurance programs currently exist. The first is through the State Society's member benefit policy, which provides disability payments to HIV-infected physicians when they can no longer practice medicine due to the illness.

The second program, run by the American Medical Association (AMA), is a fixed-amount policy. Benefits range to $500,000, depending on the premium physicians choose to pay, and payment is received in one lump sum after a confirmed positive HIV test. The Pennsylvania Medical Society Liability Insurance Company (PMSLIC) is currently conducting a study to determine if additional programs are needed and marketable.

As for retraining programs, the commission determined, through careful study, that effective programs should be developed on an individual basis for each physician and specialty. Until follow-up is addressed by the 1992 House of Delegates in October, the commission will support the tailored approach used by the Physicians' Health Programs of the Society's Educational and Scientific Trust by referring physicians to that program, already in existence.

At its next meeting, to be held this summer, the Commission on Public Health will address Society actions toward national health promotion and disease prevention goals set forth by President Robert N. Moyers, MD, in his inauguration address.

SOCIETIES CO-SPONSORING ANIMAL RESEARCH WORKSHOP

The AMA, the State Society, and the Pennsylvania Society for Biomedical Research (PSBR) will co-sponsor a one-day workshop addressing the importance of animals to medical research. Set for May 18 at the Hershey Lodge and Convention Center, the workshop's overall goal is to encourage practicing physicians to speak out on the issue, and to build grassroots support for the use of animals in research. For further information about registration and credits, or to pre-register, call the AMA at 1-800-AMA-3211. Proof of identification and affiliation will be required for all participants.

CDC REPORTS RISE IN TB MORBIDITY

The number of tuberculosis (TB) cases reported to the Centers for Disease Control (CDC) has been increasing since 1988, after a long historic decline. In 1990, 25,701 cases were reported, an increase of 9.4 percent over the 1989 figure and the largest annual increase since 1953.

From 1985 to 1990, reported cases increased by 15.8 percent. Disproportionately greater increases in reported cases occurred among Hispanics, non-Hispanic blacks, and Asians/Pacific Islanders. In contrast, decreases were observed among non-Hispanic whites and American Indians/Alaskan natives.

By age, the largest increase in reported cases occurred in the 25- to 44-year age group; this increase may be largely attributable to rising numbers of TB cases among persons with HIV infection or AIDS. Notable increases also occurred among children.

Computer Technology, Patients, and Modern Medicine

Leo Uzych, JD, MPH

The development of computer-based information systems may prove advantageous to physicians for a number of reasons, but monitoring its evolution is essential to continued quality of care.

At a time when computer technology is progressing rapidly, health care costs are rising, and public education about health-related matters is needed, it would be unwise to simply ignore the vast possibilities of computerized services. People need information to learn about self-care and prevention, to stay healthy, and to visit their physician promptly when a problem arises. The on-line access to medical information provided by computerized services may help meet this need.

Even after a health problem develops, self-care instructions may enable a patient to manage the problem at home, while under the supervision of a physician. When sensitive topics are involved, such as reporting sexual histories, patients may feel more comfortable reporting this information by computer rather than in face-to-face interviews. A computerized communication system may also function as a major cost containment force if it provides educational information which, in fact, helps patients recognize health problems before they become serious and costly.

For physicians, the availability of medical records "on line" may have widespread, beneficial applications to clinical care and practice management:

- Prescriptions and laboratory results might be transmitted.
- Patient records could be available immediately to all physicians in a group practice setting.
- The use of automated processes in place of manual processes could increase practice efficiency.
- Knowledge guides and decision support tools built into the system might be valuable to physicians for diagnostic and treatment purposes.
- Group practices and participating physicians might find added opportunities for cost containment.

Mr. Uzych is an attorney specializing in health law based in Wallingford.

Evolution of computerized systems

In November 1988 the Harvard Community Health Plan, a major New England health maintenance organization (HMO), together with Electronic Data Systems Corporation, a Dallas-based unit of General Motors, combined in a joint venture to form InterPractice Systems (IPS). The purpose of the venture is to develop computer-based information systems. In substance, IPS provides systems and consulting services pertinent to the clinical and business aspects of managed health care. Physicians and patients are connected electronically to one another, and to needed administrative and technical support.

The use of computer-based information systems, in general, may achieve readily available, quality clinical care for patients while containing costs, and may also provide access to desired information for physicians. The IPS communication system, in particular, encompasses various areas of practice, including an electronic medical record, practice administrative support, appointment scheduling, results management, and clinical decision-support guidelines, thus potentially resulting in a more efficient practice environment.

Furthermore, the IPS system is designed to increase appropriate access to health services while at the same time reducing unnecessary appointments. The system may be accessed using a computer terminal, which might be located either at home or at a worksite. The necessary computer hardware includes a monitor, a keyboard, and a built-in modem to facilitate electronic transmission.

Health-related questions may be answered and advice given to users in accordance with on-line and written instructions designed to help users make appropriate selections. HMOs and other managed care entities might use the IPS system to communicate effectively with

With Princeton, you're in good company.

More than 19,000 medical and health care professionals have chosen Princeton Insurance Company for their professional liability insurance coverage. Here are some reasons why:

- **A solid track record.** Princeton has a decade of experience providing professional liability insurance coverage to physicians, and A.M. Best has ranked us (with our parent company) among the 20 largest medical malpractice insurers nationwide since 1983.

- **Financial strength.** Our loss reserves are carried at full value, not discounted in the hope of earning sufficient interest income to pay claims. We maintain a high quality/low risk investment portfolio, with no junk bonds, no common stock and no real estate speculation. And we've earned a claims-paying ability rating of "A" from Standard & Poor's.

- **Coverage options.** Tail coverage is included in the purchase price of Princeton's innovative *Occurrence Plus* policy. A standard claims-made policy is also available, and we offer excess liability coverage (limits up to $5 million) to Pennsylvania physicians regardless of which company writes their primary coverage.

- **Strong defense against claims.** In a typical year, more than 90 percent of the Princeton-managed cases disposed of by the courts are resolved in the policyholder's favor.

It may be easier than you think to change insurance companies. Call today to find out more or return the coupon to receive a copy of our brochure, "It's Princeton's Specialty."

members. Several HMOs have already reportedly indicated an interest in the computerized service.

The need for monitoring

Computerized services may offer potential advantages, yet important issues remain open. The possible reduction in patient visits may, in some respects, be cost beneficial, but what if patients delay acquiring needed medical care? It would be helpful if more data were collected germane to potential effects of a computerized system on patterns of utilization of medical services and the effects on overall levels of patient satisfaction. Some patients may feel more comfortable working with an electronic information system, especially if the subject involved is perceived to be embarrassing. Other patients may dislike the lack of personal or face-to-face contact with providers, and yet others may generally dislike, fear, or feel uncomfortable working with a computer system.

Introducing to patients a new system, perceived to be cost efficient yet disadvantageous to clinical care, may be unwise. The physician community needs to monitor carefully the evolution of computerized communications systems, particularly for effects on quality of care, access, and cost ramifications.

GRATEFUL MED® & LOANSOME DOC®

Helping physicians meet their information needs

Access to timely information is critical for physicians because of rapid changes and developments taking place in medicine. Optimal patient care requires that physicians be able to quickly and easily find the most current medical literature. The overwhelming amount of information being published is often an obstacle to the efficient identification and retrieval of needed information.

Recognizing both the need for information and practitioners' time pressures, the National Library of Medicine (NLM), a division of the National Institutes of Health, developed two products for personal computers which allow practitioners to search for information more easily and more productively: GRATEFUL MED® and LOANSOME DOC®.

GRATEFUL MED® is a communications software package which permits anyone with access to a personal computer and a modem to search NLM's databases of article citations indexed from more than 3,500 medical and scientific journals. LOANSOME DOC® is a companion software package which sends an electronic request for an article to a library designated by the user.

Before using the request service, the user must sign an agreement with a LOANSOME DOC® provider library. Libraries may charge for this service to cover processing costs.

In Pennsylvania, Falk Library of the Health Sciences at the University of Pittsburgh has been awarded an Outreach Services Program contract from the New York Academy of Medicine, a regional medical library in NLM's National Network of Medical Libraries. The program will provide GRATEFUL MED® and LOANSOME DOC® training to practitioners in 30 counties in Western Pennsylvania.

The targeted counties are: Armstrong, Beaver, Bedford, Blair, Butler, Cambria, Cameron, Centre, Clarion, Clearfield, Clinton, Crawford, Elk, Fayette, Forest, Franklin, Fulton, Greene, Huntingdon, Indiana, Jefferson, Lawrence, McKean, Mercer, Mifflin, Potter, Somerset, Venango, Warren, and Washington. For more information, call Outreach Services at (412) 648-3573.

Medical Practice Consult: Coding

This continuing column is designed to answer physicians' questions about specific third-party reimbursement and other timely practice management issues they face daily in medical practice. State Society members are encouraged to submit questions, typed on letterhead, to: Medical Practice Consult, Department of Physician Services, Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820. Answers will be solicited from the Society's Practice Management Consulting Network, a group of eight consulting firms in various areas of health care expertise. Answers to the following questions were submitted by The Thayer Group, Inc., Upland, (215) 499-7417.

Explain the use of the modifier "22" for unusual services.

The resource based relative value scale (RBRVS) has maintained the use of the modifier "22" with a descriptor of "unusual procedural services." This modifier carries with it financial impact for reimbursement. The law provides for carriers to increase payment where medical care has been provided above and beyond the highest level of service provided in each category of care. When reporting modifier "22," always include required supporting documentation. Claims cannot be submitted electronically using supporting documentation; all claims with the use of modifier "22" require manual review by the carrier.

When resubmitting a claim due to an error, is there a modifier that can be used to alert third-party payors that it is not a duplicate billing?

No. Most third-party payors will respond in payment or rejection within 45 days. If payment has not been received within 45 days, the protocol for handling is as follows:

For Medicare: Submit a review for non-payment, and attach a copy of the original claim form. This is applicable to hard-copy claims only; the protocol for electronic claims is supplied by your software vendor.

For commercial carriers: Submit a copy of the original invoice with a cover letter explaining it is a resubmission of a claim. Optimal results can be achieved by placing a call to the commercial carrier requesting a status report of the claim. Most commercial carriers offer an 800-number.

For Pennsylvania Medical Assistance: Simply resubmit the claim if no response of payment or denial is received within 45 days.

When are HCPCS codes used in lieu of CPT codes?

HCPCS (Health Care Financing Administration Common Procedure Coding System) codes have historically been used for medical services provided to Medicare patients. With implementation of evaluation and management (E/M) services, CPT (Common Procedure Terminology) codes were designed to be universally accepted by all third-party carriers. Effective January 1, 1992, Medicare is the leading third-party carrier to adopt CPT E/M codes to be synonymous with HCPCS codes. Physicians should be cautious of the following:

- While the AMA has designed E/M codes to be both CPT and HCPCS, it is not assured that all or any commercial carriers will quickly adopt the new E/M codes. It is recommended that a trial claim be submitted from the medical practice to test the waters of commercial carriers. Commercial insurance carriers historically pay promptly; and when there is a conflicting concern, they frequently will place a telephone call to the medical practice for confirmation.
- National and local carrier codes will continue to exist for services rendered to patients. Use of the local codes as they are unveiled will require careful review of interpretation.

How do you code for concurrent care by two physicians so both are paid?

Concurrent care has been—and remains—a hot issue for patients requiring medical services by two physicians on the same day. Medicare has been disallowing this service and will continue to do so under RBRVS unless it is "Medicare's opinion and interpretation" that two distinct diagnoses warrant that two distinct and separately identifiable services were provided by two separate physicians. The level of E/M services will continue to be honored on a first-physician claim basis. The second-physician claim will warrant individual review and interpretation of services by Medicare.

Under what circumstances should a physician request a hearing for a Medicare claim?

Medicare can reject a claim and will issue the reason for rejection on the "Explanation of Medicare Benefits." If a physician/provider believes a service was warranted for reimbursement, a review can be submitted to Medicare using a Medicare inquiry form. If Medicare rejects the claim on the second review and the dollar amount in question is more than $100, the physician has the right to request a fair hearing. If Medicare does not give one, write to the Medicare Fair Hearing Office and request one.

Note: information in this column should not be interpreted as a substitute for legal or other expert advice. For a listing of Practice Management Consulting Network participants, call the Society's Department of Physician Serivces at 1-800-228-7823.

QUESTIONS ON PRACTICE MANAGEMENT?

This page is for you and your office manager. Write to us as directed in the box above.

COMPUTERS CAN EASE MANAGEMENT FUNCTIONS

All too often physicians fail to reap the full benefits of the practice management functions their computers offer. In fact, an office computer is actually an investment that can yield larger dividends to the practice than physicians and staff may realize.

In addition to the more widely used capabilities, software is now available that makes it easier not only to compile many types of management data, but also to share financial and clinical information between hospitals (or managed care providers) and practices. Today's computer systems perform numerous financial management and reimbursement functions that make the job easier, such as billing, fee and reimbursement, coding review, managed care, and marketing functions. Additionally, some of the newer programs—such as clinical management programs and links to managed care plans—can enhance quality of care as well as office efficiency.

Billing functions

In many practices, computers are used merely to generate bills; however, billing efficiency could be significantly improved by adding new software that links a practice directly to the principal hospital's computer, providing physicians with patient registration and demographic data. This immediate access to hospital admission, discharge, and consultation data, and emergency room sheets could dramatically streamline staff efforts and reduce turnaround time.

Also, if physicians set payment schedules for patients, but fail to send a written copy of the agreement to them or fail to verify that payments are being made, computers can print payment schedules and collection notices and be programmed to track payments and list patients who missed promised deadlines. Physicians can use such lists to contact those patients quickly, keeping collection efforts on schedule and speeding up cash flow.

Fee and reimbursement functions

A good system should be able to report—by payor—the range of reimbursements for every procedure that physicians perform. Physicians should use such background data to review and adjust fees each year, and to run a list of the number of times each procedure is performed. When analyzed with the reimbursement data, these numbers give physicians a profile of revenue centers. This type of information is valuable, too, for budgeting, marketing, and strategic and resource planning.

Coding review functions

Computers can be used to check coding accuracy and identify poor coding patterns. Computer-aided coding reviews can reveal inappropriately high use of non-specific diagnosis codes or of a single level of service. Physicians' coding practices can be observed, helping identify both practice-wide problems and individual digressions from established coding policy. Also, the system helps physicians analyze fee adjustments by showing how much discounting is occurring, if adjustments are caused by coding errors, and which insurers have been reimbursing improperly.

Managed care functions

System data can be used to evaluate contracts from health maintenance organizations (HMOs) and preferred provider organizations (PPOs). Computers can produce detailed analyses of revenue from each plan in which a physician participates, helping to evaluate financial gains or losses from participation. Physicians may then compare each plan's turnaround time in making payments for services rendered and review the percentage of patients originating from each plan.

Marketing functions

To guide marketing strategies, physicians can use data on how many patients are received from each referral source. Recall procedures should be streamlined through a computerized follow-up system. Many software packages not only compile the recall list and general recall form letters, but also cross-reference recall notices with scheduled appointments. Computer word processing functions are also useful for printing patient education materials and newsletters.

Clinical management programs

In addition to billing link-up functions previously mentioned, hospitals are creating computer networks to share clinical and scheduling information. For example, diagnostic tests can be scheduled directly with a hospital, reducing waiting time for patients and administrative time for staff. Afterwards, the system transmits test results directly to a physician's office. While earlier software generations allowed physicians to view the clinical data, the data could not be stored effectively, manipulated, or printed in different formats.

Today, the latest versions allow physicians to store clinical data as a separate file, from which they can print the information in whatever form is needed. As networking technology develops further, physicians should be able to integrate clinical data with a billing system to ease billing routines.

Links to managed care plans

Computer vendors and larger managed care plans are working to give physicians access to managed care groups' records. The first stage of this undertaking has two goals: 1) to give practices immediate information on eligibility, allowable services, and required co-pays; and 2) to provide fast approval for referrals—which will reduce paperwork and improve collections. The second stage, then, includes electronic claims submissions and rapid reply on claims statuses.

To track these and other important telecommunications developments, physicians should talk to their hospital and HMO information service experts *before* deciding on new purchases or modifications to telephones, modems, or computer systems. Physicians may want to obtain hardware and software compatible with those in their hospitals and managed care systems.

Maintaining a computer system that is not fully integrated into practice management activities costs time and money. Dollars invested are wasted in an under-utilized computer, and physicians lose the potential savings from cost-effective operations. Poor computer use also makes an office less efficient, placing more pressure back on the medical practice. Keep up-to-date with software and hardware developments by staying in touch with vendors and reading articles about medical office computers.

The contributing authors, Patricia M. Salmon and Paul W. Smith, CPBC, are consultants with The Health Care Group, a medical practice management consulting firm based in Plymouth Meeting.

THE BREAST DIAGNOSTIC IMAGING CENTER
WEST PENN HOSPITAL

accredited by the American College of Radiology

OFFERS YOU AND YOUR PATIENT —

STATE OF THE ART IMAGING CHOICES

complete problem-solving breast diagnosis,
including tailored mammography and patient consultation

•

high resolution breast ultrasound

•

procedures including fine needle aspiration cytology, cyst aspiration,
core biopsy, pre-surgical localization and galactography

•

medical, surgical and oncologic consultation
as requested by the referring physician

•

screening mammography

ACCESS TO AN OUTSTANDING STAFF

Ellen B. Mendelson, M.D., Director of the Breast Diagnostic Imaging Center,
a radiologist subspecializing in mammography, breast ultrasound and women's
imaging services, recognized locally, regionally, and nationally for her expertise

•

D.G. Bhagwanani, M.D., Marcela Bohm-Velez, M.D. and Ellen K. Tabor, M.D.,
additional well-known radiologists subspecializing in breast imaging

•

technical staff certified by the American Society of Radiologic Technologists
with a subspecialty in mammography

A PERSONAL APPROACH TO PATIENT CARE

emphasis on a strong relationship among Breast Center physicians and staff,
referring physicians and patients

•

all women with breast problems will have personal consultations and review of
films with the radiologist at the time they visit the Center

•

education of all patients in breast self examination
through literature, audiovisuals and demonstration

For more information or to schedule a patient appointment, call (412) 578-1105.

ACTIONS OF THE BOARD OF TRUSTEES, MARCH 11, 1992

SOCIETY WILL SEEK AMENDED LANGUAGE

As House Bill 20, the Health Care Partnership Act, passed the state House of Representatives, Society lobbyists worked successfully to remove language tying licensure and medical staff privileges to mandated Medicaid participation. The bill is now awaiting movement in the Senate Public Health and Welfare Committee.

The House-approved bill contains a provision for physician referral networks in lieu of mandatory Medicaid participation attached to medical staff privileges. However, the responsibility for the network has been placed on the hospital. The Society believes that hospital medical staffs, rather than hospitals, should be responsible for access to physician services.

Also, an added clause provides that effective referral networks already in existence would be considered in compliance with the proposed act, eliminating the need to develop new programs in areas already effectively served. If movement occurs in the Senate, Society lobbyists will work for these additional changes approved by the Board of Trustees.

ACTING SECRETARY DISCUSSES HEALTH BUDGET

Alan S. Noonan, MD, MPH, acting secretary of the state Department of Health, attended the board's March meeting to discuss Pennsylvania's proposed budget "from a health point of view." He said the governor told him last year that health was a priority, and Dr. Noonan is "encouraged" by the proposals for the next fiscal year.

The 9.6 percent increase in the Department of Health budget is the largest proposed for any state department, according to Dr. Noonan. Increases have been proposed for several programs, including AIDS training and education, immunization, and development of an incentive program to increase the number of primary care providers in Pennsylvania.

SOCIETY CONCERNED ABOUT HCFA SURVEY

The Pennsylvania Medical Society expressed grave concerns with the Medicare Current Beneficiary Survey (MCBS) being conducted by the Health Care Financing Administration (HCFA). In a letter approved by the Society's Board of Trustees, the Society relayed its concerns to Louis W. Sullivan, MD, HCFA's secretary of Health and Human Services.

The Society identified several weaknesses in the MCBS, designed to research the effects of physician payment reform and other Medicare policies on beneficiary access. According to the letter to HCFA, the State Society "questions the study's ability to satisfy [its] intent,...[is] offended by several of the patient satisfaction questions and objects to the collection of this information on a physician-specific basis."

At this time, the Society is awaiting HCFA response to the letter. However, to remedy the final concern, the board in another action approved a recommendation of the Council on Governmental Relations that the Society request AMA to study whether a better-designed study, to be conducted by the AMA, was warranted.

BOARD AUTHORIZES LEGAL ACTION

The Board of Trustees authorized legal action against the state Department of Public Welfare and the U.S. Department of Health and Human Services to contest the failure of Medicaid to pick up Medicare co-insurance payments for the elderly poor eligible under both systems.

Medicaid currently pays Part B premiums for Medicare plus a deductible for dual eligibles; however, it does not pay the 20 percent co-insurance premium. Society legal staff estimates the amount owed to Pennsylvania physicians from co-insurance payments due ranges between $25 and $45 million. In a similar New York lawsuit, physicians were successful in regaining money due. The Society's law suit will seek to do the same.

PRIORITIZATION POLICY ADOPTED

In response to the on-going debate about prioritization versus rationing of health care, the board adopted a policy statement which makes a clear distinction between the two and states the Society's view of both.

The subject was hotly debated during the 1991 House of Delegates meeting, where members of the House agonized over the involvement of organized medicine in any form of health care rationing. Rationing is "a process that restricts the application of resources to those medical services, categories of services, and/or treatment options ranked higher on a priority lists and denies access to others by, in effect, drawing a line," according to the statement. It also states that organized medicine should not be responsible for the rationing of care.

Prioritization, however, is defined as "a process that ranks medical services, categories of services, and/or treatment options on the basis of value," which is derived from both non-economic and economic benefits of services and options. The Council on Education and Science, which recommended adoption of the statement by the board, believes that physicians should be involved in prioritizing health care so it is not done without physician participation.

The policy statement will be presented to the House of Delegates at its October meeting for further ratification.

SOCIETY PURSUING BILLING SERVICE

The trustees approved a recommendation of the Council on Medical Practice that the Society pursue development of an electronic billing service for use by all Society members. According to the Council's report, the service would:

1) electronically bill many major third-party insurers in the state,

2) increase the speed of transmission of electronic claims,

3) allow the Society to monitor claims payment practices of third parties,

4) provide a competitively priced alternative for physicians in the event third-party insurers institute penalties for paper claims submission,

5) offer the opportunity for physicians to introduce computers into their practices, and

6) allow the Society to offer other computer-based products.

Presbyterian Medical Center of Philadelphia
presents the:

1992 Philadelphia Internal Medicine Board Review Course

September 8-13, 1992

- 6 DAYS OF LECTURES BY OVER 40-MEMBER FACULTY TO COVER INTERNAL MEDICINE IN BOARD REVIEW STYLE
- 4 EVENINGS OF CASE MANAGEMENT WORKSHOPS AND ECG INTERPRETATIONS
- SPECIAL SESSION ON HOW TO PASS THE BOARDS
- COMPREHENSIVE COURSE SYLLABUS INCLUDING SPECIAL TEST QUESTIONS / ANSWERS

EARLY REGISTRANTS MAY OBTAIN A STUDY GUIDE ON PREPARING TO TAKE THE 1992 INTERNAL MEDICINE BOARD CERTIFICATION EXAMINATION

THIS COURSE WILL CLOSE OUT QUICKLY — IMMEDIATE REGISTRATION ADVISED
TO BE HELD AT THE MEDICAL ARTS BUILDING
3801 MARKET STREET
PHILADELPHIA, PA

COURSE DIRECTORS:
WARREN A. KATZ, M.D.
STEVEN SILBER, M.D.
JOSEPH BOSELLI, M.D.
JOEL MORGANROTH, M.D.

To obtain a brochure please contact: Jackie at (215) 662-9014 or write to Joel Morganroth, M.D. at Presbyterian Medical Center, CME office, 39th and Market Streets, Philadelphia, PA 19104

FIVE SOCIETY SEMINARS ON OSHA ADDED IN APRIL

With the release of new standards of the Occupational Safety and Health Administration (OSHA) on occupational exposure to bloodborne pathogens, the Society scheduled three half-day seminars at the end of April to help members and their office staffs with implementation. An overwhelming response from potential attendees led the Society to add five seminars to the original schedule.

More than 660 physicians and members of their office staffs attended the eight half-day seminars in King of Prussia, Harrisburg, and Pittsburgh, April 21-24. A consultant with Practice & Liability Consultants, a health care practice management and risk management firm, addressed general compliance topics, personnel recordkeeping and training requirements, discipline documentation, universal precautions, infection control techniques, and other pertinent topics. Attendees received the necessary components of an Exposure Control Plan as required by the regulations, and a seminar outline.

Exclusively for members unable to attend a seminar, the Society is offering an OSHA Information Kit containing all documentation necessary to comply with the regulations. Kits are available from the Society's Department of Physician Services for $10 each plus tax. For fastest delivery, complete and mail to the Society a copy of the OSHA Order Form included in the May issue of *Executive Report*. For more information, call 1-800-228-7823.

DELEGATION NEWS

AMA DELEGATES DEBATE RESOLUTIONS

The Pennsylvania Medical Society's delegation to the American Medical Association in April debated a number of resolutions for possible introduction at the AMA Annual Meeting in Chicago in June.

Those resolutions *finalized* for introduction address the following issues: subpoena power for the Food and Drug Administration, alternatives for board recertification examinations, establishment of college campuses as smoke-free

Members of the Pennsylvania delegation to the AMA met in April to discuss resolutions under consideration for introduction in June to the national delegation. Pictured (left to right) are: George F. Buerger Jr., MD; Donald C. Brown, MD; and John A. Malcolm Jr., MD.

environments, compliance of residency programs to provide a broad year of general training to most first-year residents, tax treatment of individual insurance, and Health Access America, AMA involvement in and reporting of development of proposals for funding and structure of graduate medical education, AMA involvement in changing concurrent care payment policies, and AMA reaction to aspects of HCFA's Health Care Quality Improvement Initiative.

Also at the June meeting, the delegation will support two candidates for seats on AMA councils: State Society President Robert N. Moyers, MD, a family practitioner from Meadville, is seeking a position on the Council on Medical Education; and Ronald J. Clearfield, MD, a radiologist in New Kensington, will run for a position on the Council on Constitution and Bylaws.

SOCIETY DISTRIBUTES AIDS GUIDE TO MEMBERS

The State Society recently published a booklet containing information for physicians on AIDS. It also includes a new Department of Health reporting form released in February and information about the final regulations on occupational exposure to bloodborne pathogens issued by the Occupational and Safety Health Administration.

The publication, developed specifically for physicians by the Society's Commission on Public Health, Subcommittee on AIDS, describes, among other topics: the State Society's policy on AIDS including patient care, education, testing, couseling, confidentiality, and public policy; counseling information, such as a sample patient information statement, sample consent form, and disclosure of HIV test results; safe sex guidelines; information about diagnosing AIDS and HIV positivity; the pathogenesis of HIV; and testing information.

This second edition of the Society's booklet was distributed, through funding from the Society's Educational and Scientific Trust, to each member physician in early April.

COUNTY NEWS

ACMS HOSTS MEDIA TRAINING

In February, the Allegheny County Medical Society (ACMS) hosted a half-day media training seminar for physicians. Pat Wood, State Society director of media relations, explained medicine's role in the media, and attendees were provided with practical techniques in managing the interview process.

A panel of local reporters explained the news-gathering and dissemination process and answered physicians' questions regarding medicine in the media. Representing print and broadcast media were: Mark Roth, assistant managing editor, *Pittsburgh Post-Gazette*; Steve Twedt, medical reporter, *The Pittsburgh Press*; Stacy Smith, news anchor, KDKA-TV; and Dan Splain, talk show host, KQV-AM radio.

SPECIALTY NEWS

ACADEMY PRESENTING ANNUAL MEETING

The Pennsylvania Chapter of the American Academy of Pediatrics will present its annual meeting May 22-24, 1992, at the Sheraton Hotel at Station Square, Pittsburgh. The session is entitled "Meeting the Challenge: Special Care for the Special Child."

The meeting will focus on specific diseases and the roles of parents, family members, primary care physicians, sub-specialists, the community, the school nurse, and other health care professionals. Topics of interest to physicians include: what is coordination of care and does it work?, psychological

aspects of chronic illness, management of asthma, Down's Syndrome and seizure disorders, diabetes outpatient management, reimbursement for chronic care, and recent federal initiatives for care of the special needs child.

For additional information about the meeting, credits, or registration, call (215) 520-9123.

THORACIC SOCIETIES TO CONVENE IN FALL

The Pennsylvania and New Jersey Thoracic Societies, along with the American Thoracic Society's Eastern Section, will convene for two days, September 11-12, 1992, at the Hotel Atop the Bellevue, Philadelphia.

Barbara Bates, MD, author and lecturer at the University of Pennsylvania, will keynote the scientific meeting with her presentation, "100 Years: Looking Backward and Looking Forward," a summary of activities of the American Lung Association of Pennsylvania. Other session topics will include gene therapy, cystic fibrosis, lung transplantation, and indoor/outdoor air pollution.

Six Category I CME credits will be offered for the program. For additional information, call Kathi Wagner, chapter administrator of the Pennsylvania Thoracic Society, at (717) 540-8506.

HMSS NEWS

MEDICAL STAFF ASSEMBLY AT AMA IN JUNE

Medical staffs from across the country are encouraged to elect a medical staff representative to participate in the AMA-Hospital Medical Staff Section (AMA-HMSS) Assembly Meeting June 18-22, 1992, at the Chicago Marriott Hotel.

The HMSS assembly provides medical staffs with the opportunity to discuss and participate in the policy-making process of the AMA. In addition to the assembly meeting, participants may attend one of the following educational programs: 1) Medical Staff Bylaws: Principles and Practices, or 2) Outcomes Management: A Medical Staff Issue.

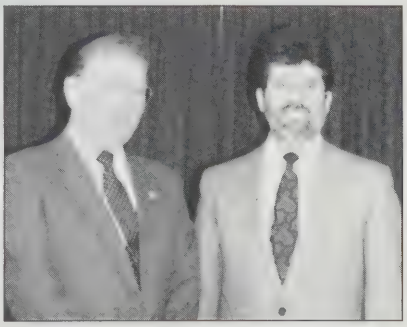
During the first program, legal experts from the AMA and private medical law firms will present a practical overview of the purpose, function, and organization of medical staff bylaws. Topics of discussion will include selected provisions regarding the Health Care Quality Improvement Act, provision for policy statements, and other relevant issues. Participants will also have the opportunity to ask questions pertinent to individual institutions.

In the second program, physician experts in the field of outcomes management and total quality improvement will provide medical staff leaders with a perspective in data collection and outcomes management. They will also be presented with information about how to focus data collection for successful and appropriate application in the interest of improved patient care.

For more information, call the AMA's Department of Hospital Medical Staff Services at (312) 464-4754 or 464-4761.

HMSS NEWS

DR. MOYERS VISITS AROUND THE STATE



State Society President Robert N. Moyers, MD, (pictured at podium) is fulfulling his inaugural promise of visiting with as many Pennsylvania Hospital Medical Staff Sections (HMSS) and county medical societies as possible this year. Averaging three visits per week, Dr. Moyers has talked with more than 675 physicians and hospital staff members in almost 25 hospitals as of the end of April.

His agenda covers great changes in the medical profession on local, state, and national levels, as well as current issues such as RBRVS, workers' compensation reform, the Medicare Overcharge Measure (MOM), living wills, tort reform, practice parameters, and Medicaid funding. He also emphasizes the importance of physicians uniting through State Society membership.

At a recent visit to Philhaven Hospital, Lebanon County, he spoke with Diehl M. Snyder, MD, president of Philhaven's HMSS (seen below with Dr. Moyers), and 37 of his staff members about fragmentation of the profession through subspecialties and recent legislative activities. Dr. Moyers strongly believes his visits are a step toward reaching "all of the profession" with a message about regaining professionalism and unity and countering "physician bashing" by the media.

Before his presidential term ends in October, he hopes to speak to "at least half" of Pennsylvania's HMSS staff members and county medical societies.

SMALL BUSINESS HEALTH INSURANCE STUDIED

Of the 218,000 small businesses in Pennsylvania, approximately 19 percent do not offer health care insurance for their employees, according to a study commissioned by Pennsylvania Blue Shield. Further results indicate that those businesses would offer insurance, and even share in the cost of coverage, if an affordable, basic benefits package was available.

The percentage of small businesses not offering health care insurance for employees is even greater nationwide, according to the National Federation of Independent Businesses and the Small Business Administration. Of six million small businesses in the nation, between 34 and 48 percent do not provide health care insurance for employees.

The results demonstrate that "most small businesses prefer to offer health care coverage to their employees, but cannot afford to do so," according to Karen Early, public affairs manager at Pennsylvania Blue Shield, who directed the study in late 1991. She adds that the results also "support the development of tax incentives for small businesses to offer health insurance."

1991 in Retrospect

Donald E. Harrop, MD

At the end of February, the Keystone Peer Review Organization mailed its annual report to all practicing physicians in Pennsylvania. This article briefly summarizes highlights of that report and discusses the organization's recent accomplishments.

Now that all the numbers for 1991 are in and verified, we can look back and ask ourselves, "What kind of a year has it been in terms of the Keystone Peer Review Organization's (KePRO's) accomplishment of objectives, and the expectations of our parent company, the Pennsylvania Medical Society?" Those who read KePRO's 1990-91 annual report would probably agree that 1991 was successful and that the organization's reputation is being continuously enhanced through the various policies and procedures intended to maintain maximum fairness in the review system.

Statistically, the annual report displayed a number of charts and graphs which reflect the success of the policies set by the Board of Directors. The most important of these was the revision made to the quality review process, which added another opportunity for physicians to discuss potential quality of care concerns without compromising our contractual obligations to the Health Care Financing Administration (HCFA). All indications are that this has greatly reduced physician anxiety over the review process and eliminated much past hostility because the initial letter is now merely a request for additional information rather than being labeled a pending quality of care concern.

Almost an entire page of the report presented information to assist health care providers in avoiding the most frequent, confirmed quality problems and HCFA generic quality screen failures. The report contains several examples of the types of cases in which confirmed problems or screen failures are most often identified, and recommendations for avoiding situations which cause KePRO to raise questions about quality of care.

Another section describes the KePRO physician advisor credentialing process which is somewhat unique. We believe that it has contributed to increased physician acceptability of the PRO program: more and more people are becoming aware that all KePRO peer reviews are conducted by board-certified specialists who have active hospital admitting privileges and who have been credentialed by committees comprised of physicians from their own county medical societies.

KePRO has also been striving to strengthen its financial base by seeking other review contracts in addition to Medicare review in Pennsylvania. In March 1992, a contract with the Southeastern Pennsylvania Transit Authority (SEPTA) was renewed for another year, and a contract was signed with the Florida Department of Health and Rehabilitative Services to conduct the Medicaid review in that state. We have also developed a joint venture with the Florida Medical Association for the purpose of bidding on the Florida Medicare PRO contract. However, HCFA withdrew their Request for Proposal because of an anticipated decrease in funding for the program shortly after our proposal was submitted, and the contract was awarded to the fiscal intermediary in lieu of a PRO for the remainder of 1992. Another proposal for that contract will be submitted later this year.

Financially, KePRO has been able to operate at a profit during a time when some PROs have suffered losses. This can only be attributed to diligent application of sound management practices. A dividend was paid to our only stockholder, the State Society, during 1991. We hope another can be paid in 1992 if KePRO maintains a sufficient excess of income over expenditures. Overall, KePRO's board considers 1991 successful, and it appears that 1992 is off to a good start.

Dr. Harrop is president of the Keystone Peer Review Organization.

Whitney C. Corsello, *Pittsburgh*
Hahnemann University School of Medicine, 1937; age 80, died February 11, 1992. Dr. Corsello was a general surgeon.•

C. Nelson Davis, *Merion Station*
Temple University School of Medicine, 1931; age 88, died March 12, 1992. Dr. Davis was a psychiatrist.•

Jose G. Guzman, *Bethlehem*

Howard University College of Medicine, 1935; age 87, died February 26, 1992. Dr. Jones was a dermatologist.•

Robert B. Silverman, *York*
University of Miami School of Medicine, 1973; age 44, died February 6, 1992. Dr. Silverman was a pathologist.•

Howard M. Simons, *Elkins Park*
Hahnemann University School of Medicine, 1961; age 56, died February 18, 1992. Dr. Simons was a dermatologist.•

Harold L. Bess, *Levittown*
University of California, Irvine, California College of Medicine, 1954; age 67, died February 22, 1992.

Ralph Cantafio, *Doylestown*
Temple University School of Medicine, 1938; age 78, died January 18, 1992. Dr. Cantafio specialized in occupational medicine.

William M. Conway, *Holidaysburg*
Loyola University of Chicago Stritch School of Medicine, 1939; age 78, died February 20, 1992. Dr. Conway was a general surgeon.

Barbara M. Frank, *Wexford*
University of Pittsburgh School of Medicine, 1963; age 54, died January 8, 1992. Dr. Frank was a pediatrician.

Alda de Sam Lazaro,
Age 74, died January 28, 1992. Dr. Lazaro was a psychiatrist.

Christopher S. May, *Philadelphia*
Hahnemann University School of Medicine, 1988; age 29, died January 21, 1992. Dr. May was an internist.

Michael S. Mermon, *Nesquehoning*
Jefferson Medical College, 1933; age 83, died January 30, 1992. Dr. Mermon was a general practitioner.

Edward G. Torrance, *West Chester*
University of Minnesota Medical School, 1924; age 93, died February 19, 1992. Dr. Torrance was an internist.

A. Carl Walker, *Waynesburg*
University of Pennsylvania School of Medicine, 1931; age 86, died February 28, 1992.

• Denotes membership in the Pennsylvania Medical Society at time of death.

The Educational and Scientific Trust of the Pennsylvania Medical Society provides you with a way to make a significant statement honoring the memory of and paying tribute to your colleagues who are deceased. Send you tax-deductible memorial gift to the Educational and Scientific Trust of the Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

GIVE YOURSELF AND YOUR PROFESSION A GIFT

Working too hard to smell the roses? Do something nice for yourself, your family, and your profession.

Invest as little as $5,000 in a charitable gift annuity from The Educational and ScientificTrust, and you'll receive:

- **An income to you and your beneficiary for life at competitive rates, some of it tax free;**
- **An income tax deduction; and**
- **No capital gains taxes if funded with appreciated securities.**

At the death of the final beneficiary, the principal endows The Educational and Scientific Trust, permitting it to help additional deserving medical students with low-cost student loans, assist new practitioners establish offices in underserved areas, and address vital public health issues.

Paul D. Siegel, MD, Philadelphia internist, was newly appointed to the board of directors of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC).

Marjorie A. Bowman, MD, MPA, professor and chair of the Department of Family and Community Medicine at the Bowman Gray School of Medicine of Wake Forest University in Winston Salem, North Carolina, was appointed editor of the *Archives of Family Medicine*.

Ted S. Eisenberg, DO, FACOS, plastic and reconstructive surgeon at Suburban Genral Hopsital in Norristown, has been named plastic surgery consultant for the American Osteopathic Board of Surgery.

Paul Lotke, MD, chief of implant services and a knee specialist in the Joint Reconstruction Center at the University of Pennsylvania Medical Center, has been named president of the Knee Society.

Jose F. Caro, MD, internationally known diabetes expert, has been appointed chairman of the Department of Medicine at Thomas Jefferson University.

Gloria J. Watkins, MD, pathologist at Frick Community Health Center in Mt. Pleasant, was named president of the Westmoreland County Medical Center.

Edwin W. Shearburn III, MD, surgeon at Grand View Hospital in Sellersville, was elected president of the Bucks County Medical Society.

The Schuylkill County Medical Society has installed the following 1992 officers: **Samuel C. Slimmer Jr., MD,** medical director of emergency services at Pottsville Hospital and the Warne Clinic, president; **A. Mohsen Kholoussy, MD,** chairman of the Department of Surgery at Pottsville Hospital, president-elect; **Robert H. Peters III, MD,** gastroenterologist, treasurer; and **Joseph T. Marconis, MD,** vice president of medical affairs at Pottsville Hospital, secretary.

Paul J. Fink, MD, chairman of the Department of Psychiatry at Albert Einstein Medical Center and medical director at Belmont Center for Comprehensive Treatment, has been appointed to the Philadelphia Board of Health.

Dr. Fink

Charles M. Baney, MD, retired this year after practicing family medicine in Hamburg for 35 years.

Charles E. Gregg, MD, was named physician-in-charge of the anesthesia service at Chestnut Hill Hospital in Philadelphia.

An article entitled, "Euthanasia," by **Stanley M. Marks, MD,** past president of the Allegheny County Medical Society (ACMS), will be reprinted in the "Other Opinion" section of the AMA's *American Medical News*. The article was originally published in the January 11, 1992, issue of the *ACMS Bulletin*.

Charles E. Gregg, MD, was named physician-in-charge of the anesthesia service at Chestnut Hill Hospital in Philadelphia.

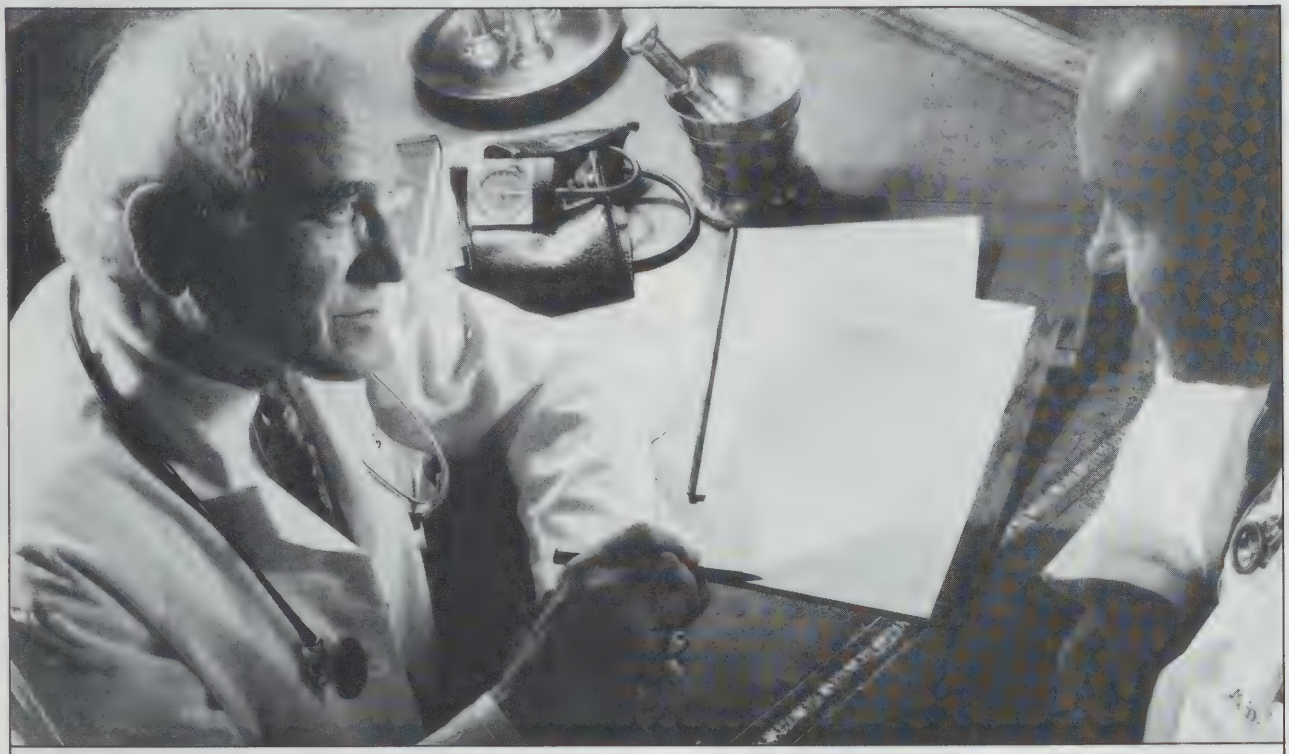
James P. Bradley, MD, Pittsburgh orthopaedic surgeon, was inducted to fellowship in the American Academy of Orthopaedic Surgeons.

Jonathan D. Rubin, MD, diagnostic radiologist, was appointed medical director of the Department of Radiology at Mt. Sinai Hospital in Philadelphia.

William E. Benson, MD, Overlook, was named director of the Wills Eye Hospital Retina Service. He succeeds **William H. Annesley Jr., MD,** who, in addition to continuing as a Retina Service attending physician and an active practitioner, will continue as head of the Vitreoretinal Foundation.

Alexander J. Brucker, MD, chief of the Retina and Vitreous Service for the Department of Ophthalmology of the University of Pennsylvania School of Medicine at Scheie Eye Institute in Philadelphia, was elected president of the Macula Society. The Society is an international organization of ophthalmologists who subspecialize in the care of patients with diseases of the retina.

Jeffrey T. Kirchner, DO, a member of the Department of Family Practice at St. Joseph Hospital in Lancaster and clinical preceptor in the Department of Family and Community Medicine at Lancaster General Hospital, has been named to the editorial board of *Postgraduate Medicine*.



James H. Herndon, MD, the David Silver professor and chairman of the Department of Orthopaedic Surgery at the University of Pittsburgh School of Medicine, has been elected chairman of the Residency Review Committee for Orthopaedic Surgery.

Scott P. Henry, MD, was appointed medical director of the Endoscopy Center at Hamot Medical Center in Erie.

Sheldon H. Linn, MD, obstetrician/gynecologist at Grand View Hospital, has been board certified by the American Board of Obstetrics and Gynecology.

The Commonwealth Board of the Medical College of Pennsylvania (MCP) annually awards and funds two National Health Policy Fellowships for medical students to participate in a summer internship program in Washington, DC. The program gives selected MCP students first-hand experience in health care policy making at the federal level. Pictured (left to right) are: Francine M. Monohan, 1991 National Health Policy Fellow; Janet Nanorta, manager of community relations at Pennsylvania Blue Shield, Harrisburg; Victoria Wilson, president of MCP's Commonwealth Board; Gilbert D. Tough, chairman of Blue Cross of Northeastern Pennsylvania; and Robert F. Centeno, 1991 National Health Policy Fellow.

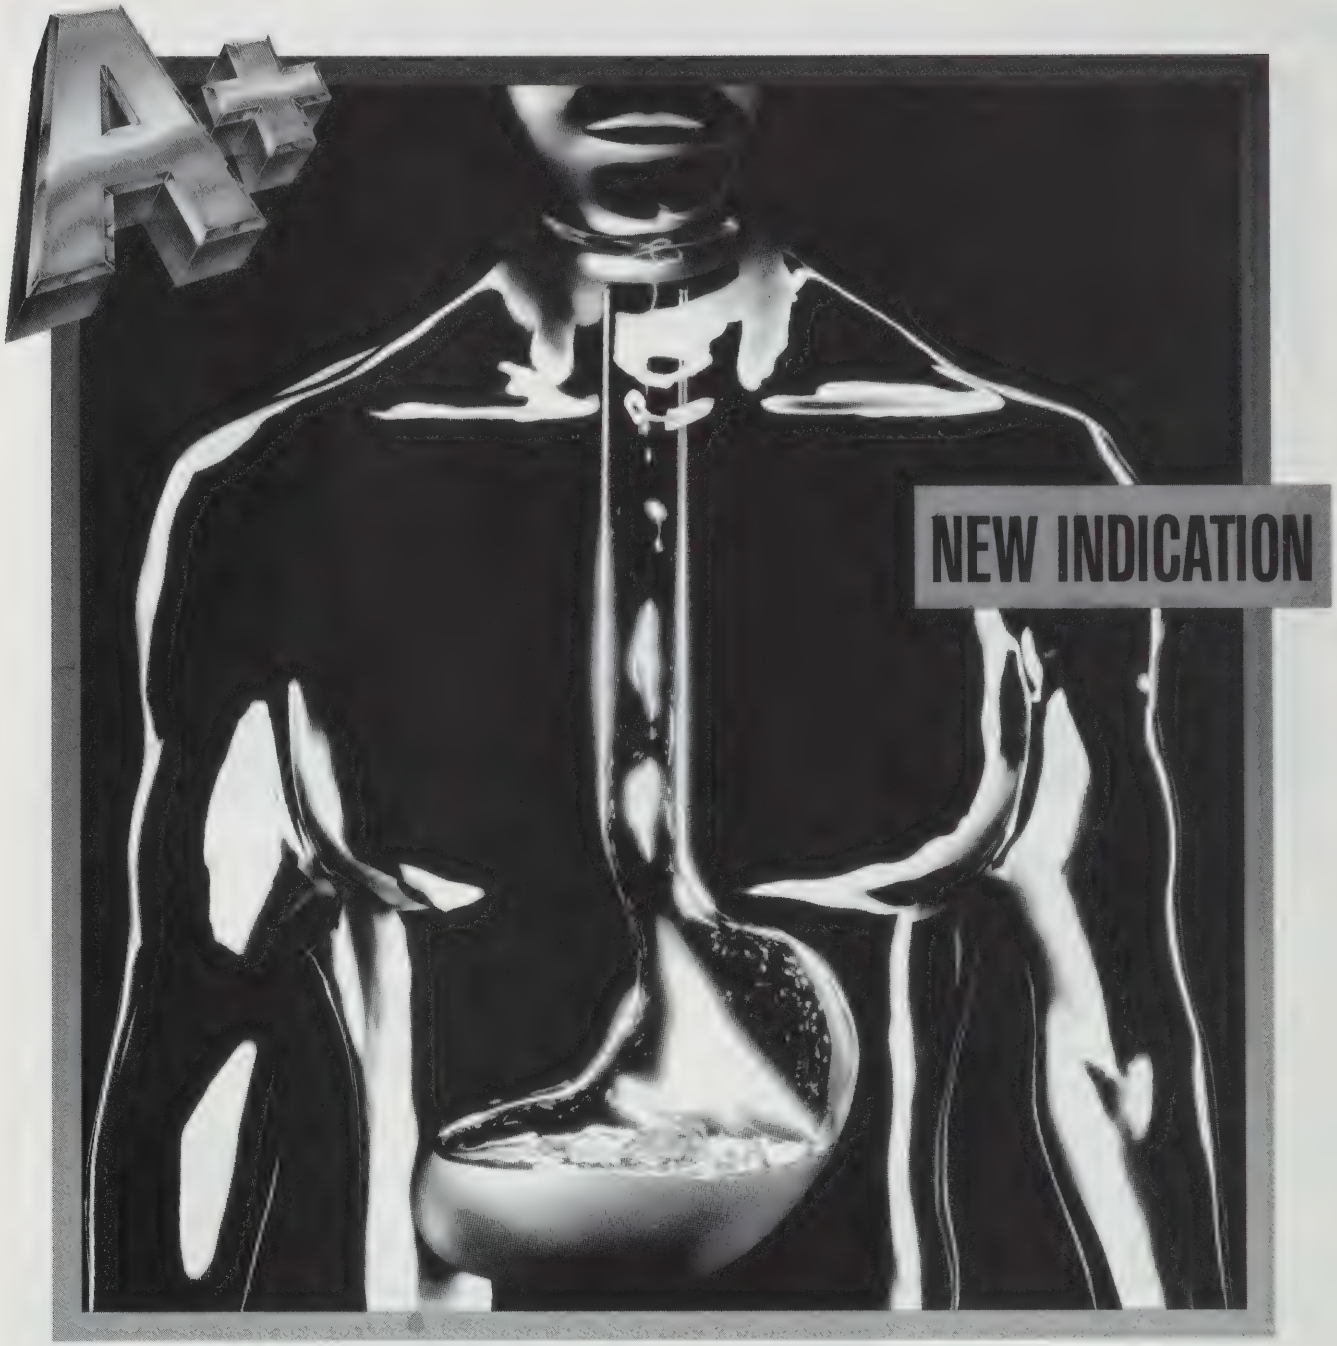
"When you compare malpractice insurers, there is no comparison."

"What do you look for first? Rates, naturally. So that was the first item that attracted me to Physicians Insurance Company. They're stable, well run—and their rates have *decreased continuously* since 1986; while at the same time they have continued to broaden their coverage.

Additionally, the Company's performance seems to have forced other insurers to lower their rates.

Still, no one matches Physicians Insurance Company, on rates *or* support;

- they won't settle a case without your consent,
- when they fight your case, it's with confidence and intelligence, as shown by their 98% success rate at trial,
- you receive 40 hours of *free* legal representation for disciplinary proceedings, including staff privilege disputes and service on peer review committees,
- you receive legal counsel if you are called for a deposition in a medical malpractice case in which you are not named in the suit.



And Physicians Insurance Company doesn't automatically increase your rate for individual loss experience, or for corporate or partnership coverage.

I had good reasons for originally changing to Physicians Insurance Company. Those reasons are even truer today — the rates, the service, the support. It's an easy choice."

For updates, quotes, or any other information on Pennsylvania's leading malpractice carrier, or a copy of our latest newsletter, VITAL SIGNS, call or write today.

PHYSICIANS INSURANCE COMPANY

Plymouth Meeting, PA 19462

ONLY ONE H_2-ANTAGONIST HEALS REFLUX ESOPHAGITIS AT DUODENAL ULCER DOSAGE. ONLY ONE.

Of all the H_2-receptor antagonists, only Axid heals and relieves reflux esophagitis at its standard duodenal ulcer dosage. Axid, **150** mg b.i.d., relieves heartburn in **86%** of patients after one day and **93%** after one week.[1]

AXID®
nizatidine
150 mg b.i.d.

ACID TESTED. PATIENT PROVEN.

1. Data on file, Lilly Research Laboratories. *See accompanying page for prescribing information.* ©1991, ELI LILLY AND COMPANY NZ-2947-B-249304

AXID®
nizatidine capsules

Brief Summary. Consult the package insert for complete prescribing information.

Indications and Usage: 1. *Active duodenal ulcer*—for up to 8 weeks of treatment at a dosage of 300 mg h.s. or 150 mg b.i.d. Most patients heal within 4 weeks.

2. *Maintenance therapy*—for healed duodenal ulcer patients at a dosage of 150 mg h.s. at bedtime. The consequences of therapy with Axid for longer than 1 year are not known.

3. *Gastroesophageal reflux disease (GERD)*—for up to 12 weeks of treatment of endoscopically diagnosed esophagitis, including erosive and ulcerative esophagitis, and associated heartburn at a dosage of 150 mg b.i.d.

Contraindication: Known hypersensitivity to the drug. Because cross sensitivity in this class of compounds has been observed, H_2-receptor antagonists, including Axid, should not be administered to patients with a history of hypersensitivity to other H_2-receptor antagonists.

Precautions: *General*—1. Symptomatic response to nizatidine therapy does not preclude the presence of gastric malignancy.

2. Dosage should be reduced in patients with moderate to severe renal insufficiency.

3. In patients with normal renal function and uncomplicated hepatic dysfunction, the disposition of nizatidine is similar to that in normal subjects.

Laboratory Tests—False-positive tests for urobilinogen with Multistix® may occur during therapy.

Drug Interactions—No interactions have been observed with theophylline, chlordiazepoxide, lorazepam, lidocaine, phenytoin, and warfarin. Axid does not inhibit the cytochrome P-450 enzyme system; therefore, drug interactions mediated by inhibition of hepatic metabolism are not expected to occur. In patients given very high doses (3,900 mg) of aspirin daily, increased serum salicylate levels were seen when nizatidine, 150 mg b.i.d., was administered concurrently.

Carcinogenesis, Mutagenesis, Impairment of Fertility—A 2-year oral carcinogenicity study in rats with doses as high as 500 mg/kg/day (about 80 times the recommended daily therapeutic dose) showed no evidence of a carcinogenic effect. There was a dose-related increase in the density of enterochromaffin-like (ECL) cells in the gastric oxyntic mucosa. In a 2-year study in mice, there was no evidence of a carcinogenic effect in male mice, although hyperplastic nodules of the liver were increased in the high-dose males as compared with placebo. Female mice given the high dose of Axid (2,000 mg/kg/day, about 330 times the human dose) showed marginally statistically significant increases in hepatic carcinoma and hepatic nodular hyperplasia with no numerical increase seen in any of the other dose groups.The rate of hepatic carcinoma in the high-dose animals was within the historical control limits seen for the strain of mice used. The female mice were given a dose larger than the maximum tolerated dose, as indicated by excessive (30%) weight decrement as compared with concurrent controls and evidence of mild liver injury (transaminase elevations). The occurrence of a marginal finding at high dose only in animals given an excessive and somewhat hepatotoxic dose, with no evidence of a carcinogenic effect in rats, male mice, and female mice (given up to 360 mg/kg/day, about 60 times the human dose), and a negative mutagenicity battery are not considered evidence of a carcinogenic potential for Axid.

Axid was not mutagenic in a battery of tests performed to evaluate its potential genetic toxicity, including bacterial mutation tests, unscheduled DNA synthesis, sister chromatid exchange, mouse lymphoma assay, chromosome aberration tests, and a micronucleus test.

In a 2-generation, perinatal and postnatal fertility study in rats, doses of nizatidine up to 650 mg/kg/day produced no adverse effects on the reproductive performance of parental animals or their progeny.

Pregnancy—Teratogenic Effects—Pregnancy Category C—Oral reproduction studies in rats at doses up to 300 times the human dose and in Dutch Belted rabbits at doses up to 55 times the human dose revealed no evidence of impaired fertility or teratogenic effect; but, at a dose equivalent to 300 times the human dose, treated rabbits had abortions, decreased number of live fetuses, and depressed fetal weights. On intravenous administration to pregnant New Zealand White rabbits, nizatidine at 20 mg/kg produced cardiac enlargement, coarctation of the aortic arch, and cutaneous edema in 1 fetus, and at 50 mg/kg, it produced ventricular anomaly, distended abdomen, spina bifida, hydrocephaly, and enlarged heart in 1 fetus. There are, however, no adequate and well-controlled studies in pregnant women. It is also not known whether nizatidine can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity. Nizatidine should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus.

Nursing Mothers—Studies in lactating women have shown that 0.1% of an oral dose is secreted in human milk in proportion to plasma concentrations. Because of growth depression in pups reared by treated lactating rats, a decision should be made whether to discontinue nursing or the drug, taking into account the importance of the drug to the mother.

Pediatric Use—Safety and effectiveness in children have not been established.

Use in Elderly Patients—Healing rates in elderly patients were similar to those in younger age groups as were the rates of adverse events and laboratory test abnormalities. Age alone may not be an important factor in the disposition of nizatidine. Elderly patients may have reduced renal function.

Adverse Reactions: Worldwide, controlled clinical trials included over 6,000 patients given nizatidine in studies of varying durations. Placebo-controlled trials in the United States and Canada included over 2,600 patients given nizatidine and over 1,700 given placebo. Among the adverse events in these placebo-controlled trials, only anemia (0.2% vs 0%) and urticaria (0.5% vs 0.1%) were significantly more common in the nizatidine group. Of the adverse events that occurred at a frequency of 1% or more, there was no statistically significant difference between Axid and placebo in the incidence of any of these events (see package insert for complete information).

A variety of less common events were also reported; it was not possible to determine whether these were caused by nizatidine.

Hepatic—Hepatocellular injury (elevated liver enzyme tests or alkaline phosphatase) possibly or probably related to nizatidine occurred in some patients. In some cases, there was marked elevation (>500 IU/L) in SGOT or SGPT and, in a single instance, SGPT was >2,000 IU/L. The incidence of elevated liver enzymes overall and elevations of up to 3 times the upper limit of normal, however, did not significantly differ from that in placebo patients. All abnormalities were reversible after discontinuation of Axid. Since market introduction, hepatitis and jaundice have been reported. Rare cases of cholestatic or mixed hepatocellular and cholestatic injury with jaundice have been reported with reversal of the abnormalities after discontinuation of Axid.

Cardiovascular—In clinical pharmacology studies, short episodes of asymptomatic ventricular tachycardia occurred in 2 individuals administered Axid and in 3 untreated subjects.

CNS—Rare cases of reversible mental confusion have been reported.

Endocrine—Clinical pharmacology studies and controlled clinical trials showed no evidence of anti-androgenic activity due to nizatidine. Impotence and decreased libido were reported with similar frequency by patients on nizatidine and those on placebo. Gynecomastia has been reported rarely.

Hematologic—Anemia was reported significantly more frequently in nizatidine than in placebo-treated patients. Fatal thrombocytopenia was reported in a patient treated with nizatidine and another H_2-receptor antagonist. This patient had previously experienced thrombocytopenia while taking other drugs. Rare cases of thrombocytopenic purpura have been reported.

Integumental—Urticaria was reported significantly more frequently in nizatidine- than in placebo-treated patients. Rash and exfoliative dermatitis were also reported.

Hypersensitivity—As with other H_2-receptor antagonists, rare cases of anaphylaxis following nizatidine administration have been reported. Rare episodes of hypersensitivity reactions (eg, bronchospasm, laryngeal edema, rash, and eosinophilia) have been reported.

Other—Hyperuricemia unassociated with gout or nephrolithiasis was reported. Eosinophilia, fever, and nausea related to nizatidine have been reported.

Overdosage: Overdoses of Axid have been reported rarely. If overdosage occurs, activated charcoal, emesis, or lavage should be considered along with clinical monitoring and supportive therapy. The ability of hemodialysis to remove nizatidine from the body has not been conclusively demonstrated; however, due to its large volume of distribution, nizatidine is not expected to be efficiently removed from the body by this method.

YOCON®
YOHIMBINE HCl

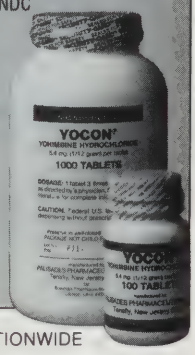
Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.



Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

Internal Medicine-Family Practice for sale—Well established with excellent growth potential. Situated one hour north of Harrisburg, Pennsylvania. Fully equipped and excellent staff. Located near two community hospitals. Physician will help with transition and financing. Gross income $600,000 to $800,000 yearly. Extremely reasonable asking price. Reply to: Box 378, PENNSYLVANIA MEDICINE, 777 East Park Dr., P.O. Box 8820, Harrisburg, PA 17105-8820.

Otolaryngologist needed to share space with ophthalmologist with multiple offices in Pittsburgh and suburbs. Flexible terms and ready market. Call (412) 837-4232.

General Practice, ambulatory—Pittsburgh suburb. Growing six years old practice. 95% privately insured patients. Owner relocating out of state. Includes x-ray, EKG, spirometer, and lab equipment. Real estate optional. (412) 935-0880.

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months or longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES**, as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

Physician-Specific Outcome Data: Good or Bad Medicine?

Ferdinand L. Soisson Jr., MD

See the article by John Malcolm, MD, on page 12 of this issue, for a more in-depth discussion of this topic.

The nation is waiting for the Pennsylvania Health Care Cost Containment Council (PHC4) to open the door to physician-specific outcome data. We, the physicians, are perched on the doorstep, deciding whether to go in.

Meaningful data has become a complex issue. PHC4 could sunset this year, adding pressure for the council to generate news and fulfill its mandates. Confusion exists whether PHC4 will cease to be an independent state agency, e.g., becoming part of the Pennsylvania Insurance Department. The level of funding for PHC4 is another subject of controversy, as the Commonwealth sets budgetary priorities for 1992-93. Concerning physician data, the connection between the surgeon and the outcome of coronary-artery bypass procedures isn't as simple as PHC4 pretends; yet the procedures consume enormous resources—as much as $1 in every $50 of health care expenses.

Let us consider the fundamental question: should physicians participate in attempts to measure quality, including outcome research? We have argued that MedisGroups™ outcome morbidity data aren't meaningful and that charge data isn't valid cost comparison. Therefore, is data collection productive and helpful? For business and labor, for example, the reduction of open heart surgery charges at St. Vincent's Hospital in Erie, in response to PHC4 reports, is proof enough that the efforts must continue. We have argued that results to date don't justify the total expense. But hospitals continue to find uses for the financial and MedisGroups™ data, at least raising questions internally about disparate outcomes. We argue the MedisGroups™ data are flawed when utilized in the context of the PHC4 reports. Science demands better. Yet, in medical science, perfection is elusive, and few of us want to risk our patients waiting for it.

We say the data report only a small fraction of quality of care. Yet, what are the ethical considerations of standing in the way of outcome reporting and research, which may ultimately benefit our patients and help control health care costs? We say that the consumer at present cannot use much of these data meaningfully. Yet, major Pennsylvania corporations say they find the data useful, even if flawed. The media asks whether we can offer viable alternatives to these flaws.

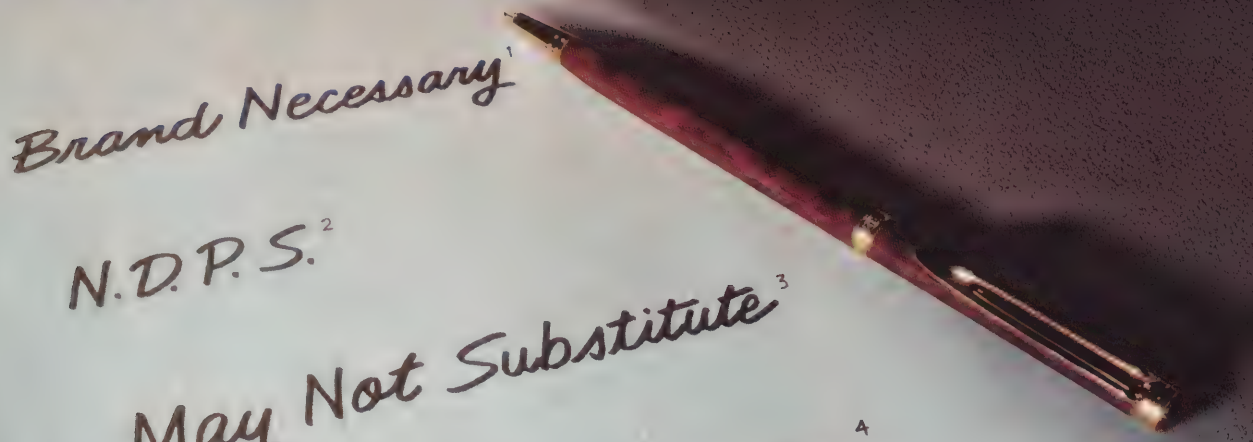
Would we generate more public respect and credibility by working within the system, rather than appearing to oppose the system by specific criticisms that may be construed as biased? We say we care about total health care costs; but to fail to support efforts to generate data which may spur competition may cloud our credibility.

Doesn't participation in analyzing data afford the opportunity for new alliances with business, labor, and others; or does obstruction risk our place at the policy-making table?

The question of our commitment to data collection is separate from related issues, such as if PHC4 should sunset, go under a state agency, get more or less money, or be replaced with a non-state operation.

We need to actively educate the public, media, business and labor about data limitations and potential abuse. Data collection cannot be viewed as a simple process to develop or analyze. We must also educate all parties about the dangers of data abuse, particularly with respect to misleading patients and reducing access to care for higher risk patients.

We must increase out credibility as we defend out health care institutions, including individual physicians whose reputations may be unfairly tarnished by such abuse and oversimplification.



We have a special responsibility not to allow our members, no matter their specialty, to become pawns in this measurement process or allow it to fracture the unity of organized medicine.

The process isn't perfect. Yet if we wait for perfection, we will find that this need obstructs the path to other goals. We must be involved in the "handling and polishing" necessary to form, and perhaps help perfect, the science of outcome research.

It will not be painless or risk-free, but we can exercise greater control by working from within.

Dr. Soisson, who practices office gynecology in Cambria County, holds several positions within the Society including: chairman of the Communications and Management Advisory committees; secretary of the Judicial Council and Bylaws Committee; and member of the Publications, Leadership Conference, and Medical Benevolence committees.

YOU CAN IMPROVE TECHNOLOGY AND STILL BE STUCK IN THE SAME JAM

Technology is supposed to make your people more productive, your practice more competitive. We anticipate how technology will affect not only processes, but the structure of your practice as well. The Valley Medical Management concept revolves around a team of reimbursement specialists, managers, systems analysis and CPA's. This is the formula for our success. Our approach is scientific, comprehensive, and informative. Services provided include:

- ✦ Practice Reviews
- ✦ Administrative & Financial Management
- ✦ Billing
- ✦ Hardware/Software

Our objective is to make you a more successful professional.
Call us for more information.

SPECIALISTS IN MEDICAL PRACTICE MANAGEMENT

"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.

Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

FEDERAL LEADERS PROMOTE STRICT HEALTH CARE REFORM PLAN: Several members of the Democratic leadership and the majority of the House Ways and Means Health Subcommittee are promoting a health care reform plan that would impose strict government price controls on physicians, hospitals, and other health care providers. The shape and direction of the reform was to be considered at the June 8 meeting of the Democratic caucus. Members of the Society's Federal Key Contact Program have called members of Congress: 1) in opposition to extending Medicare payment policies to private insurers and establishing arbitrary spending caps for public and private health programs; and 2) in support of insurance market reform, professional liability reform, market-based cost containment efforts, and changes in tax policy for health insurance coverage. Also, key contacts traveled to Washington, D.C., on June 5 to meet with top Congressional aides to further relay Pennsylvania-specific and AMA messages. Action by the Rules Committee on potential floor amendments is expected by the end of the month. PHYSICIANS ARE URGED TO CALL THEIR CONGRESSMEN STAT IN SUPPORT OF ORGANIZED MEDICINE'S POSITION. In related news, Representatives Fortney Pete Stark (D-CA), chairman of the subcommittee, and Fred Grandy (R-IA) will address the political realities of reform at a special health care forum scheduled during the AMA's annual meeting later this month.

EFFECTS OF SENATE WORKERS' COMP AMENDMENT STUDIED: The Society's Workers' Comp Quick Response Committee is studying the possible effects of an amended House Bill 2140, addressing workers's compensation issues. The bill, approved by the Senate on May 19 by a 29-19 vote, includes an amendment by Senators Roger A. Madigan and Robert J. Mellow to limit medical payments to 120 percent of the Medicare allowance for 1992. Breaking the tie to Medicare for 1993 and after, the fee schedule would be updated annually according to the percentage change in the statewide average weekly wage. Several other provisions were also included in the amendment. The bill was expected to appear on the House agenda after Memorial Day. For information on Society activities leading up to the Senate vote, see page 22.

SOCIETY-BACKED CHILDHOOD IMMUNIZATION ACT SIGNED BY GOVERNOR: Governor Robert P. Casey on May 21 signed into law Act 35 (House Bill 536), which requires health insurance policies to include immunization coverage and expand availability to younger Pennsylvanians. The new law increases availability of care; eases the burden on public health clinics; insures affordable and minimal immunization costs; and expands the definition of comprehensive coverage to include any immunization for DPT, MMR, polio, and HIB. The Society worked in cooperation with the Pennsylvania Chapter of the American Academy of Pediatrics and the bill's prime sponsor, Representative H. William DeWeese (D-Greene), in support of the legislation.

HHS ISSUES RECOMMENDED MEDICARE CONVERSION FACTOR: Louis W. Sullivan, MD, secretary of Health and Human Services (HHS), in late May issued HHS-recommended Medicare physician payment schedule conversion factor updates for 1993 to Congress. Dr. Sullivan is calling for a two-part update to be applied on a service-specific basis: for surgical services, the recommended update is 2.6 percent; and for nonsurgical services, it is 0.3 percent. Also issued were the following Medicare Volume Performance Standard figures to be used in establishing the 1994 default conversion factor update: 6 percent for surgical services and 7.9 percent for nonsurgical services.

FINAL OSHA BLOODBORNE PATHOGEN EFFECTIVE DATE IN SIGHT: Physicians are reminded that the third and final stage of the Occupational and Safety Administration (OSHA) regulations on occupational exposure to bloodborne pathogens goes into effect July 6. Among other things, employers will be required to provide vaccinations against the hepatitis B virus. For further information, call the State Society at 1-800-228-7823.

Most outpatient rehab facilities.

Bryn Mawr Rehab Outpatient Services.

Most outpatient rehabilitation facilities are single service providers, offering physical therapy to treat conditions such as sports injuries and back pain. At Bryn Mawr Rehab, we do this — and offer an array of individualized programs and specialized services.

A coordinated multi-service approach
Treatment might include a coordinated program of physical, occupational and aquatic therapies for a person with arthritis. Driver's evaluation and speech therapy for an individual who has sustained a stroke. A work hardening program to help someone get back on the job.

A collaborative process is the best process
Our focus is on maximizing outcome. Collaborating with you, your patient and, as needed, your patient's family, we are able to tailor a program to best suit the patient's individual needs.

Specialized services are a big part of our multifaceted approach
Unique, specialized services such as adapted driver education, aquatic therapy, equestrian therapy and rehab engineering assist patients in achieving the best possible outcome for their lifestyle.

Call our Outpatient Services Department at **(215) 251-5503** to learn more about our multifaceted outpatient programs.

BRYN MAWR REHAB
OUTPATIENT SERVICES

414 Paoli Pike, Malvern, PA 19355

A Sunday "Burnout"

John Mills, MD
Medical Editor

As I write, it is Mother's Day, the close of a very busy week in this doctor's life. Busier than average, I'd have to say, for besides the usual office hours and surgical assists, coupled with two evening medical meetings, reading for the Society board meeting, and accounting paperwork, I've been struggling to comply with the new regulations on bloodborne pathogens from the Occupational and Safety Health Administration (OSHA).

Despite the Society's seminar I attended, and the items I received from the Society and the AMA on the new OSHA rules, I still feel frustrated in trying to comply with the voluminous regulations in such a short time. Appropriate sources for the items we need are difficult to come by: there are half a dozen brands of Glutaraldehyde, all of which are governed by OSHA, Environmental Protection Agency, and Department of Environmental Resources hazard standards. One hardly knows how to use the stuff. I've never received an MSDA (Material Safety Data Sheet) form with any chemical ordered! Clorox rusts my speculums and its use voids any guarantee on fine biopsy instruments! What does one wash the exam tables with? Will the colored naugahyde react with the solution or spray?

Here is another frustrating subject for us physicians: workers' compensation legislation. The State Society has issued two "calls to action" this past week in anticipation of the state Senate's consideration of and voting on the workers' compensation bill. Governor Casey wants it his way or he'll veto it. His recent railing at our profession (during a May 4 press conference) made me see red. He compared our amendments to running his bill through a sausage machine—we would make out like bandits and workers would get the shaft!

A few more incidents like this, and Pennsylvania physicians will react like Massachusetts physicians under Dukakis: they'll leave the state in droves. Will companies have trouble finding physicians to take workers' compensation cases if Governor Casey gets his way? I'm beginning to hear of access problems from Medicare patients. The governor's workers' compensation plan would tie the fees to Medicare and just aggravate the situation.

Earlier, my Sunday afternoon paperwork was interrupted by the beeper to assist at a ruptured appendix with abscess and another acute appendix. Four hours later on this Mother's Day, I am back to trying to cook outside for my wife and me.

Why do we do what we do? Most physicians genuinely like their work and are caring, compassionate people, accepting the awesome responsibilities of medical practice with steadfastness and a sense of duty.

But it's getting more difficult each day. My litany brings me up short when I think about it, as I have for this editorial—being written under deadline pressure.

Medical school and residency are supposed to prepare you for this kind of pressure-packed lifestyle. But they don't prepare you for the likes of politicians like Governor Casey, or the onslaught of government regulations from all those bureaucracies. Add the clinical laboratory regulations to my list—another thorn in the side.

As I look over today's list of things to do, I realize the yard and garden have been completely ignored; the birdhouses are still to be readied for summer. I also note that I missed "60 Minutes" this evening, and their segment on "Physician Burnout!"

Maybe it's good that I didn't see it—for I sometimes feel I've experienced it in short episodes. On the other hand, it might have helped me deal with the overwhelming feeling I have now that I can't accomplish all I have to do this next week.

Thoughtful consideration of my options with my spouse has dissuaded me from cancelling my attendance at the Society's board meeting and the Publications Committee meeting, and from signing out for two days to deal with OSHA, clinical lab regs, corporate taxes, and my sanity.

MIIX℠ will offer free income protection coverage for doctors who become HIV positive.

Because we understand.

"We are addressing a problem which can have a potentially devastating impact on those few doctors who may be affected. We are here to serve doctors with responsive and innovative programs, and I believe that we are doing our part to deal straightforwardly and candidly with this dilemma for doctors and patients alike."

Daniel Goldberg
MIIX President

The Medical Inter-Insurance Exchange is pleased to announce, effective January 1, 1992, its Human Immunodeficiency Virus (HIV) Insurance Endorsement as a no cost addition to its professional liability insurance policies for Pennsylvania doctors. Should you be diagnosed as HIV positive, the endorsement will provide you with a benefit of $500,000, payable monthly over 5 years at $100,000 per year.

The Doctor Is In(undated)

Robert N. Moyers, MD

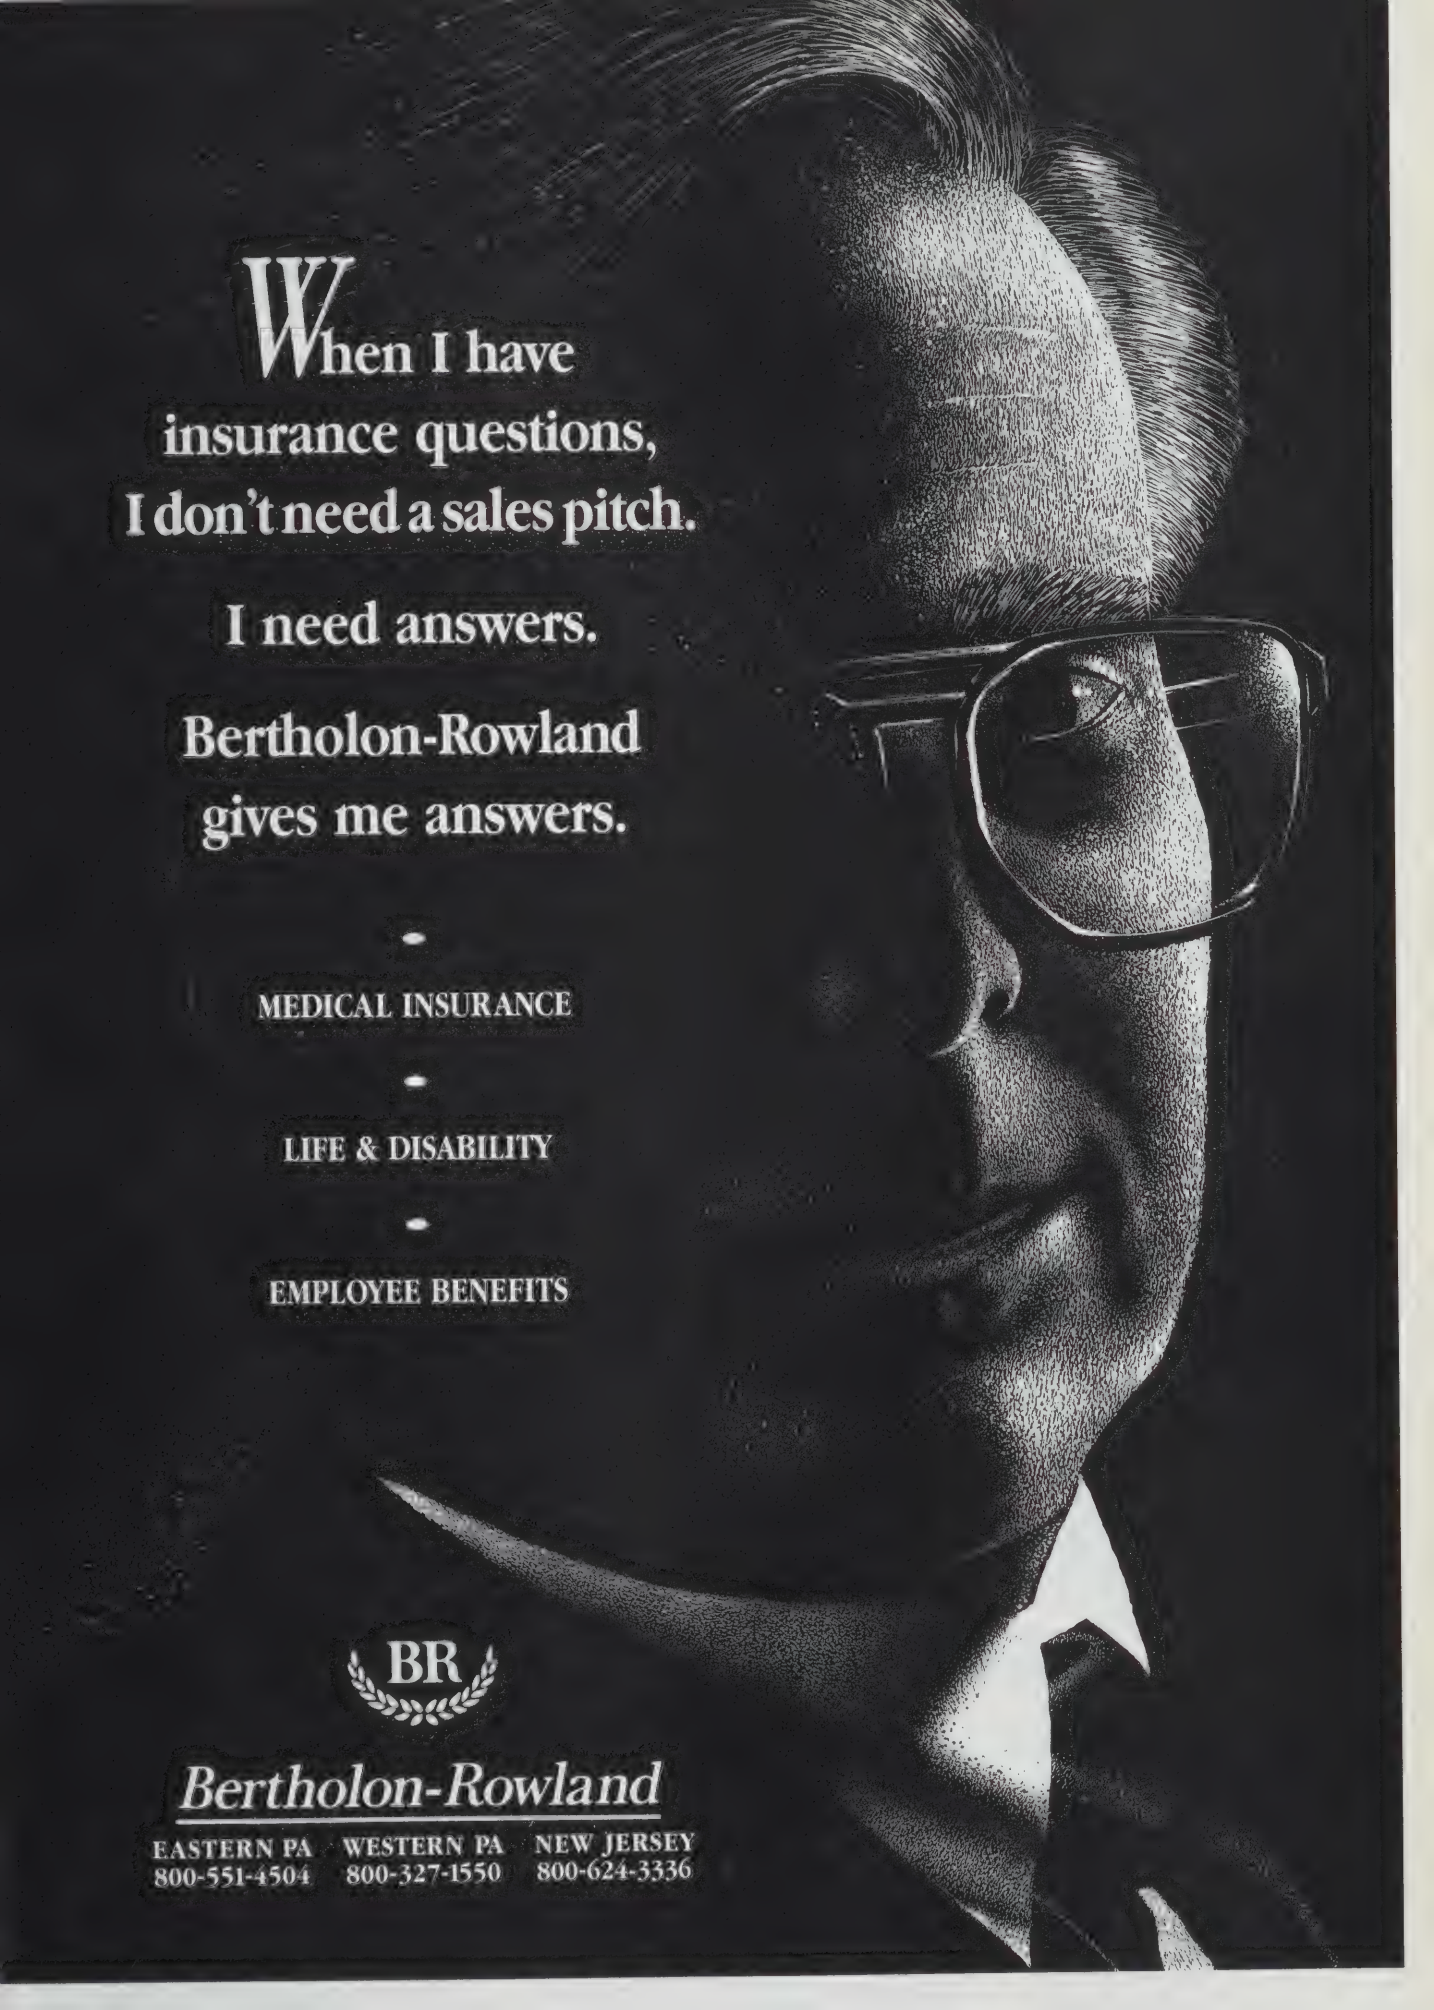
A recent article in *American Medical News* carried the headline, "Family physicians may finally get more respect." The article was about a change in medical college accreditation, recommended by the Liaison Committee for Medical Education of the AMA and the Association of American Medical Colleges, calling for schools to offer medical students experience in family medicine, general internal medicine, and general pediatrics.

Other recent articles in medical publications have focused on the importance of family medicine departments and the need for good primary care role models for medical students. Why all this interest in primary care? The medical community knows that a sufficient number of primary care physicians can help to mitigate future problems of access and cost in our health care system. But does anyone else know it?

"Physicians must stand at the helm of medical care."

About the same time that the accreditation article appeared, I, like most of my colleagues, was sitting down with an office manager to review the new OSHA regulations on bloodborne pathogens. Physicians certainly support appropriate safety measures and quality standards for medical tests and procedures, but most feel that regulations such as these serve to make primary care less and less attractive.

A young physician carrying medical school debts already makes a difficult decision when choosing a lower-paying primary care practice. And the difficulty increases if that student chooses to practice alone. Excessive regulations, such as OSHA's, can do much to further discourage the selection of primary care specialties, especially when applied to small offices where the cost and extent of the measures far exceed the probability of an incident of significant exposure.



Certainly, we understand that a practitioner who chooses primary practice is in a small business, and the physician must understand that up front. As in any private enterprise, there can be no substitute for responsible business practices. We in the medical community can use our own resources and organizations to provide economic advice and practice management training to our young colleagues who embark on a primary care practice. But economic factors beyond our control, such as burdensome costs associated with implementation of excessive regulations, may prevent our efforts from bearing fruit.

It is not in either the patient's best interest nor the medical profession's best interest to have the basic primary care physician network deteriorate, only to be replaced by non-physician practitioners. First and foremost, there are quality concerns. But there are cost concerns, as well. Problems that could be handled at a good primary physician level would instead very likely be referred to a high-tech medical center unnecessarily.

The best thing for our patients is the best thing for our health care system: ensuring a sufficient number of well-trained primary care physicians. We must find ways of taking our insights to the decision-makers who pass bills and promulgate rules that affect our day-to-day practice of medicine. We have already had many successes, large and small, with such issues as RBRVS and clinical laboratory regulations. These examples show what it takes for physicians to succeed in such matters: informed, unified effort. Our strength in dealing with legislators, third-party payors, and others depends on our strength in numbers.

Physicians must become and remain informed about the laws and policies that will affect them; and they must dedicate time, even five minutes a week, to personal contact with legislators and opinion leaders. At the same time, the Society will continue to review and act on all matters that affect the practice of medicine.

Physicians must stand at the helm of medical care. It is vital that all the spectrum of medical care remain under physician direction.

LETTERS TO THE EDITOR

IN PRAISE OF "MALPRACTICE PROPHYLAXIS"

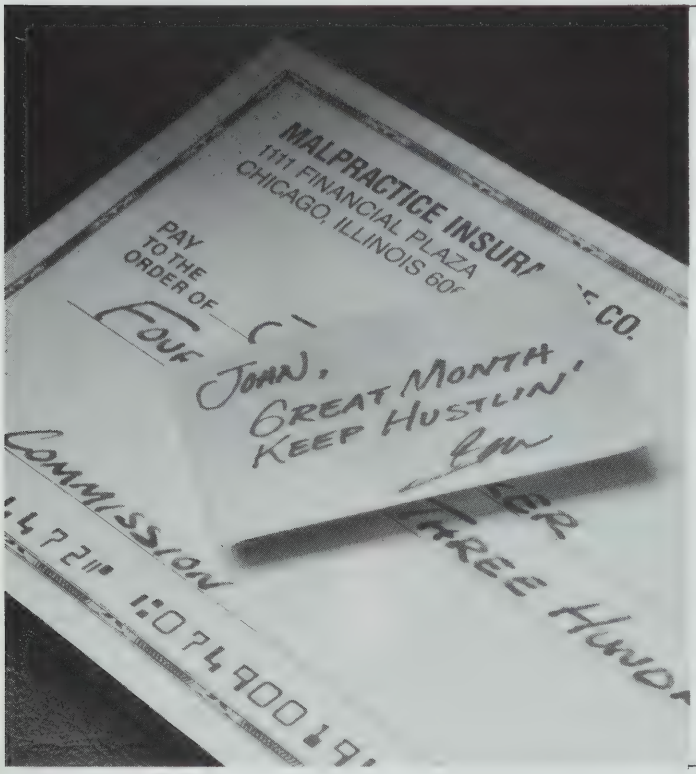
I was delighted to read Dr. George J. Paul's article, "Let's Practice Malpractice Prophylaxis," in the April issue, especially since he is a friend and colleague. Dr. Paul neglected to mention the most important maxim, i.e., "Listen to what your patient is saying." He did say the heart of prophylaxis is communication but did not emphasize the importance of hearing what the patient is trying to tell you. I dare say that if this maxim were strictly practiced, nine out of 10 times, a deficient chart would be of secondary importance because there would be no need for an attorney to read it.

Jack E. Cole, MD
Bethlehem

PAINTING WITH TOO BROAD A BRUSH?

I am an avid reader of your excellent publication, PENNSYLVANIA MEDICINE. However, I must take exception to your editorial called "Law and Medicine: Where the Similarity Ends" [by John W. Mills, MD, March 1992].

It seems to me you are painting with too broad a brush. Just as we all abhor general slurs based on gender, race, or other similar categories, I think we should equally abhor denegrating an entire profession. As both a physician for many, many years and a lawyer for the last five, I can tell you quite frankly that the huge majority of attorneys that I have met and worked with in my career have been very fine people. There is no question but that there is a small minority who do not have any scruples or ethics, and it is a shame that these people are the ones who conjure up the worst images.



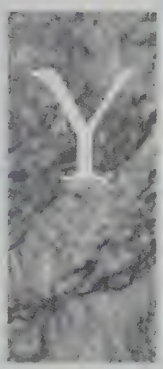
As to advertising, one can only open up any yellow pages directory and see the dozens upon dozens of advertisements by physicians, often in poor taste. Yet, we would not even think about categorizing all physicians based on a few "bad apples."

I fear that this type of editorial just adds to the paranoia and distrust which seems to grow continually between the two professions. It is time to heal and bridge the gap, rather than to further widen it. There are fine and respectable practitioners of both professions, and, in my opinion, they are certainly in the majority. Let's try emphasizing this for a change rather than adding to the anti-legal hysteria that exists today among many medical practitioners.

Andrew Newman, MD, JD
Bala-Cynwyd

Medical Editor's Note: Your comments are not without merit. Both professions do suffer from caricature generalizations. However, my comments relate to the maelstrom in which the medical profession finds itself, especially in Pennsylvania. We have been totally "outgunned" by the legislature and the courts (both controlled by the legal profession) in trying to get significant tort reform via controls that have been legislated in many other states. In addition, our practice of medicine in the Medicare arena is shackled by decreasing fees, more paperwork, and mandated efficiency at the expense of patient communication and risk management. Here Congress runs the show—again, the legislative branch. It should be no surprise to anyone that there is distrust and paranoia on our part. I don't like it, but I have to tell it the way I see it.

John W. Mills, MD
Medical Editor



NO SALESMEN.

A salesman's primary concern is to sell. That's precisely why we don't employ any. Our general agents make no commission, and work exclusively for us. So they spend less time selling, and more time advising, informing and preventing problems for their clients. Their success isn't measured by how well they sell. But by how well they serve. For a different approach to professional liability, call your Medical Protective general agent today.

Understanding Advance Directives and Amendments to Guardianship Law

Susan M. Weber, Esq.

In April, Pennsylvania became one of the last states in the country to statutorily recognize living wills. In addition, Pennsylvania guardianship statutes have been amended. This article describes those changes and informs physicians of their responsibilities when patients have executed living wills or when guardians have been appointed by the courts.

This article will describe the provisions of the Advance Directive for Health Care Act, while a future article will discuss the Durable Power of Attorney for health care.

On April 16, 1992, Governor Casey signed the Advance Directive for Health Care Act ("the Act"), which provides statutory authority in Pennsylvania for living wills, into law. The Act is a result of many years' work by representatives of various statewide constituencies. (See "State Code Remains Silent on Living Will Law Despite Cruzan Case," PENNSYLVANIA MEDICINE, January, 1991.)

Physicians should be aware of the interrelationship between the provisions of the Act and their medical practice. While the new law may not alter the way many physicians relate to their patients, others may find they must develop a new type of partnership with their patients to deal with certain health care decisions.

The federal Patient Self-Determination Act, which became effective December 1, 1991, requires institutional health care providers to inform adult patients of their rights under state law to make health care decisions at the end of life, including the right to accept or reject treatment and the right to execute advance directives. (See "Implementation of Self-Determination Act Begins," PENNSYLVANIA MEDICINE, November, 1991.) Until now, Pennsylvania statutory law has addressed only the ability to nominate a representative under a Durable Power of Attorney for health care. Since the passage of the Advance Directive for Health Care Act, physicians will likely see several types of documents in which patients will make their wishes known.

Under the Act, any person who is at least 18 years of age, or who has graduated from high school or has married, may execute an advance directive related to the "initiation, continuation, withholding, or withdrawal of life-sustaining treatment." The directive must be witnessed by two adults but need not be notarized. Although the Act includes a model directive, declarants may utilize other forms if they wish.

The model directive allows the declarant to set forth choices through a menu format, which includes cardiac resuscitation, ventilation, dialysis, nutrition and hydration, blood transfusions, surgery, invasive diagnostic testing, and the prescription of antibiotics. A declarant may also designate a proxy or surrogate who would make treatment decisions for the declarant.

An advance directive does not automatically go into effect after it has been signed by the declarant. An advance directive becomes operative only after the treating physician receives the directive and determines in writing that the declarant is incompetent *and* in a terminal condition or a state of permanent unconsciousness. The statute defines "incompetent" as the "lack of sufficient capacity for a person to make or communicate decisions concerning himself." Permanent unconsciousness includes both "persistent vegetative state" and "irreversible coma," and is defined as a condition diagnosed to a reasonable medical certainty, under currently accepted medical standards, "as total and irreversible loss of consciousness and capacity for interaction with the environment." A "terminal condition" is defined as an "incurable and irreversible medical condition in an advanced state...which will, in the opinion of the attending physician,...result in death regardless of the continued application of life-sustaining treatment." The standard for the physician's determination that a patient suffers from a terminal condition is also that of a reasonable medical certainty.

The physician must obtain written con-

Ms. Weber is assistant general counsel for the Pennsylvania Medical Society.

One to One.

One to One is a series that invites physicians to ask questions about Pennsylvania Blue Shield. We've designed One to One to be another open line of communication between physicians and Blue Shield. Our goal is to give you the opportunity to ask questions — and to give us the chance to provide more physicians with information about both our Private Business and Medicare operations.

Your questions will be addressed by Joseph A. Ricci, M.D., Blue Shield's Vice President of Medical Affairs. In the first several installments of One to One, Dr. Ricci answers some of the most commonly asked questions about Blue Shield.

If you have a question, please write Dr. Ricci at: Pennsylvania Blue Shield, P.O. Box 890089, Camp Hill, PA 17089.

What is a Medicare Participating Physician?

A Medicare Participating Physician is a provider who has entered into an agreement with the Health Care Financing Administration (HCFA) to accept assignment for all the services he or she provides Medicare patients. The contracts usually run for a 12-month period and are automatically renewed unless a provider requests that it be terminated. In these cases, the provider must give written notice to all Medicare carriers with whom he or she has filed agreements. Providers may only drop their Participating status at the end of their agreements.

What happens when a physician accepts assignment?

When a provider accepts assignment, he or she agrees to accept Medicare's approved allowance as full payment for a service supplied to a Medicare patient. Even non-participating physicians may accept assignment for their Medicare patients on a case by case basis. Medicare will view each claim as a separate contract.

Are there any cases where a non-participating physician must accept assignment?

Yes. Non-participating physicians must accept assignment for all clinical laboratory services, including venipuncture/specimen collection and clinical laboratory fees. In addition, HCFA regulations say all providers must accept assignment for services provided to a Medicare patient who is enrolled in Medicaid.

And, clinical psychologists, physicians' assistants, certified registered nurse anesthetists, clinical social workers, nurse practitioners, clinical nurse specialists and nurse midwives are required to accept assignment on all Medicare claims.

What are the advantages of being a Medicare Participating Provider?

HCFA provides the following incentives to encourage physicians to participate:

- ***Higher fees:*** Fee schedule amounts for Medicare Participating Providers are higher than those for non-participating physicians. In fact, non-participating physicians receive just 95 percent of the fee schedule amount paid to Participating Providers.
- ***Medpard directory:*** Every Medicare carrier publishes a directory — known as the Medicare Participating Physician/Supplier Directory or Medpard — with the name, address and specialty of each Participating Physician who has filed a contract with them. These directories are available to senior citizens and their organizations, to hospitals and to Participating Physicians.
- ***Electronic claims submission:*** Toll free telephone lines are available for Participating Providers to use electronic claims submission — when they file their claims with a personal computer and a modem.
- ***Faster claims turn around:*** Most claims filed by Participating Physicians are processed more quickly than those submitted by non-participating providers.
- ***Medigap piggybacking:*** Medicare carriers forward claims to Medigap insurers, when the claims are filed by a Participating Provider.
- ***Hospital referrals:*** Hospital personnel, when referring a Medicare patient to a non-participating physician, must also, when practical, identify a qualified Participating Physician for the patient.

Pennsylvania
Blue Shield
The right information. Right away.

currence in the diagnosis of a terminal condition or state of permanent unconsciousness from a second physician. Both physicians must document their diagnoses in writing "without delay." The Act does not define the legislature's intent with regard to the use of the term "without delay."

Although the section of the Act which describes when a declaration becomes operative does not require the second physician's concurrence prior to implementation of a directive, a later section implies that a declaration becomes operative only after the second opinion has been obtained. Therefore, until the Department of Health has promulgated regulations, the cautious physician would obtain a second opinion prior to issuing implementation orders.

If a physician is unable to comply with a patient's directive in good conscience, the Act requires him or her to inform the patient and make "every reasonable effort" to assist in the transfer of the patient to another physician. The Act does not define "every reasonable effort." However, it does provide protection from civil and criminal liability and administrative sanctions for the health care provider who is unable to transfer care and who subsequently renders life-sustaining treatment contrary to the provisions of the directive.

"The most controversial provision of the Act is the pregnancy protection provisions."

The physician can avoid this scenario by arranging for patient transfer in advance of a crisis situation. By discussing advance directives with the patient during routine office visits, the physician can address several issues. First and foremost, the physician demonstrates availability to the patient to answer questions, explain terms, and understand the patient's philosophy concerning end-of-life medical care.

Second, the physician and patient can come to an agreement about the patient's desires for terminal care. Third, if differences are irreconcilable, the physician can explain to the patient the need for transfer of care to a physician who can accommodate the patient's wishes.

The statute forbids discrimination against any health care provider for nonparticipation in the withholding or withdrawal of care, but the provider may be required to document objections in writing. Under the Act, "health care provider" includes any person licensed or certified in Pennsylvania to render health care. The Act includes those recognized under the Emergency Medical Services Act.

The Act authorizes EMS personnel to honor advance directives in the field under (or in) one of the following scenarios. In the first, the EMS personnel must receive an original signed declaration. The personnel then must notify the command physician, who issues orders based upon the directive.

The Act does not indicate how the command physician or the EMS personnel are to verify that a declaration has become operative. Department of Health regulations, which have not yet been issued, should clarify this point.

In the second scenario, the command physician issues orders to EMS personnel pursuant to notification by "the attending physician or other health care provider that a valid and operative directive exists." Therefore, any health care provider, as defined in the Act, may notify the command physician about the existence of a valid, operative directive.

When a patient with a valid, operative directive must be transported by EMS personnel for any reason, the attending physician should notify the command physician prior to transport when possible, so that EMS personnel can honor the directive based upon orders received from the command physician,if need be.

The Act further requires that if any conflicting information exists with respect to a declarant's wishes, EMS personnel are to follow established treatment protocols. Thus, where family members cannot agree even in the presence of a valid and operative declaration, EMS personnel will treat the declarant. It is likely that EMS personnel faced with uncertainty as to whether the declaration has become operative will also treat the declarant.

Health care providers must honor a patient's revocation of a directive. The Act provides for revocation at any time and in any manner, regardless of the patient's physical or mental condition. It also provides for criminal prosecution for anyone who forges, falsifies, defaces, or cancels a directive or who conceals knowledge of the revocation of a directive.

Therefore, regardless of a patient's mental status, a physician faced with a revocation of a directive should issue orders cancelling those which implemented the directive. In addition, the Act requires that a revocation be included in the medical record. A written revocation could be physically included in the record, and a verbal revocation could be documented in the progress notes. A physician notified of a revocation should document all pertinent information received, such as the manner in which the revocation occurred, identification of the person who notified the physician, and the circumstances under which the revocation occurred.

The most controversial provision of the Act is the pregnancy protection provision. If a pregnant woman becomes incompetent *and* either terminally ill or permanently unconscious, she must be maintained on life support until the fetus can be safely delivered irrespective of her written directions to the contrary. No physician is required to perform a pregnancy test, however.

The Act provides three circumstances under which physicians are not required to maintain the life of a pregnant woman. The attending physician and an obstetrician must examine the woman and document to a reasonable medical certainty: first, if life-sustaining treatment, nutrition, and hydration would not permit the development and live birth of the fetus; second, if such treatment would be harmful to the woman; or third, if the treatment would cause her pain which medication could not alleviate. The state is required to pay for treatment costs, but has the right of subrogation against health insurance payments.

Guardianship provisions

The Advance Directive Act was passed as part of Act 24 of 1992, which also contains provisions which amend Pennsylvania guardianship laws. Physicians should understand the general concepts embodied in the guardianship provisions as they relate to the practice of medicine.

Under previous law, once a person had been adjudicated "incompetent," he or she was considered incompetent for all legal purposes, including medical decision making. Amendments now provide for varying levels of "incapacity." The amendments define "incapacitated person" as "an adult whose ability to receive and evaluate information effectively and communicate decisions in any way is impaired to such a significant extent that he is partially or totally unable to manage his financial resources or to meet essential requirements for his physical health and safety." The use of the term "incapacitated" in the guardianship provisions appears to be consistent with the use of the term "incompetent" in the Advance Directive Act, discussed above. Physicians should be aware, however, that only a court can make a determination of incapacity for guardianship purposes.

Act 24 does not address whether a living will would remain in effect in the event a guardian has been appointed, and no case law has yet been developed. It is quite possible that once a guardian has been appointed for health care decisions, the living will would become an advisory document only.

The amendments state a preference for limited guardianship, depending upon the nature and severity of the person's incapacity. Courts are required to fashion individual guardianship orders, tailored to meet the needs of the "partially incapacitated" person. Full guardianship is recommended only when the person is "totally incapacitated." Guardians must encourage participation by the incapacitated person to the maximum extent possible in all decisions which affect the person, and to act on the person's behalf when able.

Thus, physicians will encounter patients who are incapacitated for some purposes but not others. For example, some persons may require guardians for financial purposes but are able to comprehend medical conditions and make personal health care decisions. Partially incapacitated persons retain all legal rights except in those areas in which the court has vested guardians with responsibility. Nevertheless, physicians may experience situations in which persons who are incapacitated for health care decision purposes participate to some extent at the request of the court-appointed guardian.

Unless a court specifically grants certain powers to a guardian, he or she may not make some decisions without court approval. For example, a guardian may not consent to "abortion, sterilization, psychosurgery, electroconvulsive therapy, or removal of a healthy body organ" on behalf of an incapacitated person. Similarly, a guardian may not consent to the participation in an "experimental biomedical or behavioral medical procedure."

The amendments prohibit courts from granting certain powers to a guardian which are governed by other statutes, such as the power to admit the incapacitated person to inpatient psychiatric units or state facilities for the mentally retarded, or to relinquish the person's parental rights.

The statutory amendments discussed in this article require that physicians understand not only patients' wishes concerning medical care, but also their varying decision-making capacities. For the most part, these new requirements will not alter individual physicians' practice of medicine. In certain circumstances, however, some physicians may find that they must develop new and hopefully more satisfying relationships with their patients.

NOTE: A bill is now under consideration in Pennsylvania to change the effectiveness date of the guardianship provisions from June to September 15.

Living Will Brochure Available

The Society has redesigned the brochure "Dignity in Life, Dignity in Death." It is consistent with the Advance Directive for Health Care Act and contains a living will, proxy designation clause, and a wallet card which identifies where an individual's living will can be obtained. Physicians who wish to receive copies of the brochure for patient distribution should contact the Division of Communications and Public Affairs at Society Headquarters in Harrisburg.

LIVING WILL BROCHURE AVAILABLE

"Suppose I'm in an accident. I'm in a coma, on life support. Decisions must be made. Would my family know my choices?"

This is one question your patients may be asking you, now that Pennsylvania has passed the Advance Directive for Health Care Act. As a physician, you are responsible to help them with the "living will" process and their decisions. Are you prepared to do so? Why not let your State Society help?

The Pennsylvania Medical Society has revised its living will brochure to reflect the Commonwealth's new act. Designed for your patients, the brochure:

- describes how to prepare a living will;
- includes a model living will;
- answers questions, such as "What do I do with my living will?" and "What if I change my mind?"; and
- provides a wallet card which, when completed, serves as notification that a person has signed an advance directive and indicates where a copy can be obtained.

Physicians: By helping patients prepare a living will, you can help them communicate their views about artificial support to you and their family members. In a sense, the document speaks for them when they can no longer speak for themselves.

How to order

Physicians can order brochures by using the order form below. State Society members may receive up to 100 copies of the brochure free-of-charge upon request; printing and shipping costs will be charged for quantities of more than 100 brochures. The general public may obtain individual copies free-of-charge by sending a stamped, self-addressed envelope to the Society with a note requesting one brochure. Larger quantities may be purchased by nonmembers upon request.

For more information, call the Pennsylvania Medical Society Division of Communications and Public Affairs at (717) 558-7750 or 1-800-228-7823.

PENNSYLVANIA MEDICAL SOCIETY
MEMBER REQUEST FOR PUBLICATION

Send me, at my cost, an additional supply of your publication entitled *Dignity in Life, Dignity in Death*, in the quantities I have indicated below. I will make no additions or deletions and will not alter the publication in any manner. If I desire to add my name as a distributor, I will obtain written permission from the Pennsylvania Medical Society.

❒ I have not received the 100 free copies available to members. ❒ I have received the 100 free copies available to members.

THIS FORM MAY BE DUPLICATED

With Princeton, you're in good company.

More than 19,000 medical and health care professionals have chosen Princeton Insurance Company for their professional liability insurance coverage. Here are some reasons why:

- **A solid track record.** Princeton has a decade of experience providing professional liability insurance coverage to physicians, and A.M. Best has ranked us (with our parent company) among the 20 largest medical malpractice insurers nationwide since 1983.

- **Financial strength.** Our loss reserves are carried at full value, not discounted in the hope of earning sufficient interest income to pay claims. We maintain a high quality/low risk investment portfolio, with no junk bonds, no common stock and no real estate speculation. And we've earned a claims-paying ability rating of "A" from Standard & Poor's.

- **Coverage options.** Tail coverage is included in the purchase price of Princeton's innovative *Occurrence Plus* policy. A standard claims-made policy is also available, and we offer excess liability coverage (limits up to $5 million) to Pennsylvania physicians regardless of which company writes their primary coverage.

- **Strong defense against claims.** In a typical year, more than 90 percent of the Princeton-managed cases disposed of by the courts are resolved in the policyholder's favor.

It may be easier than you think to change insurance companies. Call today to find out more or return the coupon to receive a copy of our brochure, "It's Princeton's Specialty."

Plans Proceed to Publish Physician-Specific Data

John A. Malcolm Jr., MD

Physicians should be aware that the release of physician-specific information by the Pennsylvania Health Care Cost Containment Council (PHC4) may have a significant impact on decisions made by patients or potential patients. This article, which outlines PHC4's proposed Research Plan about coronary artery bypass graft (CABG) surgery and related issues, is a follow-up to "First Report Card for Physicians Due This Summer" [PENNSYLVANIA MEDICINE, May 1992].

The Pennsylvania Health Care Cost Containment Council (PHC4) released on April 22 its proposed Research Plan, which details in varying depth the methodologies and techniques to be used by the council in selecting and utilizing risk-predictive factors for coronary artery bypass graft (CABG) surgery patients. The Research Plan was reviewed by the State Society's Task Force on Health Care Cost Containment, as well as independent statisticians and leadership of the Pennsylvania Association for Thoracic Surgery. Comments were also offered by several members of the newly formed PHC4 Technical Advisory Group—three of whom are MDs.

The comment period for the Research Plan ended May 15. A variety of significant points concerning statistical methodologies, validation procedures, epidemiology, etc., were raised by reviewers and will be addressed when the final version of the Research Plan is released. The risk-adjusted mortality/morbidity ranges for hospitals and physicians as developed from the Research Plan are due for review this month.

The following risk-adjustment factors for predicting "expected patient deaths" (mortality) are proposed by PHC4's Research Plan:

- patient demographic factors—age and sex;
- admission clinical factors—admission severity, elective or urgent admission, urgent transfer from another hospital, surgery performed by third day, presence of mechanical device aiding heart function, and failed angioplasty;
- pre-admission clinical factors—comorbid conditions, such as recent acute myocardial infarction, congestive heart failure, diabetes mellitus requiring insulin, hypertension, previous CABG procedure, or unstable angina; and
- anatomical disease factors—the presence of multiple coronary vessel disease.

The list of risk-predictive factors for "medically unstable" (PHC4 surrogate for major morbidity) is the same as mortality less "surgery performed by third day." Similar but not identical risk-predictive factors were used in previously published CABG surgery reports in New York and New Jersey, although greater emphasis was placed on left ventricular function and/or functional cardiac classification by those states. The methodology to be used in Pennsylvania does not capture functional cardiac classification data.

The PHC4 report on CABG surgery will have several sections, including general statewide statistics, specific hospital statistics, and specific physician/physician practice group statistics. The most voluminous portions of the report will cover hospitals, largely because charge data and individual risk factor comparative data will be reported only for hospitals. Several bar graphs detailing comparative case volumes and average charges will be included displaying very substantial ranges between the highest and lowest hospitals. Hospital administrative personnel and physician staff will likely be expected to meaningfully discuss this data, including charges.

For physicians, the most poignant part of the report will be the physician and physician practice group data. Originally the PHC4 staff indicated that mortality/medically unstable data would be reported only for hospitals and physician practice groups. However, in May they indicated a significant change by ten-

Dr. Malcolm, a pathologist from Sunbury, is chairman of the Society's Task Force on Health Care Cost Containment and a member of the Joint Committee on Health Care Data of the State Society, the Pennsylvania Osteopathic Medical Association, and the Hospital Association of Pennsylvania.

tatively considering inclusion in the report of statistics for individual operating surgeons doing more than 29 cases in 1990.

One factor entering into the decision to consider publishing individual physician statistics was the finding that one quarter of the 205 operating surgeons doing CABG surgery in Pennsylvania were independent practitioners. Hence, they would be excluded if published mortality/medically unstable statistics were limited to physician practice groups of more than one. Conversely, if independent surgeon practitioners were considered the same as a practice group, their mortality/medically unstable statistics would be published, while individual surgeons in large groups would not have their statistics published.

This development has raised additional concerns—addressed in recent newsletters of the Joint Committee on Health Care Data—by the task force, joint committee, and cardiovascular surgeons. In order to know the issues and their current status, physicians should contact their Hospital Medical Staff Section (HMSS) representative or medical staff president for copies of the newsletters.

The recommended final draft report format by the PHC4 Data Committee lists physician practice groups and their component cardiovascular surgeon members under the hospitals where they performed CABG surgery, and surgeons performing CABG surgery at more than one hospital are denoted. Hospitals in which CABG surgery is performed are grouped two ways: 1) by geographic location in Pennsylvania—eastern, central, or western; and 2) over the objections of physicians, by whether their 1990 mortality statistics are greater than, the same as, or less than predicted by the methodologies proposed in the Research Plan.

Hospitals, physician practice groups, and physicians may comment on *their* statistics prior to the release of the report. All such comments will be published and sent with the report to involved hospitals and physician practice groups to coincide with the date of public release of the report. Comments will also be distributed with copies of the report to the media at the official press conference announcing the public release of the report. The joint committee has published some recommendations for surgeons and their practice groups about the comment procedure in the May issue of its newsletter.

Several hospitals and their cardiovascular surgeon groups have filed grievance procedures with PHC4 about the pending report; such actions continue. The Society will publish updates on those actions and the CABG surgery report in future issues of its publications. In the meantime, "it ain't over 'til its over!"

YOCON®
YOHIMBINE HCl

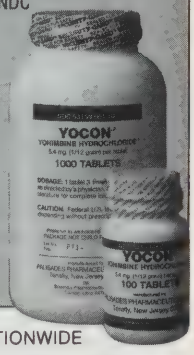
Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatic. It may have activity as an aphrodisiac.



Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

SOCIETY ADDRESSING BLUE CHOICE CONCERNS

The Society has been working with the Pennsylvania Department of Health (DOH) to resolve a number of the Society's concerns with Pennsylvania Blue Shield's new Blue Choice program.

Blue Choice is essentially a preferred provider organization (PPO) with two gatekeeper options. Under the lock-in option, the enrollee is locked into one gatekeeper for primary care and referrals. Under the passive option (or panel approach), the enrollee may use any participating gatekeeper.

DOH has approved the Blue Choice provider contracts and the passive option; however, they have not yet approved the lock-in option. Mellon Bank and Duquesne Power and Light, the first two companies to enroll with Blue Choice, switched their coverage to the Blue Choice passive option as of January 1 of this year.

Last year, the Society filed a formal complaint with DOH protesting Blue Shield's solicitation of physicians to sign provider contracts before the contracts had even been approved. DOH has since directed Blue Shield to obtain new contract signatures from primary care providers (PCPs)—the gatekeepers. Blue Shield has also agreed to provide a window period for specialists to cancel their participation.

DOH has also been responsive to other Society concerns. Major successes to date include:

- The lock-in gatekeeper option must meet the same quality of care oversight standards as a health maintenance organization (HMO), including an external quality audit. Blue Shield has volunteered to apply these same standards to the passive gatekeeper option.
- The lock-in option must meet the same accessibility and availability standards as an HMO. Blue Shield has volunteered to apply these same standards to the passive option.
- Blue Choice must pay its participating physicians on a fee-for-service basis and cannot tie their reimbursement to their utilization—i.e., holdbacks, bonuses, and creeping capitation are prohibited.

The Society and DOH are also closely reviewing the Blue Choice "efficiency" credentialing process. As currently proposed, physicians will be assigned points based upon utilization and cost profiles, and be excluded if their point totals exceed a designated cut-off. While excluded physicians are provided a limited opportunity to appeal their exclusion, the current proposal does not require Blue Shield to prove excluded physicians were inefficient through a case-by-case review of their care.

The Society will continue to press for resolution of the remaining concerns and keep its membership advised of new developments. Future Society publications will outline the terms of PCP and specialist provider contracts. In the meantime, Society members with questions about Blue Choice may contact the Council on Medical Economics staff at 1-800-228-7823.

HCFA FURTHER EXTENDS USE OF "OLD" 1500 FORM

As a result of a joint lobbying effort of the State Society and the AMA, the Health Care Financing Administration (HCFA) has extended the deadline for accepting the old (1-84) edition of the HCFA 1500 form. Previously, HCFA announced that as of May 1, 1992, it would only accept the new (12-90) form. HCFA has now agreed to a 60-day grace period.

Both editions of the HCFA 1500 form will be accepted through June 30, 1992; and claims received by Pennsylvania Blue Shield, Pennsylvania's Medicare carrier, on or after July 1, 1992, must be on the new (12-90) edition. When using the old (1-84) form, the completion requirements applicable to the old edition must be used. For example, new place-of-service (POS) codes should not be used on the old (1-84) edition. When using the new (12-90) edition, all requirements applicable to the new edition, such as the new POS codes, must be used. Also, HCFA has said that the 60-day grace period does not apply to "superbills."

The Society and the AMA had asked for the grace period because physicians who electronically print their claims were encountering problems complying by May 1.

MEDIGAP "PSYCHIATRIC" PROVISIONS REVIEWED

The Society in April provided to the state Insurance Department comments about a proposed Medicare Supplemental Insurance regulation published in the March 28 *Pennsylvania Bulletin*. According to the Society, "the proposed regulation will create confusion regarding the extent to which Medigap insurers are obligated to pay the copayment for outpatient psychiatric services."

As a general rule, Medicare Part B pays 80 percent of the Medicare allowance after the deductible has been satisfied; the beneficiary is responsible for the remaining 20 percent copayment. The problem stems from the unique copayment applicable to outpatient psychiatric services which can equal up to 50 percent of the Medicare allowance.

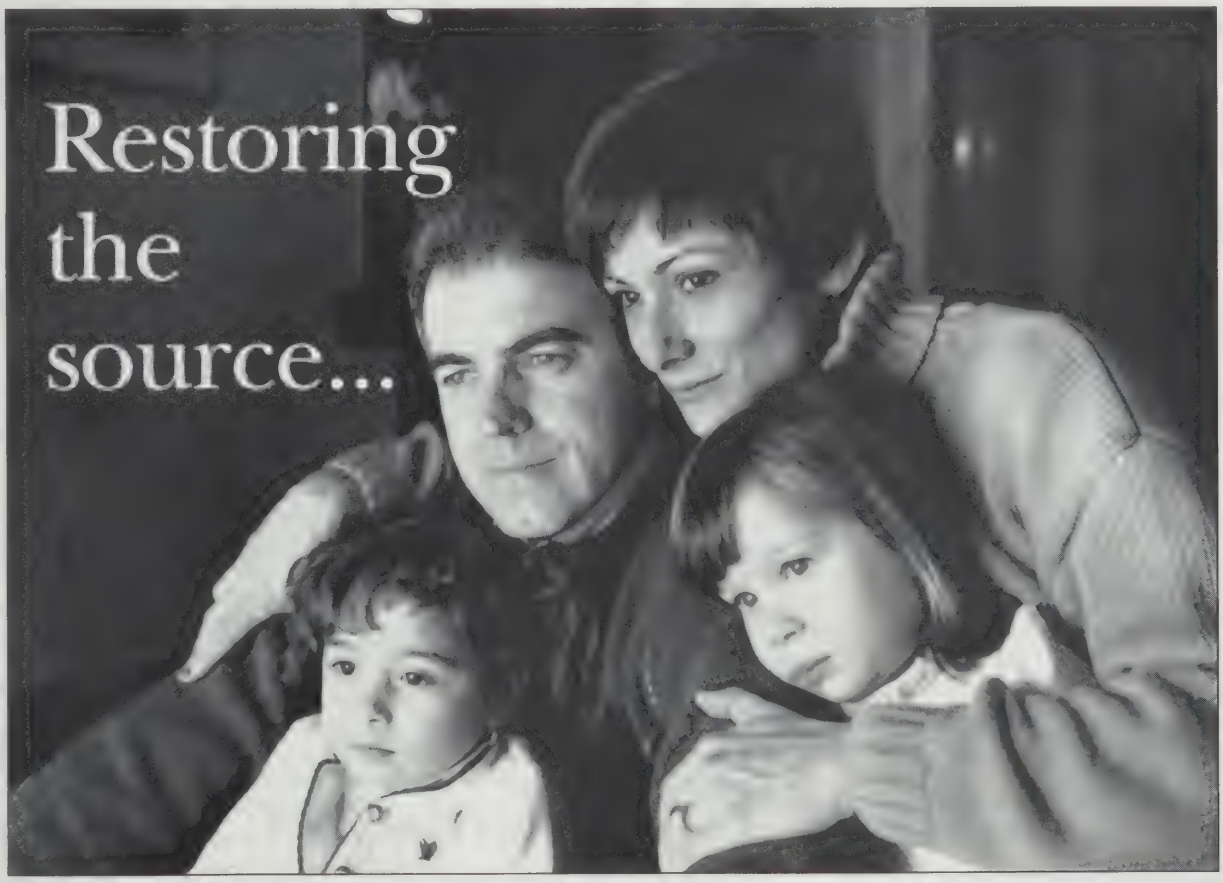
In the past, it was not always clear whether a Medigap policy was required to pay the full copayment; and even in cases where the policy clearly required payment of the full copayment, some insurers did not pay the full amount due.

In an effort to address current confusion—caused by regulations—the State Society, in its comments, recommended that the Insurance Department revise the proposed regulations to clearly state that a Medigap insurer must pay the full copayment (which can reach 50 percent of the allowance) in the case of outpatient psychiatric services.

The American Psychiatric Association (APA) is working with the National Association of Insurance Commissioners to clarify the situation. The Society is coordinating with the APA's Pennsylvania chapter to pursue further clarification of the copayment requirements.

HMO RULE ADDRESSES SOCIETY CONCERNS

The Independent Regulatory Review Commission (IRRC) in mid-April approved a final rule, relating to health maintenance organizations (HMOs), published by the Insurance Department in March. The rule incorporates many of the State Society's original concerns with the proposed regulation.



The new regulation, which went into effect immediately after IRRC approval, includes several consumer-protection measures designed to strengthen the financial condition of HMOs and protect subscribers of insolvent HMOs. Specifically, it requires existing licensed HMOs

which do business in Pennsylvania to increase their capitalization from $100,000 to the new requirement of $1 million. New HMOs will be required to have $1.5 million in capital prior to receiving a license. The regulation also requires:

- each HMO to deposit $100,000 with the state Insurance Department to cover administrative costs in the event of insolvency;
- each HMO to provide subscribers with benefits for the period for which premiums have been paid in the event of insolvency;
- each HMO contract to include a "hold harmless" provision which states that subscribers cannot be held responsible for health care bills in the event of insolvency; and
- insurance companies attempting to pick up the business of an insolvent HMO to offer subscribers the same benefits at the same rate charged by the HMO.

Among the Society's concerns was the need for clarification of the "hold harmless" language in the proposed regulation. The final regulation includes such clarification, making it clear that physicians can collect co-payments and deductibles due from the patient. In addition, the department confirmed the Society's concern that proposed "continuation of benefits" language cut off a provider's obligation at the date of the patient's discharge or the expiration of the premium period, whichever occurs earlier.

One issue which the Society protested still remains: the order of distribution of assets. The Society commented that physicians should be placed ahead of general creditors in the order of distribution of assets. However, the department contended that priorities for distribution are mandated by statute rather than regulation, and that they did not have the authority to change the order.

SENATE TO VOTE ON WORKERS' COMP

The full Senate, at press time, had not yet acted on a bill to reform the state's workers' compensation fees using the federal workers' compensation fee schedule as its base. As the expected vote neared, Society leaders, who oppose linking workers' compensation reform to Medicare, were brought onto the hill to keep the pressure on the legislature.

House Bill 2140 originally passed the House of Representatives capping workers' compensation reimbursements using 113 percent of Medicare as a fee schedule. Following several months of intensive lobbying from health care providers, the bill was amended (9-2) by the Senate Labor and Industry Committee in early April, replacing Medicare with a cap of 80 percent of the federal Office of Workers' Compensation Programs (OWCP) fee schedule. The amended bill was then reported out of the Senate Appropriations Committee by a 15-1 vote.

In a May 4 press conference, Governor Robert P. Casey threatened to veto any workers' compensation bill which reached his desk without the Medicare link. He claimed the cost of the "doctor/hospital plan" was 60 percent more per procedure than 113 percent of Medicare; and he referred to a report of the Pennsylvania Compensation Rating Bureau (PCRB) which estimated that using the federal fee schedule would *increase* workers' compensation medical costs by 15 percent. His plan, Casey asserted, would *save* an estimated 25 percent.

The Society responded immediately, challenging the validity of the PCRB data and communicating the Society's concerns about the potential impact excessive cuts would have on the health care system. The Society distributed a cost analysis by Ernst and Young estimating the Society's proposal would save a minimum 19 percent in payments to non-hospital providers and an average 23.5 percent in annual workers' compensation payments to hospitals. As the Senate vote neared, the Society and the Hospital Association of Pennsylvania (HAP) provided copies of the analysis to members of the legislature.

State Society President Robert N. Moyers, MD, in a letter to Governor Casey, further addressed the issue: "Data being provided by private insurers, which have a $1/2 billion stake in the issue, are suspect...for example, in one recent [meeting]...it became absolutely clear that the insurer's data were terribly flawed and totally unusable for use in making any statewide comparisons or projections." Fearing the state may be using flawed data in its projections, the Society asked Casey to release data on the State Workmen's Insurance Fund. Two prior requests for the information were unanswered.

On the day following the governor's press conference, the Pennsylvania Chamber of Business and Industry held a "special event" on workers' compensation in Harrisburg. The intent of the program was to allow members of the chamber, in an attempt to develop a position on the medical alternatives of a workers' compensation system, to hear arguments from proponents of the two leading proposals: the federal workers' compensation schedule and the governor's Medicare schedule. Members of the panel included representatives of the Society, HAP, the insurance industry, small business, the PCRB, and the legislature. The program was well-attended by Pennsylvania employers. According to Society representatives in attendance, "Business is sympathetic to the medical community, but it needs savings."

SOCIETY COMMENTS ON SELF-DETERMINATION RULE

On behalf of the State Society, President Robert N. Moyers, MD, in a letter to the Health Care Financing Administration (HCFA), commented about the interim final rule on advance directives published in the March 6 *Federal Register*.

The regulations were promulgated by the Patient Self-Determination Act (PSDA), established by Congress as part of the Omnibus Budget Reconciliation Act of 1990 (OBRA '90). The PSDA became effective on December 1, 1991, and requires certain Medicare- or Medicaid-reimbursed health care entities to provide adult individuals with information about their right to direct and participate in decisions concerning their health care.

The Society stated three concerns in the letter and recommended, as clarifying language, that the final regulations include: 1) a definition of "adult individuals" which would include, for example, minors permitted under state law to make decisions concerning their medical care; 2) allowances for alterations to the written policy explaining the provider's conscientious objections to advance directive provisions based upon case-by-case determinations of issues not previously considered by faculty; and 3) a 60-day compliance time to allow for appropriate changes in provider policies and procedures.

After considering comments and recommendations from the Society and other responding organizations, HCFA will work to finalize the regulations.

"NEW PHYSICIAN" BILL FOR U.S. INTRODUCED

New efforts to repeal the inequitable Medicare payments for "new physicians" have been introduced in the U.S. Senate (S.2362) by Senator John McCain (R-Arizona) and in the House (H.R. 4507) by Representative Edolphus Towns (D-New York).

Presently, Medicare pays physicians in their first year of practice 80 percent of the amount determined by the resource based relative value scale (RBRVS) formula, while physicians in their second year receive 85 percent, in their third year receive 90 percent, and in their fourth year receive 95 percent.

The new legislation asks for equal payment to all physicians and contains budget neutrality language which directs the Secretary of Health and Human Services to make reductions in aggregate Medicare payments to offset the increased spending.

State Society trustees voted to support all legislative activity to help resolve this inequity and has sent their sentiments for strong support to the AMA. Now is the time for physicians to write to their U.S. senators and representatives in support of these budget-neutral proposals.

PHYSICIAN

The Westinghouse Bettis Atomic Power Laboratory is seeking a full-time Physician seriously interested in Occupational Medicine.

Responsibilities will include the medical services provided to the Laboratory, such as routine medical examination and emergency service. The Physician must be licensed to practice medicine in the Commonwealth of Pennsylvania or be eligible to become licensed in Pennsylvania. Experience in Occupational Medicine and Radiation Health will be helpful. Board Certification in an appropriate speciality is preferred.

The Bettis Atomic Power Laboratory is located in West Mifflin, PA. (approximately 15 miles southeast of Pittsburgh). Pittsburgh offers pleasant suburban living and extensive cultural and recreational facilities.

U.S. CITIZENSHIP REQUIRED.

Normal working hours are 8:00 AM to 4:45 PM, Monday through Friday. All Westinghouse employees enjoy a full range of benefits that are among the finest in the industry.

Interested Physicians should forward their curriculum vitae to:

Manager of Employment
Department PM-692
Westinghouse
Bettis Atomic Power Laboratory
P.O. Box 79
West Mifflin, PA. 15122-0079

Operated for the Department of Energy
by the Westinghouse Electric Corporation.

Health Views from the Senate: Part Two

Maria T. Montesano
Assistant Managing Editor

Senator Dawida is a Democrat representing Pennsylvania's 43rd District, including part of Allegheny County. He is currently serving his first term in the Senate and is seeking re-election this year. Senator Dawida is minority chairman of the Finance Committee, and a member of the following committees: Public Health and Welfare, Banking and Industry, and Urban Affairs and Housing.

This interview was conducted by Miss Montesano, in cooperation with the State Society's Department of Governmental Affairs Division of Legislative Affairs, Larry L. Light, director.

In this second of three interviews with members of the general assembly, Senator Michael M. Dawida talks about the Clean Air Act, living wills, and how physicians can be more involved in the political process.

Question: *Pennsylvania has some restrictions on smoking in public. In relation to that, I have a three-part question for you. First, how difficult was it for Pennsylvania to get where it is? Second, what do you think is doable? And third, where would you like Pennsylvania to be in the future?*

Senator Dawida: It took almost 10 years for the state to enact any meaningful restrictions on smoking. It was extraordinarily difficult, because the tobacco institute is devoted to [opposition to] the issue, and the groups that are for it, such as medical doctors, are interested in a broader range of issues. The tobacco institute has a lot of money and a very single-minded interest. It's always hard to beat someone who has a single-minded interest; it's easier to defeat things than it is to pass them in our legislative process.

[After passage of the Clean Air Act,] I wanted to sit back for a couple years, let it digest, and get people used to a new way of living. What we essentially did was change a presumption in people's minds. The presumption always was, "You can smoke wherever you want; and if you want to breathe clean air, you've got to find it." We're trying to get the public to say, "Clean air is a right, and you smoke where we tell you to."

Fewer and fewer adults are smoking; in the future, [we'll have] a much broader public base with a much clearer understanding of what smoking does to you both directly and indirectly. I hope to go further...to expand on where we are and to make the rules and regulations much tougher.

Question: *Linked to that issue is medical liability reform. What are your thoughts on such reform?*

Senator Dawida: The public needs to understand that there's a trade off [with medical liability]: the higher malpractice rates you have, the more likely costs are going to go up for medical care because that doctor has to pass that cost on, some way, some how.

It is absolutely appropriate if somebody is harmed by a doctor that the doctor pays for that person's suffering. The question is, "At what point are doctors at fault?" We have developed a system that is harsher and comes close to saying, "You're at fault because you are a doctor," rather than "because you did something wrong." We need to change that system; we need to lower medical costs.

Question: *Let's turn to the living will bill. What were your thoughts on the bill, and what was the hold-up?*

Senator Dawida: I was one of the people most *for* living wills. The hold-up was clearly the pro-life groups who felt that pregnant women should not be allowed to have a living will. That is a very emotional issue which has almost nothing to do with living wills, [but] these groups are respected and powerful and were able to hold up the process while their concerns were reviewed.

The issue of nutrition and hydration was the first difficult hurdle. At what point is it appropriate to remove that? Well, "not too often" is the answer to that. The easier question, although still a very painful and difficult one, was at what point do you take people off machines? That's where you need instruction from the person artificially sustaining life. Most people agreed with that, but it's still tough because you're talking about life and then death.

Finally, all those obstacles were removed, and it came down to one obstacle—the pregnant woman. This probably won't even come up four or five times a year. But because it's such an emotional issue—because we've allowed abortion to become such a central, political battle—*it* became the battle instead of what was going to be

"It's a tenuous idea to require hospitals to do something that by law may be illegal in Pennsylvania. Technology has created a whole set of problems that didn't used to exist."

helpful to a couple million senior citizens who unanimously are for it.

The compromise is unsatisfactory to the pro-choice advocates, but...they had to take it...We were one of the last states—I think the next to last—to pass a living will bill, even though there are federal court orders that have hospitals giving this to everybody. It's a tenuous idea to require hospitals to do something that by law may be illegal in Pennsylvania. Technology has created a whole set of problems that didn't used to exist.

Question: *Are there any other health issues you would like to talk about?*

Senator Dawida: Public health in general needs revitalized, and that's an issue we all have to face. Within three to five years, if we haven't settled our problems on how to give people access to health care and settled some of our more pressing public health issues, we're going to have a revolution...with legislature or the federal government saying, "This is the way it's going to be." Doctors aren't going to like it; hospitals aren't going to like it; the public's only going to like it to some degree—but because our public health policies are thought to not be working, we're going to have to move.

Question: *What is your view on how physicians can best get involved in the political process?*

Senator Dawida: I think doctors have failed in a number of ways, some their fault and some maybe not their fault. The first and the most important is that they all live in the same neighborhoods...That is different than the doctors of just two decades ago who used to live in *every* neighborhood...We had Doc Sexauer in my neighborhood...He was the kind of guy that everybody in the community respected. You went to his house to get his service...and if he was *for* something, I'd be inclined to be for it simply because I know he had the welfare of that community at heart.

Those people don't exist anymore; all the doctors in my senatorial district live in one neighborhood. The difficulty of that problem, of course, is that you can't tell people where to live, and I am not suggesting that we should. It does, however, make involvement more difficult, and getting involved is what this is all about. So they [physicians] have to start getting involved in a more direct way, or this revolution that I talked about is going to happen *to* them.

Question: *Do you hear from the physicians in your senatorial district?*

Senator Dawida: I didn't until very recently. This workers' comp issue is the first time I've seen genuine, "real-live" doctors talking to me in a real way; talking about the issue, what it meant to them, how they needed to serve these people, and so on. It was the first time I'd seen them in 14 years.

Question: *Do you think that will continue?*

Senator Dawida: I would guess, because if it doesn't, their role in our society will change. To give you a real good example, doctors are not treated in this country the way they are everywhere else. [In other countries] they have some social respect, but they don't get the financial rewards that are so evident in this country. That should be a warning that there are other ways to do business. Maybe not better in the long run, but the public is angry at what they perceive as not getting the proper service, paying too much money, not having enough access.

In my district there are 52,000 senior citizens registered to vote. Now, I found 20 doctors. There's no contest—52,000 senior citizens against 20 doctors? Who do you think I should vote for?

Doctors must become much more involved in a personal way. Lobbyists can do a lot of things, but one of the most important things doctors can do is provide information on how things can be best done. They're the experts; they have to get involved in the grassroots in their communities and the political world...[and] the way to get involved is to *get involved*, not just sit on the sidelines.

Question: *And I'm assuming, not just through letter writing?*

Senator Dawida: Particularly not just through letter writing where their secretary types what is written for all of them by your organization. There's some value to that, but that's not the whole ballgame. The ballgame is to get to know, first of all, *who* your legislator is, and maybe personally become his or her expert.

The [state] budget is almost 5,000 line items, each one representing a different issue. I admit to maybe knowing 300-500 issues really well, but I've got 5,000 issues... A doctor who gets to be well-respected by his or her legislator can really make policy or help move policy just by being that person's friend or at least advisor. That can really happen if doctors get involved.

NEXT MONTH

Why buy an office automation system that doesn't offer a long-term solution?

ACCLAIM™ from Sentient is the total system solution.

A lot of medical practices are planning to invest in an office automation system. But a lot of the systems out there just don't offer the comprehensive functions and long-term expandability that your practice may need.

IBM® and compatible hardware.

The ACCLAIM system operates on IBM and compatible hardware, so you know you're getting the quality standard of the industry. And it's completely expandable, so it can grow as your practice grows.

Long-term support.

ACCLAIM is the system solution that fits your needs today. And Sentient's software engineers, customer trainers, and telephone support people are always there to make sure your system fits your needs over the years to come.

Easy to operate.

Even if your staff has no previous computer experience, ACCLAIM is simple to operate effectively and efficiently. Complete training is included in the purchase.

When you're thinking about office automation, call Sentient first, and find out what ACCLAIM can do for you.

An Update on Lyme Disease in Pennsylvania

Dale Tavris, MD, MPH

With incidences of Lyme Disease increasing annually throughout the Commonwealth, physicians need to be reminded of its diagnosis, transmission, and control.

When Lyme Disease first became reportable in Pennsylvania in 1987, 29 cases were reported. That number has risen every year since, with 271 in 1988, 668 in 1989, 767 in 1990, and 922 reported so far with disease onset in 1991. Pennsylvania's total of 2,733 reported cases is fifth in the U.S., behind New York, Connecticut, New Jersey, and Wisconsin.

The highest incidence of Lyme Disease in Pennsylvania has occurred in the southeast and the northwest around Elk County. Of total reported cases in Pennsylvania, the three contiguous southeastern counties of Bucks (375), Montgomery (492), and Delaware (411) have accounted for 47 percent.

Diagnosis

The diagnosis of Lyme Disease is problematic, since there are no highly accurate and commercially available laboratory tests. For surveillance purposes, the Pennsylvania Department of Health uses the case definition recommended by the Centers for Disease Control (CDC). It specifies either a physician diagnosis of the characteristic rash, erythema chronicum migrans (ECM), or a positive antibody test in association with one or more of the typical secondary or tertiary manifestations of the disease, including the cardiac or neurological manifestations or arthritis. However, this case definition should not serve as a hard-and-fast guide to physicians in their decisions regarding treatment. At times, because of the lack of reasonable alternative diagnoses, it may be appropriate to use a trial course of antibiotics effective against Borellia burgdorferi, the spirochetal bacteria which causes Lyme Disease, even in the absence of case definition criteria.

The problem is the various antibody tests used for Lyme Disease diagnosis are neither very sensitive nor specific, and they are characterized by a good deal of interlaboratory variability. They are therefore characterized by many false-positive and false-negative results, and they do not differentiate between acute versus remote, inactive infection.

Except for ECM, the most common manifestations of Lyme Disease—including arthritis, atrioventricular block, and neurologic manifestations (aseptic meningitis, cranial nerve palsies, and peripheral neuropathies)—are so commonly seen in other conditions that they are not much help alone in the diagnosis of Lyme Disease. ECM develops from two to 30 days following the bite of a tick infected with B. burgdorferi. It first appears as a red papule at the site of the bite, then gradually expands to leave a central faded area, giving it the typical ring-like appearance. There also may be secondary lesions. Unfortunately, diagnosis is made more difficult by the fact that ECM occurs in only two-thirds of cases.

Transmission

As stated before, B. burgdorferi is transmitted primarily by the bite of a tick. In Pennsylvania, the primary tick vector is Ixodes damini, the deer tick, although other tick vectors are of prime importance in other parts of the country and may also play some role in Pennsylvania. It is also suspected that some insects may play a role in transmission; some evidence exists that untreated pregnant women may transmit the disease to their fetus, thus resulting in fetal death. However, this appears to be quite uncommon. Theoretically it could be transmitted through blood transfusions, although to my knowledge this has never actually been documented.

Because ticks are the primary vector of transmission, public wooded areas are most commonly thought of as the places where people acquire disease. However, much residential property contains enough shrubbery or high grass to harbor the vector ticks, and disease acquisition on private residential property has been

Dr. Tavris is the state epidemiologist for the Pennsylvania Department of Health.

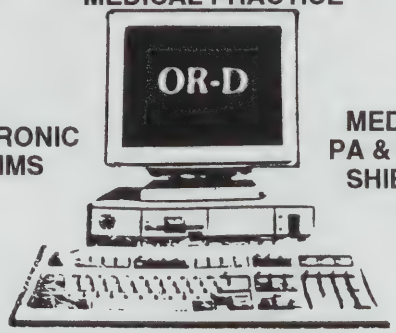
documented. Most notable in Pennsylvania in this regard is a recent cluster of several cases in a small neighborhood in Bucks County, where disease acquisition was found to be associated with gardening around the home. The fact that reported Lyme Disease in Pennsylvania is more common in women than in men also suggests that disease transmission around the home may be significantly more frequent than is commonly thought.

Control

The means of preventing and controlling Lyme Disease are quite limited. No vaccine exists, widespread efforts to apply pesticide to kill the vector tick would do tremendous damage to the environment, and targeted efforts at tick control are very expensive for the limited goals they achieve. At this time, the best means of control is to educate the public and the medical community.

The public should know that there is virtually no place in Pennsylvania which is known to be free of this disease. The following precautions may be taken with regard to exposure to wooded areas:

- Wear long sleeve shirts and long pants; tuck pants into socks.
- Walk in the middle of trails.
- Apply tick repellent prior to exposure.
- Carefully inspect clothes, self, children, or pets following exposure. Remove ticks with forceps by applying steady, gentle traction.
- Clear underbrush and trim vegetation around homes, where people are likely to be exposed.



Physicians should be familiar enough with the disease to recognize the characteristic rash (ECM) and to consider it in patients who have the characteristic cardiac, neurologic, or arthritic manifestations when there are no apparent alternative explanations for them. The earlier in the disease process that antibiotic treatment is introduced, the more successful it is likely to be. Because no satisfactory diagnostic tools are available for Lyme Disease, in some cases therapy should be tried even without a clear-cut diagnosis.

systems and realize we can't grow— our computer from Keystone."

Carol Matthews, President
Lebanon Medical Management, Inc.
Lebanon, PA

"We've been with Keystone for over eight years. They've always provided us with options as we've grown and done whatever it takes to keep the system up and running. Their support is worth every penny." **Carol Matthews**

Keystone has designed a system that allows you to start with the basics (Accounts Receivable, Billing, Practice Analysis and Electronic Claims) and add on other capabilities as you need them. KMS gives you a total picture of your involvement with the patient — and provides you with all pertinent information easily and instantaneously. Among the KMS modules receiving praise from the industry and our clients are Patient Scheduling, Intelligent Payment Posting, and Credit and Collections.

"We were searching for a company sophisticated enough to support the growing demands of our company, and we found that in Keystone. The KMS Credit and Collections module allowed us to convert from a manual collections system that took forever to a computerized system that saves us 25% in manhours — without having to change our collections style one bit." **Cindy Groux**

"Their system ties all of our offices together, letting us keep track of everything that goes on — every facet of the practice — electronically. We feel secure that the business end is running expertly and efficiently. When I think how inaccurate we might have been before KMS, I know we couldn't survive now without it." **Paul J. 645 North 12th Street, Suite 100,
Lemoyne, PA 17043

HCFA RESPONDS TO CLIA COMMENTS

Based on comments received on its proposed regulations on the Clinical Laboratory Improvement Act of 1988 (CLIA '88), the Health Care Financing Adminstration (HCFA) will make some "technical corrections" prior to the effective date of September 1, 1992. While more substantive changes may be considered later, several planned modifications will satisfy some concerns expressed by the State Society.

First, for example, the publication of the final regulation on procedures for a state to request exemption is expected "momentarily." If HCFA has reason to believe that a state will apply for exemption, it reportedly will not bill physicians this summer for the inspection fee, even if a final determination on the state's application has not been made. The physician, however, must still pay the initial registration fee and eventually the second fee to the state. In effect, it appears Pennsylvania will be granted the temporary exemption requested by the Society.

Second, in response to Society comments, HCFA will not impose a fee for inspections conducted in response to complaints found to be groundless; and the option of completing 20 hours of appropriate continuing medical education, or some equivalent mechanism, should remain viable for a physician to qualify as a first-time director of a moderately complex laboratory.

As for HCFA's initial survey of laboratories, it sent more than 600,000 HCFA-109 survey forms and received only 100,000 responses. Although the response appears consistent with the AMA's estimate based on its impact study, the administration believes many laboratories are not registering for various reasons. *Any State Society members who have not yet registered should do so as soon as possible, since effective September 1, 1992, Medicare will not reimburse for laboratory services if a laboratory is not registered.*

HCFA-109 survey forms can be ordered from the Society at 1-800-228-7823 or HCFA Region III at (215) 596-1351. Additionally, HCFA has initiated a hotline to answer questions related to CLIA '88. Survey forms can also be ordered through the hotline at (410) 290-5850. Note: physicians do not need to complete pages 5-6 of the survey form; HCFA will collect this data at a later date.

Physicians should also be aware that HCFA is now mailing the HCFA-35A CLIA Fee Remittance Coupon, the bill for initial registration of laboratories. The coupon will contain a laboratory's CLIA number, which must be recorded and used by laboratories in all future correspondence to HCFA.

On a final note, there is considerable concern at the state level that although the new system is supposed to be self-supporting through user fees, the federal government will not provide sufficient funds for states to accomplish inspection functions without additional resources.

News on CLIA

- Physicians should register labs STET—effective 9/1/92, Medicare will not reimburse lab services if a lab is not registered.
- HCFA has initiated a CLIA hotline—(410) 290-5850—to answer questions about implementation of the act.
- Labs should retain CLIA coupon, presently being mailed by HCFA. The coupon contains the lab's CLIA number, required for all future correspondence with the administration.

TASK FORCE SPONSORS FACT-FINDING CONFERENCE

The Joint Task Force on Child Abuse of the Pennsylvania Medical Society and the Pennsylvania Bar Association (PBA) sponsored a fact-finding conference on April 27 in Harrisburg to collect information about the child abuse reporting process and exchange ideas about systemic problems.

Approximately 30 experts in the field—including district attorneys, police officers, social workers, physicians, advocates for abused children, and an adult now dealing with abuse received as a child—testified before the task force. Roger F. Mecum, executive vice president of the State Society, said, "At the end of a long day of testimony, it was clear that many experts worried about the abused child who is scared and confused facing a daunting legal system." During the next several months, the task force will review the expert testimonies for common themes and problems. Then it intends to develop a series of recommendations for consideration by the boards of both the Society and the PBA. Many other problems were also identified.

Robert J. Lilley, assistant director of educational and scientific affairs, contributed to this page.

PMSLIC RELEASES HIV SURVEY RESULTS

The Pennsylvania Medical Society Liability Insurance Company (PMSLIC) has released the results of a survey conducted to determine physician opinion on the need for HIV insurance. The survey resulted from a 1991 House of Delegates action to investigate the need for HIV insurance in Pennsylvania.

Sixty-one percent of 7,000 PMSLIC policyholders completed and returned the survey of five HIV-related questions which, with aggregate results, follow:

1. How great a concern is HIV infection in your practice?
   11.6% High 27.6% Moderate 60.8% Low
2. Do you presently have income protection coverage if you become HIV positive?
   7.9% Yes 60.8% No 31.3% Uncertain
3. Do you believe that HIV income protection is an appropriate and desirable addition to your professional liability policy?
   53.5% Yes 19.4% No 27.1% Uncertain
4. Would you choose one professional liability insurance carrier over another if HIV income protection was included in that carrier's coverage?
   32.9% Yes 25.6% No 41.5% Uncertain
5. Should HIV income protection be offered as part of the standard paid coverage, or should physicians choosing that option be required to pay for it?
   46.6% For free 53.4% For a fee

In a letter to PMSLIC policyholders releasing results of the survey, Betty L. Cottle, MD, chairman of the PMSLIC board, wrote: "In considering all of the available information, the PMSLIC Board of Directors concluded we should continue to monitor the situation and watch carefully the coverage options that are available."

OBITUARIES

Nicolas A. Colosi, *Glenside*
Jefferson Medical College, 1938; age 80, died March 29, 1992. Dr. Colosi was a general practitioner.•

George W. Crouse, *Greensburg*
Case Western Reserve University School of Medicine, 1941; age 76, died April 13, 1992. Dr. Crouse was a general practitioner.•

Ervin Ellison, *Lancaster*
University of Cincinnati College of Medicine, 1943; age 73, died April 7, 1992. Dr. Ellison specialized in occupational medicine.•

Roscoe L. Fisher, *York*
University of Pennsylvania School of Medicine, 1936; age 80, died April 5, 1992. Dr. Fisher was an ophthalmologist.•

Robert L. Green, *Lafayette Hill*
Temple University School of Medicine, 1945; age 71, died April 13, 1992. Dr. Green was an orthopedic surgeon.•

Walter P. Havens Jr., *Haverford*
Harvard Medical School, 1936; age 80, died April 6, 1992. Dr. Havens was an internist.•

C. Merrill Leister, *Bethlehem*
Harvard Medical School, 1932; age 90, died March 5, 1992. Dr. Leister was a pediatrician.•

George P. Schmieler, *McMurray*
University of Maryland School of Medicine, 1936; age 82, died January 12, 1992. Dr. Schmieler was a general practitioner.•

D. Ernest Witt, *Bloomsburg*
University of Pennsylvania School of Medicine, 1944; age 72, died March 22, 1992. Dr. Witt was a family practitioner.•

Cyril R. Allen Jr., *Bridgeville*
University of Osteopathic Medicine and Health Sciences Des Moines, 1959; age 66, died March 31, 1992.

F. Benedict Lanahan, *Malvern*
Jefferson Medical College, 1935; age 82, died March 7, 1992. Dr. Lanahan specialized in occupational medicine.

Clennis R. Wheelock, *State College*
Temple University School of Medicine, 1954; age 70, died March 17, 1992. Dr. Wheelock was a general practitioner.

• Denotes membership in the Pennsylvania Medical Society at the time of death.

The Educational and Scientific Trust of the Pennsylvania Medical Society provides you with a way to make a significant statement honoring the memory of and paying tribute to your colleagues who are deceased. Send your tax-deductible memorial gift to The Educational and Scientific Trust of the Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

INSTRUCTIONS TO AUTHORS

Submit two manuscripts, typewritten and double-spaced, on 8 1/2" by 11" paper. This material is for the exclusive use of this publication and should not be published elsewhere except in abstract form. Statistical methods used in scientific articles should be identified. Acknowledgments will be made only for specific preparation of an essential part of the manuscript.

Authors are asked to seek clarity, accuracy, and originality; attention to details of grammar, spelling, and typing are important. The title page should include the full name, degrees, and affiliations of all authors, and the name and address of the author to whom reprint requests should be sent. Tables must be typewritten and double-spaced on separate 8 1/2" by 11" sheets, with a title and number. Symbols for units should be confined to column headings; and abbreviations, properly explained, should be kept to a minimum.

Illustrations should be professional quality, black-and-white glossy prints. The name of the author, figure number, and the top of the figure should be noted on a label attached to the back of each illustration. Where photographs of patients are used, the subjects should not be identifiable or publication permission, signed by the subject or responsible person, must be included with the photograph. Material taken from other publications must give credit to the source; written permission for republication from the original publisher must be submitted.

References should not exceed 35 citations and should be noted consecutively in the text by superior numbers at the end of a sentence. The reference list should be typewritten and double-spaced on separate 8 1/2" by 11" sheets in the numerical order in which they are first cited in the text. The style of reference is that of *Index Medicus*:

1. **Goldwyn RM:** Subcutaneous mastectomy. *J Med Soc NJ* 74:1050-1052, 1977.
2. **Dixon WJ, Massey FJ:** *Introduction to Statistical Analysis*. New York, NY, McGraw-Hill, 1969, pp. 42-48.

In compliance with the Copyright Revision Act of 1976 (effective January 1, 1978), a transmittal letter or a separate statement accompanying material offered to PENNSYLVANIA MEDICINE must contain the following language and must be signed by all authors:

In consideration of PENNSYLVANIA MEDICINE taking action in reviewing and editing this submission, the author(s) undersigned hereby transfers, assigns, or otherwise conveys all copyright ownership to the Pennsylvania Medical Society, in the event that such work is published in PENNSYLVANIA MEDICINE.

Send manuscripts and all related correspondence to: Managing Editor, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Directory Issue Coming Up!

The August issue of PENNSYLVANIA MEDICINE is the Society's annual membership directory. Not only a valuable resouce for physicians and other health care providers statewide, the Directory is also a unique opportunity for health care services to advertise to physicians. Contact the offices of this puyblication before June 26, 1992, to reserve advertising space for your organization.

How Does KePRO Compare?

Donald E. Harrop, MD

Last month, PENNSYLVANIA MEDICINE featured an overview of highlights of the Keystone Peer Review Organization's 1990-91 Annual Report. However, results published in the report are meaningless without meaningful comparison.

The 1990-91 Annual Report of the Keystone Peer Review Organization (KePRO) provided an in-depth look at statistics for various types of review conducted by KePRO under contract with the Health Care Financing Administration (HCFA). Although the report compared the year's review statistics with the those of the prior year, such numbers usually don't mean too much to anyone unless they are able to see how they stack up against someone else who performs a comparable service.

The tables below provide utilization and quality review statistics for each PRO in HCFA Region III, regional totals, and national totals. As the PRO for Pennsylvania, KePRO has a strong tendency to analyze these numbers only as PRO statistics without thinking of what they really represent.

For example, KePRO would interpret Table 1 to mean that 1.11 percent of all cases it reviewed during the first 27 months under the Third Scope of Work were denied. Likewise, in Table 2, KePRO would find 3,309 confirmed quality problems, or 0.91 percent. KePRO might then go directly to the other states, and to regional and national percentages, to see if it compares higher or lower,

However, let's look at the numbers in a different way. Of 366,029 cases reviewed, only 4,067 were denied. That means that in over a third of a million cases, Pennsylvania physicians and hospitals admitted patients appropriately 98.9 percent of the time. And in over a third of a million cases, 99.1 percent of patients received care which met acceptable standards as judged by physician peers of those who delivered the services.

While we at KePRO are pleased that statistically we compare favorably with other PROs, we need to recognize that the same statistics show the overall practice and delivery of medical care in the state to be above average. Pennsylvania physicians and hospitals have good reason to be proud of those numbers.

ACTIONS OF THE BOARD OF TRUSTEES, APRIL 14, 1992

BOARD REAFFIRMS SUPPORT OF DATA AVAILABILITY

At the recommendation of the Society's Task Force on Health Care Cost Containment, the Board reaffirmed its support of the public availability of valid and reliable information related to the cost and quality of health care services in Pennsylvania.

In response, the Society will actively pursue—through legislative amendments and budgetary processes—implementation of several principles relating to the structure and operation of the Pennsylvania Health Care Cost Containment Council (PHC4), the independent state agency which compiles such information. For example, the Society will seek:

- an in-depth, independent audit of the cost effectiveness of the health care cost containment effort;
- assurance that PHC4 accurately and effectively collects, validates, and publishes appropriate mandated health care data through sufficient funding;
- increasing physician representation on the council from one member to four;
- the establishment and utilization of a technical advisory group to assist the council in carrying out its responsibilities; and
- the establishment of a committee to continuously study quality of health care systems and report regularly to the council.

The Society also called for PHC4 to require purchasers to help defray costs of special reports; require itemized hospital bills only on patient requests; and actively involve the State Society and specialty societies in the planning, validation, and review of physician-specific data reports.

POLICY FORMATION EFFORTS TO CONTINUE

The Board authorized the Committee on Long Range Assessment to continue development of the State Society's policy on state and federal health care reform movements.

The committee has held three meetings since accepting the assignment earlier this year to develop for the Board's consideration the Society's response on the reform issue. Primary discussion at these meetings has focused on formulating a set of health care reform policy goals to use in developing the Society's position.

The Committee has developed a proposal, not yet board approved, which "is intended to represent the Society's commitment to reform and to foster an overwhelming consensus of agreement and support from both our members and our patients." The goals addressed in the proposal relate to access, quality of care, cost containment, practice parameters, health insurance reform, public health initiatives, tort reform, basic freedoms, prioritization, and medical research and education.

Once such a document is designated as policy by the Society, it would be used to respond to the media, develop the Society's own health care reform proposal, and evaluate the merits of plans advocated by other organizations and legislators.

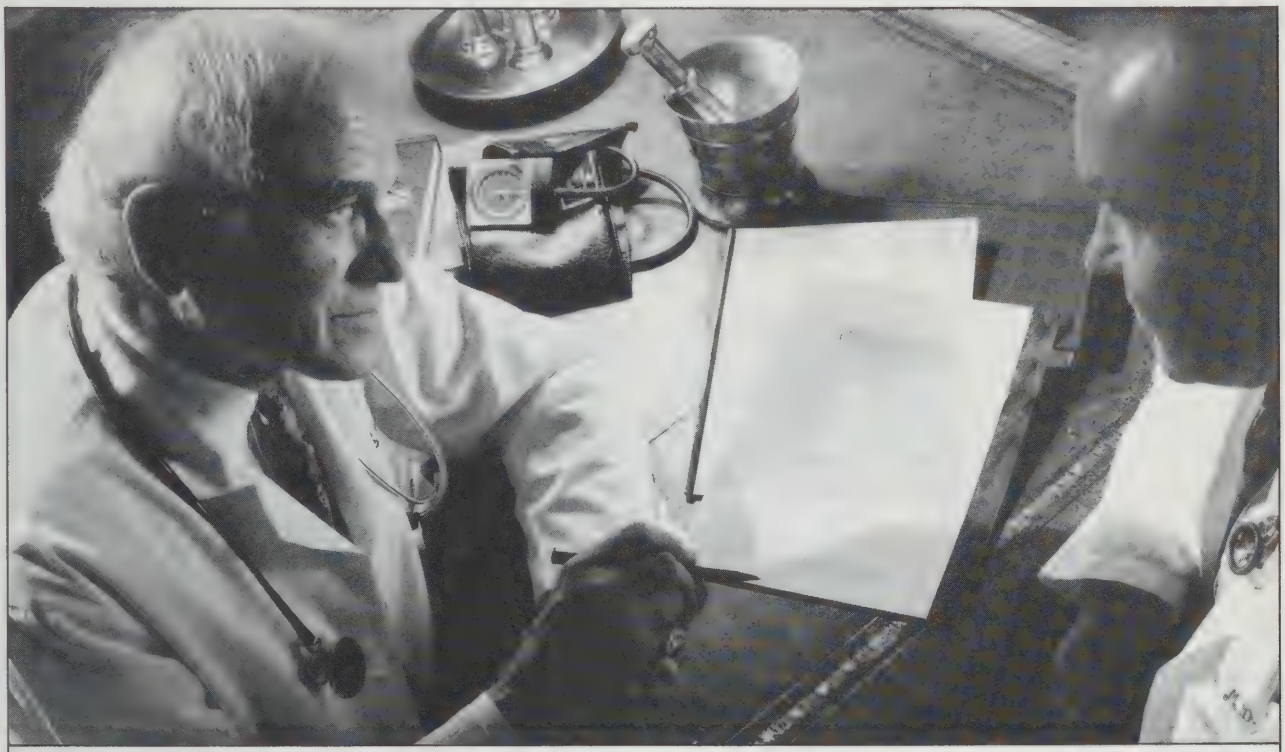
TRUSTEES APPROVE IMG RECOMMENDATIONS

Several recommendations of the Committee on International Medical Graduates (IMGs) were approved by Society trustees at their April meeting, and since then several related actions have occurred.

One approved recommendation directed the State Society to urge the State Board of Medicine to study the feasibility of using the AMA National Credentials Verification Service (AMA/NCVS) as part of the licensing credentials verification process. Consequently, at its April 28 meeting, the State Board voted unanimously to investigate the possibility of using the AMA/NCVS to assist in the licensing process.

Through approval of a second recommendation, the Society encouraged the State Board of Medicine to establish "grandfather" provisions for physicians who have taken previous versions of qualifying examinations prior to implementation of the new United States Medical Licensing Exam. The Board also authorized appropriate Society representatives to provide input into State Board deliberations on the subject. Since that time, the Society's Committee on Medical Education has reviewed regulations drafted by the State Board, and the committee believes they adequately address the concerns of the Committee on IMGs.

Finally, by approving a third recommendation, the Board authorized representation of the Committee on IMGs in the Society's review of the 1985 Medical Practice Act, which is scheduled to sunset in 1995.



DR. GRECO TO CHAIR CONFERENCE COMMITTEE

Victor F. Greco, MD, Twelfth District trustee, was elected chairman of the Society's 1993 Leadership Conference Committee, succeeding Frederick G. Brown, MD, Danville. Dr. Greco is a thoracic surgeon in Drums.

Other Board members elected to the committee include: Edward H. Dench Jr., MD, Sixth District; Donald G. Ferguson, MD, president elect; John W. Lehman, MD, Tenth District; John W. Mills, MD, Ninth District; James R. Regan, MD, Interspecialty Section; and Howard A. Richter, MD, vice speaker of the House of Delegates.

The Society's Board deliberates as John A. Malcolm, Jr., MD, makes a presentation as chairman of the Task Force on Health Care Cost Containment.

"When you compare malpractice insurers, there is no comparison."

"What do you look for first? Rates, naturally. So that was the first item that attracted me to Physicians Insurance Company. They're stable, well run—and their rates have *decreased continuously* since 1986; while at the same time they have continued to broaden their coverage.

Additionally, the Company's performance seems to have forced other insurers to lower their rates.

Still, no one matches Physicians Insurance Company, on rates *or* support;

- they won't settle a case without your consent,
- when they fight your case, it's with confidence and intelligence, as shown by their 98% success rate at trial,
- you receive 40 hours of *free* legal representation for disciplinary proceedings, including staff privilege disputes and service on peer review committees,
- you receive legal counsel if you are called for a deposition in a medical malpractice case in which you are not named in the suit.

And Physicians Insurance Company doesn't automatically increase your rate for individual loss experience, or for corporate or partnership coverage.

I had good reasons for originally changing to Physicians Insurance Company. Those reasons are even truer today — the rates, the service, the support. It's an easy choice."

Dealing with Stress in the Physician's Marriage

Penelope P. Ziegler, MD

Practicing medicine in the 1990s brings a high-stress lifestyle, and no one knows that better than the spouse of a physician. While television and cinema have portrayed the medical family as an all-American ideal, the reality can be very different.

"The physician's identity is so closely bound to the world of medicine that, despite the best of intentions, practice demands inevitably take priority over the demands of the relationship."

Dr. Ziegler is medical director of the Physicians' Health Programs of the State Society's Educational and Scientific Trust.

Surveys show that while the rate of divorce in physicians' marriages is less than the national average, the degree of conflict, instability, and dissatisfaction is significantly higher. Certain medical specialties have markedly higher divorce rates than others, with orthopedic surgery and psychiatry leading the list. Also, female physicians are much more likely to divorce than are their male colleagues.[1]

The medical marriage: pros and cons

To understand the origins of problems in the medical marriage, first consider how these relationships become established. Choosing to marry a physician has certain obvious advantages. Even if the bond is formed during the relatively lean educational years, a physician's partner can look forward to a high likelihood of material success and social status tempered with altruism and humanistic values.

The physician and his/her prospective spouse, like other couples, are drawn together by shared interests, values, and goals, as well as sexual attraction and mutual affection. If they are contemplating children, they recognize their ability to provide comfortably for the needs of a growing family.

But there are many accompanying disadvantages to choosing a physician for a spouse. The physician's identity is so closely bound to the world of medicine that, despite the best of intentions, practice demands inevitably take priority over the demands of the relationship. Long periods of time apart—forced by emergencies, on-call schedules, and the "tyranny of the telephone"—rob the couple of the closeness and privacy needed to nurture intimacy and trust. Deferred gratification becomes a way of life, and each new, eagerly awaited milestone ("when I finish school, internship, residency, the boards, etc.") fails to fulfill its promise. "Just wait until ..." becomes a familiar theme song of countless arguments over disrupted evenings and holiday disappointments.

The two-career couple

These days, many physicians' spouses are professionals who derive much of their gratification and sense of self from their own careers. A special subset of this two-career group is the so-called "dual-doctor marriage." It is estimated that 40,000 or more physicians in the United States are married to other physicians, and this number has been increasing rapidly over the past 10 to 15 years as the number of female physicians and medical students increases.[2] Physician-partners report many advantages of such unions, including the ability to empathize and share the pain associated with training and practice, and an increased understanding and acceptance of such insanities as on-call schedules, sleep deprivation, and constant interruptions of leisure time.

Two-career marriages also present special challenges to these couples, whether both are in medicine or one spouse's career is in another field. Questions about priorities and whose career determines major life choices abound. Who makes career sacrifices for the sake of the other's career? How are family roles assigned? How are mundane chores and duties divided? How can the couple ensure adequate parenting for their children and still find time for the care and feeding of their own relationship? These are tough questions with no easy answers. Not surprisingly, surveys show that in many of these families, the female professional assumes most, if not all, of the responsibility for household management and child care, in addition to her career demands.[3]

The "traditional" medical marriage, still the most common pattern today, is that in which the husband is the physician and the wife is devoted to caring for the home and family. While she may be em-

ployed or very active in community service, it is mutually understood that his career is the focal point of both of their lives. The challenges and stresses which arise in this setting have been explored through surveys, in-depth interviews with couples seeking marital counseling or participating in growth-enhancing seminars, and case reports of individuals seeking psychiatric treatment for symptoms related to marital stress.[4,5]

Areas of conflict

A relationship is in distress when the partners' expectations and needs are at odds with the existing reality in any of the important areas that make up a stable, satisfying union. In most surveys of physicians and spouses, the area of conflict most often cited is time together. Time is the rarest commodity for most physicians to bring to their marriages.

There is also the issue of how to spend available time. When the time factor is explored in-depth, spouses feel a strong need for time to talk with each other, while physicians are more likely to use their leisure periods working on home-improvement projects, participating in sports activities, or catching up on professional reading.

This observation suggests that, in addition to the quantitative lack of time presented by the demands of medical practice, problems stem from discrepancies in communication style, perceived needs, and relational priorities. To understand the origins of this deeper level of distress, the focus needs to be on physicians' personality traits and strategies for coping with conflict.

Personality traits

To succeed in the highly competitive arena of pre-medical and medical education, the physician-to-be must have certain skills and abilities which will allow him or her to survive and flourish in a toxic environment. Intelligence is not enough; one must also be compulsive, relentlessly driving toward a desired goal while ignoring distractions not relevant to achieving that goal. It helps to be a perfectionist, intolerant of failure or inadequacy in oneself or others. Other useful traits include emotional detachment, tremendous tolerance for deprivation and humiliation, the ability to defer gratification indefinitely, and the capacity to think fast under pressure while physically exhausted and sleep-deprived.

How do physicians acquire this set of survival skills? The best "school" for teaching these traits to children is a dysfunctional family system. Therefore, it is not surprising to discover that many physicians and medical students grew up in families troubled by alcoholism, physical or psychiatric illness in a parent, or some other identifiable problem.

The doctor-to-be, as a child, functioned as the "family hero." He or she brought positive energy to the family unit through achievement and recognition of excellence. Perhaps this child took on a super-responsible role in the face of parental inability and was rewarded for this behavior. Overachieving and caretaking brought satisfaction and gratification, so the young person was drawn strongly toward a "helping" profession. Even many physicians who find no evidence of overt dysfunction in their families identify with this "hero" role. As adolescents and young adults, they report a relentless need to accomplish more, to achieve greater success, and to receive recognition in order to win parental approval.[6]

The physician's spouse-to-be may bring similar issues to the union. Although no large-scale surveys have addressed this issue, interviews with spouses in marital therapy and spouses of physicians who are in treatment for alcoholism or drug addiction suggest that a higher-than-expected percentage of physicians' partners may also be products of dysfunctional families. Common traits found in these groups include: distorted self-concept with low self-esteem, difficulty expressing feelings verbally, fear of loneliness, and loss of self.

Family rules

Both partners may bring to the marriage a collection of self-defeating personality

"In most surveys of physicians and spouses, the area of conflict most often cited is time together."

traits, as well as a lack of experience in how to build a healthy, balanced family life. Without a conscious awareness of the risks and a concerted effort to avoid the pitfalls, such a couple is likely to develop family "rules" which lead to continuing, unresolved stress for all family members.

For example, one of the most common unwritten rules is, "Don't talk about problems." Under this rule, it is not okay to express negative feelings openly because it might cause an uproar and make the situation worse. Family members must act like everything is fine and not rock the boat in the hope that "it" will blow over. Over time, the family playing by this and other stress-enhancing rules will develop a deep-seated, festering abscess of anger, hurt, and fear which poisons intimacy and trust in the relationship.[7]

Such a couple may drift farther and farther apart, and one or both partners may look outside the marriage to find what is missing. Extramarital affairs are an obvious symptom of serious trouble. Other, sometimes less obvious, signs include:

- symptoms of depression and/or anxiety;
- sleep disturbances;
- physical problems, including headaches, G.I. upset, back pain, etc.;
- increased alcohol or drug use;
- frequent arguments or increased intensity of fighting, i.e., getting more physical with pushing, shoving, or name calling;
- avoiding each other; and
- a loss of interest in sex and/or physical displays of affection.

All of these may be indicators of a need for professional help in identifying the sources of conflict, setting new goals and directions, and changing the "rules" to allow the relationship to grow.

Sexuality and intimacy

In any discussion of medical marriages, intimacy and sexuality deserve special mention because complaints in these areas are universal among medical couples in marital therapy. Despite their professional education and exposure to the physiology of human sexuality, many physicians are not comfortable discussing sexual matters with their spouses. In fact, a number of physicians who describe themselves as entirely comfortable with patients' sexual complaints and who routinely advise patients about the importance of open, frank discussions between spouses about sexual matters, have admitted they do not follow their own advice in the marriage bed, with predictable problems resulting.[8]

Many studies of medical families do not address the issues and needs of gay and lesbian physicians and their relationships. In his book, *Doctors' Marriages*, Michael F. Myers, MD, explores gay and lesbian families and their similarities and differences as compared to heterosexual couples. Some of the special stressors with which these families struggle include social prejudice and stigma; isolation from medical peers and, for some, from the family of origin; "coming out" conflicts and internalized homophobia; and, for gay men, HIV/AIDS.[9]

Parenting issues

In some medical marriages, the overt conflict revolves around issues of parenting. In the early years, questions about whether and when to have children begin to arrive. Disputes later arise over role definitions, division of responsibilities, discipline, day care, schooling, and religion. These are the usual dilemmas with which all families contend. However, if some physicians' families experience more than their share of strife over childraising, it may be related to their lack of healthy role models and to the persistence of those unwritten rules which block meaningful communication and problem-solving.

A myth tells us that doctor-dads are absentee fathers because of the time pressures of practice. Some fathers admit that an additional factor is lack of confidence in the parental role; and worse yet, some see themselves recreating their own fathers' role of family terrorist. Some doctor-moms experience similar uncertainties and insecurities. Such problems can and should be addressed through family therapy aimed at opening channels of communication, as well as teaching good parenting skills.

The importance of communication

As medical practice and the physician's role in society continue to change, the external stressors brought to bear on the medical family will also increase. Individual physicians and their spouses will have

little control over megatrends in medical economics, health care delivery, and education, let alone over the public's attitude toward and the image of the physician and his/her family. What physicians and their partners can change is the way they approach their relationships and the strategies they employ in dealing with the inevitable stresses and problems to which they are vulnerable.

For example, the "rule" about dealing with problems can be changed to, "Do talk openly about problems, and give each other permission to express feelings." Operating under the new "rule" will be anxiety-producing at first, especially when angry feelings are involved. This is because neither partner is used to hearing anger expressed directly, and because people learning to express feelings openly tend to be overly aggressive until they "get the hang of it." However, with practice, the couple will become increasingly comfortable with their new style of relating. Increased sensitivity to each other's needs will develop.

This new approach starts with acknowledging the central importance of open, honest communication within the marital partnership. This, coupled with a willingness to seek help when communication begins to break down rather than waiting until it has ceased completely, can help physicians' families cope effectively with stress, to ensure that the medical marriage survives.

Motivating Employees to Be Team Players

The Health Care Grap

How important is communication among employees in a medical office? Simply put, it can make or break the effectiveness of a medical practice.

Communication is the most fundamental building block in motivating office staff to work as a synchronized team. But all too often, the hustle of the daily routine leaves little time for physicians and staff to sit down and discuss problems, share ideas, or exchange vital office information.

At the most basic level, creating an atmosphere of teamwork among members of an office staff, and between doctors and staff, means making conscious efforts to keep employees abreast of all newsworthy events in a medical office. Relating to staff as team players means keeping them updated on new developments in the office, such as the introduction of new medical equipment, the use of new drugs in the practice, or the arrival of new employees. Even issues as simple as changes in hours, fees, and codes need to be communicated effectively.

By communicating changes or developments such as these directly to staff members, a physician is sending a clear message that staff members are an integral part of the team. Employees also need to be encouraged to voice their feelings and ideas for improvement. In this way, physicians also let them know their contributions as professionals and individuals are valued.

As a consulting firm, The Health Care Group has encountered practices where a physician took on a new associate, but never bothered to inform the staff of the new doctor's background and the additional services he offered. This type of management oversight fuels the flames of employee discontent and results in a wide range of negative repercussions in the office, from increased employee grumbling and lowered morale, to waning productivity. In the long run, the most damaging "trickle-down" effects of unhappy staffers will reach patients and colleagues.

Consider the example of another client, an established pediatric practice, which recently hired a new nurse practitioner, yet never formally described her training and capabilities to the office staff. Without knowledge to the contrary, everyone in the office simply assumed that the new assistant was a nurse, and therefore failed to take advantage of the full range of skills she offered. In this case, not only did the employees feel left out of an important exchange of information, but the practice suffered a financial loss as a result of poor personnel management.

How can physicians ensure that important developments are communicated accurately? One way is to establish internal staff meetings. Meetings can provide an important forum not only for vital exchange of information, but also for all employees to meet and commonly evaluate or work together to substantially improve office morale.

• *Schedule regular meeting times*: Very different from crises meetings, staff meetings should be scheduled at regular intervals to create a habit of constructive participation. Once a month is a good rule of thumb. Even practices with satellite offices should conduct a monthly meeting at each facility. All employees should be encouraged to attend, including part-time employees, so they understand it is part of the work experience.

• *Set an agenda*: To be effective, staff meetings should be scheduled with prearranged agendas, so staffers understand the meetings are not meant to be general gripe sessions. At least one doctor should attend meetings periodically but should avoid taking undue control. The office manager—not a physician—is best suited to run the meetings, and some meetings are best left to just the manager and the staff.

• *Distribute minutes of each meeting*: The office manager should take minutes of the meeting and type and distribute them to all attendees. Minutes formalize the meeting's importance, keep employees aware of issues affecting the practice, and help prepare everyone for the next meeting. Any questions should be followed up by the manager, who should report on these items at the start of succeeding meetings. Employees will respect staff meetings much more, and contribute to them more, if they know management cares enough to act on ideas that arise. In addition, staff meetings enhance office productivity: when staff members know that a specific issue can be discussed in a regular forum, they will not use time and energy raising the matter through other channels.

• *Use meetings as educational forums*: Managers can also spice up staff meetings with clinical educational briefings. Ten minutes of each meeting can be devoted to physicians' describing one clinical aspect of the practice in terms appropriate for the employees' experience and training. These discussions not only keep meetings interesting, but convey to employees the desire to share experiences with them. They also help create a more responsive and enthusiastic staff.

Although staff meetings may seem to click initially, developing effective meetings usually takes a little time and patience. The practice will benefit from employees who know that their contributions as members of the team are highly valued.

Using staff evaluations to motivate

Another way to boost staff morale is through regular job performance evaluations. Surveys of medical offices have shown that lack of appreciation for good work and conscientious efforts is a prime cause of poor employee morale. Although some physicians fear that praising employees' work will create pressure for a large pay increase, this fear is unfounded in a healthy office environment.

The rule of thumb is to evaluate employees at three months, six months, and one year. Long-term

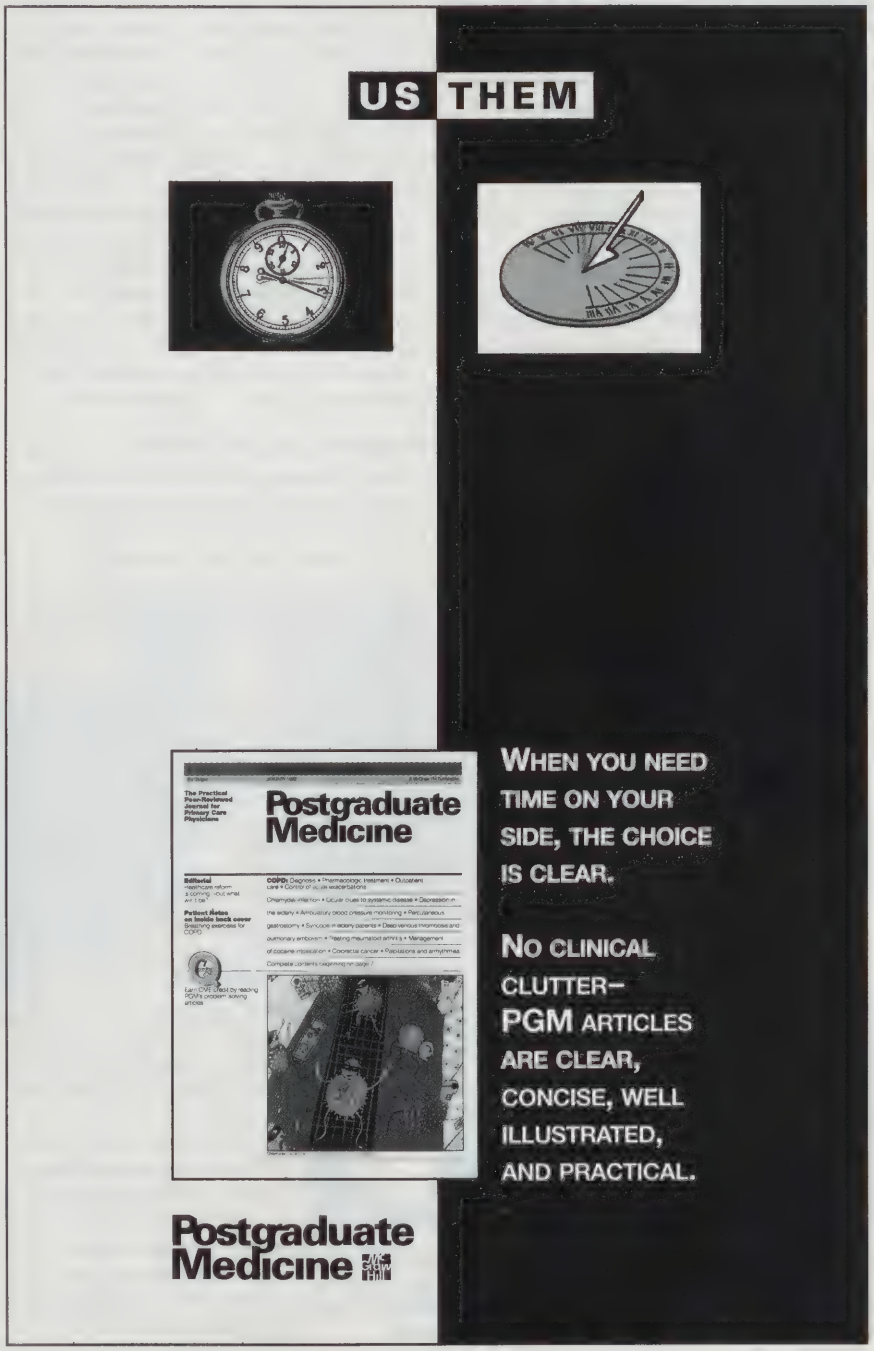
staffers should be evaluated at least once a year, with some practices preferring evaluations every six months and salary reviews annually. During these individual meetings with the employee, the physician or office manager can build rapport by soliciting and listening to the staffer's concerns.

Too often, salary reviews are seen only as opportunities to criticize employees. Motivation, however, works in both directions, and equally important is acknowledging outstanding performance and conveying support and satisfaction to employees.

Motivating through training

Staff training can be an additional route to motivating employees. Not only do training programs ensure that employees have the specific skills necessary to do the job correctly, but training helps all staffers understand how their jobs relate to those of others and to the overall function of the practice. Also, most importantly, training encourages each employee to contribute maximum effort and thought, and to fully develop his or her potential in medical practice management. Training session topics might include: effective handling of telephone calls, refining the office scheduling procedures, developing a consumer-oriented mentality, and enhancing the staff's patient education abilities.

Giving staff some medical education is one training effort that can pay off handsomely. Whether during staff meetings or daily routines, spending some time describing the practice's clinical aspects will help employees appreciate and understand their jobs better.



Taking a "preventative approach" to employee motivation is more than good personnel management; it can also be a very worthwhile business investment. A motivated, trained staff can be a physician's most powerful marketing tool and can contribute far beyond their specific skills to the practice.

The contributing authors, Dorothy R. Sweeney and Edward L. Grab, are consultants with The Health Care Group, a medical practice management consulting firm based in Plymouth Meeting.

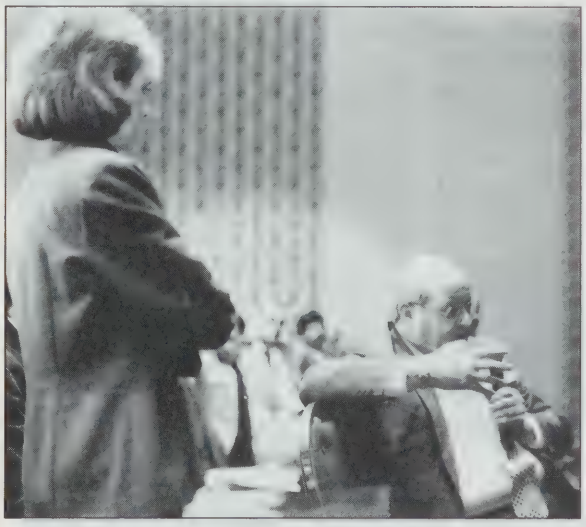
Practice Management Questions?

PENNSYLVANIA MEDICINE offers two sections specifically designed to help physicians solve the often pressing problems of practice management. Write to submit your questions to: Medical Practice Consult, Department of Physician Services, Pennsylvania Medical Society, 777, East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Leaders Gather to Discuss "Survival"

More than 260 Pennsylvania physicians gathered in Hershey, April 14-15, for the Society's 1992 Leadership Conference, "Survival on the Highwire." During the course of the two days, attendees discussed their own survival in the changing medical arena and had the opportunity to learn more about practice parameters, liability reform, managed care, political involvement, and improving leadership skills.

Keynote address



Robert E. McAfee, MD, vice chairman of the AMA Board of Trustees, presented the keynote address on practice parameters, following an animated videotape welcome developed and produced by the Society, and a greeting by Fred Brown, MD, chairman of the Leadership Conference Committee. Dr. McAfee said that while he hears many negative comments about practice parameters, they may be the "salvation" of the profession. "They are guidelines, standards, and they are not new to the profession," he said. "They are parameters of acceptable care—they don't dictate, they give options."

Prior to developing practice parameters, a lengthy research process compiles specific outcome data and reviews and tests it. Dr. McAfee explained that such data can be useful to physicians: after evaluating the data and its nature, physicians may then use it to decide whether or not they need to change their practices to offer higher quality of care. In response to concerns of evaluating physicians on the basis of outcome-specific data, Dr. McAfee, a member of the AMA's Practice Parameters Partnership, asked, "What else would you want to be measured on?"

He ended his presentation with his "observations" on health care reform in the U.S., touching upon such factors as the growth of the aging population, the nation's demand for quality, the intensity of care required, the problems of utilization, and the role of managed care in America.

Reforming medical liability

In regard to medical liability reform, physicians and administrators are focusing on the wrong problem, according to Lucian Leape, MD, lecturer at the Harvard University School of Public Health and Tufts University School of Medicine. "Liability is the symptom," he says. "The real disease is medical injury."

Robert E. McAfee, MD, (right) vice chairman of the AMA Board of Trustees, challenges panel members during a discussion moderated by Alice G. Gosfield, Esq., (left) Philadelphia health care law specialist, at the 1992 Leadership Conference.

Dr. Leape led a plenary session on the issue as part of Tuesday's schedule. During the session, he presented data compiled to study to what extent negligence and death are related to medical injury. His findings showed that in 1984 in New York, approximately 27,000 of 98,600 injuries (27 percent) were due to negligence, 15,000 deaths occurred due to the injuries (15 percent), and of that an estimated 50 percent of the deaths resulted from negligence. When he transferred those numbers to a national level, he found that more that 200,000 deaths occurred each year in the U.S. due to negligence.

He stressed, however, that not all medical injury is caused by physicians. Any reform plan would need "to give hospitals incentives to make their environments safer," he said, and the right plan could help "put physicians on the side of patients, where they belong." The key to reforming the system, according to Dr. Leape, "is to stop thinking of malpractice as crime and punishment, and start thinking of it as prevention and compensation."

He suggested that 70 percent of adverse effects are preventable and concluded with the following five suggestions to enhance existing efforts in reducing negligence: 1) expand methods to identify and track errors; 2) rethink the way mistakes are dealt with, e.g., not *who* made the mistake, but *why*; 3) prevent falls; 4) introduce technology to institute computerized medication ordering; and 5) rethink the technical education process.

According to Lucian Leape, MD, nationally known lecturer and a speaker at the 1992 Leadership Conference, "Liability is the symptom. The real disease is medical injury."

Questioning managed care

Alice G. Gosfield, Esq., health care law specialist from Philadelphia, returned to this year's Leadership Conference by popular demand. She had moderated a 1990 Leadership Conference forum on "Governmental Transitions in Medical Care."

The Society invited Gosfield back this year to moderate, "Can Quality Medicine Survive in a Managed Care Environment?" Joining her as panel members were Neil Schlackman, MD, medical director of U.S. Healthcare, Blue Bell; Michael A. Hattwick, MD, practicing physician, Annandale,

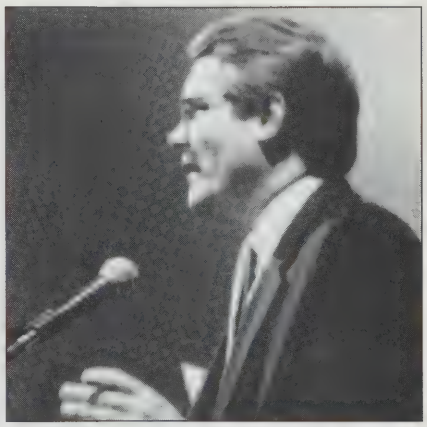
Virginia; and David B. Nash, MD, director of health policy and clinical outcomes at Thomas Jefferson University and Jefferson Medical College, Philadelphia.

Each panel member reacted to the question posed in the session's title. Dr. Nash said that the question itself is "an interesting reflection of the membership, [and confusion occurs because] the marketplace is infiltrated by different models under the umbrella of managed care." He believes managed care is a viable option for hospitals.

Dr. Schlackman called "managed care" a "misnomer." He said physicians have always "managed care," and what they were really talking about was "OWAs—other weird arrangements." Such arrangements can work and physicians can use guidelines to improve care, he said, "but physicians and others need to make the guidelines...everyone needs to participate." Dr. Hattwick said that, to achieve quality medicine, the nation needs "a health care system with the single goal of assuring basic quality of care for all and promoting excellent quality care for each."

Gosfield and audience members then posed questions and scenarios to the panel members. Access/quality of care issues and physician participation in managed care were among "hot topics" of interest. Following the discussion, the audience was encouraged to participate in breakout sessions with panel members.

David B. Nash, MD, (left) director of health policy and clinical outcomes at Thomas Jefferson University and Jefferson Medical College, listens as Neil Schlackman, MD, (right) medical director of U.S. Healthcare in Blue Bell, reacts to the question, "Can Quality Medicine Survive in a Managed Care Environment?," at the Society's 1992 Leadership Conference in April.



Debating election '92

Two national political commentators opened Wednesday's meeting schedule with a debate about the 1992 presidential election and where health care fits into campaigning. Eleanor Clift, *Newsweek* correspondent, and Fred Barnes, *The New Republic* writer, presented the hour-long, point-couterpoint session to a full house.

According to Barnes, "There is not a health care crisis in this country. We have quality health care, and the uninsured do get health care, just less of it." So why is health care not the big issue of the election? He cited two main reasons: 1) Senator Harris Wofford's recent campaign really was *not* about health care, but more about recession; and 2) focus groups show Americans really *do not know* what they want in a health care system, except that they *don't* want national health care or health insurance, and they *don't* want government involvement."

Clift countered, saying that health care is "the only uncontrollable portion of the budget" and *will be* important to the election. She noted that candidates and analysts should not underestimate "senior citizens as a voting power"; and she believes that the U.S. will have a some type of health care system in place within four to five years: "Not either/or—not the present system or the Canadian system." Instead, she said, it will incorporate elements of a number of existing systems.

Barnes predicted that George Bush will win this year's presidential election, citing several reasons Bill Clinton cannot win, including the issue of his character and his inexperience with foreign policy. In response, Clift said, "Bill Clinton is still standing. He has thought about where to take the country domestically, and debates will be important [to his campaign, because] at that time, Clinton will show the public he has ideas on foreign policy, economics, and health care."

Fred Barnes, writer for *The New Republic*, defends his views on the 1992 presidential election during a point-counterpoint session at the 1992 Leadership Conference.

Clift and Barnes agreed that H. Ross Perot is a "wildcard" in the election. Barnes said "Bush and Clinton should both be worried about particular states—Texas, California...he will take votes from Clinton." According to Clift, "Perot will be important in the spring, but not later on." They concluded their debate by touching upon potential running mates and several other potential campaign issues.

Other highlights

On Tuesday afternoon, county leaders were invited to a policy session held "to open the avenues of communication between the different tiers of organized medicine." Attendees were given the opportunity to question state and national leaders about societal concerns.

For instance, Robert E. McAfee, MD, vice chairman of the AMA Board of Trustees, talked about the value of the AMA in response to negative comments about unification. He suggested that physicians not look at the AMA as an "umbrella" organization, since that can be considered "confining" and be associated with "inclement weather." Instead, he said, the AMA's long-standing role in the U.S. in setting guidelines in medical science, ethics, and medical education should stand to prove it the highest level of

organized medicine.

The session, which ran a half-hour beyond the originally scheduled hour, turned out "quite well" according to attending leaders. Several suggestions were made by county leaders for consideration at state and national levels.

Among other highlights of the 1992 Leadership Conference were a Tuesday evening dinner, sponsored by the Pennsylvania Medical Political Action Committee, featuring Rob Rogers, editorial cartoonist for *The Pittsburgh Press*; and a Wednesday morning breakfast, sponsored by the Pennsylvania Medical Society Liability Insurance Company, featuring R. Faser Triplett, chairman of the American Medical Political Action Committee.

Following workshop sessions on diversity, practical political involvement, physician and hospital relationships, and leadership skills, the two-day conference ended Wednesday at noon with an address by Society President Robert N. Moyers, MD. He reiterated the importance of political involvement by physicians, presented several ways to succeed with that involvement, and concluded with a thank you to attendees for their interest and cooperation.

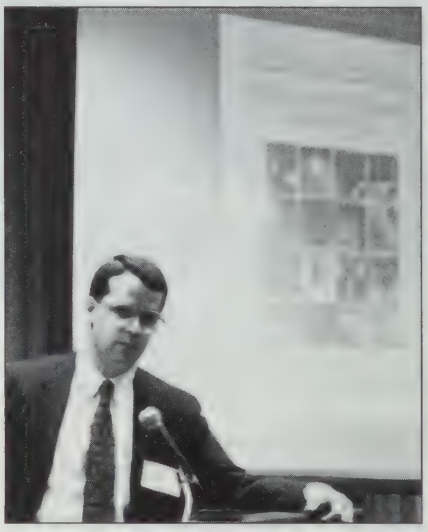
WORKSHOPS ADDRESS DIVERSITY, POLITICS, SKILLS

After a full day of debate and discussion on broad health care issues, attendees at the Society's 1992 Leadership Conference were offered workshops developed to address specific issues and skills. Topics of the concurrent sessions included

Diego J. Gonzales, MD, (left) and Lynn Michele Lucas-Fehm, MD, (right) discuss their views and experiences during the "Diversity" workshop, sponsored by the Institute for Physician Leadership of the Society's Educational and Scientific Trust.

Dr. George Trajtenberg of Chester County Hospital in West Chester offers his views during the audience participation portion of the "Diversity" workshop.

ethnic diversity in the physician community, political involvement, peer review, stress management, presentation skills and image building, and physician and hospital relationships.



Highlighting the sessions was a discussion entitled, "Diversity: A Workshop for the Future Leaders of Medicine." Sponsored by the Institute for Physician Leadership of the Society's Educational and Scientific Trust, this workshop gathered panelists "to explore the future leadership of organized medicine in Pennsylvania and the effect an increasingly diverse population will have on it."

Panelists included: Betty L. Cottle, MD; Lynn Michele Lucas-Fehm, MD; Diego J. Gonzales, MD; and Jitendra Desai, MD. Each talked about their personal experiences as a physician of diverse background. Audience members were then given the opportunity to question the panelists, who voiced their ideas for handling specific situations and being more accepting and understanding of physicians of diverse backgrounds. The session was well-received and offered many interesting and eye-opening views to attendees.

State Representatives John H. Broujos and Samuel E. Hayes Jr. joined Melissa B. Ross, a representative of the American Medical Political Action Committee, in leading the workshop, "Practical Political Involvement for Physicians." During the presentation, Representative Broujos said, "Political activity is part of the process, [and] doctors talking to politicians is important." Representative Hayes added, "If you don't do your business on Capitol Hill...someone else will do it for you." Practical tips were also offered for physicians to become more effective with their grassroots political activities.

Michael Sheehan, a communications consultant from Washington, DC, led "Presentation Skills and Image Building," a workshop designed to improve leaders' skills when communicating with the public, legislators, and peers. Sheehan offered the "three Ms"—message, messenger, and medium—and used videotaped segments of nationally known figures to demonstrate good and bad speaking techniques and their effectiveness. The response to the workshop was overwhelmingly positive.

Two seminars were offered to help physicians deal more effectively with the pressures and evolving forms of the medical field. In the first, a stress management workshop subtitled, "Is Stress Worth Dying For?," physicians were given statistics on stress levels of their specialties. Led by nationally known speaker, Robert S. Eliot, MD, FACC, this workshop analyzed the causes and effects of stress, and

Richard J. Lipovich, senior manager for Arthur Andersen Healthcare Services in Pittsburgh, answers questions during a workshop about "The Future of Health Care," a study of the health care environment of the future.

offered mechanisms for physicians to use in reducing stress. The second workshop addressed one common stressor for physicians: peer review. Donald E. Harrop, MD, president of

State Representative Samuel E. Hayes Jr. relays practical tips for increased physician involvement on Capitol Hill during a political involvement workshop at the 1992 Leadership Conference.

the Keystone Peer Review Organization (KePRO), offered advice to help physicians deal more effectively with peer review.

In the final workshop, Richard J. Lipovich, senior manager for Arthur Andersen Healthcare Services in Pittsburgh, presented the findings of the 1991 Delphi Study, "The Future of Health Care." The study asked 2,600 health care professionals, including 1,200 physicians, what the future holds. Findings related to universal health care and costs.

From the data, Arthur Andersen developed strategies for surviving in the health care environment of the future. According to the study, Lipovich said physicians need to: 1) understand policy and payment changes; 2) select the best mode of practice; 3) look carefully at managed care organizations they may consider joining; 4) enhance productivity; 5) improve hospital relationships; and 6) strengthen patient care quality commitment. The study also suggests that hospitals make some adjustments to assure future survival, i.e., improve operational effectiveness and involve physicians in leadership roles.

SOCIETY CONDUCTING A NUMBER OF SURVEYS

Each year, the Pennsylvania Medical Society conducts a number of surveys to learn about public and member perceptions on a range of medical and public health issues. This year promises to be no different, with a dozen surveys already in the works by the Society and its Educational and Scientific Trust.

Membership surveys

An all-physician survey is conducted annually by the Society's Department of Management Information Systems. Questionnaires were mailed to all state-licensed physicians in May to collect the following data: specialty; carrier participation; years in practice; employment category (solo, partnership, hospital, group, medical school, other); and demographic/personal information. The results will be used three-fold: 1) to update the Society's database of Pennsylvania physicians; 2) to produce sections of the Society's 1992 membership directory, due in August; and 3) to compile data for the Society's Physician Manpower Report due in October.

Data for another annual survey, the Society's Membership Poll, is currently being gathered by the Trust for the Society's Division of Communications. Written questionnaires—seeking to discover members' opinions and priorities on specific issues—were mailed to a random sample of Society members and leaders beginning last month. Results are due in October.

Regulatory and public health surveys

Information about several regulatory and public health issues—including auto insurance reform, child abuse and neglect, cults, and depression in the elderly—will be collected in 1992 by the Society and the Trust.

First, in response to a Board action, an auto insurance reform survey was conducted in May and June through a written questionnaire and telephone interviews. The target audience included random samples of Pennsylvania physicians specializing in anesthesiology, general surgery, neurosurgery, neurology, orthopedic surgery, physician medicine, plastic surgery, family practice, general practice, and emergency medicine.

From the results, due in September, the Trust seeks: 1) to ascertain the level and nature of health care access problems which have resulted from the passage of the Auto Insurance Reform Act (Act 6); and 2) to collect information on physicians' experiences with the act's reimbursement limits and peer review components.

Second, the Society's Department on Education and Science will collect information on child abuse and neglect from Pennsylvania school districts. Survey questions will address school policies on child abuse, experiences with reporting child abuse, and feelings regarding Pennsylvania's child abuse and reporting laws.

Third, random samples of Pennsylvania primary care physicians and psychiatrists will be surveyed regarding cults. The study

District News

AMA VICE SPEAKER VISITS NINTH DISTRICT

Daniel H. Johnson Jr., MD, a diagnostic radiologist from New Orleans and vice speaker of the AMA House of Delegates, recently spoke at a Ninth District dinner at the invitation of Society Trustee John W. Mills, MD. More than 60 physicians attended to hear Dr. Johnson discuss content and economic aspects of Health Access America, the AMA's proposal to improve access to affordable, quality health care.

Earlier in the day, he spoke to approximately 40 members of the Hospital Medical Staff Section at Indiana County Hospital about the role of the AMA and the importance of physician involvement on a national level.

Dr. Johnson

will seek to determine specialties' experiences with and reactions to cult activities. The questionnaire is scheduled for mailing this month, and study results will be available for release to the House of Delegates in October.

Fourth, between May and September, the Trust—through focus groups and mailed written questionnaires—will collect information for the state Department of Aging to use in developing educational campaigns regarding depression in the elderly. The target audience includes physicians who specialize in family practice, general medicine, internal medicine, and geriatrics, as well as older Pennsylvanians.

Other surveys

Several other surveys are also under consideration or development:

• Four hundred randomly selected Pennsylvanians will have the opportunity to express their opinions about several medical issues through a Gallup poll. Each year the Society latches onto the poll conducted for the AMA and is given the opportunity to add questions to the survey. This year questions were added regarding medical insurance, Medicare, the cost of health care, living wills, malpractice, access to care, HIV/AIDS, substance abuse, and health care rationing. Select results will be published, for comparison purposes, with those from the Society's Membership Poll.

• State and federal government candidates will be polled through a legislative survey being conducted by the Trust. The survey will solicit opinions from the candidates on issues of interest to the Society and its members. The questionnaire will be mailed this month, and the results are slated for publication in the September issue of PENNSYLVANIA MEDICINE.

• Medical student issues will be addressed by two additional surveys under development by the Society. The first, in reponse to Resolution 91-61, will study health care coverage for Pennsylvania's medical professionals-in-training. The second, still in the proposal stages, will seek to collect information on the student loan debt load of first-year residents in the state and determine to what degree that influenced specialty choices.

• Secretaries and executives of county medical societies, under State Society bylaws, are required to file a report of disciplinary activities annually with the secretary of the Society. Questionnaires mailed on January 31, 1992, from Secretary Ferdinand L. Soission Jr., MD, were due back for tabulation by April 10. Results will be published in the secretary's report to the House of Delegates in the Society's *Official Reports Book*.

• Delegates to the 1992 House of Delegates meeting in October in Philadelphia can again look forward to completing the Annual Business Meeting Questionnaire, which is used to improve the meeting from year to year and to compile delegate interests regarding committee assignments.

The Society reminds members that these surveys are developed to obtain vital information about where to direct the Society's efforts for members, legislative action, and public well-being. Though the Society and Trust attempt to filter physicians so that they are not overburdened with surveys each year, for the reason stated above, physicians are encouraged to participate by completing as many Society surveys as possible that *do* reach their desks.

AMA News

PHYSICIANS TO SERVE ON AMA COMMITTEES

Three Pennsylvania physicians will serve on reference committees at the annual meeting of the American Medical Association's (AMA's) House of Delegates, June 21-25:

• Doris F. Bartuska, MD, will serve as chair of Reference Committee E—Science, Technology, and Public Health. She is an endocrinologist in Philadelphia.

• Jonathan E. Rhoads Jr., MD, a thoracic surgeon from York, will serve as a member of Reference Committee F—Board of Trustees. He is speaker of the Society's House.

• Jack K. Goodrich, MD, a specialist in nuclear medicine from Erie, will serve as a member of Reference Committee H—Health Care Data/ Systems. He is a delegate representing the American College of Nuclear Physicians.

Auxiliary News

AUXILIARY CONFLUENCE HELD IN APRIL

The Pennsylvania Medical Society Auxiliary held its annual confluence April 28-29 in State College. Approximately 125 members attended the mid-year educational seminar. Serving as keynote speakers were Jennie T. Stultz, director of Keep America Beautiful, Gastonia, North Carolina, who spoke on "Your Impact on the Environment"; and Sarah Weddington, an attorney from Austin, Texas, who presented, "You Can Be a Leader."

A celebrity auction highlighted Tuesday evening's program. Society Trustee Victor F. Greco, MD, served as auctioneer, and guest auctioneers from the Society included: Robert N. Moyers, MD, president; Donald G. Ferguson, MD, president elect; and John H. Hobart, MD, chairman of the board. More than $5,000 was raised for the American Medical Association Education and Research Foundation which provides money for medical schools, student loans, and community health projects. These programs are a principal objective of AMA and auxiliary activities.

The auxiliary also scheduled workshops focusing on legislative information, fund-raising, political action committees, and estate planning. Joining Dr. Moyers as guest speakers for the sessions were: R. William Alexander, MD, and Lorre Lei Jackson, board members of the Americal Medical Political Action Committee; Larry L. Light, executive director of the Pennsylvania Medical Political Action Committee; and Kenneth B. Jones, Esq., general counsel of the State Society.

FOUNDATION CREATES ACCESS INCENTIVE PROGRAM

Practice Sights, a new program of the Robert Wood Johnson Foundation (RWJF), challenges states—through collaborations among state agencies, communities, provider groups, and health professionals schools—to improve the distribution of primary care providers in medically underserved areas. Foundation staff also hope the program will help states and the nation set their sights on resolving the access problems created by the maldistribution of primary care providers.

Specifically, the work of the grantees and the partnerships under the program is intended to:

- increase the number of primary care physicians, physician assistants, nurse practitioners, and nurse midwives providing care in medically underserved areas;
- improve the reimbursement, policy, and practice environments in underserved communities so as to improve their ability to recruit and retain providers; and
- increase the state's capacity to support and enhance primary care service delivery statewide.

RWJF will make up to $16.5 million available under this four-year, two-stage competitive program. In the first stage, 15-month development grants of up to $100,000 each will be made to as many as 15 states. At the end of this development period, grantees will be eligible to

Sheraton Station Square

Successful Meetings Come In All Sizes

Our hotel lavishes the same attention on your executive meeting of 10 as we do on your convention of 1,000.

Our reputation for service has secured us the patronage of people from every profession.

With 20,000 square feet of meeting and banquet space, and 300 guest rooms, we're large enough to handle most board meetings, conferences or banquets.

Call (412) 261-2000 and book your next meeting where quality comes in all sizes.

LEONARDO COULD HAVE QUALIFIED FOR AMWA MEMBERSHIP.

CAN YOU?

The great Renaissance man could have made it on the strength of his medical writing alone...

Or as an illustrator,

Or simply as a medical scientist.

You can earn membership in the American Medical Writers Association — AMWA— by being any one of these, as well as by being a doctor, dentist, editor, librarian, educator, medical photographer... or by being professionally involved in medical communication.

The one inflexible criterion: you must share the conviction of AMWA's 3,700 members that clear, concise communication is a vitally important art that must be cultivated and refined.

To achieve that end, AMWA conducts extraordinary workshops, plenary sessions and forums in a variety of specialized facets of communications — including explorations into the latest electronic media. It holds local, regional, national, and international meetings that enable writers, editors, physicians, film- and videomakers, publishers, illustrators — a wide spectrum of scientific communicators to meet and exchange ideas. And AMWA publishes a refereed journal that exists for one purpose only — to encourage and nurture concise, lucid medical communications.

To learn more about how to join the rapidly growing ranks of AMWA members who share your concerns, write, call, or fax the American Medical Writers Association, 9650 Rockville Pike, Bethesda Maryland 20814, (301-493-0003, fax 301-493-0005).

Just because da Vinci missed out on AMWA membership is no reason you should!

AMERICAN MEDICAL WRITERS ASSOCIATION

compete for three-year implementation grants that will average $800,000. Up to 10 states will be awarded implementation grants and will also be eligible to apply for program-related investments, averaging $700,000, to develop loan funds to enhance the viability of primary care practices.

Cabinet-level agencies in the U.S. and Puerto Rico, universities, state primary care associations, or other nonprofit groups with the capacity to develop a statewide system to support primary care providers are eligible to apply for grants. For more specific information about the program, application, selection criteria, use of funds, and evaluation and monitoring, call James D. Bernstein, program director, at (919) 821-9991.

OLDER AMERICANS SURVEYED ON LIFESTYLES

On April 1, some 250 interviewers began knocking on doors of thousands of families, asking older men and women to volunteer detailed information about their lives. The interviewers, from the University of Michigan's Institute for Social Research (ISR), plan to visit more than 13,000 older Americans across the U.S. The effort is expected to give government policymakers and researchers the data they need to better understand how people fare as they age.

Interview questions will pertain to work history; earnings, assets, and debts; pension programs and retirement incentives offered by employers; health conditions and insurance; family structure and responsibilities; housing; and current and prospective living standards. ISR expects to collect data from approximately 13,500 men and women ages 51-61 in about 80 areas across the U.S. Also, a special sample will be taken in Florida because of its high concentration of older people.

Preliminary data from the study may be available as soon as April 1993, and the study is expected to continue for at least 12 years, following up on interviewees' decisions and their health and economic well-being. The study is being sponsored by the National Institute on Aging, under a five-year cooperative agreement with the ISR.

NEW INFORMATION SERVICE AVAILABLE

A new, low-cost, on-line information service for health care professionals and others requiring access to extensive medical and health information resources is now available throug IEI Network, Inc., Wheaton, Illinois. The service, US HealthLink, provides unlimited usage of its principal products and services for one fee of $35 per month, including four hours of communications time.

Using a personal computer and communications modem, subscribers can access: medical literature from both the National Library of Medicine and Elsevier Science Publishers; up-to-the-minute medical, health, and science news; a drug interaction service; a disease information database; electronic mail and bulletin boards; and a diagnostic decision support service. Also available for an added fee are a fax information service and a premium support service.

US HealthLink offers a free, on-line preview for those with a computer, modem, and communications package. For specific information about the preview, or additional information about the service, call 1-800-682-8770.

CARDIOLOGY RELEASES

Lea and Febiger has announced the release of the following cardiology publications:

Rapid Analysis of Electrocardiograms
Written by Emanuel Stein, MD, MPH, FACP, FACC, FCCP, this 404-page, paperback book provides a firm foundation in electrocardiography for health professionals. Self-assessment is emphasized in this self-learning, programmed course, which includes questions based on the text and reflected in illustrations.

Progress in Cardiology 5/1
Written by Douglas P. Zipes, MD, this 170-page issue of the biannual publication provides the latest facts, findings, and opinions about heart disease in the elderly. Illustrations, tables, and pertinent bibliographic citations supplement the journal, which focuses on one topic of interest per issue.

For additional information or to order these publications, call Lea & Febiger at 1-800-638-0672.

PMSLIC TO OFFER SEMINAR DISCOUNT

Pennsylvania Medical Society Liability Insurance Company (PMSLIC) insureds will receive a premium discount for participation in PMSLIC's risk management seminars this fall. More details on the program, discount, and registration will appear in Society publications in the next few months. Non-PMSLIC-insured physicians will also be invited to attend, and all participants will receive Category I CME credits.

PMSLIC believes that risk management and physician participation in such educational programs will reduce the risk of malpractice litigation while improving the quality of patient care for all Pennsylvanians.

Health Department Publication

The Pennsylvania Department of Health has obtained a limited quantity of a professionally produced publication developed to assist physicians in providing clinical care to people with HIV infection. For information about obtaining one free copy of the publication, call the department's Bureau of HIV/AIDS at (717) 783-0572. Orders must be placed by June 30, 1992.

Reach Out to Colleagues Where? How?

Place a message in the 1992 Membership Directory of the Pennsylvania Medical Society.

Deadline for insertion orders for advertising space is June 26. Call (717) 558-7750.

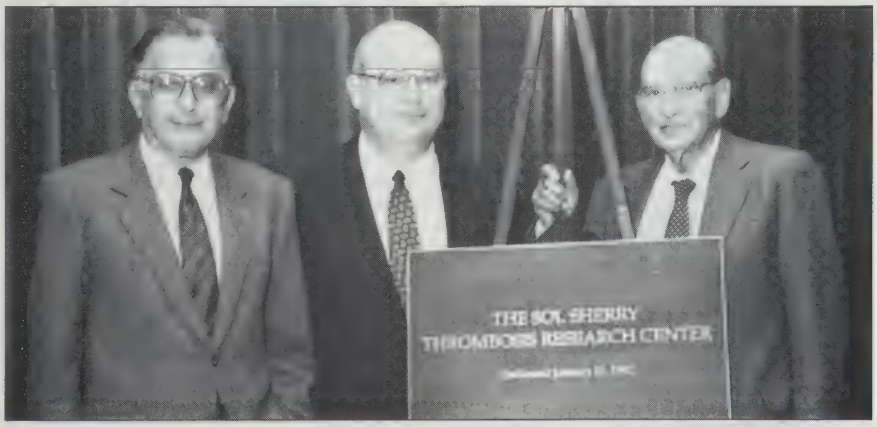
Ralph Gaudio Jr., MD, internal medicine and pulmonary disease specialist at North Hills Passavant and Suburban General hospitals in Pittsburgh, received a Physicians Merit Award from the Allegheny County Medical Society for his tireless work and contributions.

John Silverio, MD, FAAP, FACN, retired after three decades as director of pediatric nutrition research at Wyeth-Ayerst Laboratories. Based on his accomplishments in infant nutrition, the Association of Medical School Pediatric Department Chairmen have established the "John Silverio Pediatric Research Fellowship Award" to be given annually.

Lila Stein Kroser, MD, a family medicine practitioner in northeast Philadelphia and faculty member at the Medical College of Pennsylvania, was re-elected treasurer of the Medical Women's International Association. She also serves as a director of the Philadelphia County Medical Society and the Pennsylvania Academy of Family Physicians.

Paul E. Berkebile, MD, anesthesiologist at Allegheny General Hospital, has been named president elect of the American Heart Association, Pennsylvania affiliate.

Robert J. Jenkins, MD, an internal medicine specialist in Finleyville, was elected to the Board of Directors of Mon-Vale Health Resources, Inc., in Carroll Township.



Lynda Thomas, MD (center), an obstetrician at Chestnut Hill Hospital in Philadelphia, and her mother, Audrey (left), were recognized by the U.S. Surgeon General Antonia Novello, MD (right), in a special ceremony for families of organ and tissue donors. Dr. Thomas's son, who died last August, was an organ and tissue donor, helping to save the lives of several people. Dr. Thomas was recognized for her "supreme humanitarian spirit to give the Gift of Life to others" by consenting to organ donation.

Jules Kann, MD, PhD, internal medicine specialist in Pittsburgh, was honored by the Pennsylvania Senate with a citation for his contributions to the Pennsylvania Chronic Fatigue Association.

Joseph A. Marasco, MD, Pittsburgh radiologist, was elected treasurer of the International Society of Radiology.

Kenneth L. Cooper, MD, retired medical director of the Family Planning Center, Williamsport Hospital, was honored by the Lycoming County Chapter of the National Conference of Christians and Jews for his longtime service as a civic leader.

Temple University has named its Thrombosis Research Center after Sol Sherry, MD (right), in honor of his many contributions to the hospital and school of medicine. Pictured with Dr. Sherry are (left-right): Peter J. Liacouras, president of Temple University, and Leon S. Malmud, MD, vice president of Temple University Health Sciences Center. In other news from Temple, Dr. Malmud has been elected to fellowship in the American College of Nuclear Physicians.

Robert P. Liss, MD, specialist in anterior segment ophthalmology and associate clinician at the Scheie Eye Institute at the University of Pennsylvania, was selected as an instructor of cataract surgery at the 1992 American Academy of Ophthalmology's Annual Meeting in Dallas, Texas.

Rex H. Newton, MD, chief, Department of Physical Medicine and Rehabilitation, Harmarville Rehabilitation Center, Pittsburgh, was selected 1991 Physician of the Year by the National Association of Rehabilitation Professionals in the Private Sector.

Barry B. Goldberg, MD, director, Division of Ultrasound, Department of Radiology, Thomas Jefferson University Hospital, received the Joseph H. Holmes Clinical Pioneer Award from the American Institute of Ultrasound in America for his contribution to the development of diagnostic ultrasound.

Joseph C. Flanagan, MD, director of oculoplastic service, Wills Eye Hospital, Philadelphia, in March presented "Endoscopic Laser DCRs" as the featured speaker at Grand Rounds at the Cornell Medical Center in New York City.

Anthony R. Temple, MD, Wayne, has been promoted to executive director, medical, and named to the management board at McNeil Consumer Products Company in Fort Washington.

Howard K. Rabinowitz, MD, professor and vice chairman, Department of Family Medicine, Jefferson Medical College, Philadelphia, was elected president of the American Board of Family Practice.

John C. Sonne, MD, Moorestown, New Jersey, received the Bion Award for Distinguished Scientific Achievement in Psychoanalysis, presented by the Study Group for Contemporary Psychoanalytic Process at the Institute of the Pennsylvania Hospital in Philadelphia. Also, Dr. Sonne recently presented "The Relevance of the Dread of Being Aborted to Models of Therapy and Models of the Mind" at a Tuesday Conference of the Institute.

The following were elected officers by the medical staff at Tyler Memorial Hospital in Tunkhannock: **Ian A. Kellman, MD,** director of radiology, as president; **John C. Gardner, MD,** family practice physician, as vice president; and **Donald L. Jackson, MD,** director of emergency medicine, as secretary-treasurer.

Harry G. Zegel, MD, attending physician in medical imaging at Presbyterian Medical Center, is assuming two additional positions at Presbyterian: vice chairman of the Department of Medical Imaging and director of its Radiology Residency/Fellowship Program.

Paul R. Rosenberg, MD, Pittsburgh specialist in diseases of the retina, was elected to fellowship in the American College of Surgeons.

David Yanoff, MD, private practice thoracic surgeon, was appointed to the board of directors at Gnaden Huetten Memorial Hospital in Lehighton.

DeWitt E. Kemp III, MD, director of the regional hospice at Windber Hospital, was elected president of the hospital's medical staff.

M.H.V. Murthy, MD, FACP, medical staff director at Suburban General Hospital in Pittsburgh, was elected to fellowship in the American College of Physicians.

Jorge Lindenbaum, MD, internal medicine specialist, was named president of the medical staff at Divine Providence Hospital of Pittsburgh. Also at Divine Providence, **Thomas W. Cowan, MD,** orthopedic surgeon, was appointed chair of the Department of Surgery; and **Anthony P. Yates, MD,** internal medicine specialist, was appointed chair of the Department of Medicine.

Rodolfo I. Godinez, MD, PhD, medical director of the Department of Respiratory Care Services and associate director of the Pediatric Intensive Care Complex of the Children's Hospital of Philadelphia, was elected to a three-year term on the board of directors of the American Society for Testing and Materials.

The following physicians were elected staff officers at Grand View Hospital in Sellersville: **Mitchell J. Barrer, MD,** as medical staff president; **Irwin J. Hollander, MD,** as vice president; **Sandra Harris-Corrado, MD,** as secretary/treasurer; and **Ann M. Rudden, MD,** as member-at-large of the medical executive committee. Dr. Hollander was also elected respresentative to the Hospital Medical Staff Section of the State Society.

Paul D. Thompson, MD, was named director of the newly formed Cardiovascular Disease Prevention Center at the University of Pittsburgh Medical Center Heart Institute.

Newell Fischer, MD, senior attending psychiatrist at The Institute of Pennsylvania Hospital in Philadelphia, received first place status in the Ralph B. Little Award for Clinical Research in Psychiatry for his paper, "The Psychoanalytic Experience and Psychic Change." Institute medical staff members **Marcia Meckler, MD,** and **Silas L. Warner, MD,** received second-place status, and honorable mentions went to: **Sydney Pulver, MD; Ira Brenner, MD; Howard S. Baker, MD;** and **Michael Miller, MD**.

Juan A. Asensio, MD, Philadelphia, has been appointed associate professor of surgery and chief of the Division of Trauma Surgery and Surgical Critical Care at Hahnemann University. Dr. Asensio will also serve as medical director of Hahnemann's Level I Regional Resource Trauma Center, as well as of its University MedEvac.

Francis L. Hutchins Jr., MD, clinical associate professor of obstetrics/gynecology at Hahnemann University Hospital and Thomas Jefferson University Hospital, was appointed director of the Division of Gynecology and Women's Services at the Graduate Hospital in Philadelphia.

Dr. Hutchins

Donald G. Mitchell, MD, associate professor of radiology and director of the Division of Magnetic Resonance Imaging, Thomas Jefferson University, was recognized by the Association of University Radiologists for the paper, "Chemical Shift Phase-Difference and Suppression Magnetic Resonance Imaging Techniques in Animals, Phantoms, and Humans." Dr. Mitchell wrote the paper with colleagues at Jefferson.

Eric N. Faerber, MD, was named director of the Department of Radiology at St. Christopher's Hospital for Children, Philadelphia.

George W. Blankenship Jr., MD, professor and chairman of ophthalmology, Penn State's Milton S. Hershey Medical Center, was promoted to associate dean for external affairs and continuing medical education.

The following were appointed to positions at the Graduate Hospital in Philadelphia: **Vincent M. Vaccaro, MD,** Newtown Square, as director of benign gynecology; **Harry Reich, MD, FACOG,** Dallas, as director of gynecologic surgery; and **Michael J. Campion, MD,** Villanova, as director of clinical research.

Bartley P. Griffith, MD, a Henry T. Bahnson professor and chair in cardiothoracic surgery, University of Pittsburgh Medical Center, received a University Medalion honoring him as the second holder of the Bahnson Chair and for his contributions to heart and lung surgery, and organ transplantation.

Jonas T. Johnson, MD, FACS, professor and vice chairman, director, Division of Head and Neck Oncology and Immunology, Department of Otolaryngology, University of Pittsburgh School of Medicine, has been appointed editor-in-chief of the *American Journal of Otolaryngology*.

Herbert S. Waxman, MD, chairman of medicine, Albert Einstein Medical Center, and professor of medicine, Temple University School of Medicine, has been named president elect of the Association of Program Directors in Internal Medicine.

William S. Frankl, MD, Wynnewood, has been appointed regional director of cardiovascular services for Medical College Hospitals, Philadelphia. Dr. Frankl will also serve as professor of medicine at the Medical College of Pennsylvania.

7th Annual Conference on Clinical Immunology
including a Special
Symposium: Clinical Immunology
for the Practitioner
November 13-15, 1992
Wyndham Franklin Plaza
Philadelphia, Pennsylvania

The Annual Conference on Clinical Immunology (ACCI), organized by the Clinical Immunology Society (CIS), provides a participatory forum which unifies the many components of clinical immunology—from an understanding of fundamental immune mechanisms to current knowledge concerning the role of immunologic processes in human disease. Particular sessions will focus on signal transduction in immune responses, immunosuppression, cytokines and allergic diseases and new aspects of autoimmunity as well as a day-long symposium on viral and clinical pathogenesis of HIV infection. The special symposium for practitioners focuses on immunologic diseases and provides opportunities for general discussion.

The conference will be supplemented by workshops, minisymposia, study groups, poster sessions and exhibits. CME accreditation will be available.

For registration information contact CIS Registration Manager, Slack Incorporated, 6900 Grove Road, Thorofare, NJ 08086-9447, 609-848-1000, extension 208.

salary and benefit package leading to partnership. For more information, send CV to Daniel Stern and Associates, 211 N. Whitfield St., Pittsburgh, PA 15206; or fax to 412-363-6032; or call 1-800-438-2476.

General internist or internist with interest in pulmonary to join board certified internist in outstanding practice in foothills of Poconos. Safe, growing community with opportunity to enjoy the practice of medicine. Send CV to Douglas Turtzo, MD, 101 South Schanck Ave., Pen Argyl, PA 18072.

$30,000 BONUS OFFERED TO HEALTH CARE PROFESSIONALS

If you are a board-certified physician or a candidate for board certification in one of the following specialties, you may qualify for a bonus of up to $30,000 in the Army Reserve.

Anesthesiology • General Surgery • Thoracic Surgery
Pediatric Surgery • Orthopedic Surgery
Colon-Rectal Surgery • Vascular Surgery • Neurosurgery

A test program is being conducted which offers a bonus to eligible physicians who reside in certain geographic areas (Pennsylvania, West Virginia, Ohio, Michigan, Illinois, Indiana, Wisconsin, Minnesota and Iowa). You would receive a $10,000 bonus for each year you serve as an Army Reserve physician—for a maximum of three years.

You may serve near your home, at times convenient for you, or at Army medical facilities in the United States and abroad. There are also opportunities to attend conferences and participate in special training programs, such as the Advanced Trauma Life Support Course.

To learn more about the Army Reserve and the Bonus Test Program, call one of our experienced Medical Personnel Counselors:

In Philadelphia call Major Ernest Lyons or Captain Jules Fleischner 1-800-759-5462. In Pittsburgh call Captain Russell Flemming collect (412) 644-4432.

ARMY RESERVE. BE ALL YOU CAN BE.

Medical Practice Sales and Appraisals

Fulton, Longshore & Associates is a leader in the appraisal and sale of medical practices.

Listed below are several of the practices which are currently for sale:

SPECIALTY	LOCATION	ANNUAL REVENUE
Cardiology	Philadelphia	$ 285,000
Dermatology	Coastal New Jersey	$ 700,000
Family Practice	Northern Delaware	$ 250,000
Gynecology	Philadelphia	$ 340,000
Internal Medicine	Central Pennsylvania	$ 900,000
Ophthalmology	D.C. Area	$ 600,000
Ophthalmology	Michigan	$ 700,000
Ophthalmology	New Jersey	$ 300,000
Ophthalmology	North Virginia	$1,000,000
Ophthalmology	Ohio	$1,500,000
Ophthalmology	Charlotte, NC	$ 600,000
Pediatrics	Central New Jersey	$ 210,000
Pediatrics	Lehigh Valley, PA	$ 250,000
Psychiatry	Tennessee	$ 525,000
Radiology	South Jersey	$ 850,000

For additional information, please contact:

Ed Strogen
Fulton, Longshore & Associates
527 Plymouth Road, Suite 410
Plymouth Meeting, PA 19462
(215)834-6780

PITTSBURGH!

Hospital-guaranteed and private practice opportunities for board certified/eligible physicians are available in Western Pennsylvania in the following specialties:

- **Cardiology**
  - *Invasive*
  - *Noninvasive*
- **Emergency Medicine**
- **Family Medicine**
- **Internal Medicine**
- **OB/GYN**
- **Surgery**
  - *General*
  - *Vascular*

Our search and business advisory services are paid by our sponsoring hospital and physician clients. We will provide:

- **Compensation planning**
- **Practice start-up planning and implementation**
- **Practice valuation and purchase assistance**
- **Fee schedule/profile development**
- **Partnership buy-in valuation and structuring**

If you would like additional information on current opportunities or assistance in the above areas before making your decision, please send your CV or call John Fenner for a confidential discussion:

FENNER & COSTELLO, INC.

Specialists In Physician Development

Responding to Living Wills: Questions for Physicians

William Cooper, MD, JD

Most people have concern for that period when death begins but life continues—that period when our control of our life situation is lessened or lost. One of the first recorded discussions of this matter was by Aristotle in his proposal for the Necomachean Ethics: he proposed that fairness in dealings with others be the basis of all relationships.

Mills, in 1907, proposed the Utilitarian Ethic, where the good to the individual was reviewed in light of its effect on the good to the group. The effect on the group dominated, and individuals' rights were—to some degree—lessened. This approach has been used in recent years to justify certain rationing decisions. Wasserman, in his writing in the Hastings Center Report (October 1983), said, "When a patient's only connection to life is through a respirator or an IV tube, the length of life should not be determined by the amount—or the duration—of Medicare benefits."

Dr. Louis Kutner is given credit for the first use of the term, "living will" in 1967 in a discussion regarding patients' wishes. In 1969 he published an article in the *Indiana Law Journal* proposing legislation for the same. Since that time, 48 states have enacted some legislation regarding the "living will," and 49 jurisdictions have durable power of attorney provisions. Additionally, some states have indicated the availability of specific durable power of attorney for health affairs.

Patients write living wills and durable powers of attorney for a number of reasons, and the physician's responsibilities are numerous when the patient has correctly completed one of these documents. Physicians should know:

1) procedural requirements to implement these documents, as these may vary from state to state and according to which document is available to the patient;

2) requirements within their jurisdictions, such as duration of validity of the documents, reaffirmation requirements upon hospital admission, revocation requirements, or degree of immunity conferred on physicians; and

3) how to respond to advance directive or family or state conflicts.

One such conflict is the definition of medical futility. If a treatment merely preserves permanent unconsciousness or cannot end dependence upon extensive medical supportive care, it should be considered medically futile. This is a professional judgement that takes precedence over patient autonomy. (For discussion, see Schneiderman et. al., *Ann Int Med*, 112:12, 1990.)

Physicians must also consider the many questions provoked by the existence of living wills and durable powers of attorney for health care: Do patient rights extend to the provision of futile therapy? Does the institution or do patients and families have the right to demand treatments that do not result in improvement in effective life span, but simply extend the dying period? Can the currently terminally ill, incompetent, and hopelessly ill have support systems withdrawn? Is it a medical decision or a social decision requiring input from ethics committees or the judical system?

I recommend that in addition to asking these questions, physicians continue to not only provide living will and durable power of attorney documents and information to patients, but also attempt to change the emphasis from death in the institution to the "art of dying well." In ancient Rome, the art of dying well was fostered by Seneca and his students. Such a lesson could help family and friends, but will require increased funding and health professional support for home care for the terminally ill.

Dr. Cooper is chairman emeritus, Department of Medicine, at Shadyside Hospital, Pittsburgh.

WHEN ACID REFLUX ERUPTS

Zantac® 150 Tablets **BRIEF SUMMARY**
(ranitidine hydrochloride)

Zantac® 300 Tablets
(ranitidine hydrochloride)

Zantac® Syrup
(ranitidine hydrochloride)

The following is a brief summary only. Before prescribing, see complete prescribing information in Zantac® product labeling.

INDICATIONS AND USAGE: Zantac® is indicated in:
1. Short-term treatment of **active duodenal ulcer.** Most patients heal within 4 weeks.
2. **Maintenance therapy** for duodenal ulcer patients at reduced dosage after healing of acute ulcers.
3. The treatment of **pathological hypersecretory conditions** (e.g., Zollinger-Ellison syndrome and systemic mastocytosis).
4. Short-term treatment of **active, benign gastric ulcer.** Most patients heal within 6 weeks and the usefulness of further treatment has not been demonstrated.
5. Treatment of **gastroesophageal reflux disease (GERD).** Symptomatic relief commonly occurs within 1 or 2 weeks after starting therapy. Therapy for longer than 6 weeks has not been studied.

In active duodenal ulcer; active, benign gastric ulcer; hypersecretory states; and GERD, concomitant antacids should be given as needed for relief of pain.

CONTRAINDICATIONS: Zantac® is contraindicated for patients known to have hypersensitivity to the drug.

PRECAUTIONS:

General: 1. Symptomatic response to Zantac® therapy does not preclude the presence of gastric malignancy.
2. Since Zantac is excreted primarily by the kidney, dosage should be adjusted in patients with impaired renal function (see DOSAGE AND ADMINISTRATION). Caution should be observed in patients with hepatic dysfunction since Zantac is metabolized in the liver.

Laboratory Tests: False-positive tests for urine protein with Multistix® may occur during Zantac therapy, and therefore testing with sulfosalicylic acid is recommended.

Drug Interactions: Although Zantac has been reported to bind weakly to cytochrome P-450 *in vitro,* recommended doses of the drug do not inhibit the action of the cytochrome P-450-linked oxygenase enzymes in the liver. However, there have been isolated reports of drug interactions that suggest that Zantac may affect the bioavailability of certain drugs by some mechanism as yet unidentified (e.g., a pH-dependent effect on absorption or a change in volume of distribution).

Increased or decreased prothrombin times have been reported during concurrent use of ranitidine and warfarin. However, in human pharmacokinetic studies with dosages of ranitidine up to 400 mg per day, no interaction occurred; ranitidine had no effect on warfarin clearance or prothrombin time. The possibility of an interaction with warfarin at dosages of ranitidine higher than 400 mg per day has not been investigated.

Carcinogenesis, Mutagenesis, Impairment of Fertility: There was no indication of tumorigenic or carcinogenic effects in lifespan studies in mice and rats at dosages up to 2,000 mg/kg per day.

Ranitidine was not mutagenic in standard bacterial tests (*Salmonella, Escherichia coli*) for mutagenicity at concentrations up to the maximum recommended for these assays.

In a dominant lethal assay, a single oral dose of 1,000 mg/kg to male rats was without effect on the outcome of two matings per week for the next 9 weeks.

Pregnancy: ***Teratogenic Effects: Pregnancy Category B:*** Reproduction studies have been performed in rats and rabbits at doses up to 160 times the human dose and have revealed no evidence of impaired fertility or harm to the fetus due to Zantac. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

Nursing Mothers: Zantac is secreted in human milk. Caution should be exercised when Zantac is administered to a nursing mother.

Pediatric Use: Safety and effectiveness in children have not been established.

Use in Elderly Patients: Ulcer healing rates in elderly patients (65 to 82 years of age) were no different from those in younger age-groups. The incidence rates for adverse events and laboratory abnormalities were also not different from those seen in other age-groups.

ADVERSE REACTIONS: The following have been reported as events in clinical trials or in the routine management of patients treated with Zantac®. The relationship to Zantac therapy has been unclear in many cases. Headache, sometimes severe, seems to be related to Zantac administration.

Central Nervous System: Rarely, malaise, dizziness, somnolence, insomnia, and vertigo. Rare cases of reversible mental confusion, agitation, depression, and hallucinations have been reported, predominantly in severely ill elderly patients. Rare cases of reversible blurred vision suggestive of a change in accommodation have been reported.

Cardiovascular: As with other H_2-blockers, rare reports of arrhythmias such as tachycardia, bradycardia, atrioventricular block, and premature ventricular beats.

Gastrointestinal: Constipation, diarrhea, nausea/vomiting, abdominal discomfort/pain, and rare reports of pancreatitis.

Hepatic: In normal volunteers, SGPT values were increased to at least twice the pretreatment levels in 6 of 12 subjects receiving 100 mg q.i.d. intravenously for 7 days, and in 4 of 24 subjects receiving 50 mg q.i.d. intravenously for 5 days. There have been occasional reports of hepatitis, hepatocellular or hepatocanalicular or mixed, with or without jaundice. In such circumstances, ranitidine should be immediately discontinued. These events are usually reversible, but in exceedingly rare circumstances death has occurred.

Musculoskeletal: Rare reports of arthralgias.

Hematologic: Blood count changes (leukopenia, granulocytopenia, thrombocytopenia) have occurred in a few patients. These were usually reversible. Rare cases of agranulocytosis, pancytopenia, sometimes with marrow hypoplasia, and aplastic anemia and exceedingly rare cases of acquired immune hemolytic anemia have been reported.

Endocrine: Controlled studies in animals and man have shown no stimulation of any pituitary hormone by Zantac® (ranitidine HCl) and no antiandrogenic activity, and cimetidine-induced gynecomastia and impotence in hypersecretory patients have resolved when Zantac has been substituted. However, occasional cases of gynecomastia, impotence, and loss of libido have been reported in male patients receiving Zantac, but the incidence did not differ from that in the general population.

Integumentary: Rash, including rare cases suggestive of mild erythema multiforme, and, rarely, alopecia.

Other: Rare cases of hypersensitivity reactions (e.g., bronchospasm, fever, rash, eosinophilia), anaphylaxis, angioneurotic edema, and small increases in serum creatinine.

OVERDOSAGE: Information concerning possible overdosage and its treatment appears in the full prescribing information.

DOSAGE AND ADMINISTRATION: (See complete prescribing information in Zantac® product labeling.)

Active Duodenal Ulcer: The current recommended adult oral dosage is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice daily. An alternate dosage of 300 mg or 20 mL (4 teaspoonfuls equivalent to 300 mg of ranitidine) once daily at bedtime can be used for patients in whom dosing convenience is important. The advantages of one treatment regimen compared to the other in a particular patient population have yet to be demonstrated.

Maintenance Therapy: The current recommended adult oral dosage is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) at bedtime.

Pathological Hypersecretory Conditions (such as Zollinger-Ellison syndrome): The current recommended adult oral dosage is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice a day. In some patients it may be necessary to administer Zantac® 150-mg doses more frequently. Dosages should be adjusted to individual patient needs, and should continue as long as clinically indicated. Dosages up to 6 g per day have been employed in patients with severe disease.

Benign Gastric Ulcer: The current recommended adult oral dosage is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice a day.

GERD: The current recommended adult oral dosage is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) twice a day.

Dosage Adjustment for Patients with Impaired Renal Function: On the basis of experience with a group of subjects with severely impaired renal function treated with Zantac, the recommended dosage in patients with a creatinine clearance less than 50 mL/min is 150 mg or 10 mL (2 teaspoonfuls equivalent to 150 mg of ranitidine) every 24 hours. Should the patient's condition require, the frequency of dosing may be increased to every 12 hours or even further with caution. Hemodialysis reduces the level of circulating ranitidine. Ideally, the dosing schedule should be adjusted so that the timing of a scheduled dose coincides with the end of hemodialysis.

HOW SUPPLIED: Zantac® 300 Tablets (ranitidine hydrochloride equivalent to 300 mg of ranitidine) are yellow, capsule-shaped tablets embossed with "ZANTAC 300" on one side and "Glaxo" on the other. They are available in bottles of 30 (NDC 0173-0393-40) tablets and unit dose packs of 100 (NDC 0173-0393-47) tablets.

Zantac® 150 Tablets (ranitidine hydrochloride equivalent to 150 mg of ranitidine) are white tablets embossed with "ZANTAC 150" on one side and "Glaxo" on the other. They are available in bottles of 60 (NDC 0173-0344-42) and 100 (NDC 0173-0344-09) tablets and unit dose packs of 100 (NDC 0173-0344-47) tablets.

Store between 15° and 30°C (59° and 86°F) in a dry place. Protect from light. Replace cap securely after each opening.

Zantac® Syrup, a clear, peppermint-flavored liquid, contains 16.8 mg of ranitidine hydrochloride equivalent to 15 mg of ranitidine per 1 mL in bottles of 16 fluid ounces (one pint) (NDC 0173-0383-54).

Store between 4° and 25°C (39° and 77°F). Dispense in tight, light-resistant containers as defined in the USP/NF.

Medical Technology and Maternal-Fetal Conflicts: An Ethicist's View

Page 12

YOU CAN IMPROVE TECHNOLOGY AND STILL BE STUCK IN THE SAME JAM

Technology is supposed to make your people more productive, your practice more competitive. We anticipate how technology will affect not only processes, but the structure of your practice as well. The Valley Medical Management concept revolves around a team of reimbursement specialists, managers, systems analysis and CPA's. This is the formula for our success. Our approach is scientific, comprehensive, and informative. Services provided include:

- ✦ Practice Reviews
- ✦ Administrative & Financial Management
- ✦ Billing
- ✦ Hardware/Software

Our objective is to make you a more successful professional.
Call us for more information.

SPECIALISTS IN MEDICAL PRACTICE MANAGEMENT

"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.

Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

12 Medical Ethics and Maternal-Fetal Conflicts

A medical ethicist offers guidelines for physicians in dealing with medical decisions, new technologies, and the age-old maternal-fetal dilemma.

Cover photo by Blair Seitz©, Harrisburg

24 Clarifying Concurrent Care

Concurrent care policy is the source of much confusion and exasperation in Pennsylvania. This article seeks to clarify the process for a better understanding by physicians.

18 Health Views from the House

Representative Elinor Z. Taylor

In this final of three conversations with members of the state's legislature, a representative of the House discusses medical issues and the political process.

Living Wills

The follow-up article on living wills slated for this issue of PENNSYLVANIA MEDICINE has been delayed until September. At that time, look for an analysis of the Pennsylvania Durable Power of Attorney Act.

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

MEDIGRAM

WORKERS' COMP BILL AMENDED, MEDICAL LANGUAGE UNTOUCHED: The state Senate on June 30 passed (30-18) an amended version of House Bill 2140, addressing workers' compensation reform. The bill's medical language—limiting medical payments to 120 percent of the Medicare allowance for 1992 and offering an annual update beginning in 1993 equal to the percentage change in the statewide average weekly wage—was comparable to the previous Senate-passed version. Since the Senate vote occurred during a House recess, the House will not consider the bill until it reconvenes September 21. The Senate procedural maneuvers avoided a conference committee on the bill.

HOUSE COMMITTEE APPROVES CERTIFICATE OF NEED LEGISLATION: The House Health and Welfare Committee in late June voted 13-10 in support of House Bill 1982, which modifies Pennsylvania's Certificate of Need (CON) program. The program could sunset December 31, 1992, a move the State Society supports because improvement in quality of care and limiting increased health care costs, with few exceptions, have not resulted from the program as intended. The Society's Board in May adopted a recommendation advocating assurance of quality through appropriate licensure standards, but Society lobbyists are working with key legislators in an attempt to amend the bill should it pass.

HOUSE PASSES MAMMOGRAPHY BILL: Pennsylvania's House of Representatives, just prior to recess on June 30, passed (196-1) Senate Bill 1939, the Mammography Quality Assurance Act. The bill—introduced by Senator Allyson Schwartz (D-Philadelphia), and supported by the Society and the Pennsylvania Radiological Association—establishes standards for mammography services. The Senate unanimously passed the bill on May 19, at which time it was amended to utilize federal Medicare standards in lieu of those set by the American College of Radiology. At press time, the bill was back in the Senate for concurrence on the House amendments, and action was pending.

SOCIETY MEMBERS ELECTED TO AMA POSTS: Pennsylvanians will play an increasingly prominent role in organized medicine at the national level with the election of three State Society members to posts at the American Medical Association (AMA): Society President Robert N. Moyers, MD, a Meadville family physician, was elected to a three-year term on the Council on Medical Education; Lee H. McCormick, MD, a Pittsburgh family physician, was elected to a two-year term as chairman of the governing council of the AMA's Hospital Medical Staff Section; and Maria Simbra, who just completed her third year at the University of Pittsburgh School of Medicine, was elected to a one-year term as chairman of the governing council of the AMA's Medical Student Section. Elections were held in conjunction with the AMA's annual meeting in June.

CONCERN ABOUT PHYSICIAN LIABILITY UNDER ADA EXPRESSED: Several State Society members have expressed concern about their liability under the Americans With Disabilities Act (ADA) when they perform physicial examinations at an employer's request. In particular, they are concerned about the inclusion in their reports of information with respect to medical history or previous workers' compensation claims. According to an attorney from the Equal Employment Opportunity Commission (EEOC), a physician who performs examinations in a "medically ethical manner" should not be exposed to liability for a report and advice given to an employer. The ADA prohibits the *employer* from making employment decisions based on a person's handicap or disability and requires the *employer* to segregate medical information from general personnel records. It appears, at the present time, that physicians' liability under the ADA is primarily focused on their role as employers and the accessibility of their offices to the public.

curing&caring

"**N**early ¾ of the malpractice lawsuits that doctors lose reflect poor patient communication," according to a recent article in the *Wall Street Journal* (March 17, 1992). Did you know something as simple as empathy could help protect you against medical malpractice litigation?

Curing and Caring–a half-day seminar sponsored by PMSLIC–addresses this vital component of medical care and how it could make a difference in your own practice.

And to demonstrate how important this seminar can be to your practice, PMSLIC is offering its insured participants a 10% credit on 1993 policy premium. Any other physician attending the seminar also is eligible for the discount upon obtaining 1993 malpractice coverage with PMSLIC.

Curing and Caring will be presented at the following locations, with a morning and afternoon session at each:

Harrisburg–
Wednesday, September 23

Erie–
Wednesday, September 30

Pittsburgh–
Thursday, October 1

Wilkes Barre/Scranton–
Tuesday, October 20

Philadelphia–
Wednesday, November 4

King of Prussia–
Thursday, November 5

For registration information contact the PMSLIC Risk Management Department at 800-445-1212 (PA) or 717-558-7500

THE PRACTICE OF MEDICINE: KNOWLEDGE, SKILL, EMPATHY.

THE STRENGTH OF YOUR PRACTICE DEPENDS ON HOW WELL YOU COMBINE ALL THREE.

IF YOU'RE NOT PAYING ATTENTION TO EMPATHY, YOU MIGHT AS WELL HANG IT UP.

PMSLIC

AIDS: Startling Statistics Call for Strong Actions

John W. Mills, MD
Medical Editor

"If we continue to pussyfoot around this epidemic, we will be consumed by it."

A public service message on TV recently pointedly announced that one in 250 Americans are infected with HIV. There followed a toll-free number for "information on how to prevent HIV infection."

That statistic boggled my mind: one in 250 Americans infected with HIV? Is this true? In a recent editorial I questioned whether the Centers for Disease Control (CDC) is telling the truth about HIV; now I question it even more. I recalled Mark Twain's comment, "Statistics and more statistics and damn lies." But this startling statistic, true or not, pulled me toward several realizations.

The new regulations from the Occupational Safety and Health Administration (OSHA) on controlling bloodborne pathogens in medical facilities have jump-started physicians and their office staffs into compliance under the threat of severe fines. As I said in a recent editorial, I think the regulations are probably a good thing—though perhaps misdirected.

That misdirection is the problem. The federal regulators have missed the boat with their emphasis so far; past efforts in the right direction have not been carried through. Former Surgeon General C. Everett Koop sent an HIV informational flyer to each American household several years ago. It was a well-intentioned effort which should have been continued on a periodic basis with new information and updated statistics. This would have been a very positive way to disseminate HIV trends and keep the spector of HIV before the American public so that we could begin to really understand the seriousness of this scourge.

Instead, federal efforts turned toward us—the medical community.

Most physicians would argue for HIV infection to be treated as an infectious disease, reportable at once with immediate follow-up of patient contacts. Unfortunately, the legal morass in this country, spurred on by AIDS activists, have made this deadly disease a political football. Even with the increasingly alarming spread to the heterosexual population and to teenagers, we are afraid or blinded by the threat of legal actions to call a spade a spade.

Physicians know that, regardless of OSHA's newest regulations, the threat of spreading HIV infection from within our offices is a miniscule risk.

Rather, the federal regulations need to acknowledge the actual modes of infection and get tough about dealing with them.

It is a sexually transmitted disease as well as an illicit drug user's disease. It should be immediately reportable with follow-up with patient contacts.

If we continue to pussyfoot around this epidemic, we will be consumed by it.

Education is our other tool. We need widespread sex education, including information on HIV and other sexually transmitted diseases. This should be mandatory in the schools starting in the elementary grades and continuing through college. We can't afford not to spend this effort to protect our young citizens from themselves.

Some might blame our dilemma on the breakdown of morality in this country. They're not entirely wrong, in my view: the sexual revolution of the 1960s was part of that breakdown. Couple this with the increasing loss of the family unit, and you have the seeds of destruction. But when the rights of some threaten the health of a nation, it's time for action. The common good should be the legal precedent here.

MIIX℠ will offer free income protection coverage for doctors who become HIV positive.

Because we understand.

"We are addressing a problem which can have a potentially devastating impact on those few doctors who may be affected. We are here to serve doctors with responsive and innovative programs, and I believe that we are doing our part to deal straightforwardly and candidly with this dilemma for doctors and patients alike."

Daniel Goldberg
MIIX President

The Medical Inter-Insurance Exchange is pleased to announce, effective January 1, 1992, its Human Immunodeficiency Virus (HIV) Insurance Endorsement as a no cost addition to its professional liability insurance policies for Pennsylvania doctors. Should you be diagnosed as HIV positive, the endorsement will provide you with a benefit of $500,000, payable monthly over 5 years at $100,000 per year.

For more information, please call one of our licensed agents.

Notes from the Road

Robert N. Moyers, MD

"Physicians should be players, because we know the business of medicine as well as the art of providing effective medical care."

Feeling a little like a traveling preacher intent on spreading the word, I rolled out on my first hospital medical staff visit to Bryn Mawr in late January. My truck odometer read 80,000 miles. More than two dozen visits later, it reads 120,000 miles. Many more miles are represented in plane flights and in the company of Society staff as a tired and grateful passenger.

By the time my presidency is over, I will have spoken personally to hundreds of physicians, averaging two visits a week to county medical societies and hospital medical staff meetings. That's in addition to many, many visits to Harrisburg to talk to groups ranging from the foundrymen to legislators, and several trips to Washington. It's been a privilege. It's been a challenge. But it's just a beginning.

It's been my longtime goal to reach out to our colleagues who are not members and give them the very compelling reasons to join us in our efforts. We know there are a number of external forces that are affecting the way we practice medicine. Two key forces are governmental regulation and legislative activity. We in the Society, and I as president, recognize the feelings of concern, frustration, anger, and disillusionment that these forces elicit in physicians.

If we as a profession want to do something about these negative forces, we need to become more effective and influential. We must unify in the only association that serves us all regardless of specialty, the Pennsylvania Medical Society.

But unity is not enough. There is little value in a society that functions only as a loose association of political observers or bystanders. The State Society needs not only more members, but more member involvement. Many are active; many more must be, particularly in the legislative process and in devising ways in which we can have an impact on that process.

I've put a lot of rubber to the road to take this message to physicians. There's no way around it. Each of us must devote a bit of time to addressing the issues of the day. We must learn to communicate better with our legislators.

My travels throughout the state have reinforced my belief that physicians do not have to be victims of this whole process. We do need to get a better grasp on how to deal with the legislative process effectively and strengthen our ability to influence legislation. This is especially critical as the nation and its individual states struggle with health care reform. Physicians should be players, because we know the business of medicine as well as the art of providing effective medical care.

When physicians' input is lost, our health care system is vulnerable to special interest groups who may want only to control costs by sacrificing quality, and to the quick fix that can become the long-term boondoggle. We can play a more aggressive role in this whole process, or we can become victims of others' decisions, mere purveyors of care at the control of others.

My visits to hospital medical staff sections, in addition to the regular visits to county medical societies, are part of an initial effort to achieve greater unity. Many physicians tell me they want to see more regular outreach programs at the local level.

This certainly reinforces my impression that the Society needs a greater presence on the front lines of the medical care delivery system. It's important that members and non-members have the opportunity to meet and talk to Society leadership and staff. We must be more than just names and faces in Harrisburg. Physicians need to see that there really are people who are concerned about working to solve our mutual problems.

I'm more determined than ever to see how we can be more helpful in rebuilding our sense of professionalism, improving our scope of influence, and expanding our role as patient advocates. I'm confident that more leaders and members will join me, on the road again....

Malpractice rates too good to be true usually are.

You may have been told about lower rates offered by insurers new to the Pennsylvania market. Low rates will not benefit you if the company is not around to protect you or *your assets* if you are sued.

Physicians Insurance Company is an established Pennsylvania carrier who has continued to lower rates while protecting your future:

- 10% overall reduction in September 1991
- more for physician groups
- additional reductions for individuals who are claims free

Artificially low rates are a prescription for disaster... for the physician and the company. When selecting a malpractice carrier you should ask yourself what will happen in the future. Will they automatically surcharge my premium for claims experience? Will their policy provide me with the full Occurrence coverage I have enjoyed with Physicians Insurance Company or are they only providing a form of Claims-Made coverage—better known as Occurrence Plus or Permanent Protection? Why would a broker recommend this carrier... is the company only trying to buy my business by raising his commission? More importantly, will they be there when I need them?

At Physicians Insurance Company we have always maintained our rates among the lowest and we are committed to keeping this practice intact. When you take an honest look, *you can't do better.*

For more information on malpractice rates and coverage, please call or write today.

VACCINE PAMPHLET SUPPLEMENT RELEASED

In mid-March 1992, the Pennsylvania Department of Health sent to each Pennsylvania Medical Society member (who was likely to administer childhood vaccines) a camera-ready copy of three different Vaccine Information Pamphlets (VIPs) developed by the Centers for Disease Control (CDC). The VIPs—for use with DTP, OPV, and MMR vaccines—would satisfy a provision of the National Childhood Vaccine Injury Act (Public Law 99-660).

Because of the recent licensure of the acellular pertussis vaccine, a supplement was developed for the VIP that is used with DTP vaccine. *This VIP Supplement must be inserted into the DTP pamphlet, if the DTP vaccine being used by the health care provider was purchased using the federal vaccine contract.* Even though few physicians would be required to use the supplement, many are using the VIPs developed by the CDC and, therefore, are encouraged, but not required, to use the supplements when they administer any DTP vaccine.

Enclosed is a copy of the VIP supplement. In communications with Society members, it might be helpful for them to know about this. Thank you for your assistance.

Robert E. Longenecker
Immunization Program Coordinator
Pennsylvania Department of Health
Harrisburg

Editor's Note: At right is a reprint of the supplement which physicians may copy, cut, and insert into DTP pamphlets as needed. The State Society, in an early June news release, expressed some concern with the CDC pamphlets: "A major concern is that [the government's] effort to provide so much detail, on what for most families has been routine preventive health care, can backfire, actually scaring parents away from having their children immunized," warned Society President Robert N. Moyers, MD, a family physician. Also, May's American Academy of Pediatrics "AAP News" reports that many parents refuse to read the booklets, and many who do "are frightened." The distribution of the information specified by the National Childhood Vaccine Injury Act should be in addition to routine pre-immunization counseling, according to State Society advisors. Physicians should talk to parents and legal guardians about their understanding of the information in the brochures, and should document the patient record that the information was distributed as required.

Dr. Moyers noted that the CDC brochure writers tried to make the information as readily understandable as possible, and the information on what to look for in shot reactions and certain risk factors may be useful to some parents. But he emphasized the importance of physician communication when administering vaccinations.

SUPPLEMENT

WHAT YOU NEED TO KNOW ABOUT THE ACELLULAR PERTUSSIS VACCINE

After the 1991 pamphlet *Diphtheria, Tetanus, and Pertussis: What You Need to Know* was prepared, a new pertussis vaccine became available for the fourth and fifth shots against diphtheria, tetanus, and pertussis. This sheet provides up-to-date information about the new vaccine. You should read this sheet after you have read the pamphlet.

WHAT IS THE NEW VACCINE?

DTP vaccine is usually given 5 times before a child reaches age 7 years. Until now, pertussis vaccine has been made from killed whole pertussis cells and mixed with diphtheria and tetanus vaccines to make the whole-cell DTP shot. The new acellular pertussis vaccine, DTaP, is made of only a few parts of the pertussis cell and is also combined with diphtheria and tetanus vaccines.

WHEN SHOULD IT BE USED?

The fourth and fifth shots of the DTP vaccine series are usually given to children 15-18 months old and 4-6 years old. The DTaP vaccine can be used only for the fourth and fifth shots. Testing is now in progress to show that DTaP is safe and effective for the first three doses. Until these studies are completed, this vaccine cannot be considered for use for the first three doses of the vaccine series. Whole-cell DTP vaccine should still always be used for the first three shots, and can still be used for the fourth and fifth DTP shots, although most experts will prefer to use DTaP vaccine. Compared with the DTP vaccine, after DTaP shots fewer children will be cranky or drowsy, have fever, or have soreness or swelling where the shot was given. Convulsions that occur after receiving DTP vaccine are usually caused by fever. With DTaP, there is less chance of fever, so convulsions probably occur less often. Experts do not know whether unusual, more serious problems which have been reported after DTP vaccine (mentioned in the pamphlet) happen less often after DTaP shots than after DTP shots.

WHEN SHOULD THE VACCINE NOT BE GIVEN?

If the health care provider determines that a whole-cell DTP should not be given, DTaP also should not be given. In that case, the child should usually get DT vaccine instead.

Why buy an office automation system that doesn't offer a long-term solution?

ACCLAIM™ from Sentient is the total system solution.

A lot of medical practices are planning to invest in an office automation system. But a lot of the systems out there just don't offer the comprehensive functions and long-term expandability that your practice may need.

IBM® and compatible hardware.

The ACCLAIM system operates on IBM and compatible hardware, so you know you're getting the quality standard of the industry. And it's completely expandable, so it can grow as your practice grows.

Long-term support.

ACCLAIM is the system solution that fits your needs today. And Sentient's software engineers, customer trainers, and telephone support people are always there to make sure your system fits your needs over the years to come.

Easy to operate.

Even if your staff has no previous computer experience, ACCLAIM is simple to operate effectively and efficiently. Complete training is included in the purchase.

When you're thinking about office automation, call Sentient first, and find out what ACCLAIM can do for you.

Medical Ethics and Maternal-Fetal Conflicts

James F. Drane, PhD

As ethical issues are raised by more and more aspects of medical practice, medical ethics becomes an ever more complex and confusing enterprise, presenting yet another physician dilemma. This article offers guidelines for individual physicians and hospital ethics committees in dealing with medical ethics and maternal-fetal conflicts.

"The impact of maternal behavior dangerous to the fetus is only beginning to be understood."

To most lay persons, the term "medical ethics" suggests that there is one right (ethical) answer to every question which experts in the field can provide. However, many different answers are proposed to all the important questions, and experts prefer to outline options rather than presume to give answers.

Despite an absence of unanimity about answers to particular problems, there are areas in modern medical ethics in which broad agreement exists. One can speak of a main-line, medical ethics agreement on death and dying issues, as opposed to a refractory and troublesome division on questions related to the beginning of life. The abortion controversy, for example, drags on in the courts, the legislature, the hospitals, and even in the streets. On one side of the dividing line, answers are based on women's freedom and privacy rights; the other side decides right and wrong based on the principles of sanctity and right to life.

Understanding the conflict

Abortion for some is a paradigm example of maternal-fetal conflict, and new medical technologies are expanding this conflict area. Even when pregnant women decide not to abort, but to carry a pregnancy to term, conflict possibilities between them and their fetuses emerge with every new technology. Sonograms, amniocentesis, chorion villus sampling, fetal therapies, and even fetal surgeries all raise the possibility of disagreement between what a woman might want for herself and what doctors believe to be best for her developing life. The fetus has become "a patient" as a result of technological advances, and this change of language and status sets up conflict possibilities with the maternal patient. Potential areas of conflict have also been expanded by changes in the lifestyles of many women. Most pregnant women go to great lengths to do everything beneficial for their babies. Not only do they abstain from legal and illegal drugs, but they even submit to painful procedures if the fetus will benefit. Recently, however, this traditional, moral characteristic of western society has weakened.

Thirty-seven thousand babies are born each year in the U.S to mothers who have used illegal drugs. In a Florida county (Pinellas), 3.4 percent of pregnant women used cocaine during pregnancy. Furthermore, alcohol use by mothers causes abnormalities and growth retardation in one of every 1,000 U.S. births, and fetal alcohol syndrome now is the leading cause of mental retardation. Also, 1.5 percent of New York City newborns are HIV positive, usually because their mothers engaged in high-risk behaviors.

The impact of maternal behavior dangerous to the fetus is only beginning to be understood. Sometimes a fetus survives the worst uterine environment with only limited damage. But as the number of severely handicapped babies mounts, the ethical issues associated with the beginning of life force themselves into the public and professional consciousness.

In American culture, the individual's right to make personal life choices is a basic one. Applied to the medical setting, this translates into a right to consent or refuse consent to treatment, and even a right to accept or to ignore medical advice. Once pregnant, however, the exercise of these typical American rights affects another human being: a child-to-be. Freely making one's own decisions, without interference from state or medical authorities, suddenly may mean endangering a fetus's life. The rights of pregnant women can quickly become pitted against the interests, if not the rights, of their fetuses.

Dr. Drane was Russell B. Roth professor of medical ethics at Edinboro University of Pennsylvania. He retired in December 1991.

Managing your Medicare claims has never been easier...if you file your claims electronically.

You're in control.

You control the accuracy. Because what you submit is exactly what goes into the system. Time-consuming clerical errors are virtually eliminated.

You control the timing. Because the instant your claims are sent is the instant they arrive at Medicare Electronic Services for processing — 24 hours a day, seven days a week.

Need a paper record? It's easy. Just print a copy of each transaction for your files.

With Electronic Claims Submission (ECS), it's never been easier to stay in touch and in complete control.

You always know where you stand.

With ECS, you can retrieve a report that tells you when we received your claims. There's no more guessing when your claims were received.

Want to check the status of the claims you submit? When you file claims electronically, your staff can access and print Reconciliation Reports that provide assigned claims detail on patients, services, payments and claims still pending in our system.

Faster claims turnaround means faster payment.

With ECS, you bypass handling and administrative work. Faster receipt of your claims means faster payment to you.

ECS makes it easy to go with the flow — your cash flow.

ECS reduces your administrative costs. And your equipment costs are probably less than you expect.

Technology has never been faster, easier to use or more affordable.

If you have an IBM-compatible PC, DOS 3.3 or greater, a modem and a printer, we'll make our user-friendly, Paperless Claims Express software available to you free of charge. We'll even provide expert systems support.

One-touch, computer access to Medicare Electronic Services has never been easier — or more productive.

Go electronic. There's never been a better time. There have never been better reasons.

Call Tina Hart: 717.763.6722. She's got good news for you or your Office Manager about how easy it is to make the switch.

Medicare Electronic Services

A unit administered by Pennsylvania Blue Shield (your Medicare Part B Carrier in Pennsylvania, New Jersey, Delaware, District of Columbia) under contract with the Health Care Financing Administration, United States Department of Health and Human Services.

Resolving the conflict

The resolution of ethical dilemmas involving rights conflicts can be handled by the courts, but few believe that courts are the proper place for such problems. They can also be addressed by hospital ethics committees, which attempt to provide help while keeping the decision making within the doctor-patient relationship. In any case, either judges or hospital committees, including doctors, patients, and other medical professionals, will be addressing medical ethics with their pregnant patients—engaging in applied philosophy for which they may be well prepared, but not necessarily so. Professional medical associations are more and more frequently trying to provide ethical guidelines to prevent the worst ethical errors. And, of course, the American courts have developed their own corpus of literature on medical ethics.

"Can the fetus, too, be considered a patient toward whom the doctor has professional obligations?"

The court in *Roe v. Wade* left open the possibility of government exercising some degree of control over a pregnant woman's behavior. Since that case, however, the areas of potential maternal-fetal conflict have expanded, and older Supreme Court ethics are hardly adequate to address the many new situations in which a mother's behavior can be harmful to the life she carries. The medical ethics provided by law in effect are deficient, and other sources must be found to develop defensible ethical guidelines and policies.

The new conflict areas can seriously affect the doctor-patient relationship. Traditional medical codes were developed under different situations and either do not fit or provide little guidance for these new problems. According to tradition, the mother is the physician's patient and he owes her care, support, and confidentiality. But what do doctors do when medical care and direction are ignored? Can the fetus, too, be considered a patient toward whom the doctor has professional obligations? What is the extent of physician responsibility toward a fetus in situations involving harmful maternal behavior or a maternal medical decision which harms or creates risk for the fetus?

The American Academy of Pediatrics (AAP) Committee on Bioethics has provided general ethical directives for physicians facing these problems. In general, AAP advises respect for the American principle of individual autonomy, so that when a procedure beneficial to the fetus is opposed by the mother, the physician should honor the mother's refusal, even if the fetus will be harmed as a result.

Only in the following situations, according to AAP, may a physician consider challenging a woman's decision out of concern for benefit to her fetus: 1) when the fetus will suffer irrevocable harm without the treatment; 2) when the treatment is clearly indicated and likely to be effective; and 3) when the risk to the woman is low.[1] If all three conditions are present and the mother refuses, then the academy advises consultation with a hospital ethics committee. Turning to the courts is not recommended, except as a last resort; physicians are encouraged to handle medical ethical dilemmas within the clinical setting rather than turning clinical problems over to lawyers for solution.

The American College of Obstetricians and Gynecologists (ACOG) Committee on Ethics provides similar ethical directives for situations in which the mother's lifestyle or refusal of diagnostic/therapeutic procedures endangers her fetus. ACOG advocates education of the mother to follow doctor's orders but condemns the use of coercion because of its bad effect on the doctor-patient relationship. Like their pediatrician colleagues, when education doesn't work, ACOG suggests turning to a hospital ethics committee and avoiding the courts.

Developing ethical directives

Virtually everyone agrees that medical practice and hospital policy should not be dictated by the courts. The reason is clear: the culture of law is different from the culture of medicine, and physicians are much better off developing ethical directives that reflect the culture and ethics of medicine. Defensible medical ethics has to be adequate to clinical realities; court-dictated ethics rarely seem to be so. Besides, courts have provided very conflicting signals on cases of maternal-fetal conflict. Some courts have sentenced women to jail for behavior harmful to fetuses,[2] while others have overturned the use of legal force against maternal decisions thought to be threatening to fetal life.

Most famous among cases involving conflicts of interest between pregnant women and their fetuses is the Angela Carter case. Twenty-six-and-a-half weeks pregnant, she entered the hospital dying of metastatic cancer. She had to be so heavily sedated that her competency was severely compromised. Never was she able to carry on a reasoned discussion about her situation or that of her fetus. First she seemed to want to do what she could to improve the baby's chances, then

she seemed less clearly committed. Her mother had no such ambivalence—she did not want the baby.

Doctors, as often happens, were caught in the middle and decided to inform administrators about what was happening. The administrators, in turn, asked the court for a declaratory judgement. Judge Sullivan found it was "not clear what her intent was" and ordered a caesarean section performed. The baby lived only a few hours, and the mother died two days later. The ACLU entered at this point, and an appeal was initiated. In a sharply worded reversal of the trial court decision, the District of Columbia Court of Appeals ruled that "in virtually all cases the question of what is to be done is to be decided by the Patient—the pregnant woman—on behalf of herself and her fetus."[3] Subsequently, the family sued George Washington Medical Center for malpractice and civil rights violations.

In November 1990 the family and hospital settled out-of-court. The family accepted an undisclosed payment and an agreement to adopt a policy written by the hospital ethics committee which requires difficult decisions involving severely ill pregnant women and their fetuses to be made by each woman, her family, and her doctors, and not by the courts.

The George Washington Medical Center Ethics Committee policy is comprehensive and can serve as a guide for other hospitals. Its objective is to keep difficult decisions within the doctor-patient-family relationship. Ordinarily, consultation with the ethics committee is optional, but this policy requires that the ethics committee be consulted if a woman's preference is being overridden or before any court actions are initiated. The hospital policy reflects the need to balance the interests of the pregnant woman and the fetus. Process is important to guarantee that everyone involved understands the issues. If a maternal-fetal conflict cannot be resolved by committee involvement, either the patient may leave the hospital, or the hospital may withdraw from the case. According to the policy, a patient advocate will also be made available to help patients and their surrogates clarify complex issues and understand where help is available.

Consulting hospital ethics committees

The hospital ethics committee, of course, is always available for advice. In many court cases, hospital policies, and ethical statements by professional organizations, the hospital ethics committee is recommended as the first resource when conflict develops. But where does an ethics committee's expertise come from? What are the ethics of the hospital ethics committee, especially in disputed areas where the whole society, including the hospital community, is split?

A hospital ethics committee can provide help in conflict resolution, but only if it is well-trained and has worked to develop policy guidelines which reflect basic ethical principles and the mission statement of the hospital. As things now stand, one hospital ethics committee may provide advice and develop policies different from those of a neighboring institution.

Most everyone agrees that it is not good for medicine or society that life and death decisions depend upon where a patient happens to be treated. A hospital ethics committee then cannot simply apply either a pro-life or a pro-choice perspective. Solving problems created by a conflict between two interests or principles by opting for one over the other is sometimes inevitable and often-times appropriate at the personal level. But a hospital ethics committee, even in its case consultations, enters the area of policy; and policy involves a balancing of interests and principles, rather than simply choosing one over the other.

Different hospital committees may provide different advice on similar cases, but basic directives and committee methodology for coming to conclusions should be somewhat uniform. And every committee should try to balance legitimate interests in conflict situations. The life of the fetus and the freedom of the mother must both be taken into account, and the same is true of society's interests.

Balancing interests

Medical professionals have interests too, as do health care institutions, that also need balancing. Institutional policy will be influenced by a particular committee's make-up and the hospital mission/philosophy, but committees which stamp out ethical judgements from a single ethical perspective are likely to be a waste of time. Given the importance of balance, it is not advisable, even in Catholic institutions, to discount a woman's competent decision. In practice, ignoring women's interests makes very bad hospital policy, both ethically and legally. Reasonable and defensible policy must take the law into consideration without having ethics dictated by law or collapsed into law.

Pennsylvania's recently passed living will law (Senate Bill 3, now Act 24) pro-

motes and defends individual patient decision making, and requires respect for patient decisions to refuse life-sustaining treatments in terminal and comatose situations. But an exception is made in the case of a pregnant woman. Life-sustaining treatments, including nutrition and hydration, must be provided even against a pregnant woman's wishes, as expressed in a living will, unless the interventions will not contribute to a live birth or will cause harm and pain to the pregnant woman.

Even with such a law in place, an ethics committee has to carry out careful assessments of medical facts and patient interests including the fetal patient before providing advice and mediation. However, many hospitals have no committee trained to do this delicate work and have no guiding policies for conflict situations.

What is an individual physician practicing in a particular hospital to do when society is so split and the hospital has no policy? Prudential counsel would suggest the following:

- Discuss your own professional values or ethical beliefs with patients whom you think might be involved in behavior harmful to their fetuses.
- Be careful about overreacting when patients do not follow orders—it could signal a personal hang-up.
- Be very clear (e.g., draw pictures) about the effects of harmful behaviors on mother and fetus.
- Evaluate the patient's competence, and make a note of this in her file.
- Recognize that in this culture, patient autonomy—in situations involving options and/or conflicts of goods—is a firmly established value which must play a role in ethical decision making.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

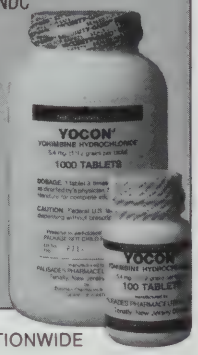
Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatic. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]



Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

With Princeton, you're in good company.

More than 19,000 medical and health care professionals have chosen Princeton Insurance Company for their professional liability insurance coverage. Here are some reasons why:

- **A solid track record.** Princeton has a decade of experience providing professional liability insurance coverage to physicians, and A.M. Best has ranked us (with our parent company) among the 20 largest medical malpractice insurers nationwide since 1983.

- **Financial strength.** Our loss reserves are carried at full value, not discounted in the hope of earning sufficient interest income to pay claims. We maintain a high quality/low risk investment portfolio, with no junk bonds, no common stock and no real estate speculation. And we've earned a claims-paying ability rating of "A" from Standard & Poor's.

- **Coverage options.** Tail coverage is included in the purchase price of Princeton's innovative *Occurrence Plus* policy. A standard claims-made policy is also available, and we offer excess liability coverage (limits up to $5 million) to Pennsylvania physicians regardless of which company writes their primary coverage.

- **Strong defense against claims.** In a typical year, more than 90 percent of the Princeton-managed cases disposed of by the courts are resolved in the policyholder's favor.

Health Views from the House

Maria T. Montesano
Assistant Managing Editor

Representative Taylor is a Republican representing Pennsylvania's 156th District, Chester County. She is currently serving her eighth term in the House, and is minority chairman of the Health and Welfare Committee and a member of the Education Committee.

In this final of three conversations with members of Pennsylvania's legislature, Representative Elinor Z. Taylor talks about living wills, cost containment, health care access, and physician involvement in the political process.

This interview was conducted by Miss Montesano, in cooperation with the State Society's Department of Governmental Affairs Division of Legislative Affairs, Larry L. Light, director.

Question: *As Republican chairman of the House Health and Welfare Committee, you were involved in passage of the living will bill. What were your thoughts are on that bill?*

Representative Taylor: The bill was extremely important to senior citizens. They had been looking to the legislature for some assurance, some control during the death process, so that it could occur with dignity. Certainly, we in the House had fooled around with this for a long time, but I can't tell you how pleased I am to see that Pennsylvania does have a living will law.

I had an amendment added to the legislation for protection of the emergency medical community. Emergency medical personnel are committed to keeping a person alive. That's what their certification requires them to do. So, my portion of the bill says that if you have a living will, you should register it with the local emergency medical service. That way, if you require an ambulance in the last hours, the emergency personnel could be directed not to keep life going, but to honor the person's will.

Question: *But overall, you were pleased with the passage?*

Representative Taylor: Yes, I was.

Question: *I remember seeing you quoted in the newspaper as saying, "This has been held up for quite some time now—let's get it moving."*

Representative Taylor: Yes, I did. I said that, and if you recall, that was when there was a controversy between the Senate and the House. You can't let pride of authorship interfere with a piece of legislation that is this important.

Question: *Moving on, what is your response to this statement: Medical liability reform must be included in any health care cost containment reform.*

Representative Taylor: Well, if we are going to really look at health care costs, we are going to have to put in some liability reform. For example, we would have to limit awards for payments. Also, we would have to set a definition for malpractice and require the plaintiff to prove incompetence, malfesion, unethical behavior on the part of the doctor, rather than require the doctor to prove that what was done was correct.

It would appear to me that a portion of the "Greenwood proposal" [the Health Reform Act of 1992] is a limiting of physician liability by having patients consent in writing to major invasive procedures. When a patient agrees to a procedure, it would be presumed that the doctor is acting in accordance with accepted medical practice. And one step further, that medical treatment could not be conditioned on a patient who would refuse to sign an agreement. Those are two elements that have to be in any health care cost containment that we hope to have.

Question: *Speaking about cost containment, do you think the Certificate of Need (CON) process has been a viable means to control health care costs and expansion?*

Representative Taylor: I'm not sure what the answer to that is. In 1979 we passed Act 48, which is the Health Care Facilities Act. In 1980 I think health care costs—if we're going to tie CON to them—were about eight percent of the gross national product. That has risen today to 14 percent. And with some economic predictions that I saw, it will rise again—to 20 percent—by the year 2000...I don't know whether it's working or not. I think that the idea could work...that probably it hasn't worked because of some medical ramifications, not necessarily at the state level, but at the local level.

The health care industry itself has not shown noticeable restraint in capital ex-

HOW THE COOKIE CRUMBLES IS UP TO YOU.

This advertisement is intended for Pennsylvania Medical Society members and auxiliary. PAMPAC is a separate segregated fund established by the Pennsylvania Medical Society. Voluntary political contributions by individuals to PAMPAC should be written on personal checks; corporate contributions can be used only for administrative purposes. Contributions are not limited to the suggested amount. Neither PAMPAC nor its AMA affiliate, AMPAC, will favor or disadvantage anyone based upon the amounts of, or the failure to make, PAC contributions. Voluntary political contributions are subject to the limitations of FEC Regulations, Section 110.1, 110.2 and 110.5 (Federal regulations require this notice). A portion of your contribution will be forwarded to AMPAC to support candidates in Federal elections. Contributions to PAMPAC and AMPAC are not deductible as charitable contributions for Federal Income tax purposes.

pansion and the management of services. For example, within a 30 mile radius of Harrisburg, we have six open-heart surgery units. If CON were working, possibly that wouldn't be true. But I will also say that CON cannot be solely responsible without the involvement of other issues, such as liability, if we are going to be successful in containing health care costs.

Question: *You introduced legislation for rural and family physician incentives. Could you talk a little about that?*

Representative Taylor: First of all, I introduced three bills. House Bill 729—introduced early in the session—would have set up an opportunity for health demonstration projects throughout the Commonwealth for primary care, inpatient health care, managed care, and a Medical Assistance buy-in. That bill was voted out of the Insurance Committee early in 1991, came to the floor of the House, and is now in Appropriations because it had a fiscal note of $4 million—$1 million for each project, the idea being, let's see how a pilot project might work.

I also introduced House Bill 530, which addressed the key barrier to rural health care: access. We simply don't have enough physicians, especially family physicians, to serve rural areas. The bill addressed the problem by trying to attract new physicians, awarding $100,000 to the medical school with the most innovative project to increase the number of family practitioners. Also, that bill would have provided loans to graduates of Pennsylvania's medical schools in the amount of $30,000 per year for each year of practice in a medically underserved area.

House Bill 530 was prepared as an amendment to House Bill 2594 [the Rural and Inner-City Health Care Bill] which was moved from the committee in April. House Bill 529, which was the companion bill, would have awarded scholarships to students in state medical schools. In exchange, students would serve one year in a rural area, and student loans would be repaid at the rate of $25,000 per year. Other bills are also being reviewed in committee.

Question: *What do you think is the most significant medical issue facing Pennsylvanians today?*

Representative Taylor: The number one problem is really two-fold: how do people access health care, and how do we pay for it?

We live in a society which considers itself civilized; yet, it doesn't take care of the weakest—the young and the elderly...Everybody would like to see health care spread so everyone has equal access, but health care is expensive. You only have to spend a few days in a hospital to know how expensive it is. I think to control it, we need to concentrate on a wellness program, to concentrate on immunization. It is less costly to work in those areas.

Also, if you were to ask me what else would guide my thinking in the area of health care cost containment, I would stress—and I am stressing to the [House Health and Welfare] committee—quality. You can have access, you can have affordability, and then you can have poor quality of medical care. I believe we have quality health care. The question is: How can we spread that quality so everyone can access and afford the program?

Question: *Speaking of the House Health and Welfare Committee, in what direction would you like to go in addressing those issues? You talked a little bit about wellness and immunization—what other ideas do you have?*

Representative Taylor: The committee doesn't have the privilege of beginning with a blank page and saying, "This is what the committee would like to offer in the field of health care costs." We can only look at what has been introduced: we can look at Tom Gannon's bill that creates affordable insurance for small business, and we looked at Bill DeWeese's bill that spoke to immunization.

The one thing that I haven't talked about is that the committee is looking very, very carefully at the issue of long-term care. While we have been bragging about our quality of health care in the United States, we have enabled people to live longer. And when people live longer, we get into [increased demands on] health care. The committee at present is looking at what is out there, and attempting to take the very best pieces of legislation and umbrella them into a package.

Question: *What is your view on how physicians can best get involved in the political process?*

Representative Taylor: While I don't think it's their primary responsibility, I suppose there is more doctors can do to be involved...To tell you the truth, I don't want my surgeon to be running around to political meetings. However, I do want him to have an avenue to express himself and to have input, and I want him to make sure he advises me about the problems that are out there.

FUNDS CUT IN BUDGET, GA PACKAGE OFFERED

The governor's proposed budget annually affects the medical community in a number of ways through financial activity in the state's medical and health care programs. With the 1992-93 budget, physicians' and medical students' eyes are focused on proposed cuts to medical school funding and the introduction of a general assistance (GA) basic benefits package.

Medical school funding

Available funding for non-state-related medical schools in 1991-92 totaled $135 million. For 1992-93 the governor's original budget cut all such funding and proposed a 3.5 percent cut for state-related universities for the remainder of 1991-92 and an additional 3.5 percent for 1992-93. Funding proposed for state-related schools for 1992-93 totals $531 million, with $23.6 million slated for medical programs.

Senate Republicans in early June passed an amended House budget bill which calls for a 1.2 percent increase in overall spending for the state, but $25 million less that the governor's original proposal. Included in the amended proposal is funding for all Pennsylvania medical schools.

For state-related schools, Senate Republicans agreed with the governor's 3.5 percent cut over what was approved for 1992-93. They did not, however, agree to the second proposed 3.5 percent cut in the 1991-92 fiscal year. For non-state-related schools, Senate Republicans approved funding at 90 percent of the 1991-92 budget plan. Movement on the issue by House Democrats had not occurred as of this printing.

GA basic benefits package

The Pennsylvania Medical Society, at the request of the Pennsylvania Department of Public Welfare (DPW), has commented on DPW's basic health care package for general assistance recipients. The package was proposed as part of the 1992-93 budget.

Intended to save more than $50 million for Pennsylvania, the package includes a range of covered services, such as hospital care, physician and clinic services, select medications, medical rehabilitation hospital care, day surgery, emergency care, drug and alcohol care, psychiatric care, laboratory and x-ray services, medical supplies, limited home health and hospice care, ambulatory services, and an HMO/HIO option.

Though implementation of the program was expected by July 1, in mid-June the department was still accepting comments and readjusting the plan, and could not pinpoint in what range actual savings would fall.

SUPPORT SOUGHT FOR LIABILITY REFORM BILL

A State Society proposal which would amend the state's medical malpractice act and addresses a series of underlying liability reform issues has been shared with potential sponsors in both the Senate and House. The Society maintains medical liability reform as a high priority.

Included in the proposal are both technical corrections and broader modifications of current law. Proposed amendments redefine informed consent, eliminate duplicative payments for the same injury, limit punitive damages in some instances, provide for installment or periodic payments for "future damage" awards of more than $200,000, and provide for arbitration agreements between patients and providers. Other provisions address statutes of limitations, "expert" witness qualifications, frivolous lawsuits, expansion of coverage, and risk management.

About 25 states already limit malpractice awards, and more than 30 have been trying to implement reforms since 1986, according to the Risk Management Foundation of the Harvard Medical Institutions, Inc. In Pennsylvania, two other related bills are in the works. The first, to be introduced by Representative Leo Trich (D-Washington), addresses parameters like those adopted in Maine. The second, Senate Bill 1728 introduced by Senator James Greenwood (R-Bucks), addresses health care cost containment and devotes a full section to medical liability reform. Several of the Society's provisions are addressed in Senator Greenwood's bill.

The Society is examining Senator Greenwood's and Representative's Trich's proposals, and following leads on other possible ties to proposed legislation. Additionally, the Society will continue to seek support for its proposal.

PHC4 POSTPONES REPORT RELEASE

Because of the many issues raised in comments to the Pennsylvania Health Care Cost Containment Council's (PHC4's) proposed research plan for the 1990 Hospital and Physician Report for Coronary Artery Bypass Graft Surgery, the release of the report will be delayed until fall. In the interim, the newly constituted PHC4 Technical Advisory Group and MediQual are reviewing the plan and comments. Recommendations are due back to PHC4 for review and action this month.

Current plans indicate that the report draft will be circulated to involved hospitals, physician groups, and physicians for review and comment in September. The release of the final report to the public may be in October. A number of significant concerns about the report—raised by the State Society's Task Force on Health Care Cost Containment and the Joint Committee on Health Care Data of the Society, the Pennsylvania Osteopathic Medicine Association, and the Hospital Association of Pennsylvania—remain unresolved at this time.

Chairman, Task Force on Health Care Cost Containment
Pennsylvania Medical Society

NEW LAW EXPANDS HCFA 1500 USE BY INSURERS

A new law in effect June 2 expands the requirement that the HCFA 1500 form be used by commercial insurance companies. The legislation, formerly Senate Bill 969 and now known as Act 13, was written to ease physician "red tape."

The idea for the bill developed from a conversation between Joseph M. Clark, MD, a diagnostic radiologist in Lebanon, and state Senator David J. Brightbill (R-Lebanon); their cooperative efforts led to passage. Referring to Dr. Clark, Senator Brightbill said, "This shows that a single individual who recognizes a legitimate problem can have an impact."

The bill was originally introduced and passed by the Senate last year; it passed the House earlier this year.

PennDOT Publishes Amendments To Licensing Regulations

Susan M. Weber, Esq.

The Pennsylvania Department of Transportation (PennDOT) recently published amendments to regulations with respect to physical and mental criteria relating to the issuance of drivers' licenses. While the amendments do not alter the current mandate that physicians must report to PennDOT certain conditions which may interfere with a person's ability to drive, physicians should be familiar with the regulations and the effect that the listed conditions have on the likelihood that an individual will be able to obtain a drivers' license.

The regulatory standards are divided into three sections: 1) visual standards, 2) seizure disorder standards, and 3) other physical and mental standards. For ease of discussion, each section will be addressed separately in the following analysis.

Visual standards

The PennDOT regulations provide that a person with visual acuity of at least 20/40 may drive without corrective lenses, such as glasses or contact lenses. However, if acuity is less than 20/40 in one eye, the weaker eye must be corrected. *The amendments include a waiver from the corrective lenses requirement for those whose combined vision of more than 20/40 would not improve after correction of the weaker (less than 20/40) eye, as recommended by a licensed optometrist or opthalmologist.*

In general, a person with visual acuity of less than 20/40 must wear corrective lenses. At the far end of the spectrum, a person with visual acuity of less than 20/100 combined corrected acuity may not drive under any circumstances. This standard is an improvement, however, since previous regulations had prohibited driving by those with combined corrected visual acuity of less than 20/70.

Persons who have combined visual acuity of less than 20/40 may drive under certain circumstances. For example, if a person's acuity cannot be corrected to 20/40, he or she may drive in daylight hours providing that acuity is corrected to at least 20/60, or that a licensed optometrist or ophthalmologist using equipment to properly measure acuity states that combined corrected acuity is between 20/70 and 20/60.

PennDOT has adopted new criteria for those whose corrected combined vision falls between 20/100 and 20/70. PennDOT may issue a restricted license upon recommendation of a licensed optometrist or ophthalmologist who has proper diagnostic equipment, under certain circumstances.

The applicant must pass a complete vision examination on an annual basis. Upon application, the person must pass a driving exam. If the restricted license is granted, the person will be prohibited from driving on roads with speed limits greater than 45 miles per hour, will be limited to driving passenger vehicles which weigh less than 10,000 pounds, and may not drive motorcycles. Further, PennDOT may limit the person's driving to a specific geographic area.

In addition, PennDOT will conduct a review of the person's accident and driving violation history on an annual basis. PennDOT may revoke the restricted license if the person holding the license is "involved in an at-fault accident" or is convicted of two violations within a one-year period. The regulations do not specifically define what is meant by either an "at-fault accident," or two violations "within a one-year period." However, in order to provide for maximum flexibility, it is likely that PennDOT will utilize the concept of a "rolling" 12-month period for its determinations.

Other visual standards require a combined horizontal field of vision of 140 degrees or better, with allowances for "normal blind spots." Persons with vision in only one eye are required to use mirrors to provide a rear view of at least 200 feet. And finally, the use of "corrective lenses" for acuity purposes does not include the use of telescopic lenses.

Seizure disorder standards

Previously, people who experienced seizures could not drive until they had been seizure-free for one year; those between the ages of 16 and 18 who were applying for their first driver's license must have been seizure-free for two years. *The amendments require a seizure-free period of only six months and make no distinctions between teens and adults. Persons experiencing "auras only" have no driving restrictions under the amendments.* An "aura" is defined as "an epileptic seizure which does not cause a change in a person's ability to think clearly or interfere with the mechanical or sensory ability to operate a motor vehicle."

The six months' freedom from seizure requirement may be waived in certain circumstances, based upon recommendation from any licensed physician; previously, only a neurologist or neurosurgeon could make this recommendation. The requirement can be waived providing that seizures occur only nocturnally or immediately after awakening; this pattern must be determined over a period of the two preceding years with or without the benefit of medication.

A second situation in which the requirement could be waived involves a "specific prolonged aura accompanied by sufficient warning" established over the preceding two years, with or without the benefit of medication. While "aura" has been defined in the regulations, no time limitations are defined by the terms "prolonged" and "sufficient."

A third situation in which the requirement could be waived includes those instances in which a person had previously been seizure-free for six months but experienced seizures during prescribed medication dosage alterations or supervised withdrawal from medication. The waiver would be granted only upon return to dosages at which seizures had been controlled.

The seizure-free period could also be waived if a person had previously met the six-month requirement but subsequently experienced seizures as a result of a "nonrecurring transient illness, metabolic imbalance, or nonrecurring trauma."

A specific section of the regulations addresses the physician's

responsibility for reporting to PennDOT information about persons who have experienced even a single seizure while under the physician's care. PennDOT may, pursuant to the physician's report, require the person to undergo a medical examination.

Other physical/mental standards

The regulatory amendments make significant changes in that they disqualify certain people from driving by administrative fiat, which decision had previously been left to the physician's discretion. For example, the regulations prohibit driving by those with "unstable or brittle diabetes or hypoglycemia" unless they are free from syncopal episodes related to the condition for a six-month period. Similarly, the regulations prohibit driving by those with cerebrovascular insufficiency or cardiovascular disease which has resulted in syncope, loss of consciousness, dizziness, paralysis, or loss of certain visual fields within the previous six months. In addition, the driving ban extends to those who experience episodes of loss of consciousness with unknown etiology or types not listed unless they have been symptom-free for a period of one year.

The amendments provide for disqualification of drivers based on recommendation from the provider, defined as "a person authorized to diagnose or treat disorders or disabilities covered in this chapter, including but not limited to, licensed physicians, podiatrists, psychologists, and osteopathic physicians."

In the recommendation, the provider would advise PennDOT that the condition is "likely to impair the ability to control and safely perform motor functions" essential in driving. A laundry list accompanies the description of the recommendation, which includes physical disabilities or conditions such as loss or permanent impairment of a limb or part of a limb, neuromuscular diseases, orthopedic conditions, mental deficiency or mental retardation, or cerebrovascular insufficiency or cardiovascular disease which has, in the previous six months, caused symptoms which would impair driving abilities.

The list also includes mental or emotional disorders, or chronic alcohol abuse or use of drugs which results in inattentiveness, despondency, aggressiveness, or lack of concern for personal safety or the safety of others. The regulations prohibit reporting, however, with respect to any person participating in a drug or alcohol rehabilitation program which is federally funded. In addition, PennDOT may require special driver-competency examinations for those who have physical disabilities which inhibit motor control.

Physicians should bear in mind that the PennDOT reporting requirements are not new. They have only been refined by the Medical Advisory Board, which was established in 1976 when Pennsylvania became one of the few states to require physician reporting of driver qualifications. Only about six states currently require this type of physician reporting.

Editor's Note: Physicians from the Allegheny County Medical Society (ACMS) were instrumental in having the amendments formulated by the state's Medical Advisory Board.

Ms. Weber is assistant general counsel for the Pennsylvania Medical Society.

Physiatrist

Allied Services Rehabilitation Hospital is a progressive 98-bed CARF and JCAHO accredited facility, with a comprehensive offering of rehabilitation disciplines and state-of-the-art equipment. Our inpatient and outpatient programs treat an array of neurological and orthopedic diagnoses including spinal cord injury, CVA, amputees, arthritis and pediatrics.

We are seeking a board eligible or board certified physiatrist to further develop our expanding inpatient and outpatient programs. Competitive compensation, excellent benefits and relocation costs offered.

Scranton is situated at the foot of the scenic Pocono Mountain region and offers its residents a variety of educational, cultural and recreational opportunities, a low cost of living and proximity to New York City and Philadelphia. Clarifying Concurrent Care

Dennis L. Olmstead

Pennsylvania Blue Shield's concurrent care policy for both the Medicare program and its private business is the source of much confusion and exasperation among physicians, especially with regard to medical-medical concurrent care. This article seeks to clarify the process for better understanding by physicians.

Proposed AMA Resolution

The Pennsylvania delegation to the AMA House of Delegates introduced a concurrent care resolution at the AMA's annual meeting in June. If adopted as proposed, the resolution would direct:

- that the AMA use all appropriate resources to accomplish uniformity among carriers in the application of concurrent care payment policies in the Medicare program,
- that the AMA use all appropriate resources to allow physicians to be identified by their specialty as reported to the carrier rather than an arbitrary definition established by a carrier for the purpose of concurrent care payment policy, and
- that a report of these activities be brought to the AMA House of Delegates in December 1992.

Concurrent care is defined by Pennsylvania Blue Shield (PBS) as care provided to an inpatient of a hospital or skilled nursing facility by more than one doctor simultaneously, during a specified period of time. Usually, concurrent care is provided when: 1) two or more separate conditions require the services of two or more doctors; or 2) the severity of a single condition requires the services of two or more doctors for proper patient management.

As a first step in Blue Shield's concurrent care review process, as with all claims processed by PBS, services must be deemed "medically necessary." To be considered such, the claim must demonstrate an active symptomatology or evidence of the disease, injury, or defect; and the need for services must be documented in the patient's records. If no identifiable relationship between the reported service and the diagnosis or symptoms is reported, payment will be denied.

Concurrent care claims must then be processed through concurrent care system edits, which screen by diagnosis code(s) and physician specialty. If a claim "fails" the edit process, e.g., the diagnosis code(s) used does not sufficiently support the need for the specialist or sub-specialist, the claim is rejected. Prepayment development for concurrent care, for the most part, does not exist. In other words, if the claim fails the system edits, PBS rejects it rather than sending a development letter to the provider. Under the Medicare program, however, prepayment development does occur on non-assigned claims where the denial is based upon medical necessity.

PBS policy states that the medical necessity for concurrent care is based on the patient's condition. It is therefore important that the claim form contain either the specific ICD-9 diagnosis code(s) that reflects the nature of the patient's condition, or the reason the physician is treating the patient. Additional documentation, such as hospital records, may be submitted with the claim to further explain the patient's condition and justify the medical necessity of the service. The records should also document the primary care physician's request for the consultant to see the patient and the seriousness of the patient's condition. The necessity of each physician's skills will be evaluated based on the ICD-9 code and/or this additional documentation.

Submission of medical records with the claim will delay initial claims processing and payment because the medical records must be reviewed. Ultimately though, if the claim fails the system edits, the submission of medical records with the initial claim filing would expedite payment, since records would eventually have to be sent to Blue Shield to justify the service under the postpayment review process.

Thus, the physician has a decision to make. If he or she believes the ICD-9 diagnosis code(s) stands on its own to justify the medical care rendered by specialty, the physician may not need to submit the records. If he or she does not believe that the ICD-9 code supports the concurrent medical care provided, the physician may need to send the medical records with the initial claim.

In addition to the diagnosis and/or medical records sent for the patient, PBS reviews physician specialty in determining medical necessity. Similar specialties simultaneously providing medical care may cause the physician's claim to be rejected. For example, PBS considers the following specialties the same as or comparable to "internal medicine" when evaluating the medical care provided to the patient: cardiology, endocrinology, family practice, general practice, preventive medicine, pulmonary disease, and

Mr. Olmstead is the State Society's director of medical economics.

rheumatology. Blue Shield non-Medicare business also considers pediatrics and pediatric cardiology as the same specialty for purposes of concurrent care.

The Health Care Financing Administration (HCFA) has stated that while it is not unusual for concurrent care to be performed by physicians in different specialities or sub-specialties, the need for such care would not be considered medically necessary in many cases. HCFA believes that these physicians generally possess the same skills and knowledge necessary to treat the patient. HCFA also acknowledges, however, that there are valid circumstances in which a patient may require the services of two "like" physicians, i.e., when one physician has limited his/her practice to some unusual aspect of a specialty.

Payment guidelines

PBS medical policy payment guidelines are established according to the type of concurrent care rendered. The guidelines for medical-medical concurrent care are:

- Under some circumstances, concurrent care services are *not* required on a daily basis for the entire hospitalization.
- The admitting doctor should be responsible for primary care and be paid for medical care, unless the patient is transferred to the consultant.
- Generally, PBS does *not* pay for the concurrent treatment of: 1) two or more separate conditions by physicians of the same specialty, 2) the same condition by physicians of the same speciality; or 3) the same condition by physicians *not* of the same specialty. In each case, Blue Shield's definition of "specialty" is assumed.

Advice for physicians

To avoid rejection of concurrent care claims and/or a request for additional documentation, physicians should:

- insure that the proper ICD-9 diagnosis code(s) specific to the degree of severity of the patient's condition being treated is used when billing;
- insure that PBS has on file the physician's correct specialty designation; and
- append a "22" unusual services modifier to the procedure code billed, and attach hospital records which justify the medical necessity of services being billed.

Typifying Conditions for Which Concurrent Care Services May Be Eligible

The following is a partial listing of conditions identified by Pennsylvania Blue Shield as typifying conditions for which concurrent care services may be eligible:

Blood and blood-forming organs; malignancies

Anemia (aplastic, Cooleys hemolytic, sickle cell, hypoplastic); hemophilia; Hodgkins disease; leukemia; lymphoma; multiple myeloma

Integumentary

Burns; scleroderma; erythema gangrenosum

Cardiovascular

Atrial fibrillation; cardiac arrest; cardiac arrhythmias; cardiac surgery; congestive heart failure; cor pulmonale; myocardial infarction; shock; hypertension, severe; thrombosis, acute

Gastrointestinal

Hepatitis; ulcer (gastric, duodenal, enteric); pancreatitis; cirrhosis; inflammatory enteritis, colitis, or enterocolitis

Genito-urinary

Acute renal insufficiency; chronic renal disease; urinary hemorrhage; eclampsia, pre-eclampsia; urinary tract infection with septicemia

Acute infectious diseases

Acquired Immune Deficiency Syndrome (AIDS); AIDS-Related Complex (ARC); infectious mononucleosis; tuberculosis, active; sarcoidosis; septicemia or viremia

Metobolism and endocrine system

Acute anaphylaxis; diabetes mellitus, uncontrolled and/or insulin dependent; adrenal failure; hyperparathyroidism; heat stroke

Musculoskeletal

Arthritis; myopathies; osteomyelitis; Paget's disease, complicated

Nervous

Drug intoxication; cerebral vascular accident; coma; meningitis; multiple sclerosis; Parkinson's disease; head injury; encephalitis

Respiratory

Abscess of lung; pneumonia; bronchial asthma (acute); cystic fibrosis; pulmonary edema; respiratory arrest; respiratory insufficiency and/or failure; chronic obstructive pulmonary lung disease

Miscellaneous injury and poisoning

Compressed air sickness; drowning; electric shock; poisoning (chemicals, drugs, heavy metals, toxic gases)

Psychiatric

Psychosis, acute

MEDICARE CONVERSION FACTOR SPLIT FOR 1993

The Department of Health and Human Services (HHS) in late May recommended a two-part Medicare physician payment schedule conversion factor update for 1993. HHS Secretary Louis W. Sullivan, MD, also presented the Medicare Volume Performance Standard (MVPS) for fiscal year 1993, as well as potential program directions for congressional and public consideration.

The two-part update will be applied on a service-specific basis as follows: for surgical services, the recommended update is 2.6 percent; and for non-surgical services, the recommended update is 0.3 percent. The recommendation is based on an update equal to the projected Medicare Economic Index (MEI): 2.2 percent, plus or minus the percentage points by which the MVPS was exceeded or was less than the actual rate of increase for surgical and nonsurgical services for the fiscal year 1991. MVPS figures recommended by HHS were 6 percent for surgical services and 7.9 percent for nonsurgical services.

Modifications being considered for 1994 include:

- a single MVPS and conversion factor update;
- acceleration of the payment schedule transition;
- a separate MVPS for primary care services;
- a restructuring of graduate medical education payment to favor primary care and to non-hospital-based, ambulatory residency training sites; and
- increased emphasis on primary care in Public Health Services programs.

The Americal Medical Association (AMA) has previously argued that multiple conversion factor updates are inconsistent with the resource based relative value scale (RBRVS) and should not have been recommended. Currently, the AMA is reviewing Dr. Sullivan's full report, and still believes that important elements of RBRVS require correction and refinement.

BLUE SHIELD, SOCIETY ANSWER RBRVS QUESTIONS

A number of general questions regarding Medicare coding, payment policies, audits, etc., were raised by physicians at the regional resource based relative value scale (RBRVS) seminars sponsored by the State Society. Questions were mailed directly to Medicare via special question forms handed out at the seminars.

What follows is a sampling of questions from those seminars and their corresponding answers, compiled by Pennsylvania Blue Shield Medicare representatives and amended *in italics* by the Society's Council on Medical Economics staff. The Society will publish additional questions and answers on Medicare payment reform in the future.

How do I bill for a hospital admission associated with an office visit on the same day?

When the patient is admitted to the hospital in the course of an encounter in the physician's office, all evaluation and management (E/M) services provided by that physician in conjunction with that admission are considered part of the initial hospital care when performed in the other site of service, as well as in the inpatient setting.

Services such as diagnostic tests, pathology studies, and radiologic studies—performed in any place of service—should be reimbursed in addition to the E/M services rendered that day.

If an evaluation (99201-99215, 99241-99273) involves an endoscopic procedure (31250-31375) to complete the evaluation, are both procedures or just one billed? If only one, which?

Separate payment will be made for an office visit (99201-99215) and an endoscopy on the same day if a separate, readily identifiable service was provided. If you are providing a service beyond recordkeeping, counseling, prescribing recovery therapy, etc., you may bill an office visit with modifier "25," in addition to the endoscopy.

The consultation codes, 99241-99273, may be billed when you have been asked by another physician to render your expert opinion of the patient's problem. As the consultant, you must prepare a written report back to the requesting physician. Therefore, a consultation and an endoscopy may also be performed on the same day.

By definition, a history and physical are recognized as separate and identifiable services. Therefore, a visit comprising a history and physical could be reimbursed in addition to the endoscopy using modifier "25" with the visit code. Additional documentation does not need to be submitted with modifier "25" billings.

Will Medicare pay for the administration of an injection on the same day as an office visit?

Payment for the administration of a therapeutic injection will *not* be made when the injection is performed in conjunction with an office visit on the same day. Payment will be made for the visit and the cost of the drug. The appropriate level of E/M service should be reported in addition to the appropriate code for the drug. The administration service is considered to be part of the office visit. Injection administration (procedure codes 90782-90784, 90788, and 90799) will be paid when billed independently, i.e., no E/M service is rendered on that day. In this case, one of the administration codes listed above should be billed in conjunction with the appropriate code for the drug.

Payment can be made for visits, the administration of the drug, and the cost of the drug for chemotherapy injections. Payment can also be made for the cost of the drug, the arthrocentesis injection, and a visit on the same day, if the visit was for a separate and identifiable service, such as a history and physical to determine that arthrocentesis was needed.

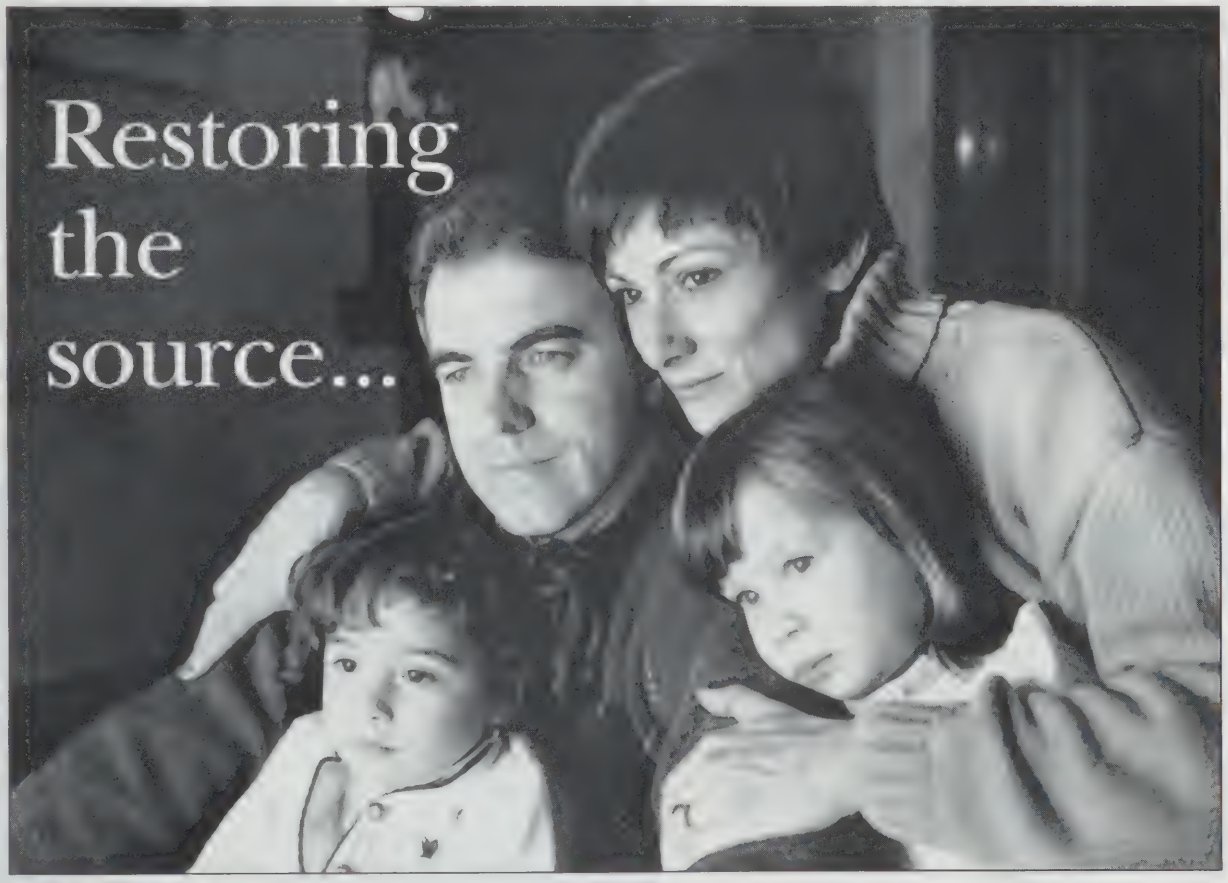
Can physicians now bill patients for telephone calls made to patients regarding their care or problem since the last office visit?

Although Current Procedural Technology (CPT) has codes for telephone calls, Medicare will not make separate payment for them. Medicare's policy is that telephone calls are part of the physician work in the visit or service, and the payment for the visit or service encompasses the payment for the telephone call.

How can electrocardiograms (EKGs) be billed when they are interpreted in the hospital by a physician who has not seen the patient?

The Omnibus Budget Reconciliation Act (OBRA) of 1990 precludes separate payment for the

interpretation of an EKG. Thus, by law, payment may not be made for the interpretation of an EKG that is ordered or performed in conjunction with a visit or consultation. Additional relative value units (RVUs) were added to the visit and consult codes to account for physician work in performing this service. The interpretation of this legislation by the Health Care Financing Administration (HCFA) does not recognize payment for the interpretation of an EKG by a physician who performed the interpretation but did not order the test.



Payment is still permitted for the technical component billings of EKGs, as well as the professional interpretation of specialized EKGs, such as holter moniters.

If a 99291 is billed on a given day, can you also bill for additional time spent for Swan Ganz catheter insertion, arterial line insertion, or ventilator management?

Critical care (99291) reported on the same day as ventilatory assistance (94656-94662) will be combined and paid at the fee for 99291. The insertion of a swan ganz catheter or an arterial line will also be included in the critical care code. Critical care codes are intended to include all critical care services, performed during the critical care period, that require the constant attention of the physician.

Procedures which are not directly attendant to critical care management (e.g., setting of fractures, bladder tap) are not included in the critical care code and should be reported separately.

Other services which can be billed in addition to critical care include the suturing of lacerations, lumbar punctures, peritoneal lavage, and the reduction of joint dislocations.

ACTIONS OF THE BOARD OF TRUSTEES, MAY 13, 1992

OFFICIAL HEALTH CARE REFORM POLICY ADOPTED

The Board amended and adopted a health care reform policy statement and goals recommended by the State Society's Committee on Long Range Assessment (see below).

The position statement sets forth broad criteria necessary for any meaningful reform movement, rather than advocating specific proposals. The statement has been designated as policy to be used to respond to media, to evaluate the merits of reform plans advocated by others, and to develop the Society's own health care reform proposal.

CERTIFICATE OF NEED POSITION STATED

The State Society's Board of Trustees, at its May meeting, adopted a position statement on Certificate of Need (CON) recommended by the Hospital Medical Staff Section (HMSS). Pennsylvania's CON program is scheduled to sunset December 31, 1992; however, a modified CON program is proposed in House Bill 1982.

Past Society policy supported a "free and competitive health care market" relative to CON. The HMSS recommendation adopted in May continues to support that position and advocates assurance of quality through appropriate licensure standards.

SOCIETY SEEKING CLAIMS DATA STANDARDS

At the recommendation of the Council on Medical Economics and the direction of its Board, the State Society will seek to have

PENNSYLVANIA MEDICAL SOCIETY HEALTH CARE REFORM POLICY

The goal of the physician is to prevent illness and treat injury or disease in the most skilled and professional manner. The Pennsylvania Medical Society believes physicians must always place the welfare of their patients first, ahead of personal interests.

Our nation has the expertise and technology to provide the finest quality health care in the world, and the strengths of our existing system should be preserved. However, the Pennsylvania Medical Society recognizes that reform is needed to address the imperfections of the health care system—including rising costs and the absence of health insurance coverage for millions of our citizens. Therefore, in the best interest of the public's health, physicians must be committed to reform and to playing an active role in the process.

Goals

Universal access: The Society believes all people should be able to obtain basic health services. To facilitate access to basic health care, financial resources must be made available. At the same time, geographic, social and cultural barriers, and other impediments to health care access must be overcome.

Quality: The Society is committed to the highest possible quality in health care services and supports ongoing efforts to improve health care techniques and technology. The current high standard of quality must be protected throughout the process of reform—cost containment should not sacrifice quality.

Cost containment: Escalating health care costs must be curbed through measures which target the causes. The Society believes health system reforms should reduce administrative burdens on physicians and other providers, attack inefficiencies in the delivery system, address overutilization, and eliminate excessive charges and cost shifting. Reforms should stress the cost savings inherent in prevention and early detection of disease. Most importantly, the health care consumer should be an active participant in the economic decisions affecting health care.

Practice parameters: The Society supports the proper development of practice parameters, which are guidelines to assist physicians in clinical decision making. They provide a means to improve quality and assure appropriate utilization of health care services.

Health insurance reform: The Society believes reforms of the existing health care insurance system are necessary to ensure the availability of basic health care coverage for all people. Shortcomings to be addressed include restrictive eligibility criteria, such as pre-existing condition exclusions; the demise of community rating, which drives up the cost of coverage; and the lack of portability—workers' inability to take their health care coverage with them when changing jobs.

Public health initiatives: Health system reform is only one component of what is necessary to achieve the major public health goals of our nation. The Society believes it is absolutely vital that efforts be increased to promote healthy lifestyles and positive changes in community attitudes. Physicians must foster a commitment within the community to improving public health education and resolving chronic economic and social problems which lead to violence, substance abuse, and other unhealthy lifestyles.

Tort reform: Billions of dollars are spent each year on "defensive medicine"—tests and procedures conducted to protect medical providers against potential lawsuits. The Society believes an efficient and fair medical liability system should be developed to reduce cost-shifting, help control health care cost inflation, and protect quality.

Basic freedoms: The Society believes that both patients and providers must be assured basic health care freedoms, limited only by the delivery systems they choose: the public must be assured of the right to select their physician and their hospital; physicians and other health care providers must be assured the autonomy to select the location of their practices and their method of reimbursement. Individuals should be free to purchase additional health care services and coverage with their own resources.

Prioritization: Health care services should be ranked, or prioritized, according to some agreed-upon criteria in order to assure the most efficient distribution of resources. This belief comes as recognition that society may be unable or unwilling to expend the resources necessary to provide every available health care service. The Society also believes that this process of prioritization should be achieved through consensus of health care consumers, payors, and providers, with the role of physicians being to provide medical information necessary for informed choices. Any subsequent restriction of resources allocated for medical services through rationing should be determined by society as a whole with full understanding of the consequences of the choices made.*

Medical research and education: The Society believes that medical education and research must be promoted and supported to assure continued improvement in quality and efficiency.

*** Definitions:**

Prioritization—A listing of services according to an agreed-upon set of criteria.

Rationing—Determining which services will be made available.

Pennsylvania's Medical Assistance (MA) program use the standard claims data elements used by Medicare.

Most health insurors, including Medicare, Blue Shield, and the majority of commercial carriers, use the HCFA 1500 claim form. However, Pennsylvania's MA program requires information specific only to the MA program. A unique claim form, the MA319, was developed in the early 1980s, with input from the State Society, to gather this data.

Because the MA319 includes nuances not present in the HCFA 1500, many claims are returned to providers due to incomplete or incorrect information. Returned claim forms are one of many "hassles" associated with participating in MA, according to members. A 22-page "crosswalk" was developed by MA to use in conjunction with the HCFA 1500 form, but its use is not practical, according to the Society.

BOARD ENDORSES MBNA CREDIT CARD PROGRAM

The Society's Board of Trustees, at the recommendation of the Council on Medical Practice, endorsed the MBNA America affinity credit card program to be offered as an added member benefit. The program offers one of the highest credit limits available in the country, access to 24-hour service, and a special business card for professional use.

Credit lines offered by MBNA range from $3,500 to $50,000. Other benefits include travel/accident insurance ranging from $300,000 to $1 million, and lost-luggage reimbursement up to $3,000. The card's annual fee will be waived in the first year of card ownership. In subsequent years, the annual fee will be waived when card charges exceed specified amounts.

All members will receive a credit card application in the mail by September. For additional information at that time, call the Society's Department of Practice Services at 1-800-228-7823.

JUDICIAL COUNCIL NOMINATIONS APPROVED

The Board approved four nominations for a one-year term on the Judicial Council to fill the vacancy created by the death of D. Ernest Witt, MD. Nominated are: Henry H. Fetterman, MD, Lehigh County; Donald E. Harrop, MD, Chester County; David L. Miller, MD, Clarion County; and alternate, Joseph N. Demko, MD, Lackawanna County. Dr. Harrop was appointed to the position until the election in October.

Also, the following two additional nominations for the Judicial Council were approved to fill the vacancy created by the expiration of the term of Kenneth L. Cooper, MD, Lycoming County, in October: Thomas J. Kardish, MD, Bucks County; and Charles A. Lauback Jr., MD, Montour County.

SOCIETY OPPOSING HOUSE BILL 1516

At the recommendation of the Interspecialty Section and by direction of the Board of Trustees, the State Society will oppose in its current form House Bill 1516, which amends the HMO Act and regulates health maintenance organization (HMO) functions with regard to drug and alcohol treatment.

The Society expressed concerns that the bill:

- does not allow HMOs to credential qualified physicians to treat drug and alcohol abuse patients,
- includes qualifying criteria to permit individuals certified in "any three-year program or equivalent life experience" to treat drug and alcohol abuse patients, and
- does not include a qualified psychiatrist on the proposed Grievance Committee.

NO AX TO GRIND.

Our occurrence policy has been the industry standard for nearly a century. But some doctors want a claims-made policy. So we have it available. At the Medical Protective Company, we have no ax to grind. You can choose from a variety of programs, both occurrence and claims-made, that offer greater flexibility and savings. The choice is yours. Call us today.

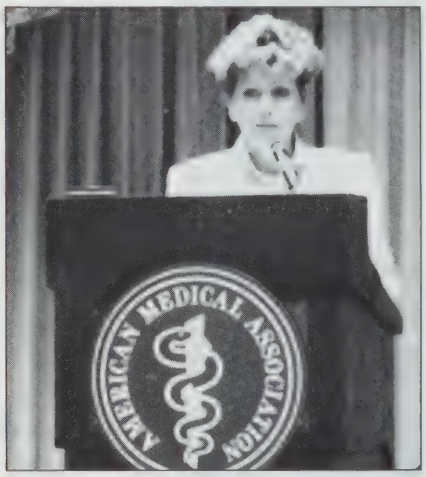
SOCIETY CO-SPONSORS ANIMAL RESEARCH WORKSHOP

The Pennsylvania Medical Society, along with the AMA and the Pennsylvania Society for Biomedical Research (PSBR), co-sponsored "Medical Progress—A Miracle at Risk," a one-day workshop in May addressing the importance of animals to medical research. More than 65 physicians, residents, medical students, basic science faculty, lab animal technicians, veterinarians, and researchers attended the workshop, held in Hershey.



Introductory remarks were offered by Jerod M. Loeb, PhD, AMA assistant vice president of science and technology, and Robert N. Moyers, MD, State Society president. Karen A. Gorell, MSW, AMA project manager of the Group on Science and Technology, overviewed the goals of the workshop, which were to encourage practicing physicians to speak out on the issue, and to build grassroots support for the use of animals in research. Dr. Loeb then presented "The Price of Ignorance: Medical Progress vs. Animal Activism."

Several other national and local leaders also participated in the program. C. McCollister Evarts, MD, senior vice president for health affairs and dean of the College of Medicine at Penn State's Milton S. Hershey Medical Center, moderated a panel discussion entitled, "What Are We Up Against?" During the discussion, three panelists offered case studies: Richard Van Sluyters, OD, PhD, professor of optometry and chair of the Animal Care and Use Committee at the University of California, Berkeley, offered the targeted researcher perspective; Steve Carroll, executive director for incurably ill For Animal Research (iiFAR), offered the patient research advocate perspective; and Deborah S. Saline, director of public relations at the Hershey Medical Center, talked about animal activism and the Hershey facility.

In the afternoon, participants learned how to handle "tough questions" about the issue. Craig G. May, senior public information officer for the AMA, and Bruce Dan, senior editor of the *Journal of the American Medical Association* and anchor of "Medical Rounds" on American Medical Television, CNBC, discussed how to address emotionally charged topics and presented examples of situations where difficult questions are posed by biased or badgering individuals. Wiley R. McKellar, editorial writer for *The Patriot News*, Harrisburg, also provided a media perspective of animal-based research in Pennsylvania.

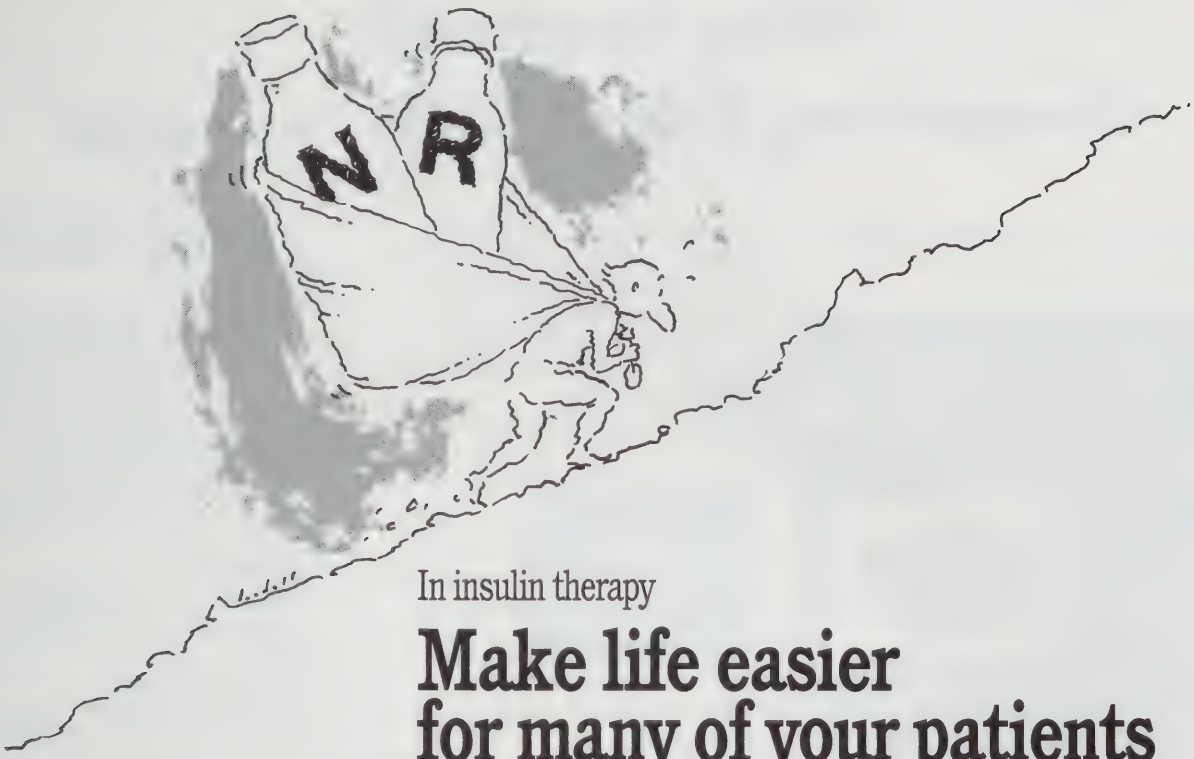
Another panel closed out the afternoon with "Personal Strategies—What Can I Do?" Moderated by Norman Wilkinson, PhD, PSBR executive director, the session included presentations by: Cooper Schenck, grassroots strategist at E. Bruce Harrison Company, Washington, D.C., on how to build an effective grassroots network; Craig B. Wisman, MD, cardiovascular and thoracic surgeon at the Hershey Medical Center, on educating patients about the role animals play in their medical care; and Ms. Gorell explaining the elements of a resource kit given to each participant to assist them in understanding the issues associated with the use of animals in medical research.

The AMA's resource kit contains materials for use in outreach activities, including such tools as a backgrounder on the animal "rights" movement, sample speeches with accompanying slides, a 10-minute videotape exploring the issues, sample written materials, and other resources to enable physicians to better inform patients. Also available to participants were a series of brochures from the conference's sponsoring organizations and the Pennsylvania Department of Health.

Karen A. Gorell, MSW, AMA project manager of the Group on Science and Technology, was one of several national and local speakers at "Medical Progress—A Miracle at Risk," a workshop, co-sponsored by the State Society, addressing the importance of animals to medical research.

FIRST RURAL HEALTH CONFERENCE HELD

The State Society participated in the first annual Pennsylvania Rural Health Conference, sponsored by the Pennsylvania Office of Rural Health (PORH) of The Pennsylvania State University. The conference, held in May in Harrisburg, brought together policymakers, health professionals, and educators to exchange information and ideas about the quality and delivery of rural health care in Pennsylvania.

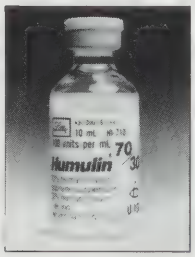


Acting Secretary of Health Allan Noonan, MD, MPH, presented the keynote address. He listed several rural health priorities, including:

- rebuilding the health professional shortage area (HPSA) designation process;
- coordinating with Pennsylvania's medical schools to use their graduates in rural areas within the state, rather than exporting them to other states;
- developing school-based health clinics;
- instituting "one-stop shopping" for health care needs;
- improving migrant health services;
- improving data collection;
- educating the rural population on health matters;
- strengthening the state's ability to assess the impact of toxic waste; and
- re-examining the Emergency Medical System.

The remainder of the conference focused on mental health and technology transfer, and several speakers outlined successful programs and projects at work in the rural areas of Pennsylvania and neighboring states.

The State Society supported this first annual conference through a financial contribution.



Robert J. Lilley, the Society's assistant director of educational and scientific affairs, contributed to this page.

Office Overhead: Recognizing Hidden Costs

The Health Care Group

Physicians are accustomed to turning to traditional strategies to increase their gross income, such as maximizing reimbursement, increasing patient base, and reducing overhead. Of these, reducing overhead often seems to offer the least savings, as a few percentage points here and there would probably have little effect on a practice's bottom line.

The new Medicare fee schedule has changed that thinking. As reimbursement dollars shrink, two key management issues are moving to the forefront in every practice: cost containment and time efficiency. Regardless of practice size or mix of services, physicians should review expenses line-by-line. In the new reimbursement climate, it is essential to ask if each expense item *really* contributes to productivity—and those that do not should be trimmed.

A word of caution in undertaking this process: don't begin by firing or laying off employees unless the practice is *clearly* overstaffed. Personnel are the most valuable asset, albeit the biggest operating expense. Many practices react to economic pressures by eliminating some of these major expenses, when, in fact, such actions often result in decreased efficiency and in patient dissatisfaction, both of which will have a negative effect on income. Practices should review personnel costs, but should not focus entirely on payroll to save dollars.

The following is a list of cost-saving ideas that have proved helpful to many practices. Some represent big savings; others will have a smaller impact. Physicians should remember, however, that in today's environment cost efficiency is key. Given that, every dollar helps.

Personnel costs

- Review and rewrite job descriptions, assuring that higher-paid workers are not doing lower-paid work, such as filing, opening mail, and making bank runs.
- Limit the number of RNs on hand at any time, using them only for tasks requiring their training.
- Cross-train staff to fill in for temporary vacancies, vacations, and illnesses, thus avoiding temporary help and "floater" employees.
- Avoid overtime work by keeping office hours on time and staggering staff work schedules.
- Recruit, train, motivate, and supervise effectively to keep turnover—a very costly item—at a minimum.
- Develop pre-printed forms and standard form letters for insurance correspondence, patient recall, and records transfer to minimize secretarial time.
- Move payroll to an "outside" payroll service, thus reducing manager/bookkeeping/accounting time demands.
- In larger practices, develop salary grades to help monitor increases.
- Consider job-sharing positions that use part-time employees to staff full-time hours. Practices can attract good, experienced employees; gain flexibility during vacation time; and save on benefits, depending on the hours worked.
- "Flex-time" can also attract good candidates looking for non-traditional hours and can be a "benefit" to existing employees if used correctly.

Occupancy costs

- If more office space is needed, hire top-notch designers or architects with medical practice expertise to design for maximum efficiency.
- Schedule office hours so each exam room is used for as many sessions as possible, avoiding underutilized days, nights, and weekends.
- Sublet excess office space—especially for days, nights, and weekends—when not in use.
- Negotiate more demanding terms with the landlord, including repainting, carpet replacement, and limited rent escalation clauses.

Supplies

- Negotiate for a year's requirements of supply items at competitively bid prices, making sure to reopen the process each year.
- Avoid "panic ordering" at high prices by having a perpetual inventory system.
- Plan purchases by a yearly budget process, limiting purchases beyond the budgeted level.
- Purchase minor supplies (pens, pencils, paper products, etc.) through mail order houses, typically less expensive for generic items.
- Limit the number of people involved in the purchasing process.

Equipment

- Be critical as to whether maintenance/service contracts are needed for fairly simple items (e.g., a telephone system).
- Avoid wedding one equipment brand or distributor, retaining the ability to negotiate price and terms.
- Evaluate lease vs. purchase options.

Telephone

- Monitor phone bills, especially long distance, to see if all calls are justified.
- Consider alternative long-distance services, but keep reviewing the costs after switching—sometimes promised savings fail to appear.
- Have only the number of phone lines needed, possibly restricting some to incoming calls and dedicating others as "outgoing" lines.

Legal and accounting

- Move routine accounting functions in house, and onto a computer if possible, to reduce the need for the work of independent CPAs.
- Negotiate legal and accounting fees, obtaining advance agreement on fees and time deadlines for specific undertakings.
- Shop around for competent, lower-priced retirement plan administrative services.

Billing and collection

- Shop for computer supplies, pegboard systems, pre-printed fee slips, etc.: a regular vendor may make undue profits.
- Negotiate collection agency fees, possibly switching to a collection

letter service which doesn't charge on a percentage basis. Using two agencies often gives a practice a bargaining chip.

• In computerized practices, use electronic claims submission whenever possible in order to turn money around quickly. Investigate "linking" with the hospital admissions office for data retrieval, as well as lab and x-ray data.

Lab fees

• Be critical about using hospital labs. If their charges are higher, hospital lab use reduces the practice profit margin on self-pay and commercial insurance patients.

• Recognize that volume discounts may be available from outside labs.

Fringe benefits

• Drop key-man and buy-out life and disability insurance that should not be needed in properly structured inter-physician practice arrangements.

• Increase the deductible and co-pay elements of health insurance, and shop for changed health insurance (possibly even HMO coverage) every three years.

• Drop group term-life insurance. It's now an expensive way to provide some coverage for physician-owners.

• Eliminate staff fringe benefits which are not really important to employees. "Cafeteria" plans (which include dependent care plans and medical expense reimbursement plans) and "401(k)" retirement plans may produce savings.

Physician-level "perks"

• Have one person coordinate all ordering of professional books and journal subscriptions, avoiding duplication among group members.

• Choose practice-paid, vacation-oriented professional meetings carefully. Even if tax-deductible, they are still costly.

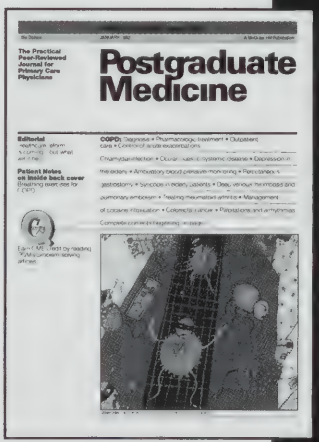
Miscellaneous items

• Computerize scheduling to better develop scheduling plans and increase efficiency.

• Computerize recall.

• Evaluate the tasks involved in seeing patients, and try to identify which tasks typically performed by physicians can be delegated to other staff members. Be sure physician time is not spent doing tasks someone else could do, such as making phone calls to check on test results.

These are just a few of the overhead costs that a physician may find hiding out in a practice. Reduce the costs, and let the savings boost the practice's income.



The contributing authors, Patricia M. Salmon and Edward L. Grab, are consultants with The Health Care Group, a medical practice management consulting firm based in Plymouth Meeting.

Possible Changes in Store for PRO Program

Donald E. Harrop, MD

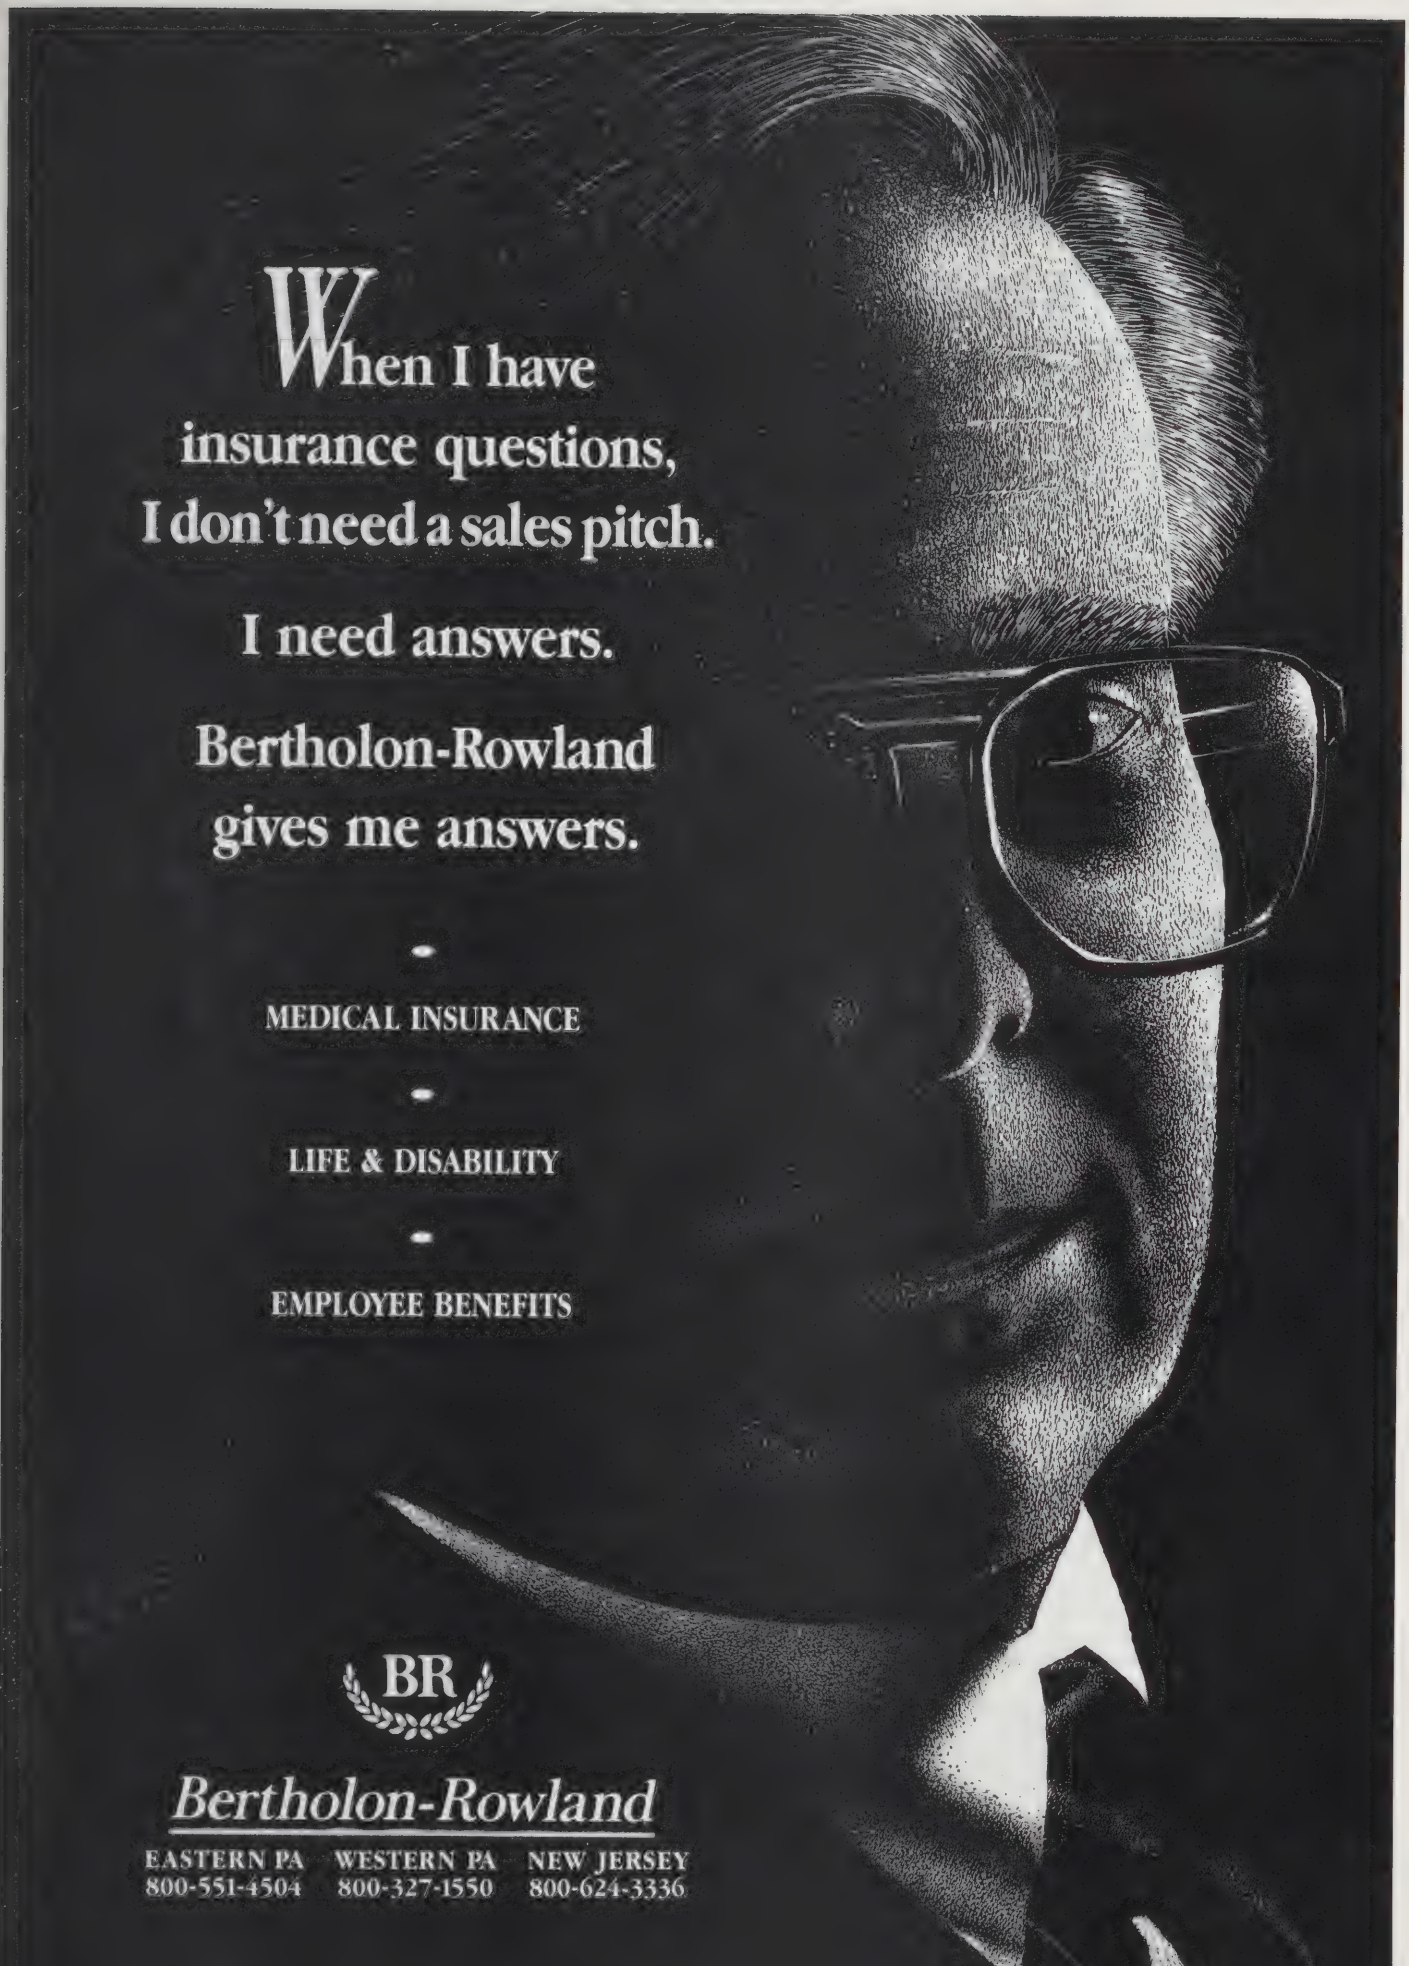
Some drastic changes in the peer review organization (PRO) program have been proposed by the Health Care Financing Administration in recent months. Some of them are good, but, as we see them, some could cause problems for PROs, hospitals, and physicians.

"We are hoping for some compromises and more opportunity for negotiation before all these plans are finalized."

As this is being written, I know that much of what is now considered as the plan for the future of the peer review organization (PRO) program will change more than once before this gets published. Nevertheless, I will attempt to comment on how I view the prospects for the program in relation to the proposed changes.

Most government programs of this type have a life expectancy of about 10 years. There is no particular reason for this that I've ever heard of, but there are historical examples. For instance, the predecessors to the PROs were professional standards review organizations (PSROs). The PSROs were created by law in October 1972, received their first funding in mid-1974, and were replaced by the PROs in 1984. The PRO law was part of the Tax Equity and Fiscal Responsibility Act (TEFRA) of 1982. At that time, the changes from PSRO to PRO were really quite dramatic.

Single-state PROs replaced what were numerous PSROs around the country. There were 28 PSRO areas in California, 17 in New York, and 12 in Pennsylvania. The nature of the organizations also changed from strictly educational to somewhat punitive, and this is believed to have been caused by the Health Care Financing Administration's (HCFA's) fear that the newly enacted Prospective Payment System using DRGs would allow too much possibility for "gaming the system."



Here we are, 10 years after enactment of the PRO law, and HCFA is busy proposing new directions for what will be the fourth PRO Scope of Work. Their basic premises were fine. They named this new direction the Health Care Quality Improvement Initiative (HCQII) and announced that the thrust of the PRO program will become educational rather than punitive. The intent is to move away from individual case review to a broader review by analysis of patterns and outcomes of care. But, other proposed changes leave much to be desired. For example, last September's article in this column discussed the Uniform Clinical Data Set (UCDS).

This is the new data-collection and case-finding system which is comprised of a standard set of clinical data elements, based on algorithms that function to provide decisions on which cases should be referred to physicians for review. HCFA has proposed creation of five regional organizations called clinical data abstraction centers (CDAC) which would do all of the medical record abstraction using the UCDS. Those records requiring physician review would be sent back to the PRO for review.

The number of reasons why we think this system is poorly conceived will not fit in this article. However, here are just a few: it threatens patient, physician, and provider confidentiality since medical records will be mailed all over the country to CDACs which will not necessarily be PROs; because of the time it takes for UCDS abstraction of a record and the cost involved, the sample sizes for review have been drastically reduced which will allow egregious departures from acceptable care to go unnoticed; and the UCDS has not been tested sufficiently to allow for such a sudden and dramatic departure from traditional PRO review.

Although the PRO community is concerned about a number of such issues, they are not against change and do support the underlying direction HCFA is attempting to take. We are hoping for some compromises and more opportunity for negotiation before all these plans are finalized. It seems as though we have gone full circle since 1972 and are starting around again. We will try to keep you posted as new developments occur.

Graduation Stats Up Five Percent From 1991

For the first time in several years, Pennsylvania's medical schools graduated a greater number of physicians than in prior years. The total number of men and women who received MD and DO degrees from the state's eight schools in 1992 is 1,225, a five percent increase from last year's figure of 1,166.

Estimated percentages of men versus women graduates have remained constant from last year, at 65 percent and 35 percent respectively. The percentage of women graduates varied by school, from a low of 24 percent at the University of Pittsburgh School of Medicine to a high of 49 percent at the Medical College of Pennsylvania.

A number of nationally known leaders spoke at the graduations, which were held between May 16 and June 5, and several honorary degrees and special honors were also presented.

Hahnemann University

Louis W. Sullivan, MD, secretary of the U.S. Department of Health and Human Services, and former Middle East hostage Joseph Cicippio received honorary degrees and spoke at Hahnemann's graduation on May 29 at the Academy of Music, Philadelphia. Dr. Sullivan received a doctorate of science and Cicippio received a doctorate of humane letters. Hahnemann confered the degree of doctor of medicine on 163 men and women.

Hershey Medical Center

AMA Executive Vice President James S. Todd, MD, presented the address to medical graduates of Penn State's College of Medicine at The Milton S. Hershey Medical Center. The ceremony was held on May 17 at Founder's Hall on the campus of the Milton Hershey School.

Among the college's 93 graduates were 37 women and 56 men. The number of graduates was up from 1991 by 35 percent; last year, 69 students graduated.

Jefferson Medical College

Michael N. Castle, governor of Delaware, received an honorary degree at Thomas Jefferson University's 168th commencement exercises on June 5 at the Academy of Music, Philadelphia.

Castle received the honorary doctor of letters degree for his efforts to broaden the delivery of health care services. Also honored with a doctor of science degree was Alfred G. Knudson Jr., MD, PhD, a renowned cancer researcher.

A total of 152 men and 59 women received MDs during the ceremony, an increase from last year's total of 209 graduates.

Medical College of Pennsylvania

The Medical College of Pennsylvania honored 111 medical gradutates at its 140th Commencement on May 16 at the Academy of Music, Philadelphia. Oliver Sacks, MD, the neurologist who wrote the book, *Awakenings*, received an honorary degree. Also honored were Rosemary Anne Stevens, MPH, PhD, dean of the College of Arts and Sciences and professor of history and sociology of science at the University of Pennsylvania, and Gail H. Foster, a longtime member of the college's National Board and president of the National Foundation for Women's Health.

Nancy Gary, MD, senior medical advisor to the administrator of the Health Care Financing Administration, was the graduation speaker. Dr. Gary spoke about quality care and health care costs.

Also this year, the college noted the twentieth anniversary of its first male graduates—four of them—in 1972. The class of 1992 had 57 male graduates.

Philadelphia College of Osteopathic Medicine

U.S. Senator Arlen Specter received an honorary doctor of laws degree and delivered the commencement address May 31 during the 101st graduation of the Philadelphia College of Osteopathic Medicine (PCOM), the nation's largest osteopathic medical college. Also honored as professor emeritus at the exercises—held at the Academy of Music—was Henry A. D'Alonzo, DO, MSc, FACOS, a distinguished surgeon and educator, and a 1951 PCOM graduate.

Of the 112 men and 84 women in the class of 1992, 75 percent were Pennsylvania residents, and 25 percent were from nine other states. The graduates represented 104 undergraduate colleges and universities, and 15 class members hold advanced degrees.

Temple University

During graduation ceremonies on May 21, Temple University School of Medicine graduated 171 physicians, a 7.5 percent increase from last year's total of 159. Ceremonies were held at the Academy of Music, Philadelphia. Kenneth R. Curdy, PhD, professor of microbiology and immunology at Temple, presented the commencement address.

MEDICAL SCHOOLS AND "THE OATH"

The original Oath of Hippocrates, set forth in 400 B.C., is no longer in use today in any of Pennsylvania's eight medical schools. Instead, the schools' medical graduates recite a "modern" version of the oath, if they recite one at all.

Common sense will tell you what might be offensive in the original version of the oath: references to "my own brothers" and "my own sons" may be considered sexist, and passages relating to not performing abortions bring up moralistic issues.

In order to allow for the changes in the medical community in the past 23 centuries, many of Pennsylvania's medical schools allow students to vote each year for the version of the oath they wish to recite. This year, seven of the eight graduating classes recited seven different versions of the "modern" oath, and one class opted not to recite the oath as part of its ceremony.

Among the "modern" versions used were the "Geneva" version written by the World Medical Association in 1948, the osteopathic oath, several versions written throughout the 1980s, and one version formulated by one of the graduating classes of 1992.

For a view of what the Oath of Hippocrates means to one Pennsylvania physician, see page 48.

Family Physicians' Approach To Important Clinical Problems

October 8-10, 1992

The Westin William Penn, Pittsburgh, PA

"A unique program presented exclusively by Family Practitioners. Family Physicians Teaching Family Physicians."

Program Features

- Depression
- Hyperlipidemia Management
- Dysuria and Urinary Tract Infection
- Headache Management
- Update in Diabetes Management
- Otitis Media
- And Many Others

Special Interest Sessions

- Incorporating Allergy Testing In Your Practice
- HIV Infection and Complications
- Asthma Management In the Office
- Spouse Programs

Shadyside Hospital is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians. This program will be designated to offer a minimum of 20 credit hours in Category I of the Physician's Recognition Award of the American Medical Association.

This program has been reviewed and is acceptable for 20 prescribed hours by the American Academy of Family Physicians.

Course Directors: David A. Blandino, M.D. • N. Randall Kolb, M.D.

Presented by: The Department of Family and Community Medicine • Shadyside Hospital • Pittsburgh, PA

For additional information, please contact : Office of Continuing Medical Education at (412) 623-2393/2296 or FAX (412) 623-2555.

SPECIALIZE IN AIR FORCE MEDICINE.

Become the dedicated physician you want to be while serving your country in today's Air Force. Discover the tremendous benefits of Air Force medicine. Talk to an Air Force medical program manager about the quality lifestyle , quality benefits and 30 days of vacation with pay per year that are part of a medical career with the Air Force. AIR FORCE

University of Pennsylvania

The Irvine Auditorium on the campus of the University of Pennsylvania was the site of commencement exercises on May 17 for the school's medical graduating class. Of the 148 graduates, 100 were men and 48 were women.

Dr. Bernadine P. Healy, director of the National Institutes of Health, presented the graduation address entitled, "The Path is Made By Walking." In her comments, Dr. Healy discussed medicine as a healing art.

University of Pittsburgh

The University of Pittsburgh School of Medicine graduated 132 physicians on May 18. Among the graduates were 101 men and 31 women. Henry Bahnson, MD, of Pitt's Department of Surgery, spoke during the event, held at Carnegie Music Hall, Oakland.

"WOMEN IN MEDICINE" MONTH: SEPTEMBER

The Pennsylvania Medical Society is planning a series of activities in September as part of "Women in Medicine" month, designated by the American Medical Association and the American Hospital Association. Activities will focus on the status of women physicians and medical students, reflect how far women have come since entering the profession in the mid-1800s, and recognize women's accomplishments.

Highlighting the Society's efforts is an exhibit on the history of women in medicine, which includes a series of photographs from years gone by of women at work in the medical field. The exhibit will include informational publications for public interest and will travel around the state.

The Society is developing special recruitment materials and a fact sheet for physicians to copy and distribute in their offices. Also a proclamation will be requested from the governor. Watch for materials and information about September's activities in July and August. For additional information, call the Society's Department of Public Affairs at 1-800-228-7823.

Editor's note: PENNSYLVANIA MEDICINE is planning to include related articles in its September issue. The editors would like to hear from women physicians and students about what it is like to be female in the field of medicine. The magazine offers a number of departments in which to include comments. The copy deadline for the September issue is August 1; all submissions are welcomed.

County News

PHILADELPHIA COUNTY PRESIDENT ELECTED

Richard M. Gash, MD, has been elected to succeed Donald Kaye, MD, as president of the Philadelphia County Medical Society (PCMS) for a one-year term. Dr. Gash is medical director of the Police and Fire Medical Association of Philadelphia, clinical assistant professor of surgery at Temple University School of Medicine, and maintains a consultative practice in general surgery.

Dr. Gash

A graduate of the University of Pittsburgh School of Medicine, Dr. Gash served as a captain in the U.S. Army Medical Corps. Following his residency, he was an active attending in surgery at Albert Einstein Medical Center in Philadelphia, Rolling Hill Hospital in Elkins Park, and Lawndale Community Hospital in Philadelphia. He has been involved in organized medicine on a county and state level throughout his career, including as a delegate from Philadelphia County to the State Society since 1974. Dr. Gash is secretary of the Keystone Peer Review Organization, where he holds a number of other positions, and he serves on the board of the Florida Peer Review Organization.

Succeeding Dr. Gash as president elect is William S. Frankl, MD. The following have been elected to other PCMS offices: Thomas G. Garbuzda, MD, vice president; Ronald J. Carlucci, MD, secretary; and James L. Cristol, MD, treasurer.

LCMS OFFERS SECOND MINI-INTERNSHIP

Six community leaders participated in the second Lackawanna County Medical Society (LCMS) Mini-Internship Program, May 14-15, 1992. Among the participants was Senator Robert Mellow, who said, "The knowledge and insight gained from my experience is something that will benefit me in my legislative duties in dealing with health care issues."

Other community leaders involved in the program included representatives from labor and industry, welfare, community service, and banking, as well as an attorney. Each was invited to spend four half-day sessions with physicians at work. The program ended Friday evening with a dinner for the 22 participating physicians and interns to discuss their two-day experiences.

Senator Mellow said the experience gave him "a great realization as to the workings of our hospitals and more importantly the men and women who provide health care services to our people." He added, "The experience of the two days with the doctors I was assigned to gave me a greater appreciation for the length of day the doctors work. It also demonstrated the personal concern and relationship the physicians had with their patients."

As for the future of the program, Eric Blomain, MD, LCMS president, said it will be repeated in October, and a member from the American Association of Retired Persons (AARP) is already scheduled to participate. For additional information about the success and workings of the program, contact Pat Martin, LCMS executive director, at (717) 344-3616.

MERCER COUNTY PHYSICIANS ADDRESS STATE OFFICIALS

Nearly 30 Mercer County physicians met with state health care officials in May during a "Capitol for a Day" visit to Sharon. The program of visits, sponsored by Governor Robert P. Casey, has brought state officials to various cities throughout the state to discuss priorities and concerns with local leaders.

Allan Noonan, MD, Pennsylvania's secretary of health, and Cynthia Maleski, the state's acting insurance commissioner, heard the Mercer County physicians' views on such issues as increasing governmental hassles and regulations directed toward physicians, private insurers' plans, decreased Medicare reimbursement, the Auto Insurance

Reform Act, AIDS testing, and implementation of the Health Care Cost Containment Council's physician- and hospital-specific outcome data.

The physicians aired specific complaints about reimbursement of physicians' medical services for automobile accidents. State insurance department regional representatives said that the payment regulations were not promulgated until November 1, 1991, and payments were based on the conclusion of the Peer Review Organization's claim evaluations. Upon being instructed that their "trade groups" must present their positions to the insurance department, the physicians told Ms. Maleski that innumerable complaints had already been filed by individual physicians and the State Society.

Dr. Giordano

The Mercer County physicians discussed the onerous responsibilities placed on physicians by Pennsylvania's AIDS Confidentiality of HIV-Related Information Act, and the resulting decline in patient testing. Conflicts between Pennsylvania law and new federal regulations regarding bloodborne pathogens were discussed, specifically regarding regulations which allow physicians to test themselves and their personnel, as well as their patients.

Also aired were the physicians' views on the encumbrances associated with Medicaid and Medicare and the acceleration of limiting medical care resulting from the Health Care Practitioners' Medicare Fee Control Act and the federal Resource Based Relative Value Scale. The physicians noted that Pennsylvania is equated with Massachusetts as the most restrictive state in which to practice medicine.

Further meetings were planned with the secretary of health, and regional insurance department representatives have already contacted the physicians about the Auto Insurance Reform Act.

Joseph A. Giordano, MD
Sharon

SOCIETIES COMPUTERIZE SPEAKER PROGRAM

The Communications Committee of the Allegheny County Medical Society (ACMS), assisted by the State Society, has developed a Speakers Bureau Utilization computer program to organize and ease the county society's operations in providing speakers to the community upon request.

Linked to the State Society's membership files, the program automatically makes additions and corrections, eliminating file maintenance by the county. The program is also set up to: identify bureau participants by specialty, location, and speaking topics; track who has been contacted and their responses to county speaking requests; and quickly and easily compile reports of bureau activity on a monthly and yearly basis.

Other county societies interested in more "user" information about the program should call Lyn Riley, ACMS director of communications, at (412) 321-5030.

COALITION HONORS STATE BUSINESSES

Twenty-two Pennsylvania businesses were honored June 3 for their non-smoking policies in the workplace by officials of the Pennsylvania Department of Health and the Coalition for a Tobacco-Free Pennsylvania. The coalition is comprised of the State Society and a number of other state agencies and organizations.

Representatives of the businesses received a certificate from the Society and a plaque from the coalition distinguishing their company as a recipient of the "Pennsylvania Smoke-Free 2000 Business Award." To qualify, businesses must be smoke free, permitting no smoking indoors by anyone on the premises, and should have a related written policy in effect for at least six months. Items such as employee incentives for those who quit smoking, smoking-cessation programs, and other employee relations/communications activities are also considered.

Honorees in the medical field included: Capital Blue Cross, Harrisburg; McWilliams Pharmacy, Danville; Family Health Council, Pittsburgh; Mary Ellen Convalescent Home, Hellertown; and Merck & Co., Inc./Merck Manufacturing Division, Danville.

AMA News

SOCIETY RECEIVES DUES REBATE FROM AMA

The State Society has received $111,610.84 from the American Medical Association (AMA) for 1992 dues rebate. The total is $6,668.29 more than received in 1991.

In keeping with Society policy, 50 percent of the rebate will be distributed in the near future to county medical societies. Seventy-five percent of the CMS share is for AMA dues reported by January 15, twenty-five percent for AMA dues reported between January 16 and February 15, and five percent for AMA dues reported between February 16 and March 15.

SEMINARS TO ADDRESS LOSS PREVENTION

The Pennsylvania Medical Society Liability Insurance Company (PMSLIC) will present loss prevention seminars at six sites around the state this fall. The seminar program, "Curing and Caring," addresses how to deal with difficult patients and is designed for all physicians regardless of specialty.

"Curing and Caring" will focus on physician-patient relationships using both a lecture and workshop approach. Stephen E. Prather, MD, a practicing obstetrician and gynecologist from Utah, will lead the program.

Following the seminar, attendees should be able to communicate more effectively with difficult patients, describe optimal use of the consultation process, and develop a communication and teamwork plan to deal with angry and dissatisfied patients.

Two sessions—one in the morning and one in the afternoon—will be offered at each site. Locations and dates are:

September 23:
Sheraton East, Harrisburg
September 30:
Bel Aire Hotel, Erie
October 1:
Westin William Penn, Pittsburgh
October 20:
The Woodlands, WilkesBarre/ Scranton

November 4:
Warwick Hotel, Philadelphia
November 5:
The Holiday Inn, King of Prussia

PMSLIC is offering a 10 percent discount on 1993 premiums to all seminar participants. For PMSLIC-insured physicians, the discount will automatically be deducted from quarterly premium billings; other physicians who attend will receive a coupon for the same discount if they obtain their professional liability insurance from PMSLIC. Please note: a $300 minimum and $1,000 maximum apply to the discount program.

For additional information on credits and the program, or for registration information, call PMSLIC's Risk Management Department at 1-800-445-1212.

FACILITIES ENTER AFFILIATION AGREEMENT

Muhlenberg College, Lehigh Valley Hospital, and Hahnemann University School of Medicine have entered into a new affiliation agreement which establishes a program designed to link the undergraduate and medical school education programs of Muhlenberg premedical students.

Under terms of the agreement, qualified Muhlenberg College students may be admitted to the program when admitted to the college or during their first, second, or third years of study. Students admitted to the program, to begin this fall, are guaranteed admission to Hahnemann upon meeting required Scholastic Aptitude Test (SAT) scores and grade-point-average standards, and completing a pre-professional internship and their undergraduate degree requirements.

Students in the program may take part in research studies and other educational enrichment experiences at the participating institutions. Also as part of the agreement, Lehigh Valley Hospital will annually award a scholarship to a maximum of six students in the program.

DRUG MISUSE-PREVENTION MESSAGE DELIVERED

Senior volunteers are delivering a medicine misuse-prevention message to the nation's elderly under provisions of a newly announced partnership involving the National Council on Patient Information and Education (NCPIE) and ACTION, the federal domestic volunteer agency—both headquartered in Washington, DC. The project is funded by a $29,000 ACTION grant.

Citing studies that 243,000 senior citizens are hospitalized each year because of adverse reactions to prescriptions or over-the-counter drugs, the effort will dispense information kits to more than 750 local projects of the Retired Senior Volunteer Program (RSVP), federally administered by ACTION and made up of more than 427,000 volunteers age 60 and older.

The kits, produced by NCPIE and containing information about medicines and the uses of drugs, will urge seniors to deposit their prescriptions and over-the-counter drugs in brown bags, and seek advice from pharmacists and other medical professionals at community medicine review clinics or other events sponsored by participating RSVP projects. The project was developed in conjunction with Older American Month, observed in May.

QUARTERLY REPORTS FROM KEPRO OVERSEERS

The House of Delegates, through Resolution 86-44 (Amended), has mandated the Society to provide regular reports on Keystone Peer Review Organization (KePRO) findings.

The following report from the Ad Hoc Committee on KePRO Oversight covers the period January 1 through March 31, 1992. It shows the number of Medicare discharges, cases reviewed by KePRO physician reviewers, pending denials issued, final denials issued, and DRG changes made by KePRO.

KePRO Data for All Pennsylvania Hospitals 01/01/92 - 03/31/92

Medicare Discharges	*222,781
Cases Reviewed	39,774
Admission Denials	701
Administrative Denials	156
Total Denials	857
DRG Changes	1,301
PPS Hospitals Under IR	2
Generic Screen Failures	32,272
Pending Quality Problems	5,670
Confirmed Quality Problems	265

* Reflects total discharges received by KePRO for the reporting quarter.

TECHNOLOGY TO BOOST CLINICAL CAPABILITIES

A "new generation" of magnetic resonance imaging technology has been approved for purchase by officials at MRI OF YORK, a joint venture between York Hospital and Memorial Hospital.

Developed by GE Medical Systems, Milwaukee, Wisconsin, the new technology, called "multicoil array," will reduce imaging time when integrated with the computerized system in place at the imaging center.

Applications of the technology include male and female pelvic anatomy, the abdomen, and the spine. MRI OF YORK will be the only imaging facility in this region implementing the new technology, according to a representative of GE.

FYI: COST-OF-PRACTICE STATS OFFERED

Physician income continues to be a topic of great interest throughout the United States, but the reality of the price of maintaining a practice is often unseen by the general public. The following statistics, offered by AMA Communications Services, address a number of topics which may be of interest to physicians:

- According to the AMA's Center for Health Policy Research, physician net income after expenses comprises approximately 13 percent of overall health care expenditures.
- These days, physicians are working an average of 60 hours per week—100 more hours per year than they worked in the early 1980s.
- Average office expenses in 1983 amounted to $85,400; today a physician averages over $150,000 in office expenses.
- The price of medical supplies alone has doubled since 1982.
- The price of malpractice insurance has more than doubled since 1983. While the average obstetrician pays $34,000 per year for professional liability insurance, there are obstetricians in some high-cost states who pay upwards of $100,000 for such premiums.

OBITUARIES

Robert E. Allen, *Mount Carmel*
Jefferson Medical College, 1927; age 93, died April 14, 1992. Dr. Allen was a general practitioner.•

Charles W. Delp, *Saint Clair*
Temple University School of Medicine, 1924; age 92, died April 8, 1992. Dr. Delp was a family practitioner.•

Max Harris, *Berwyn*
University of Vermont College of Medicine, 1940; age 76, died March 3, 1992. Dr. Harris was a pediatrician.•

John J. Kelly Jr., *Wynnewood*
Jefferson Medical College, 1954; age 63, died May 10, 1992. Dr. Kelly was a cardiologist.•

Henry G. McKeown, *Xenia, Ohio*
Hahnemann University School of Medicine, 1932; age 83, died March 28, 1992. Dr. McKeown was an internist.•

David S. Pollack, *Roaring Spring*
Hahnemann University School of Medicine, 1974; age 43, died April 22, 1992. Dr. Pollack was a general surgeon.•

Edward A. Troncelliti, *Media*
Jefferson Medical College, 1942; age 76, died April 13, 1992. Dr. Troncelliti was a pediatrician.•

James B. Gregg, *Chambersburg*
Kirksville College of Osteopathic Medicine, 1951; age 70, died April 1, 1992.

John M. Riva, *Philadelphia*
Tufts University School of Medicine, 1978; age 39, died March 22, 1992. Dr. Riva was a gynecological oncologist.

Seven Out of Ten Americans

Have Not Made a Will! Are You One of Them?

It's hard to believe but true. Most Americans die without a will. If you should die without a will, Commonwealth laws, through a tedious and impersonal process, will determine how your assets will be distributed.

Considering the courts' record in health care, you can imagine the legal process involved in settling your estate. In all probability your survivors will pay the maximum estate taxes.

To understand how important a will and linked trust instruments are to your estate, call Bob Lamb at the Trust and ask for the free pamphlet:

"What Difference Does A Will Make?"
Dial toll free: **1-800-228-7823**

P. S. When you call, you'll also receive the free booklet, "**I Have Put My House In Order,**" a personal asset directory to make your executor's job easier.

TRIGEMINAL NEURALGIA AS A MANIFESTATION OF ACROMEGALY: A CASE REPORT

Larry N. Merkle, MD, FACP; Brian W. Little, MD, PhD; Robert A. Morrow, MD; Gerald Pytlewski, DO

OBJECTIVE: Trigeminal neuralgia is one of the most painful disorders known in medicine, and neurologists and neurosurgeons frequently make a strong effort in a search for identifiable and treatable causes of this facial pain syndrome. This paper was compiled as a case report of a patient with trigeminal neuralgia and acromegaly.

METHODS: A 66-year-old female was diagnosed as having acromegaly from a growth hormone secreting pituitary microadenoma with associated trigeminal neuralgia. Acromegaly was suspected because of suggestive clinical features and confirmed by endocrine testing. The patient eventually underwent transphenoidal pituitary exploration. Pituitary replacement therapy in the form of cortisone acetate 37.5 mg daily was required following surgery, as well as continuation of a previous physiological thyroid replacement.

RESULTS: The patient's post-operative course was relatively uneventful, and the surgery resulted in complete remission of her facial pain.

CONCLUSION: When usual causes have been excluded, acromegaly should be added to the list of potential treatable causes of refractory trigeminal neuralgia.

For additional information or a copy of the complete study, contact Larry N. Merkle, MD, FACP, at the Lehigh Valley Hospital Department of Medicine, (215) 402-8200.

CLINICAL USE OF AMBULATORY BLOOD PRESSURE RECORDING: VALUE IN PATIENT CARE

Alan P. Shapiro, MD; Daniel J. Glunk, MD; Bruce Barnhill, BS

OBJECTIVE: Variability of blood pressure determinations has long been recognized and results in considerable difficulty in evaluation of hypertensive patients. This study was conducted to evaluate the problems and value of routine clinical use of ambulatory indirect recorders in an outpatient setting in a hypertension practice.

METHODS: Using the Spacelabs 90202 monitor, 200 ambulatory blood pressure recordings (ABPRs) were obtained in 179 patients over a period of 25 months; 21 of the 200 determinations were duplicates in the same patients after a change in therapy. Data were fed into a computer programmed by Spacelabs software to compute averages.

RESULTS: Of the 200 determinations attempted, successful records were obtained in 197 (98 percent). Blood pressure and heart rate outcomes were compared in regard to various means, and several calculations were made from the computed averages.

CONCLUSION: Several insights were gained from use of APBR in the clinical care of hypertensive patients. The current "state-of-the-art" instrumentation is reliable, accurate, reasonably trouble-free, and acceptable to patients. It provides a day-long measure of blood pressure which possibly has prognostic and diagnostic implications, may provide a prediction of the course of the patient, and offers guidance to the understanding and adjustment of pharmacologic therapy.

For additional information or a copy of the complete study, contact Alvin P. Shapiro, MD, at the Shadyside Hospital Department of Medicine, (412) 623-2465.

HEMODYNAMIC PATTERNS ASSOCIATED WITH INFARCTED BOWEL

Mark Gannon, MD; Robert Weaver, AS; Matthew Indeck, MD; J. Robert Burns, MD; Sheldon Brotman, MD; Joseph L. Smith, MD

OBJECTIVE: Bowel infarction remains a diagnostic dilemma and therefore leads to increased mortality and morbidity. This study was conducted to review a series of intensive care unit patients with infarcted bowel in an attempt to characterize their hemodynamic profiles.

METHODS: Between December 1984 and May 1987, hemodynamic data for 27 patients with a diagnosis of ischemia or infarcted bowel, confirmed by either surgical pathology specimen or autopsy, were reviewed. A thermodilution pulmonary artery catheter was used to monitor pressures and oxygenation, and various data were then calculated using standard formulas.

RESULTS: Data from 16 patients were excluded because of infection, myocardial infarction, or ischemia, and/or insufficient data. The remaining 11 patients demonstrated hemodynamic profiles with sharply defined high and low functional patterns similar to those described for septic shock.

CONCLUSION: The lowest functional group had the highest mortality rate. This observation is consistent with human septic shock experience and animal models of mesenteric ischemia. This might suggest that translocation of bacteria or their products across the injured bowel wall may be the most likely reason for the similarity of findings.

For additional information or a complete copy of the study, contact Joseph L. Smith, MD, at the Geisinger Medical Center Department of Critical Care Medicine, (717) 271-6211.

The editors of PENNSYLVANIA MEDICINE encourage submission of scientific articles for publication consideration; however, abstracts of those articles not published in full are printed as a reference for readers. Please send submissions to: Medical Editor, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820. Full scientific articles are published at the discretion of the medical editor as consistent with the editorial schedule and are subject to revision.

Robert L. Lasher, MD, a surgeon from Erie and the State Society's Eighth District Trustee, spoke in late May before the Republican Policy Committee Task Force on Health Insurance. Dr. Lasher presented the Society's comments on House Bill 2294, a small-business health insurance reform proposal.

Lee H. McCormick, MD, Pittsburgh family practitioner and chairman of the State Society's Task Force on Drug Abuse, has been appointed to the American Medical Association (AMA) Advisory Committee on Child Abuse.

Abram M. Hostetter, MD, Hershey, was honored in May by the Mental Health Association in Cumberland, Dauphin, and Perry counties for his many accomplishments in the field of psychiatry.

Dr. Hostetter

Rocio Nell, MD, has been appointed executive director of the Montgomery County Emergency Service, Norristown.

Rex Newton, MD, emeritus chief of the Department of Physical Medicine and Rehabilitation at Harmarville Rehabilitation Center, Indiana Township, was honored by the Pittsburgh Physiatric Society and the Harmarville facility for his teaching and lifelong contribution to the field of physical medicine and rehabiliation.

Gilbert A. Friday Jr., MD, professor of pediatrics at the University of Pittsburgh School of Medicine, has been elected chairman of the board of Pennsylvania Blue Shield.

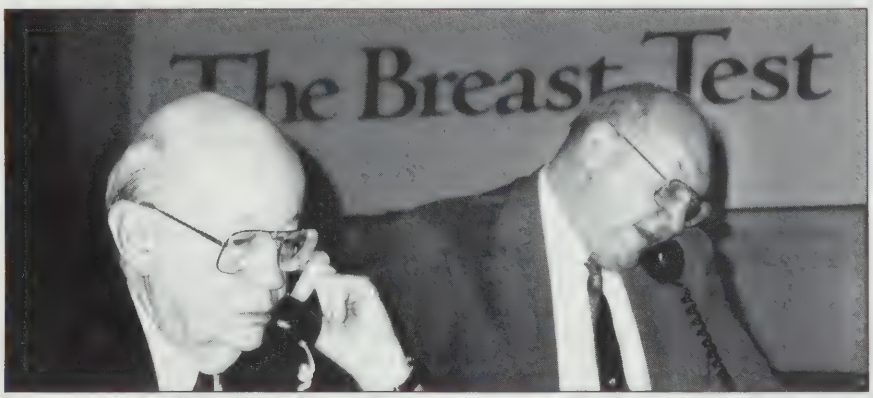
Norman M. Krause, MD, specialist in orthopedic surgery and sports medicine, was elected medical staff president at the Greater Pittsburgh Rehab Hospital.

Two faculty physicians at the University of Pennsylvania Medical Center—**Robert Austrian, MD,** John Herr Musser professor and chairman emeritus of research medicine, and **Clyde Barker, MD,** John Rhea Barton professor of surgery, Donald Guthrie professor of surgery, director of surgical research, and chairman of surgery—were elected into the Institute of Medicine of the National Academy of Sciences.

Marvin Steinberg, MD, director of the Joint Reconstruction Center at the Hospital of the University of Pennsylvania and professor of orthopedic surgery at the University of Pennsylvania Medical School, moderated "Avascular Necrosis of the Hip" at the Combined Meeting of the American Orthopedic Association and the English Speaking World in Toronto, Canada, in June.

Loren H. Crabtree, MD, vice president of clinical affairs of the Westmeade Center, Wyndmoor, and **Robert Garfield, MD,** medical director of the center, were interviewed during a live taping of a local radio program, "Family Matters." Examining the issues surrounding stigma and alternatives to traditional psychiatric care was the topic of the program, and Drs. Crabtree and Garfield answered questions about the benefits of the alternatives to psychiatric hospitalization.

John V. White, MD, associate professor of surgery and director of surgical research, Temple University Hospital, was awarded the 1992 Dr. Samuel D. Gross Prize by the Philadelphia Academy of Surgery for his work on the cause of abdominal aortic aneurysms.



Dr. White

Stephen S. Silberstein, MD, FACP, chief of neurology and co-director of the Comprehensive Headache Center at the Germantown Hospital and Medical Center in Philadelphia, recently edited and authored a special headache supplement to *Neurology*, the official journal of the American Academy of Neurology. The supplement was entitled, "Intractable Headache: Inpatient and Outpatient Treatment Strategies." Also, **Elliot A. Schulman, MD,** co-director of the center, served as a contributing author to the supplement.

Judith L. Swain, MD, Herbert C. Rorer professor of medical services and professor of human genetics at the University of Pennsylvania School of Medicine in Philadelphia, and chief of the Cardiovascular Division of the Hospital of the University of Pennsylvania, will serve as principal investigator for a grant from Bristol-Myers Squibb to support breakthrough research on how the heart muscle develops.

Ronald B. Herberman, MD, director of the Pittsburgh Cancer Institute, received the Institute for Advanced Studies in Immunology and Aging 1992 Lifetime Science Award in recognition of his "insightful" work in the field.

State Society President Elect Donald G. Ferguson, MD (left), and Allegheny County Medical Society Past President Richard E. Deitrick, MD (right), were among 29 physician volunteers who answered viewers' questions on breast cancer detection and treatment during *The Breast Test*, a community outreach project airing on WQED-TV in Pittsburgh.

Equipment leasing - Answer in 12-72 hours, no upside limit, single or master lease. Warranty extension, new practices eligible. Call 800-331-4951 ext. 511, 9-5 EST.

Lease or Sale—Established, fully equipped and staffed modern medical facility with ongoing family practice, industrial medicine, and emergency medicine. Ideally located in the Lehigh Valley. Financing arrangements available. Write: P.O. Box 4283, Bethlehem, PA 18018-0283.

CLASSIFIED ADVERTISING

Rates: $38 per insertion ($25 for PMS members) for the first 30 words or part thereof; $1.30 for each additional word; $6 per insertion for a box number. Payment should be in advance. No agency commission is paid on classified advertising.

Submissions: Copy must be submitted in writing to PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820. For more information, call (717) 558-7750.

Box Numbers: Advertisers using box numbers forbid disclosure of their identity. Written inquiries are forwarded to such advertisers, but no information can be revealed by the publisher.

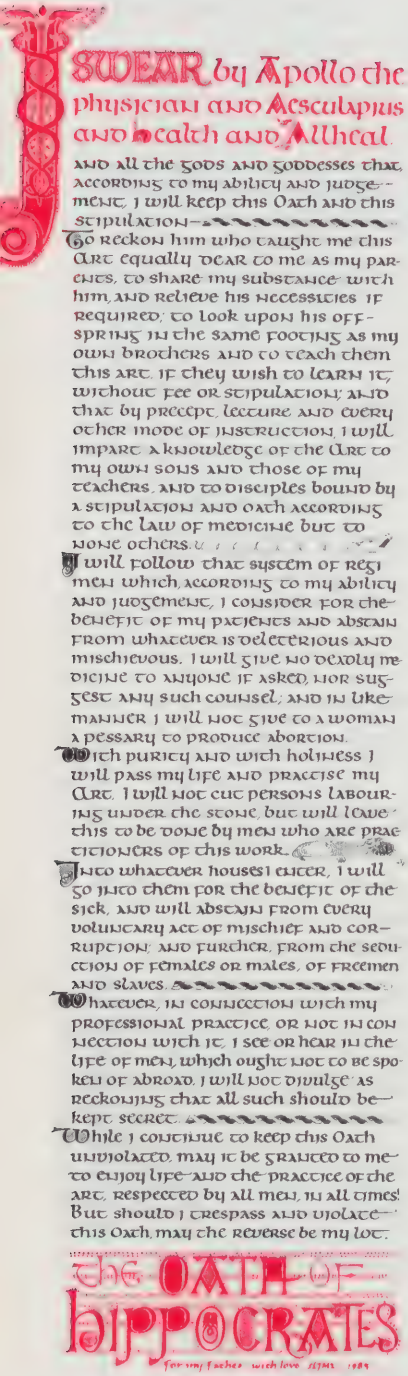
$30,000 BONUS OFFERED TO HEALTH CARE PROFESSIONALS

If you are a board-certified physician or a candidate for board certification in one of the following specialties, you may qualify for a bonus of up to $30,000 in the Army Reserve.

Anesthesiology • General Surgery • Thoracic Surgery
Pediatric Surgery • Orthopedic Surgery
Colon-Rectal Surgery • Vascular Surgery • Neurosurgery

A test program is being conducted which offers a bonus to eligible physicians who reside in certain geographic areas (Pennsylvania, West Virginia, Ohio, Michigan, Illinois, Indiana, Wisconsin, Minnesota and Iowa). You would receive a $10,000 bonus for each year you serve as an Army Reserve physician—for a maximum of three years.

You may serve near your home, at times convenient for you, or at Army medical facilities in the United States and abroad. There are also opportunities to attend conferences and participate in special training programs, such as the Advanced Trauma Life Support Course.



To learn more about the Army Reserve and the Bonus Test Program, call one of our experienced Medical Personnel Counselors:

In Philadelphia call Major Ernest Lyons or Captain Jules Fleischner 1-800-759-5462. In Pittsburgh call Captain Russell Flemming collect (412) 644-4432.

ARMY RESERVE. BE ALL YOU CAN BE.

A Refreshing View: The Oath of Hippocrates

Leslie E. Morris, MD

I was first exposed to the Oath of Hippocrates when I was a callow medical student in Trinity College, Dublin, in 1934. The oath was tastefully hung in the vestibule of the School of Anatomy. On the first reading, I thought the oath was pompous. Next year when I began to see patients, I read the document again. This time I was transformed by the magic of its message and read the oath several times each year.

When I graduated in 1939, there was no ceremonial reading of the oath. This did not bother me at all—I had the Oath of Hippocrates in my heart forever. Now, thanks to the generosity of my lovely daughter Sarah, I have a beautiful Hippocratic Oath [at left] hanging in my consulting room.

Hippocrates (460-377 B.C.) was the father of modern medicine. His principles of medical science were laid down 400 years before the birth of Christ, yet they formed the basis for the medical theory developed in the 1800s. The oath named for him gave the medical profession a sense of duty to mankind which it never lost—graduating medical students still take the oath.[1]

What is so amazing to me is the comprehensive content of this oath written 2,400 years ago.

It starts off: *According to my ability and judgment, I will keep this oath and stipulation—to reckon him who taught me this Art equally dear to me as my parents; to share my substance with him, and to relieve his necessities if required.*

I will impart a knowledge of the Art to my sons and those of my teachers. Little did he know that 24 centuries later the daughters would also acquire the art and would become outstanding physicians and surgeons.

I will follow that system of regimen which according to my ability and judgment, I consider for the benefit of my patients, and abstain from whatever is deleterious and mischievous.

I will not give to a woman a pessary to produce an abortion. I would hazard a guess that in ancient times, abortion had a mortality of 50 to 60 percent, at least. This may be the reason that Hippocrates avoided the procedure. I wonder, if he was confronted with a 14-year-old girl, pregnant from rape, whether he would deny her an abortion.

I will not cut persons laboring under the stone but will leave this to men who are practitioners of this work. Obviously he is warning students not to practice surgery without adequate training. Hippocrates also practiced surgery. He reduced dislocations of joints and set fractures; he bored holes in the skull to relieve pressure caused by brain tumors and other disorders.[2]

In whatever house I enter, I will go into them for the sick and will abstain from every voluntary act of mischief and corruption; and further from the seduction of females or males, of freemen and slaves.

Whatever I see or hear in the life of men which ought not to be spoken of abroad, I will not divulge as reckoning that all such should be kept secret.

This great document ends with a warning: *While I continue to keep the Oath unviolated may it be granted me to enjoy life and the practice of the Art, and respected by all men in all times!*

But should I trespass and violate this Oath, may the reverse be my lot!

YOU CAN IMPROVE TECHNOLOGY AND STILL BE STUCK IN THE SAME JAM

Technology is supposed to make your people more productive, your practice more competitive. We anticipate how technology will affect not only processes, but the structure of your practice as well. The Valley Medical Management concept revolves around a team of reimbursement specialists, managers, systems analysis and CPA's. This is the formula for our success. Our approach is scientific, comprehensive, and informative. Services provided include:

- ✦ Practice Reviews
- ✦ Administrative & Financial Management
- ✦ Billing
- ✦ Hardware/Software

Our objective is to make you a more successful professional.
Call us for more information.

SPECIALISTS IN MEDICAL PRACTICE MANAGEMENT

curing&caring

"Nearly ¾ of the malpractice lawsuits that doctors lose reflect poor patient communication," according to a recent article in the *Wall Street Journal* (March 17, 1992). Did you know something as simple as empathy could help protect you against medical malpractice litigation?

Curing and Caring—a half-day seminar sponsored by PMSLIC—addresses this vital component of medical care and how it could make a difference in your own practice.

And to demonstrate how important this seminar can be to your practice, PMSLIC is offering its insured participants a 10% credit on 1993 policy premium. Any other physician attending the seminar also is eligible for the discount upon obtaining 1993 malpractice coverage with PMSLIC.

Curing and Caring will be presented at the following locations, with a morning and afternoon session at each:

Harrisburg—
Wednesday, September 23

Erie—
Wednesday, September 30

Pittsburgh—
Thursday, October 1

Wilkes Barre/Scranton—
Tuesday, October 20

Philadelphia—
Wednesday, November 4

King of Prussia—
Thursday, November 5

For registration information contact the PMSLIC Risk Management Department at 800-445-1212 (PA) or 717-558-7500

THE PRACTICE OF MEDICINE: KNOWLEDGE, SKILL, EMPATHY.

THE STRENGTH OF YOUR PRACTICE DEPENDS ON HOW WELL YOU COMBINE ALL THREE.

IF YOU'RE NOT PAYING ATTENTION TO EMPATHY, YOU MIGHT AS WELL HANG IT UP.

Most outpatient rehab facilities.

Bryn Mawr Rehab Outpatient Services.

Most outpatient rehabilitation facilities are single service providers, offering physical therapy to treat conditions such as sports injuries and back pain. At Bryn Mawr Rehab, we do this — and offer an array of individualized programs and specialized services.

A coordinated multi-service approach
Treatment might include a coordinated program of physical, occupational and aquatic therapies for a person with arthritis. Driver's evaluation and speech therapy for an individual who has sustained a stroke. A work hardening program to help someone get back on the job.

A collaborative process is the best process
Our focus is on maximizing outcome. Collaborating with you, your patient and, as needed, your patient's family, we are able to tailor a program to best suit the patient's individual needs.

Specialized services are a big part of our multifaceted approach
Unique, specialized services such as adapted driver education, aquatic therapy, equestrian therapy and rehab engineering assist patients in achieving the best possible outcome for their lifestyle.

Call our Outpatient Services Department at **(215) 251-5503** to learn more about our multifaceted outpatient programs.

BRYN MAWR REHAB
OUTPATIENT SERVICES

414 Paoli Pike, Malvern, PA 19355
A Member of Main Line Health, Inc.

Besides our primary facility in Malvern, additional outpatient clinics are available in Devon and Lionville.
Our Outpatient Services Representative can assist you in selecting the location that is most appropriate for your patient.

Turn claims into cash. Fast.

We've perfected a paperless, electronic claims processing system that cuts through the clutter, bypasses the bureaucracy and ends up getting your money where it belongs. Twice as fast. 7 days instead of 14, for the average claim.

Why? Because by continually making Pennsylvania's healthcare system more efficient, we help ensure affordable access for more than six million Pennsylvanians.

Taking the physician's view of practice perfection.

During the past five years, we've talked with hundreds of physicians and their office managers to find out how Pennsylvania Blue Shield could become more "practice friendly." Overall, they wanted us to be more sensitive to their individual practice management needs.

They told us that faster payment was important. But they also wanted more control over how they accessed Blue Shield to get information relevant to their practices.

We listened. Here's what we did.

- We made preparing and filing claims more convenient, more than twice as fast.
- We provided immediate confirmation of claims received, with a hard copy follow-up sent through the mail.
- We made access to claims status seamless, fast and precise so that providers could accurately project their cash flow, streamline collections and avoid filing unnecessary duplicate claims.
- We provided instant access to patient information, including group number, coverage, eligible dependents, benefits explanations — and more.
- We made it possible to reconcile accounts and post to accounts receivable in minutes, instead of hours or days.
- And most importantly, we kept the price of participation at low cost to providers without computer automation — at no cost to providers with compatible computer systems.

Go electronic.

What you need. Estimated cost.

High performance. High return.

Support when you need it. Free.

Any electronic system needs expert support. We've got it — men and women committed to making Blue Shield responsive to your needs. Call Kathy Smith: ***1.800.992.0246***. She's got great news to share with you and your office manager.

▲ *"Why go electronic? The doctor operates in the morning. The claim is entered into the computer and transmitted by evening. Payment arrives 6 days later."*

— Donna Greytock Baird, MS, Business Administrator Practices of: Michael C. Raklewicz, MD; Daniel T. Davis, MD; and H. Alex Smith, Jr., MD — Kingston

Go electronic. You'll never look back.

If you don't already have a computer, you need:

- ***IBM/compatible**** *computer with monochrome monitor. DOS 3.3 or greater.*
- ***Internal modem** with MNP protocol.*
- ***80-column,** dot matrix printer.*
- ***Estimated Cost:** $1,566.00*

Plus:

- ***FREE** PBS Electronic Services Software Bundle, including Paperless Claims Express and Provider Inquiry.*
- ***FREE** PBS Electronic Services Technical Support.*

**386 processor, 2Mb RAM, 40Mb internal hard drive. This system is more than enough to handle Blue Shield electronic billing. However, you can save hundreds by choosing a 286-based computer.*

Not sure? Call Electronic Services Technical Support for expert advice.

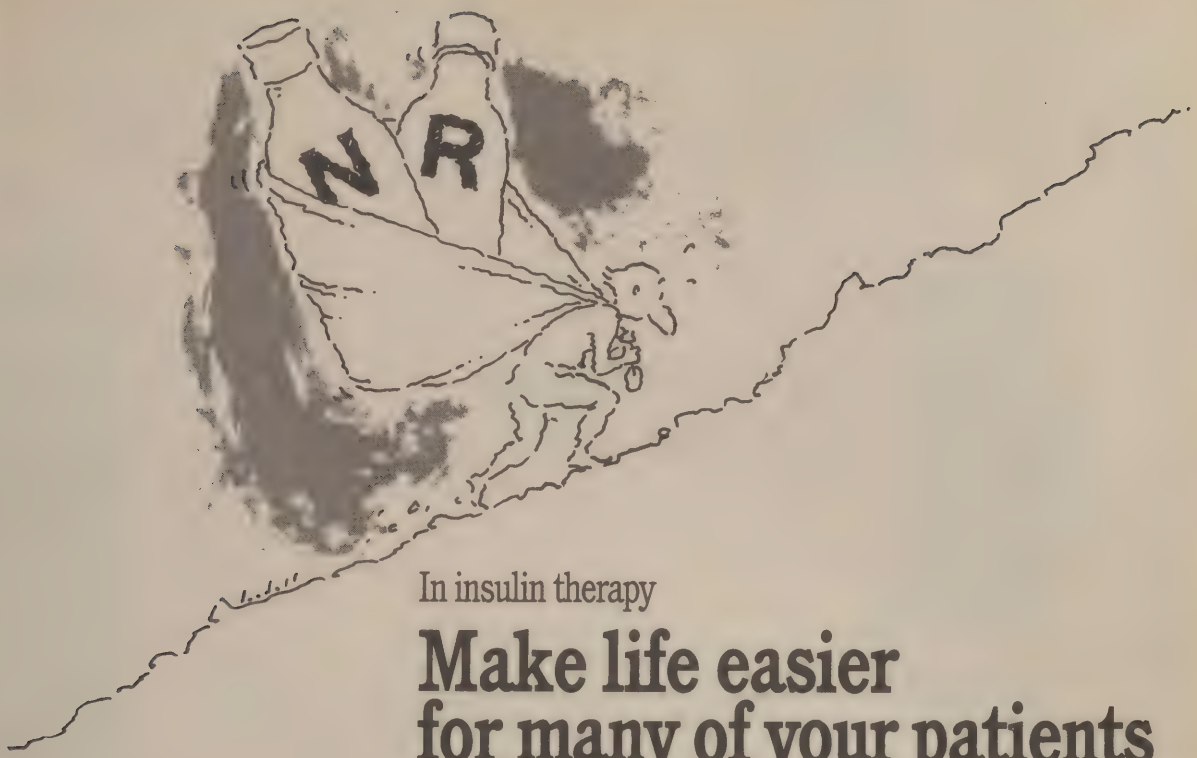
ELECTRONIC SERVICES

"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.



Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

One credit hour may be claimed for each hour of participation by the individual physician.
Conflict of Interest Statement: All faculty participating in continuing medical education programs sponsored by Hahnemann University are expected to disclose to the audience any real or apparent conflict(s) of interest related to the content of their presentation.

Malpractice rates too good to be true usually are.

You may have been told about lower rates offered by insurers new to the Pennsylvania market. Low rates will not benefit you if the company is not around to protect you or *your assets* if you are sued.

Physicians Insurance Company is an established Pennsylvania carrier who has continued to lower rates while protecting your future:

- 10% overall reduction in September 1991
- more for physician groups
- additional reductions for individuals who are claims free

Artificially low rates are a prescription for disaster... for the physician and the company. When selecting a malpractice carrier you should ask yourself what will happen in the future. Will they automatically surcharge my premium for claims experience? Will their policy provide me with the full Occurrence coverage I have enjoyed with Physicians Insurance Company or are they only providing a form of Claims-Made coverage—better known as Occurrence Plus or Permanent Protection? Why would a broker recommend this carrier... is the company only trying to buy my business by raising his commission? More importantly, will they be there when I need them?

At Physicians Insurance Company we have always maintained our rates among the lowest and we are committed to keeping this practice intact. When you take an honest look, *you can't do better.*

For more information on malpractice rates and coverage, please call or write today.

Why buy an office automation system that doesn't offer a long-term solution?

ACCLAIM™ from Sentient is the total system solution.

A lot of medical practices are planning to invest in an office automation system. But a lot of the systems out there just don't offer the comprehensive functions and long-term expandability that your practice may need.

IBM® and compatible hardware.

The ACCLAIM system operates on IBM and compatible hardware, so you know you're getting the quality standard of the industry. And it's completely expandable, so it can grow as your practice grows.

Long-term support.

ACCLAIM is the system solution that fits your needs today. And Sentient's software engineers, customer trainers, and telephone support people are always there to make sure your system fits your needs over the years to come.

Easy to operate.

Even if your staff has no previous computer experience, ACCLAIM is simple to operate effectively and efficiently. Complete training is included in the purchase.

When you're thinking about office automation, call Sentient first, and find out what ACCLAIM can do for you.

SENTIENT
SYSTEMS

We set the standard in medical computing.

With Princeton, you're in good company.

More than 19,000 medical and health care professionals have chosen Princeton Insurance Company for their professional liability insurance coverage. Here are some reasons why:

- **A solid track record.** Princeton has a decade of experience providing professional liability insurance coverage to physicians, and A.M. Best has ranked us (with our parent company) among the 20 largest medical malpractice insurers nationwide since 1983.

- **Financial strength.** Our loss reserves are carried at full value, not discounted in the hope of earning sufficient interest income to pay claims. We maintain a high quality/low risk investment portfolio, with no junk bonds, no common stock and no real estate speculation. And we've earned a claims-paying ability rating of "A" from Standard & Poor's.

- **Coverage options.** Tail coverage is included in the purchase price of Princeton's innovative *Occurrence Plus* policy. A standard claims-made policy is also available, and we offer excess liability coverage (limits up to $5 million) to Pennsylvania physicians regardless of which company writes their primary coverage.

- **Strong defense against claims.** In a typical year, more than 90 percent of the Princeton-managed cases disposed of by the courts are resolved in the policyholder's favor.

It may be easier than you think to change insurance companies. Call today to find out more or return the coupon to receive a copy of our brochure, "It's Princeton's Specialty."

OFFICIAL CALL TO 1992 MEETING

The 1992 annual meeting of the House of Delegates of the Pennsylvania Medical Society will be called to order at the Adam's Mark Hotel, Philadelphia, Pennsylvania, on Friday, October 23, at 10:00 a.m. The second session of the House of Delegates is scheduled for Saturday, October 24, at 1:00 p.m. The third and concluding session of the House of Delegates will be held Sunday, October 25, at 9:30 a.m.

ELECTIONS

In accordance with Chapter XII, Section 1 of the Bylaws of the Pennsylvania Medical Society, the following nominations and/or elections will be in order. Nominations for AMA delegates will be in order at the first session on Friday morning, October 23, 1992, and elections will occur on Saturday morning, October 24, 1992. Nominations for all other offices will be in order at the second session, Saturday afternoon, October 24, 1992, and elections will occur on Sunday morning, October 25, 1992.

General officers to be elected are a vice president, a speaker of the House of Delegates, and a vice speaker of the House of Delegates.

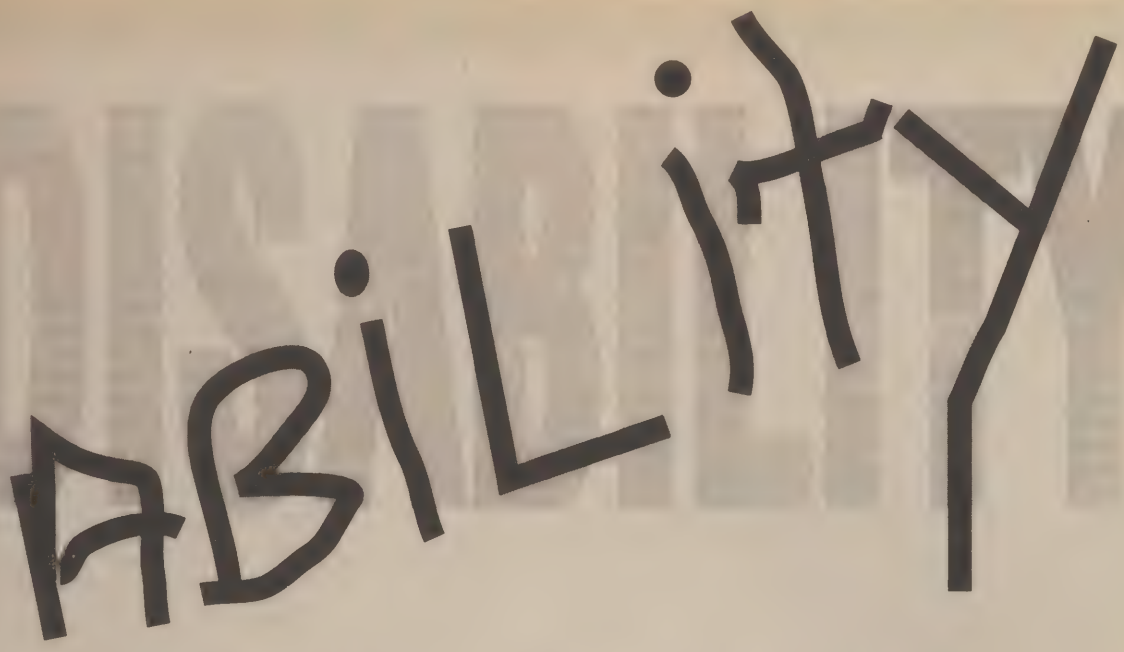
In accordance with Chapter XIV, Section 5 of the Bylaws, elections will be in order for a trustee for the First District to succeed George R. Fisher, III, MD, Philadelphia County, who is eligible for reelection; a trustee for the Third District to succeed John H. Hobart, MD, Lackawanna County, who is not eligible for reelection; a trustee for the Eighth District to succeed Robert L. Lasher, MD, Erie County, who is eligible for reelection; a trustee for the Ninth District to succeed John W. Mills, MD, Indiana County, who is eligible for reelection; a trustee for the Hospital Medical Staff Section to succeed Lee H. McCormick, MD, who is eligible for reelection; a trustee for the Young Physicians Section to succeed Richard J. Greco, MD, who is eligible for reelection; and a trustee for the Medical Student Section to succeed Mark V. Caliendo, who is eligible for reelection.

If the report of the Board of Trustees regarding restructuring is adopted by the House of Delegates, an election for a trustee for the new Thirteenth District (Allegheny County) for a three-year term will also be in order.

If the proposed Bylaws amendments submitted by David E. Wiley, DO, are adopted which will redistrict Pennsylvania from twelve districts to six districts, elections will be in order for a trustee for the First District for a three-year term and for trustees for new Districts Two through Six, with straws being drawn by the Speaker to determine one, two, and three-year terms.

If the proposed Bylaws amendments submitted by Robert B. Sklaroff, MD, are adopted which would redistrict Pennsylvania from twelve districts to ten districts, Dr. Sklaroff's implementation plan calls for district trustee elections to be held as follows: 1992—First and new Fourth, Ninth, and Tenth Districts; 1993—Fifth and new Second and Eighth Districts; 1994—New Third, Sixth, and Seventh Districts. Reference Committee A will make a recommendation to the House of Delegates on the implementation plan.

In accordance with Chapter X, Section 1 of the Bylaws, elections for delegates and alternate delegates to the American Medical Association are in order. In accordance with Standing Rule Number 10 (adopted October 22, 1982), elections for delegates will be held on Saturday morning, October 24, 1992, and elections for alternate delegates will be held on Sunday morning, October 25, 1992.



Delegates whose terms expire December 31, 1992, are:

1. R. William Alexander, MD (Berks County)
2. Doris G. Bartuska, MD (Philadelphia County)
3. Joseph B. Blood, Jr., MD (Bradford County)
4. Betty L. Cottle, MD (Blair County)
5. James B. Donaldson, MD (Philadelphia County)
6. Victor F. Greco, MD (Luzerne County)
7. Lee H. McCormick, MD (Allegheny County).
8. John S. Parker, MD (Westmoreland County)
9. Howard A. Richter, MD (Delaware County)
10. Roberta L. Schneider, MD (Montgomery County)
11. Donald H. Smith, MD (Northampton County)
12. Vacancy

The Committee to Nominate Delegates and Alternates to the AMA makes the following nominations for twelve (12) delegates for two (2) years commencing January 1, 1993, and expiring December 31, 1994:

1. R. William Alexander, MD (Berks County)
2. Richard D. Baltz, MD (Dauphin County)
3. Doris G. Bartuska, MD (Philadelphia County)
4. Joseph B. Blood, Jr., MD (Bradford County)
5. George F. Buerger, Jr., MD (Allegheny County)
6. Betty L. Cottle, MD (Blair County)
7. James B. Donaldson, MD (Philadelphia County)
8. Victor F. Greco, MD (Luzerne County)
9. Lee H. McCormick, MD (Allegheny County)
10. John S. Parker, MD (Westmoreland County)
11. Howard A. Richter, MD (Delaware County)
12. Roberta L. Schneider, MD (Montgomery County)
13. Alan H. Schragger, MD (Lehigh County)
14. Donald H. Smith, MD (Northampton County)

Alternate delegates whose terms expire December 31, 1992, are:

Magee Rehabilitation Hospital is dedicated to building on strengths for independence by providing the highest quality of care. We offer the following outstanding physical medicine and rehabilitation services:

- Spinal Cord Injury

1. Elias Abrutyn, MD (Philadelphia County)
2. Richard D. Baltz, MD (Dauphin County)
3. James M. Brian (Philadelphia County—Slotted Medical Student Position)
4. Charles J. Cattano, MD (Allegheny County)
5. J. Joseph Danyo, MD (York County)
6. Thomas F. Freenock, Jr., MD (Delaware County—Slotted Resident Physician Position)
7. Joseph F. Girone, MD (Philadelphia County)
8. Robert M. Kemp, MD (Lancaster County)
9. John D. Lane, MD (Bucks County)
10. John A. Malcolm, Jr., MD (Union County)
11. Carl A. Sirio, MD (Dauphin County)
12. Vacancy

The Committee to Nominate Delegates and Alternates to the AMA makes the following nominations for eleven (11) alternate delegates for two (2) year terms commencing January 1, 1993, and expiring December 31, 1994, and one (1) alternate delegate for a one (1) year term commencing January 1, 1993, and expiring December 31, 1993.

1. Elias Abrutyn, MD (Philadelphia County)
2. Isadore Brodsky, MD (Philadelphia County)
3. Winston M. Bryant, Jr., MD (Philadelphia County)
4. Charles J. Cattano, MD (Allegheny County)
5. J. Joseph Danyo, MD (York County)
6. Robert G. Doe, MD (Lancaster County)
7. Thomas F. Freenock, Jr., MD (Delaware County)
8. Julian Katz, MD (Philadelphia County)
9. Robert M. Kemp, MD (Lancaster County)
10. John D. Lane, MD (Bucks County)
11. John A. Malcolm, Jr., MD (Union County)
12. Carl A. Sirio, MD (Dauphin County)
13. Ferdinand L. Soisson, Jr., MD (Cambria County)

The Committee to Nominate Delegates and Alternates to the AMA makes the following nomination for one slotted position for alternate delegate for a medical student for a one-year term commencing January 1, 1993, and expiring December 31, 1993:

1. James M. Brian (Medical Student Section)

The Committee to Nominate Delegates and Alternates to the AMA makes the following nomination for one slotted position for alternate delegate for a resident physician for a one-year term commencing January 1, 1993, and expiring December 31, 1993:

1. Michael P. Moulton, MD (Resident Physician Section)

Also to be elected will be one member to serve on the Committee to Nominate Delegates and Alternates to the AMA. The term of Wilma C. Light, MD (Westmoreland County) expires; she is eligible for reelection.

In accordance with Chapter XVII, Section 2 of the Bylaws, the Board of Trustees nominates the following members for two vacancies on the Judicial Council. For the office now held by Kenneth L. Cooper, MD (Lycoming County), who is not eligible for reelection, the Board nominates Betty L. Cottle, MD (Blair County); James L. Harrison, MD (Lycoming County); and Charles A. Laubach, Jr., MD (Montour County). For a one-year term for the vacancy created by the death of D. Ernest Witt, MD (Columbia County), the Board nominates Henry H. Fetterman, MD (Lehigh County); Donald E. Harrop, MD (Chester County); and David L. Miller, MD (Clarion County).

Set forth below is the text of the proposed bylaws amendments. Deletions from existing bylaws are indicated by brackets; additions are italicized.

SUBJECT ONE

BOARD REDISTRICTING.

(1-A) The Board of Trustees directed the Committee on Bylaws to develop appropriate Bylaws language, for inclusion in the Official Call for consideration by the 1992 House of Delegates, creating a new Thirteenth District consisting of Allegheny County and a Tenth District consisting of Beaver, Lawrence, and Westmoreland Counties.

Chapter XIV - The Board of Trustees

Section 4 - Districts -

For purposes of this Society the counties in the Commonwealth of Pennsylvania shall be divided into the following [twelve] *thirteen* districts:

First District - Philadelphia County.

Second District - Berks, Bucks, Chester, Delaware, Lehigh, and Montgomery counties.

Third District - Carbon, Lackawanna, Monroe, Northampton, Pike, and Wayne counties.

Fourth District - Columbia, Montour, Northumberland, Schuylkill, and Snyder counties.

Fifth District - Adams, Cumberland, Dauphin, Franklin, Fulton, Lancaster, Lebanon, Perry, and York counties.

Sixth District - Blair, Centre, Clearfield, Huntingdon, Juniata, and Mifflin counties.

Seventh District - Cameron, Clinton, Elk, Lycoming, Potter, Tioga, and Union counties.

Eighth District - Crawford, Erie, Forest, Mercer, McKean, and Warren counties.

Ninth District - Armstrong, Butler, Clarion, Indiana, Jefferson, and Venango counties.

Tenth District - [Allegheny,] Beaver, Lawrence, and

Malachy Whalen & Company guarantees continuity of service

Since 1968, Malachy Whalen and Company has specialized in life and disability insurance for the medical profession. Currently, over 400 professional corporations and 1,700 individual physicians are protected by our programs.

We recognize that continuity of service is the key to earning your confidence... and the referrals, which are the lifeline of our business.

In the area of disability insurance, for example, we have serviced 33 long term claims with 100% satisfaction to the physicians involved. And we are organized to assure that you will receive comprehensive policy service throughout your career.

Malachy Whalen's primary function is to understand the long term business objectives of each practice... to be aware of the physicians' short and long term financial goals... and to recommend the most effective and most economical insurance currently available.

Peggy McNamee and her staff are responsible for policy execution, keeping beneficiary information and other details up-to-date, paying dividends and providing answers about the status of your policies.

Claude Whalen specializes in financial and estate planning. He is licensed in the full line of life and disability insurance as well as being N.A.S.D. licensed for equity sales. He provides fundamental insurance planning advice as well as an independent view as a balance to more specialized financial planning.

Clark Whalen has a B.A. in economics and is currently an M.B.A. candidate. His responsibility is on-going research -- tracking changes in insurance products and defining the options that are most appropriate for medical students, residents and practicing physicians.

Continuity of service means that Malachy Whalen and Company will be here to act on your behalf when claims occur. We will file the required documentation and follow-up to assure timely payment .

Eleventh District - Bedford, Cambria, Fayette, Greene, Somerset, and Washington counties.
Twelfth District - Bradford, Luzerne, Sullivan, Susquehanna, and Wyoming counties.
Thirteenth District - Allegheny County.

Chapter XIV - The Board of Trustees
Section 6 - Terms. . .
District trustees' terms shall be *so* arranged [so that no more than four shall expire at an annual meeting of the House of Delegates] *that at two of three annual meetings of the House of Delegates the terms of four members shall expire, and at the remaining annual meeting of the House of Delegates the terms of five members shall expire.*

(1-B) David E. Wiley, DO, proposes redistricting Pennsylvania into six trustee districts, each with approximately 3,000 members per district. The proposed language was submitted with the requisite number of signatures of active or associate members of the Society.

[Chapter XIV - The Board of Trustees
Section 4 - Districts -
For purposes of this Society the counties in the Commonwealth of Pennsylvania shall be divided into the following twelve districts:
First District - Philadelphia county.

and Mifflin counties.
Seventh District - Cameron, Clinton, Elk, Lycoming, Potter, Tioga, and Union counties.
Eighth District - Crawford, Erie, Forest, Mercer, McKean, and Warren counties.
Ninth District - Armstrong, Butler, Clarion, Indiana, Jefferson, and Venango counties.
Tenth District - Allegheny, Beaver, Lawrence, and Westmoreland counties.
Eleventh District - Bedford, Cambria, Fayette, Greene, Somerset, and Washington counties.
Twelfth District - Bradford, Luzerne, Sullivan, Susquehanna, and Wyoming counties.]

Chapter XIV - The Board of Trustees
Section 4 - Districts -
For purposes of this Society the counties in the Commonwealth of Pennsylvania shall be divided into the following ten districts:
First District - Philadelphia County.
Second District - Bucks and Montgomery counties.
Third District - Berks, Chester, and Delaware counties.
Fourth District - Carbon, Lackawanna, Lehigh, Monroe, Northampton, Pike, and Wayne counties.
Fifth District - Adams, Cumberland, Dauphin, Franklin, Fulton, Lancaster, Lebanon, Perry, and York counties.
Sixth District - Blair, Centre, Clearfield, Columbia, Huntingdon, Juniata, Mifflin, Montour, Northumberland, Schuylkill, Snyder, and Union counties.
Seventh District - Bradford, Clinton, Luzerne, Lycoming, Potter, Sullivan, Susquehanna, Tioga, and Wyoming counties.
Eighth District - Bedford, Cambria, Fayette, Greene, Somerset, Washington, and Westmoreland counties.
Ninth District - Allegheny county.
Tenth District - Armstrong, Beaver, Butler, Cameron, Clarion, Crawford, Elk, Erie, Forest, Indiana, Jefferson, Lawrence, Mercer, McKean, Venango, and Warren counties.

SUBJECT TWO
SOCIETY LEADERSHIP.

(2-A) Dr. David E. Wiley's proposed language was submitted with the requisite number of signatures of active or associate members of the Society.

Chapter XII - Officers
Section 7 - Duties of Officers. . .
a. The president shall:
1. [be an ex officio member] *serve as chairman* of the Board of Trustees with the right to vote;
2. be an ex officio member of the House of Delegates without the right to vote;
3. be an ex officio member of all committees and commissions without the right to vote;
4. fill vacancies on administrative councils, commissions, or standing committees according to these bylaws;
5. delegate duties to the president elect, vice president, and the immediate past president;
6. file a report on the term as president with the House of Delegates at its annual meeting; [and]
7. address the House of Delegates at its annual meeting during the opening session; *and*
8. be an ex officio member of the Committee to Nominate Delegates and Alternates to the American Medical Association without the right to vote. . . .

d. The immediate past president shall:
[1. be an ex officio member of the Board of Trustees with the right to vote;]
[2.] *1.* be an ex officio member of the House of Delegates without the right to vote;
[3.] *2.* be an ex officio member of the Committee to Nominate Delegates and Alternates to the American Medical Association without the right to vote; and
[4.] *3.* perform such duties as may be delegated by the president. . .

Chapter XIV - The Board of Trustees
Section 3 - Composition -
The Board of Trustees shall consist of the president, president elect, the vice president, [the immediate past president,] the speaker of the House of Delegates, the vice speaker of the House of Delegates, ex officio with the right to vote, . . .

Chapter XIV - The Board of Trustees
Section 10 - Board Officers -
At the first meeting of the Board of Trustees after the annual meeting of the House of Delegates, it shall elect, from among the voting trustees, [a chairman,] a vice chairman and a secretary to serve until the next such meeting of the Board and until their successors are elected.

(2-B) Dr. Robert B. Sklaroff's proposed language was submitted with the requisite number of signatures of active or associate members of the Society.

Chapter XII - Officers
Section 7 - Duties of Officers. .
a. The president shall:
1. be an ex officio member of the Board of Trustees with the right to vote; *throughout the year of the term, the president shall either serve as chairperson of the Board of Trustees or shall designate a member of the Board to serve in this capacity. . . .*

Chapter XIV - The Board of Trustees
Section 10 - Board Officers -
At the first meeting of the Board of Trustees after the annual meeting of the House of Delegates, it shall elect, from

among the voting trustees, [a chairman,] a vice [chairman] *chairperson* and a secretary to serve until the next such meeting of the Board and until their successors are elected. *Throughout the year of the term, the president shall either serve as chairperson of the Board of Trustees or shall designate a member of the Board to serve in this capacity.*

SUBJECT THREE

SELECTION OF MEMBERS OF SUBSIDIARY BOARDS.

(3-A) Dr. David E. Wiley's proposed language was submitted with the requisite number of signatures of active or associate members of the Society.

Chapter X - Nominations
Section 1 - Origin of Nomination . . .

Nominations for directors of any subsidiary organization owned directly or indirectly by the Society shall be made by the Committee to Nominate Directors of Subsidiaries and published in the Official Call.

Chapter XV - Committees, Administrative Councils and Commissions
Section 2 - Standing Committees -

This Society shall have the following standing committees:... *Committee to Nominate Directors of Subsidiaries. . .*
g. Committee to Nominate Directors of Subsidiaries. The committee shall consist of five members elected by the House of Delegates to serve a term of three years. It shall be the duty of the committee to submit to the House of Delegates a list of nominees for positions as directors on subsidiary boards owned directly or indirectly in whole or in part by the Society to which the Society is entitled to appoint directors.

(3-B) Dr. Robert B. Sklaroff's proposed language was submitted with the requisite number of signatures of active or associate members of the Society.

Chapter X - Nominations
Section 1 - Origin of Nomination...

Four directors of each subsidiary board shall be elected by the House of Delegates. Two shall be elected each year for two-year terms. No individual may serve more than three successive two-year terms following election by the House of Delegates. (In 1992, two shall be elected for two-year terms and two shall be elected for one-year terms.) Nominations for directors of any subsidiary organization owned directly or indirectly by the Society shall be made by the Committee to Nominate Directors

It's Not By Accident That We See Over 7,000 Children A Year. Usually, It's By Referral.

Although it is sometimes an accident that causes a child to need the services offered by the Kennedy Krieger Institute, most often it's a physician, in a practice like yours, that points the child's family in the right direction.

The Kennedy Krieger Institute evaluates children and adolescents with disorders of the brain and helps them participate as fully as possible in family, school and community life. The Institute offers inpatient and outpatient hospital services, a school, and a host of community programs for children with disabilities.

Our team of dedicated specialists and professionals provides quality services for youngsters of any age with:

- Learning Problems and Disabilities
- Motor and Language Delays
- Mental Retardation
- Head Injury
- Lead Poisoning
- Cerebral Palsy
- Feeding Disorders
- Behavior Problems
- Down Syndrome
- Birth Defects
- Other Special Needs

Kennedy Krieger Institute
A comprehensive resource for children with disabilities

of Subsidiaries and published in the Official Call.

Chapter XV - Committees, Administrative Councils and Commissions
Section 2 - Standing Committees -
This Society shall have the following standing committees:. .
Committee to Nominate Directors of Subsidiaries. . .
g. Committee to Nominate Directors of Subsidiaries. The committee shall consist of five members elected by the House of Delegates to serve a term of three years. It shall be the duty of the committee to submit to the House of Delegates a list of nominees for positions as directors on subsidiary boards owned directly or indirectly in whole or in part by the Society to which the Society is entitled to appoint directors.

SUBJECT FOUR

ONE PERSON, ONE JOB RULE.
Dr. David E. Wiley's proposed language was submitted with the requisite number of signatures of active or associate members of the Society.

Chapter V - Separation of Powers
Section 4 - Maintaining Separation of Powers -
To maintain the separation of powers *and encourage participation in the Society,* [of the three divisions] the following restrictions shall prevail:
a. [A member of this Society, if a voting member of the House of Delegates, may not at the same time serve on the Judicial Council, as a trustee of the Board of Trustees, or as president, immediate past president, president elect, vice president, treasurer, secretary, or speaker or vice speaker of the House of Delegates.
b. A member of this Society may not concurrently hold more than one office of this Society.
c.] A member of the Judicial Council may not at the same time serve as a voting member of the House of Delegates or the Board of Trustees except as provided in Chapter XVII, Section 2, or as president, immediate past president, president elect, vice president, treasurer, or secretary of this Society, or as speaker or vice speaker of the House of Delegates, or as a district censor, or as a member of any council, commission, or administrative committee. A member of the Judicial Council however may be elected or appointed to a council or committee which nominates persons to hold office or receive awards, or which is purely advisory in nature.
A member of this Society may serve concurrently on only one of the following: the Board of Trustees, the delegation to the American Medical Association, or any council committee, or commission of the Society, any Board of Directors on any corporation owned directly or indirectly by the Society or to which the Society may appoint directors directly or indirectly. The board shall be limited to an executive and finance committee composed of its own members. The board may appoint one, and only one, ex officio member to any council, committee, or task force. Further, the councils, committees, and boards above listed may request a member of another to serve as a consultant without right to vote.

SUBJECT FIVE

VOTING STATUS OF THE SPEAKER AND VICE SPEAKER OF THE HOUSE OF DELEGATES.
Dr. David E. Wiley's proposed language was submitted with the requisite number of signatures of active or associate members of the Society.

Chapter XII - Officers
Section 7 - Duties of Officers.
i. The speaker of the House of Delegates: . . .
6. shall be ex officio with*out* the right to vote on the Board of Trustees; . . .

j. Vice speaker of the House of Delegates: . . .
4. shall be ex officio with*out* the right to vote on the Board of Trustees; . . .

Chapter XIV - The Board of Trustees
Section 3 - Composition -
The Board of Trustees shall consist of the president, president elect, the vice president, *and* the immediate past president *as voting members, and* the speaker of the House of Delegates[,] *and* the vice speaker of the House of Delegates, ex officio with*out* the right to vote, . . .

SUBJECT SIX

CHANGE IN PMS BOARD STRUCTURE TO LIMIT TRUSTEES TO TWO THREE-YEAR TERMS.
Dr. David E. Wiley's proposed language was submitted with the requisite number of signatures of active or associate members of the Society.

Chapter XIV - The Board of Trustees
Section 6 - Terms. . .
No trustee may serve more than [three] *two* consecutive terms. A trustee elected to serve an unexpired term shall not be regarded as having served a term unless he has served more than one year. A year is deemed to be the period of time between consecutive annual meetings of the House of Delegates. *(A trustee who was serving his third term prior to October 1992 may complete that term.)*

The Commitment to Care Continues

AT HARMARVILLE

For more than 35 years, Harmarville Rehabilitation Center has treated individuals with traumatic injuries and disabling illnesses.

Harmarville is a 202-bed, not-for-profit, freestanding rehabilitation hospital.

Our programs include inpatient and outpatient rehabilitation for individuals with:

- Spinal Cord Injury
- Traumatic Brain Injury
- Stroke
- Total Joint Replacement and Fracture
- Arthritis
- Chronic Pain
- Amputations

Our other specialty programs include:

- Geriatric Rehabilitation
- Oncology Rehabilitation
- Center for Motor Control
- Adaptive Driver Education

Harmarville Rehabilitation Center is affiliated with the University of Pittsburgh residency program in Physical Medicine and Rehabilitation and numerous schools of health-related professions.

Harmarville Rehabilitation Center is accredited by:

- Joint Commission for Accreditation of Health Care Organizations
- Commission for Accreditation of Rehabilitation Facilities

Outpatient Center Locations:

- North Shore Pittsburgh, PA
- Main Center Pittsburgh, PA
- Washington, PA
- Cranberry Twp, PA
- Connellsville, PA
- Greensburg, PA

Pittsburgh Has Some Positive Side Effects On Doctors.

The kind of side effects that occur when doctors spend some time in Pittsburgh can be really positive. They start developing ideas that lead to the kind of innovations that make medical history. That's one reason why so many medical societies, groups and associations meet here. And the next time you hold a meeting, symposium or convention in Pittsburgh, you'll experience those benefits for yourself.

You'll find first-rate meeting facilities and world-class accommodations at affordable prices. Combined with great ethnic cuisine and activities like exciting performances at Heinz Hall, it leads to astounding results.

To learn more about the positive side effects that we can help make happen during your next event, write to us at Four Gateway Center, Dept. **PM3**, Pittsburgh, PA 15222. Or call us toll-free at 1-800-366-0093.

We'll Have An Effect On You.

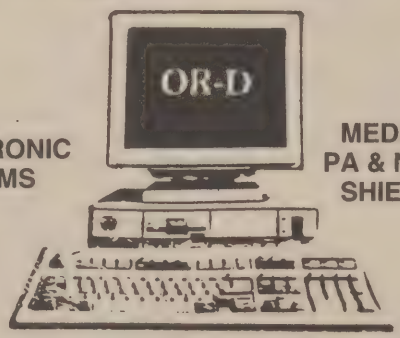
JEFFERSON MRI

The Clear Choice

Redefining the service standards by which outpatient imaging professionalism is judged.

- Immediate scheduling
- Specialized protocols with expert interpretation by Thomas Jefferson University MRI radiology specialists
- Report and films within 24 hours
- Conveniently located in Lower Bucks County on the periphery of the Oxford Valley Mall



Jefferson MRI
825 Town Center Drive, Ste. 100
Langhorne, PA 19047

YOCON®
YOHIMBINE HCl

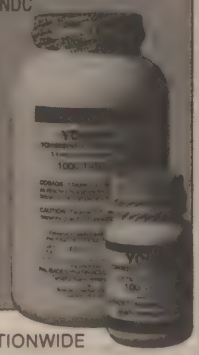
Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it: however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.



Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

1992 ANNUAL MEETING PENNSYLVANIA MEDICAL SOCIETY HOUSE OF DELEGATES

The House of Delegates of the Pennsylvania Medical Society will convene its annual meeting at the Adam's Mark Hotel, Philadelphia, Pennsylvania, on Friday, October 23, 1992. The second session will convene Saturday, October 24, 1992, and the third session Sunday, October 25, 1992. Details regarding the starting times appear in the Official Call, which begins on page 18 of this issue of PENNSYLVANIA MEDICINE.

Resolutions to be considered by the House may be submitted in writing to the Secretary by a delegate acting in his/her own behalf or for the component medical society or specialty society he/she represents. If received prior to September 23, 1992, resolutions will be published in the *Official Reports Book*.

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months or longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES**, as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

$30,000 BONUS OFFERED TO HEALTH CARE PROFESSIONALS

If you are a board-certified physician or a candidate for board certification in one of the following specialties, you may qualify for a bonus of up to $30,000 in the Army Reserve.

Anesthesiology • General Surgery • Thoracic Surgery
Pediatric Surgery • Orthopedic Surgery
Colon-Rectal Surgery • Vascular Surgery • Neurosurgery

A test program is being conducted which offers a bonus to eligible physicians who reside in certain geographic areas (Pennsylvania, West Virginia, Ohio, Michigan, Illinois, Indiana, Wisconsin, Minnesota and Iowa). You would receive a $10,000 bonus for each year you serve as an Army Reserve physician—for a maximum of three years.

You may serve near your home, at times convenient for you, or at Army medical facilities in the United States and abroad. There are also opportunities to attend conferences and participate in special training programs, such as the Advanced Trauma Life Support Course.

To learn more about the Army Reserve and the Bonus Test Program, call one of our experienced Medical Personnel Counselors:

In Philadelphia call Major Ernest Lyons or Captain Jules Fleischner 1-800-759-5462. In Pittsburgh call Captain Russell Flemming collect (412) 644-4432.

ARMY RESERVE. BE ALL YOU CAN BE.

INSTRUCTIONS TO AUTHORS

Submit two manuscripts, typewritten and double-spaced, on 8½" by 11" paper. This material is for the exclusive use of this publication and should not be published elsewhere except in abstract form. Statistical methods used in scientific articles should be identified. Acknowledgments will be made only for specific preparation of an essential part of the manuscript.

Authors are asked to seek clarity, accuracy, and originality; attention to details of grammar, spelling, and typing are important. The title page should include the full name, degrees, and affiliations of all authors, and the name and address of the author to whom reprint requests should be sent. Tables must be typewritten and double-spaced on separate 8½" by 11" sheets, with a title and number. Symbols for units should be confined to column headings; and abbreviations, properly explained, should be kept to a minimum.

Illustrations should be professional quality, black-and-white glossy prints. The name of the author, figure number, and the top of the figure should be noted on a label attached to the back of each illustration. Where photographs of patients are used, the subjects should not be identifiable or publication permission, signed by the subject or responsible person, must be included with the photograph. Material taken from other publications must give credit to the source; written permission for republication from the original publisher must be submitted.

References should not exceed 35 citations and should be noted consecutively in the text by superior numbers at the end of a sentence. The reference list should be typewritten and double-spaced on separate 8½" by 11" sheets in the numerical order in which they are first cited in the text. The style of reference is that of *Index Medicus*:

1. **Goldwyn RM:** Subcutaneous mastectomy. *J. Med Soc NJ* 74:1050-1052, 1977.
2. **Dixon WJ, Massey FJ:** *Introduction to Statistical Analysis*. New York, NY, McGraw-Hill, 1969, pp. 42-48.

In compliance with the Copyright Revision Act of 1976 (effective January 1, 1978), a transmittal letter or a separate statement accompanying material offered to PENNSYLVANIA MEDICINE must contain the following language and must be signed by all authors:

In consideration of PENNSYLVANIA MEDICINE taking action in reviewing and editing this submission, the author(s) undersigned hereby transfers, assigns, or otherwise conveys all copyright ownership to the Pennsylvania Medical Society, in the event that such work is published in PENNSYLVANIA MEDICINE.

Send manuscripts and all related correspondence to: Managing Editor, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

"As doctors, if we do the right thing at the right time, we can make a difference."

Dr. Kenneth A. Haller, Pediatrician, East St. Louis, Illinois, Member, American Medical Association

In one of the nation's poorest communities, Dr. Kenneth Haller is working not only to save children's lives, but to bring dignity to the lives of their parents.

He is the type of physician who brings distinction to our profession. He is the type of physician who upholds the highest ideals of medicine. He is also a member of the American Medical Association (AMA).

"I read the Principles of Medical Ethics of the AMA and was impressed by it. I'm proud to be a member," says Dr. Haller.

You are invited to join Dr. Haller and to join with him in his efforts to bring quality health care to those in need. Become a member of the American Medical Association today.
